"We have seven baby calves. Two of them are red, one is black, three are black and white and one is brindle," says Harriette Mathis, who lives near Kettle river, in Ferry county, Washington. Harriette and her brother, William, each have a pony and a cat. June 9, 1922, Harriette will be 9.

Velzia Stevens lives on a big farm of 100 acres, near Bellingham bay, in northwestern Washington. She is one of our new cousins and will be 11 May 14, 1922. The Stevenses have pigs and rabbits. There are some little rabbits, too, but Velzie doesn't know how many, because they are too little to come out. We are glad to welcome Velzia to the corner.

Birthday Greetings

THURSDAY, April 6—Leona Evelyn Higginbotham, 10 years old; Dorothy Wiese, 10; Audrey Weeks, 9.

FRIDAY, April 7—Vera Ferch, 9 years old; Lillian Hattemer, 10; Alvena Matson, 10; Ella Napier; Helen Lasti, 9.

SATURDAY, April 8—Arvo Ahonen, 10 years old; Ellen Crank, 10; Henry Greenwalt, 11; La Vira Rothrock, 9.

SUNDAY, April 9—George Blackburn, 11 years old; Etoile Cook, 10; Fred Lewis Jenkins, 11.

MONDAY, April 10—Agnes Hurbi, 8 years old; Edward Leppaner, 9; Dorothy McDonald, 10; Lois Rankin, 11.

TUESDAY, April 11—Edna Canfield, 11 years old; Olive Kraus, 11; Marian Mulkey, 9; Mary Plummer, 11; May Plummer, 11.

WEDNESDAY, April 12—Freda Chace, 11 years old; Ruth Kimpel, 9.

LETTERS WELCOMED BY AUNT NELLIE.

Among recent letters received by Aunt Nellie are those from cousins whose names follow. A few of these will be published each week in the regular edition of THE FARMER, and others will appear from time to time in The Junior Farmer:

BEDTIME STORIES

By THORNTON W. BURGESS.

Copyright, 1919, T. W. B.

GRANDFATHER FROG FALLS ASLEEP.

Grandfather Frog, sitting on his big, green lily pad, was feeling very good, very good, indeed. He couldn't remember when he had felt better. You know, there is nothing like a full stomach to make one feel good, and Grandfather Frog's stomach was full. You see, the Merry Little Breezes of Old Mother West Wind had danced over to the Smiling Pool very early that morning, and they had blown foolish green flies over to Grandfather Frog so fast that he would hardly get one tucked out of sight inside his white and yellow waistcoat before another would be right in front of his nose.

So Grandfather Frog had eaten foolish green flies until he just couldn't find room for another one. Indeed, the legs of the last one were still sticking out of one corner of his great mouth when the Merry Little Breezes bade him goodby and raced away across the Green Meadows to do a good turn for somebody else. He had not forgotten to thank them. Of course not. Grandfather Frog never forgets to be polite, for he is very old and very wise, and long ago he learned that good manners cost nothing, while at the same time they make a great many friends.

Grandfather Frog, sitting on his big green lily pad, was feeling very good.

Mr. Redwing sat on the very top of the tallest bulrush and sang the sweetest songs to Mrs. Redwing sitting on four wonderful eggs in the nest which they had so carefully hidden in a great clump of cattails. Grandfather Frog sat listening, his hands folded across the white and yellow waistcoat. He is very fond of Mr. Redwing's song and never tires of it.

"Tra-la-la-la-lee! Tra-la-la-la-lee!
Never was there any one happier than me!
My mate is on the nest,
And you can guess the rest—
Just why it is I sing all day this little song to thee,
Tra-la-la-la-lee! Tra-la-la-la-lee!"

So sang Mr. Redwing, and it seemed as if he would split his throat in his efforts to pour out his happiness. Grandfather Frog nodded his head in approval. He is a great believer in happiness, is Grandfather Frog. Presently, as he listened, he began to dream of the days when the world was young. It was a very pleasant dream. He still nodded his head, but he didn't know it. Jolly, round, red Mr. Sun, looking down, smiled and poured his warmest rays on Grandfather Frog's broad back. His eyes closed, opened again, closed, and stayed closed. Grandfather Frog was asleep.

Now, some one else had been watching Grandfather Frog and had chuckled to himself as he watched him nod and nod. When he saw that Grandfather Frog was really asleep he crept out of his hiding place on the edge of the Smiling Pool and he was grinning broadly. It was Billy Mink.

"Grandfather Frog may be wise, as everybody says, but even the wise are foolish sometimes," said Billy to himself. "Now, Grandfather Frog ought to know better than to go to sleep right out in plain sight. Yes, sir, he certainly ought to. He is very fond of giving advice to other people and teaching them lessons, and now I think it is my duty to teach him one. I really do."

Billy Mink's eyes twinkled with mischief as he started off to hunt up Little Joe Otter. The truth is, Billy Mink hadn't forgotten how Grandfather Frog had once made him the laughing stock of all the little people of the Smiling Pool and the Green Meadows, and now he saw a chance to get even.

Haying Time Cut in Half

Save time, labor and money by putting up this year's hay crop easily and quickly with

The "Jayhawk"
Stacker and Sweep Rakes

"Two boys and myself can put up more hay with the Jayhawk Stacker than 40 Mexicans," says A. Barter, Mercedes, Texas.

Light—easy to operate—a boy can run it. No ropes or pulleys—entirely automatic. Wood or steel. Elevates full load of sweep rake 20 to 25 feet and puts it exactly where wanted. Saves hay, teams and days. Prevents loss of crop after cutting.

Largest and Best for Over 50 Years

Cabbage Seed

Million Dollars' Worth Produced in Skagit County

By ALFRED CHRISTIANSON.

A large part of the cabbage seed of the United States is grown in Skagit county. The industry has produced returns that have reached the million-dollar mark and the quality of seed is preferred to that shipped from Europe, as was done during the war.

There are now more than 1,250,000 pounds of beet seed being produced in the Puget sound district. The eastern seed houses are recognizing western-grown seed as being free from diseases that are prevalent in other parts of the United States.

To obtain good seed it is essential to select the most desired type. Good breeding must then follow, as is the case with poultry or live stock, if the high producing qualities are to be perpetuated. Chance breeding has no place in seed production. The grower must also work for a seed with high vitality and one that is best suited to the local climatic conditions.

A test with purebred oat seed that was carried on under my supervision produced 42 bushels more to the acre than the other plot which was classed as "ordinary" seed.

There is an opportunity for a greater profit in the seed industry than in almost any other branch of agriculture because of the smaller acreage needed, which requires less labor and equipment, although the best of land is necessary.

The Gaunt Gray Wolf

(Continued from page twenty.)

to the northward near other lakes four other tilts were erected, at convenient distances apart, for Ed's use.

These tilts were all constructed upon the same general plan. They were on an average about eight by ten feet in size, with a slightly sloping roof so low in the rear Bob could scarcely stand erect.

The chinks between the logs were filled with caribou moss. The roof logs were covered with boughs, over which was spread first a blanket of moss and then a coating of six inches of earth. Each was provided with a doorway about four feet in height and two and a half feet wide, which was fitted with a door constructed of lashed saplings covered with bark.

Within, a platform of flat stones was arranged to accommodate the sheet-iron stove, with a stove-pipe hole through the roof directly over it.

Long, springy saplings were utilized in erecting bunks at the rear and along the side of the tilt opposite the stove. These were later to be covered with spruce boughs, and would serve both as beds and seats, and were elevated some 18 inches above the earth floor.

"They'll be warn an' snug," said Bob. "When frosty weather an' winter comes th' snow soon banks un up an' covers un up, roof and all, and makes un good an' tight."

"But how do you get air enough to breathe?" asked Shad.

"Th' stove-pipe hole is made plenty big," explained Bob, "an' that lets th' bad air out, an' we mostly has a snow tunnel leadin' t' th' door so th' wind won't strike in, an' leavin' th' door off, th' good air comes in."

Nearly four weeks had been consumed in this work, and without waiting for the reappearance of their friends they began at once the distribution of supplies among the tilts, for September was nearly spent and winter would be upon them by mid-October, when ice in the lakes would render the canoe useless.

Therefore, with all haste they proceeded with their first canoeload of provisions to the farthest tilt, built upon the shores of the lake expansion above the falls.

It was mid-forenoon of a beautiful, transparent September day when they reached the tilt. The supplies were quickly stowed beneath the bunks, the tent stove erected, and, halting only long enough to make tea, they launched their canoe for the return.

"We'll be makin' th' river tilt before we sleeps," said Bob. "The's a moon, an' we'll finish by moonlight, an' to morrow we'll be gettin' out with th' next load If we travels fast we can make th' river tilt before midnight, whatever!"

The portage trail left the river at a point some 10 miles below the tilt, and as previously stated, at the lower end of the lake, where the current began to gather strength for its final tumultuous rush toward the falls.

They had paddled the distance in two hours, and were congratulating themselves upon their good progress as they turned the canoe toward the portage landing, when suddenly they were startled by a burst of wild, blood-curdling whoops, and a half-dozen strange Indians, guns leveled, rose upon the shore.

"Mingens!" exclaimed Bob.

A warning in the Indian tongue was shouted at them that they must not attempt to land. A shot was fired over their heads to emphasize the fact that the savages were in earnest, and with no alternative, and taken wholly by surprise, Shad at the steerman's paddle astern, swung the canoe out into the stream, still continuing down the river.

"Upstream! Upstream! Turn about!" shouted Bob.

In the excitement and confusion that followed the first few moments after the attack, much valuable time had been lost in ineffectual maneuvers, and when the canoe was finally turned about they were far out into the stream, and it was found that the insidious current had caught them. Bob was the first to recognize the danger, and in a sharp, tense voice he commanded:

"Quick! Work for your life! If th' rapid gets us, 'twill carry us over th' falls!"

Then they paddled—paddled as none had ever paddled before. But already the powerful current had them in its grip. Slowly—slowly—but with increasing speed they were drifting toward the awful cataract.

They would have braved the Indians now, and attempted a landing, but from a point directly below the portage trail and extending to the white water of the heavy rapids the river bank rose in a perpendicular rampart of smooth-scoured rock, a full 10 feet in height, offering no possible foothold.

For a little while they hoped, as they worked like madmen. Then the full import of their position dawned upon them—that they were hopelessly drifting toward the brink of the awful cataract.

Beads of cold perspiration broke out upon their foreheads. A sickening numbness came into their hearts, and as in a dream they heard the derisive, exultant yells of the savages upon the shore.

ENTIRE FAMILY ENJOYS THE WASHINGTON FARMER

The Washington Farmer is welcomed by the wives and daughters, the young men and boys on the farm just as it is by the farmer himself.

It keeps the entire circle of readers informed about the farm life of our own state, acquaints them with outstanding personalities, and keeps them posted on the problems and events the world over. The interests of the boys and girls are given plenty of space. The "family circle" with its constant interchange of experiences, ideas, opinions, and methods makes a strong appeal to the housewife. The stories, illustrations and special features appeal to all.

It follows that the expenditure of $1 for a five-year subscription is an investment in entertainment and instruction for the entire family.

The subscription price is low on account of our cooperative subscription plan. Instead of employing agents to go from farm to farm to solicit orders, we ask our readers to send in their own orders at least 60 days in advance of the expiration date on the wrapper of your paper, and to include the orders of friends and neighbors with your own.

You get the benefit of the money saved by this economical plan. In an effort to make 1922 even more successful for cooperation than the past years have been we kindly ask that each and all of you do your part.

Subscription Rtaes of The Washington Farmer:

$1.00 for Five Years 25 Cents for 1 Year. 50 Cents for 3 Years.

In Canada add 1 cent a copy for extra postage.

April 6, 1922.

News for Breeders

(Continued from page two.)

milk in the 10 months' division. She displaces Bess Johanna Ormsby, a Delaware cow which had a record of 21,380.5 pounds. By the same token she becomes Washington state champion for milk, displacing De Kol Butter Boy Belle 3d, which made a record of 21,567.4 pounds in the herd of A. E. Smith of Sumas.

HAS FIVE A. R. DAUGHTERS.

Duenota, a Guernsey cow, now 17 years old, owned by H. B. Douglas of Ferndale, Washington, is entitled to be classed as one of the greatest brood cows—dam of A. R. daughters in America. Duenota has five A. R. daughters and the sixth is on test. There are just 23 Guernsey cows in the United States having five A. R. daughters and one with six. Of these, Duenota stands in sixth place for average production of her daughters.

G. T. MOROCCO DUCHESS.

G. T. Morocco Duchess, 374381, is the new title holder of the junior 4-year-old Jersey championship of Washington. She started test at 4 years 4 months of age and produced 16,123 pounds of milk, 813.10 pounds of butterfat. During this test she was milked three times per day, and milked as high as 60 pounds in one day. The first day of her test she milked 31.6 pounds, while on her last day 33.5 pounds. She has a previous record at 3 years 2 months of age of 12,549 pounds of milk and 698.28 pounds of butterfat. On this record she won an A. J. C. C. silver medal.

G. T. Morocco Duchess is owned by Waikiki farm, Spokane, Wash., of which J. P. Graves is the owner.

PLAN ANNUAL HOLSTEIN SALE.

The Whatcom County Holstein Breeders' association is contemplating putting on annual sales of purebred cattle. The first one will be held in April at the county fair at Lynden, where 75 or 80 head of animals will go under the hammer. The sale will be made up of consignments from such herds as P. P. Lee's, H. J. Evans' Piet Bergma's, the Milky Way farm and others who are well known to the black and white breeders. Plans are not as yet complete and the sales committee hopes to get other consigners. E. J. Tyrrell is secretary of the sale.

SELL GUERNSEYS APRIL 18.

A shipment of 27 head of Guernsey females from Wisconsin was made by the Wallace & Fordyce farm of Sunnyside early in February. The present plans are to hold an auction sale on April 18, which will include these animals as well as five females and one bull which have been consigned by Yakima valley breeders. The sale will be held on the Fawndale farm, the home of the Wallace & Fordyce herd of Guernseys.

Bee Keepers

Annual Meeting at Puyallup

With its object firmly in mind, namely, "the promotion of progressive apiculture," members of the Peninsular Beekeepers' association held their annual meeting and election of officers at Puyallup recently.

The meeting did not take place until after the customary chicken dinner, which was brought by the ladies and served in genuine family style to all members and visitors attending.

The election of officers resulted in the reelection of W. L. Cox of Elma as president, while Frank A. Ross of Puyallup was chosen as vice president. Miss S. A. Sater of Potlatch was reelected secretary-treasurer, with Mrs. Earl Spargo appointed to act as assistant secretary in the absence of Miss Sater, who is now visiting relatives in the middle west.

An entertainment committee was appointed to look after getting Dr. E. F. Phillips of Washington, D. C., and George Demuth of Ohio, to visit prominent apiaries of the state when they are in the territory this summer.

The association went on record as favoring a donation to the Dr. Miller memorial fund and requested other beekeepers to make similar donations in order to show their respect for one who has done much to promote the welfare of the industry.

In order to learn more about the necessary steps to be taken in getting an established brand for their product, the association asked R. P. Milne of the Botsford-Constantine company to give them a talk on the benefits of a trademark.

"Any trademark should be well advertised," said Mr. Milne, "in order that the consumers may know the value of the product in its relation to the home. If Washington honey can be sold under such a trademark as Tillamook cheese is sold on the market today the producers would have a better opportunity to tell the housewife just why honey should be used in the household. There are few women, aside from the beekeepers themselves, who know that honey is one of our most delicate sweets and that it has a distinct value in the canning and preserving of fruits.

"Any brand of goods should represent the growers who are raising the product and the brand of honey should represent the producers the same as if they were members of a manufacturing plant. The brand should be properly advertised and sold through the proper agencies in order to secure the greatest returns. There are many points to take into consideration, but the first in importance is to establish a good trademark and register it, then place it before the people."

By a vote of the members present it was decided to secure further details of such an undertaking and mail a copy to each member in order that they might decide as to the advisability of establishing a uniform trade name for honey produced by members of the association and invite the cooperation of all honey producers of the state.

A Douglas County Pioneer

"How wonderful the change has been!" writes J. W. Bonwell of Kiona, who says that he has lived in Douglas county since 1884. "Everything was in a wild state then," he says. The little picture herewith shows Mr. Bonwell with an armload of Netted Gem potatoes that he grew on his farm at the foot of Badger mountain. They grow large and yield well in the soil of that section, he reports, and those in his arm indicate the correctness of the first statement, at least. Mr. Bonwell has a farm of 1600 acres, on which he grows wheat, potatoes, vegetables, fruit, corn, hogs and cattle.

Eradicating Predatory Animals

Government hunters have been getting some good results eradicating predatory animals in many counties of the state. Twenty-two of these hunters have been working through the winter months and have bagged 1170 coyotes, one cougar, 66 bobcats and 10 stock-killing bears since last July, according to Dr. Glenn R. Bach, predatory animal inspector of the bureau of biological survey.

"All hunters have been working on a salary basis and are required to turn in all skins of animals killed," said Dr. Bach "These are sold and the proceeds turned over to the treasury department of the United States. In other cases, however, the proceeds have been turned to the state treasury when the men are employed by the state. In some counties the men are employed by the county game clubs in order to prevent the game birds from being destroyed by coyotes and other predatory animals. It has been estimated that this work is costing approximately $2 each for coyotes. When a man is sent into a district he is required to stay until he has cleaned it up. Government-paid hunters have given better results in rabies-infested counties, since bounty hunters will not work, due to the scarcity of animals."

Dr. Bach stated that there are other counties that are calling for assistance, but that the funds were inadequate.

AND THE PROFIT IS GREATER.

It doesn't take any more to feed a registered hog than it does a scrub.

Lolo Pass Road

Congressman John W. Summers telegraphs that he has assurances of $350,000 being made available for the Lolo Pass road this year. The total cost of this road is estimated at $1,000,000. The road will give a choice of routes west from Missoula, Mont., by way of Wallace and Spokane, or by way of Lewiston and Walla Walla, making trips to the Coast. It will shorten the road to Portland from the east by more than 150 miles.

Seed Potatoes Wanted

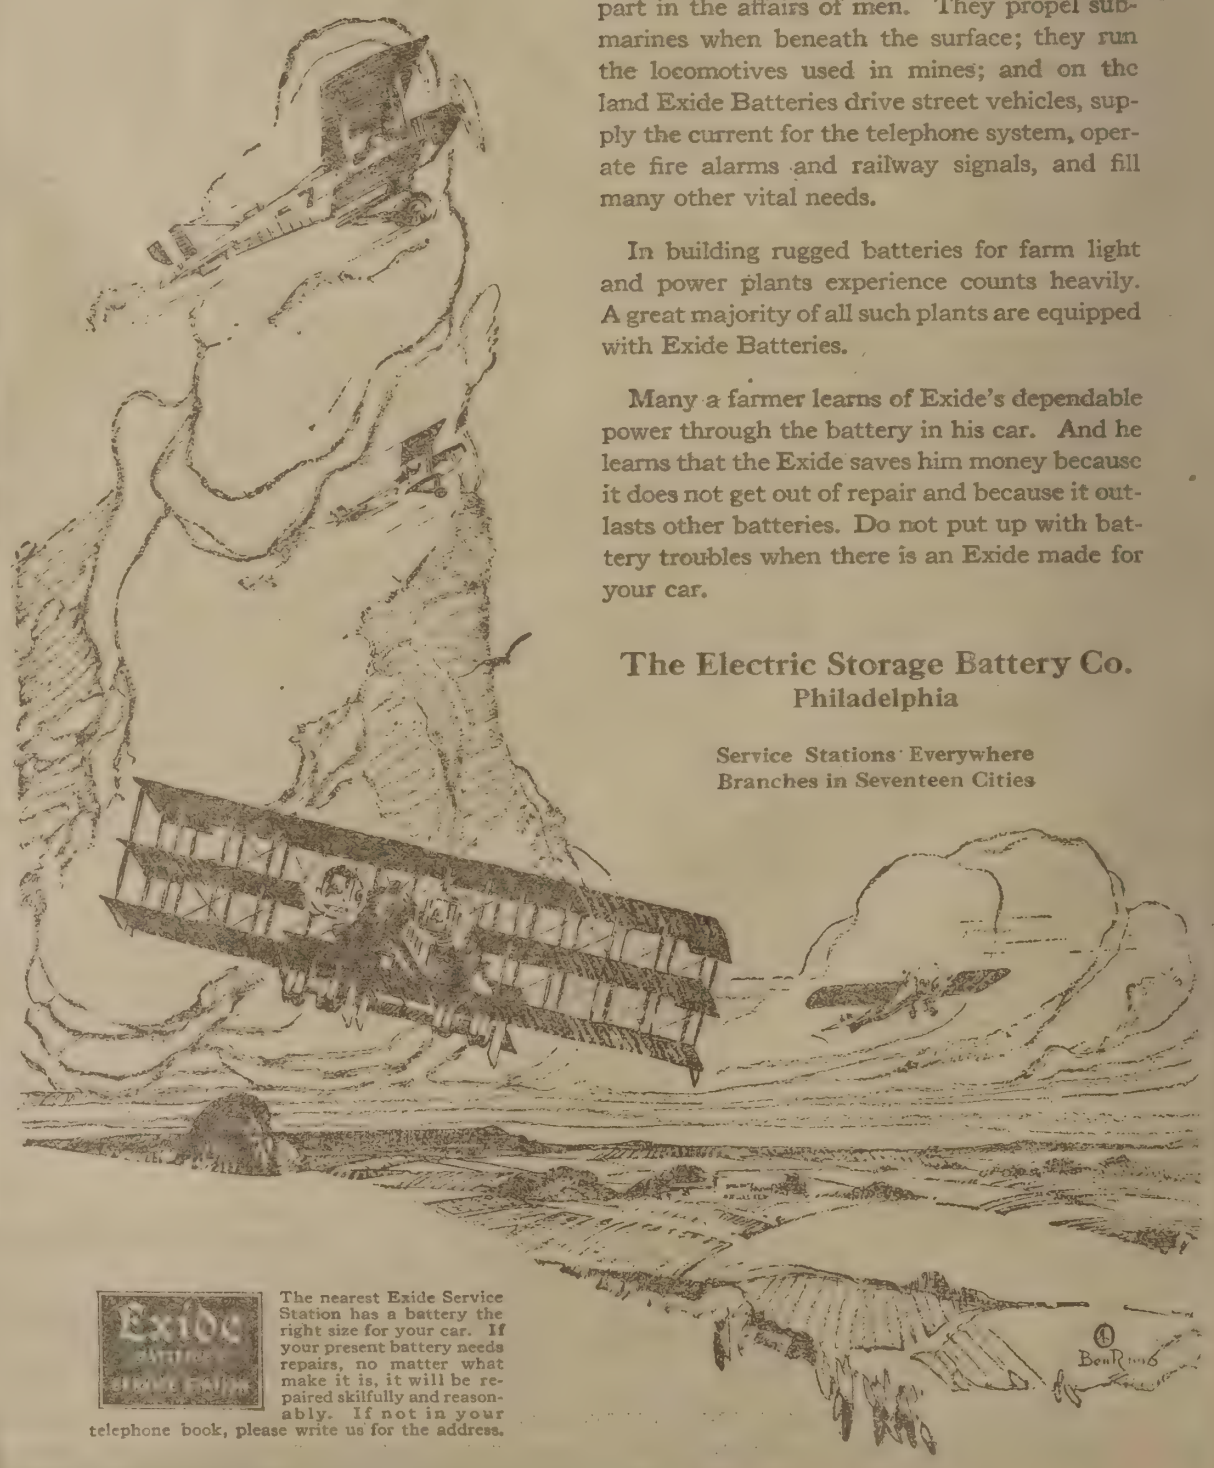
Exide
BATTERIES



The impulse to fly

The propeller revolves and, like a liberated bird, an airplane soars into space. The spark of ignition comes from an Exide Battery used in so many of our airplanes.

Not only in the air, but on land and sea and under the sea, Exide Batteries play an active part in the affairs of men. They propel submarines when beneath the surface; they run the locomotives used in mines; and on the land Exide Batteries drive street vehicles, supply the current for the telephone system, operate fire alarms and railway signals, and fill many other vital needs.

In building rugged batteries for farm light and power plants experience counts heavily. A great majority of all such plants are equipped with Exide Batteries.

Many a farmer learns of Exide's dependable power through the battery in his car. And he learns that the Exide saves him money because it does not get out of repair and because it outlasts other batteries. Do not put up with battery troubles when there is an Exide made for your car.

For Good Farming, Attractive Country Homes and Happy Country People

Real Job of Home Making in the Open

Tiny Farmsteads Are Being Carved Out of the Timbered Lands of Western Washington

By LOU E. WENHAM

It was the writer's privilege a few months ago to journey west of the Cascade range from the southern border well up toward the Canadian line. On every hand, in sections where development had not already taken place, were evidences of the return of the people to the land, or rather a desire on their part to build new homes. Dotted here and there along the road were the tiny "shacks" of the new settlers. Sometimes they were meager indeed, but nevertheless a home in its fullest term. These tiny farmsteads are being carved out of the timbered lands, many times on clearings scarcely larger than the house itself. Ninety times out of a hundred, new as these home are, there is a flock of White Leghorns skirmishing about the place, and more often than not a Holstein cow is to be sighted within a short distance of the home.

But the writer's more intimate knowledge is of a section in King county rightly named the Evergreen valley. This little valley is 30 miles southeast of Seattle, seven miles in the same direction from Kent and eight and one-half miles northeast of the thriving little city of Auburn. The Seattle-Spokane line of the Northern Pacific passes through this valley. The locality is served by a rural mail route operating out of Kent.

CAPITAL FROM NOTHING TO FEW HUNDRED DOLLARS.

This part of the country was logged off some 20 or 30 years ago. During the time intervening little has been done toward settling up the land. Farmers began from the city limits of Kent and have gradually worked eastward until all of the hill lands between the town and the valley have been transformed from stump patches into thriving dairy and poultry ranches. Many of these homes were established by the men who logged off the land. Their capital ranged from nothing up to a few hundred dollars. Despite these handicaps, they have lived to see their section thriving and prosperous.

Two years ago a land company, which held certain water rights on a beautiful stream in the Evergreen valley, secured a body of land and opened a portion as an irrigated district. This is being exploited as especially adapted to the production of loganberries. Not only has a considerable portion of the company's lands been sold and settled, but a great deal of that adjoining which was held by individuals has been in great demand and dozens of prospective home makers have bought tracts and started homes.

In one year's time it is estimated that 180 families located within a radius of two or three miles of Covington, the railway station for this valley. Now instead of all the trains whistling majestically through this station as of yore, all but four limited trains stop for pasengers, and it is indeed a dull day when there are not from three to a dozen people taken on or discharged from each train.

In the last year as a result of the increased number of settlers in this locality a townsite has been platted a mile south of Covington and christened Berrydale. Here are located a small saw and planing mill, a store and a postoffice.

The great majority of the settlers in the Evergreen valley and immediate vicinity are people of small means. Coming, as they do, into the land with barely enough money with which to build a temporary house and a few outbuildings, it is soon necessary for the head of the family to seek employment, either in the near-by mills, as a wood cutter or go to one of the larger towns or cities. For this reason the development of the section is necessarily slow. So slow, indeed, is this that occasionally one of these home makers will abandon the effort and seek employment elsewhere. However, these cases are rare, and in the struggle to build a home under these trying circumstances that the owner may be his own employer and possess independence real heroism is brought to the surface.

WOMEN OF SECTION PLAY IMPORTANT PART.

Not only are heroes developed, but heroines as well, for the women of this section play an important part in the development of the home, as they have in every pioneer movement from the beginning of all time.

These women wield a hammer on the new buildings, pick up and burn brush in the clearings, pick up rock, follow the horse on the plow and harrow in a few instances and assist in all outdoor work within their strength.

The writer has in mind one young woman who left her husband in South America to fulfill his mission there, bringing her 3-month-old baby and coming to the Evergreen valley to start a home. She bought the land, erected the house with some assistance, and by the time the husband was enabled to rejoin his little family the home was an assured fact.

Another plucky little lady carries on the outdoor work while her husband is employed in town. In addition to this and to the care of her baby she finds time to manufacture leather art goods for a city wholesale house.

The employment followed by the men in their efforts to provide cash for development expenses is varied. On the rim of the valley are two men (partners) who are laboring to make a home. In the summer they leave the place to take positions as government forest rangers. In the fall they return and spend the winter grubbing out an alder bottom. Their ultimate goal is a cleared space sufficiently large to raise White Leghorn chickens and Airedale dogs on a commercial scale.

Another man is a plumber, employed in the city and home only over Sunday. But his wife seems to have the work well in hand, for not long ago she proudly boasted that she had removed seven stumps that week—an average of one a day.

ADDS TO THE FAMILY INCOME BY HUNTING.

Another home builder adds to the family income by hunting. In the autumn season he makes for the mountains and very frequently brings home a Ford load of coyotes, with now and then a bear.

Still another is a brick layer, away from home all week. Among others who seek employment away from home are a carpenter, a real estate salesman, a printer and a principal of a rural high school.

In another instance a man and his wife, both expert fruit workers, leave their home during the summer months to work in the fruit houses in the Snake river valley, at Yakima and Wenachee. He is a superintendent and she an expert packer, thus commanding the best of wages. The development of their home tract is more rapid because of their highly paid work.

A remarkable instance is that of an old gentleman 72 years of age. He settled on a small tract two years ago. The first year he worked on the railway section, but despite this has cleared a good sized tract with the aid of a hand stump puller and has erected several well-built outbuildings. He keeps the "home pot boiling" by caring for a loganberry field near by, owned by a young woman who is employed in a Seattle railway office, who plans to move onto her tract next season.

Directly opposite to the before mentioned instances is that of a woman being the bread winner while hubby stays on the home place and wrestles with the many problems. She is a barber and works in town, arriving home Saturday night of each week.

Then there are cases where the home maker cuts wood, not only from his own place, but from adjoining lands. This is frequently shipped to the Yakima valley and traded to farmers of that section for alfalfa hay, apples or potatoes. These products are then peddled out to the recipient's neighbors, the hay being sold in from one bale to 10-ton lots.

The shipping of Christmas trees during the early part of December of each year provides money for Christmas shopping to not a few of the residents of the valley.

Women assist in outdoor work.

Each year buyers from various localities enter the field and pay on an average of 10 cents for evergreen trees, delivered at the car. These trees are shipped as far east as Council Bluffs, Iowa, and as far south as Los Angeles, Cal. As a car holds on an average of 5000 trees it may be seen that, when from five to eight cars are shipped each season, no inconsiderable sum of money is distributed about the community at that season of the year.

The goal of each and every one of these home makers is a patch of raspberries and loganberries, a few strawerries, a flock of White Leghorn hens and a cow. That on from 5 to 10 acres of land means freedom from the necessity of seeking employment away from home and provides an income for the average sized family.

That the district is admirably adapted to berry growing has been thoroughly demonstrated. Irrigation for the West Side may seem unnecessary, but it has been demonstrated that the application of water to ripening berries has been highly profitable. One expert who specializes on loganberries proclaims that as high as 34 tons per acre can be produced with irrigation and gives figures to prove it. But the average berry grower will be well pleased with the addition of a few extra hundred pounds per acre under irrigation, which, added to the four to six tons per acre, as is the average, will make a highly profitable enterprise.

PROBLEM OF GETTING LAND INTO BEARING.

The problem of getting the land into bearing is one that confronts the entire western portion of the state. As already mentioned, many, or better said, the reat majority of the people starting these homes are without adequate means with which to carry on the work. Few have even a horse for the heavy work. More are so cramped financially that they are unable to buy the necessary powder to loosen the stumps. The writer has in mind two men who are clearing a tract in the valley.

Not being able to afford a horse or even a hand stump puller they burrow under each stump and with a jackscrew placed under the roots lift it out. The work is slow and laborious, albeit effective.

The real benefactor of the cut-over sections of the state is yet to appear with a practical solution of the land clearing problem. It has been suggested that either government or state aid be offered the settler to enable him to get his land into bearing quickly. This might be effected by the organization of districts, as in the reclamation of arid lands or in

(Continued on page twenty-two.)

Ranching Near the Snow Line

"Madgeland ranch"—doesn't that have a particularly romantic sound, as though the place were named after the owner's wife, or former sweetheart, or somebody? Yet H. S. Coffin of Yakima, though admitting that he and Mrs. Coffin spent their honeymoon there, and that on a recent visit they found initials (hearts and arrows, too, we'll wager) carved in the tree-trunks years before, denies that there is anything romantic about the name, as far as he is concerned, at least, and says that he bought it with the ranch.

This is somewhat disappointing, but Mr. Coffin fully meets expectations when it comes to pride in the place, as any owner might who has been in the stock business as long as he has. It is one of 250 acres on the very bosom of Mount Adams, in Klickitat county, and 24 miles up the White Salmon river, near Trout lake.

The big barn has stanchions for 50 head of cattle, and there are 65 or 70 cows on the ranch. Water under pressure everywhere about the buildings, and electric lights and power for a multitude of purposes are among the listed advantages of the farm, but truth to tell, the one Mr. Coffin remembers best is that blackcaps, strawberries and huckleberries can be picked there "by the bucketful," and that the fishing—but this is not an outing magazine story. Suffice it to say that it is only 10 or 12 miles to the snow line.

Madgeland is run by Frank S. Cory, one of the delegation of five from the Trout Lake Holstein-Friesian association which attended the Davis-Butchart sale early in February and took back 12 head of purebreds and a large shipment of grades. His own purchase, a 3-year-old, which cost him $375, is a double granddaughter of Mutual Fobes Longfield De Kol, and is due to calve in May by the Bessie bull.

The ranch is devoted largely to the production of alfalfa, timothy and clover and to its consumption by the cows, and the product is sold in the form of cream—a practice which it is the main object of the district Holstein association to encourage.

Madgeland ranch, owned by H. S. Coffin and run by F. S. Cory.

This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of diseases in stock sold through these columns.

Irrigation Has First Right

A hearing of far-reaching importance to agriculture in the Pacific northwest was held by the Columbia river board of engineers at Spokane recently. This board was appointed by the federal power commission at Washington to make a study of the Columbia river and its tributaries above Pasco and recommend to the federal commission a broad scheme for the fullest use of these water resources in the public interest. The board is to consider irrigation, power, navigation and domestic use of water for towns and cities, for the future guidance of the federal power commission, when applicants come before the commission asking for permission under the law to appropriate any part of these waters.

The federal power commission consists of the secretary of war, the secretary of agriculture and the secretary of the interior.

United States representatives on the Columbia river board are: Colonel J. B. Cavanaugh, representing the war department, who is chairman: Fred F. Henshaw, water resources division of the United States geological survey, of Tacoma; and D. C. Henney, United States reclamation service, Portland. Idaho was represented on the board by George B. Archibald, assistant commissioner of reclamation. Washington's representative is Marvin Chase, who appeared for D. A. Scott, director of the state department of conservation and development. C. S. Heidel, state engineer of Montana, represented that state.

At the Spokane hearing Chairman Cavanaugh made the important and gratifying announcement that the board had agreed to recognize the superior claim of irrigation over water power development. That is a sound principle and in accord with the public interest and welfare. Our limitation in the Pacific northwest is irrigable land, not water power. In the three states of Washington, Oregon and Idaho, as reported by the United States geological survey, we have 20,000,000 horse power of undeveloped hydro-electric energy. Washington has 8,647,000 horse power; Oregon, 6,613,000, and Idaho, 5,067,000.

Of developed power Washington has 454,356 horse power; Oregon, 185,215, and Idaho, 224,363. In other words, only 4¼ per cent of our water power is now developed, and at that rate we have undeveloped water power sufficient for a population nearly 25 times greater than is now in this region. We have water power for the next century, and the greater need is for land, for more opportunities for the sons and daughters of our farm families to acquire farms and orchards and make homes for the future.

An Unwarranted Criticism

Recently President Howard of the American Farm Bureau federation and a few other agricultural leaders participated in a meeting of representatives of so-called big business, including a number of railroad men. His attendance at this meeting, it seems, was seized upon by certain enemies of the great organization of which he is head as grounds upon which to attack his integrity and sincerity of purpose.

Commenting upon the unwarranted criticism, a resolution unanimously adopted at the recent annual meeting of the Wisconsin State Farm bureau said that it was "passing strange that an organization which had done something besides talk should be branded by those who merely talk as unfaithful to the farm interests." We are inclined to believe that this statement fairly well sums up the entire situation. The American Farm bureau federation under the leadership of President Howard has been an organization that accomplishes desired purposes rather than one that merely talks about what should be done. As the Wisconsin resolution says, the federation was in considerable degree responsible for recent reductions on freight rates in agricultural products, along with other accomplishments, but it did not secure these betterments by soap box oratory. On the other hand, its representatives, led by President Howard, went directly to the head offices of the railroad companies, to the head offices of the interstate commerce commission and to other sources of power and there presented ably and convincingly the arguments of organized agriculture.

It is no offense for the head of a farm organization to sit in on the conferences of industry. It becomes offensive only when such participation takes the form of connivance with the enemies of agriculture.

The Washington Farmer joins the Wisconsin Farm bureau and the rank and file of farmers throughout the United States in expressing its faith and confidence in the ability and integrity of President Howard and in the worthy purposes that he is endeavoring to serve as head of the American Farm Bureau federation.

Wages and Unemployment

The United States department of agriculture calculates that farm wages in this country fell about 35 per cent in the calendar year 1921. According to the same authority, however, farm wages still stand from 40 per cent to 50 per cent above those prevailing prior to the war.

But if we turn to a recent estimate by Secretary of Commerce Hoover, we find that wages in other lines of industry have not come down proportionately to the fall in farm labor. Mr. Hoover says that workers in the textile industries are receiving 110 per cent more money than they did in 1913; those in the metal trades, 118 per cent more; those in the building industry, 90 per cent more; those in the coal mines, 73 per cent more, and those on the railways 100 per cent more. Wages on the farms more nearly compare with rates of pay in the iron and steel industry, which stand about 50 per cent above pre-war schedules.

On the whole, however, wage-earners on the farm are better off than the wage earners in the great industrial centers, for the latter are largely out of employment, and the high wages that his more fortunate brother is receiving do not help the unemployed worker who is seeking a job and can not find it.

As a matter of fact, the leaders of organized labor are showing more consideration for the men who have jobs than they are manifesting for their members who are out of employment. If other industries had taken their readjustment as promptly as the farmers took theirs, and organized laborers in the industrial centers had accepted those readjustments, we would have been on the high road of prosperity long ago and there would be no unemployment problem in this country today.

State Farm News

Organization of the King County Fair association, capitalized at $50,000, was perfected at a meeting in Tolt March 23, participated in by the commercial clubs of Tolt, Duvall, Stillwater, Snoqualmie, North Bend and Fall City. Cooperation of Seattle through the chamber of commerce was pledged by President Frank Waterhouse, after the chamber's state development and tourist and conventions' bureaus had outlined plans whereby Seattle could give assistance in advertising and promoting the Snoqualmie valley enterprise.

A fair, featuring the agricultural, horticultural and live stock resources of the entire county, but particularly of that section of the Snoqualmie valley between North Bend and Monroe, is to be held at Tolt early in October. Three options on sites for fairgrounds are under consideration.

A 20-acre site will be secured upon which will be constructed a half-mile race track, grandstand, fine arts building, stables and exhibit buildings.

* * *

Boy and girl club members of Yakima consigned six head of purebred Duroc Jersey hogs to the Duroc Jersey association sale at Sunnyside, which was held in March. All of the hogs brought good prices and one topped the sale.

* * *

E. A. Skidmore, county project leader, has been elected president of the new Stevens County Potato Growers' association; John Kruse, secretary; Charles H. Dotts, W. L. Biggar, John H. Kruse, Otto Meyer and E. A. Skidmore, directors, and Dan Knauss, Otto Meyer and John H. Kruse were appointed to prepare a constitution and bylaws.

Every effort will be made by the association to encourage planting pure seed and proper cultivation. Greater care will be taken in grading the potatoes to obtain a proper grade and ready sale.

A committee has been appointed to draw up an organization contract and marketing agreement. The sale of the 1922 crop will be in the hands of the Stevens county farm bureau, through F. A. Savage, its manager. The farm bureau got excellent prices for the potatoes it marketed last year.

* * *

The United States land office at Waterville has over 300,000 acres open for homestead entry within its jurisdiction, according to E. K. Fritts, receiver. He has commenced to check the vacant lands and has already listed 234,085 acres. The occasion for this check was reports that the average was 60,000 and, therefore, below the required limit of the interior department and fear was entertained that the Waterville office might be discontinued.

* * *

The highest producing cranberry bog in Pacific county, that known as the Richardson bog, near Oysterville, this year sustained its reputation of never yielding less than 200 barrels of berries. This is the fifth season of production at that rate. Pacific coast bogs produced over 25,000,000 boxes in 1921, and the season was a profitable one.

* * *

Uncle Tom Fife of Wild Goose prairie, Bumping river, has disposed of 80 acres of his homestead of 150 acres, says a Yakima report. He has decided to retain for himself 50 acres. J. H. Nelson, Oscar Mueller, J. O. Cull and Frank Mullins are buyers in addition to the Copper Mining company and another tract previously sold. Uncle Tom has made arrangements for the construction of an irrigation canal from the Bumping river, which will irrigate his entire tract so that the purchasers will be able, if they so desire, to do gardening at their summer homes. Reuben Root, president of the Copper Mining company, will, as soon as convenient, erect his sawmill on the ground and cut up timber for his own halfway house and for such of the new settlers as will build the coming season. Wild Goose prairie is on its way toward becoming a settled section.

* * *

More than $300 was paid one day recently to the Grays Harbor county auditor by truck owners who were found to be overloading their trucks, in a recent check made here by agents of the state highway department.

* * *

A new electric sawmill will be built immediately in the south end of Kalama by the Oregon-Kalama Lumber company, which was incorporated recently. The company has a capital stock of $500,000. It has leased 2500 feet of water front from the Kalama port commissioners and will erect a 100,000-foot capacity mill as soon as a spur can be put in from the railroad main line, so that material can be delivered.

The Veness brothers own and operate a mill at Winlock, but it is expected that some of the machinery will be moved to Kalama. The new company has purchased a large tract of timber across the river from Kalama in Oregon. The timber will be logged and delivered to the mill at Kalama. It is said a shingle mill will be built later in the summer.

* * *

A potato survey of Grays Harbor county shows that there are 28 varieties being grown extensively there. County Agent Robert Cowan is warning the farmers that if more united efforts to specialize on one or two varieties is not made the potato industry in that county will never amount to very much. Chief among the varieties are Burbank, Pride of Multnomah, Netted Gem and North River Red. Efforts will be made by the farm bureau during the next year to plant either the Burbank or Netted Gem exclusively.

* * *

A graduate of the State College of Washington, Miss Elmina White, has taken the position of assistant state club leader, formerly held by Miss Ruth Cresswell, and will handle girls' cooking, canning and sewing clubs in Washington this year. Miss White has been home demonstration agent in Pierce county since October, 1917, except for six months in 1919, and before that she taught home economics in Everett and Tacoma, besides doing dietary work at St. Luke's hospital for nearly a year.

Coming Events of Interest

April 16—Easter.
April 18—Guernsey Sale, Fawndale Farm
April 21—Grays Harbor county spelling contest.
April 24-29—"Be Kind to Animals" week.
April 26-28—Kittitas county milk, nutrition campaign.
May 4-6—Tulip festival, Bellingham.
May 12—National hospital day.
June 19-24—Boys and girls' club week, Pullman.
June 20-22—Lincoln-Adams pioneer picnic, Keystone.
July 27-28—Whatcom co. Guernsey gallop, Bellingham.

FARM BUSINESS AND MARKETS OUTLOOK

Cattle Market Lacks Trend

The cattle market has shown no definite trend for two weeks. The supply at the seven leading markets has dropped to the lowest level in two months, but the appetite for beef has shrunk likewise and dressed beef prices have been faltering. Receipts have not been as evenly distributed from day to day as in the previous month and a few bad breaks have occurred, damage being repaired shortly after. Besides contraction of the demand for beef, stocker and feeder purchases have fallen off temporarily, leaving more of the receipts to find the packing house outlet.

Less Cattle in Feed Lots

The available evidence points to a decrease of 15 to 20 per cent in the supply of cattle in feed lots compared with a year ago, especially when tonnage is considered. The remaining steers are more strongly held than 60 days back and will not be shipped in freely on declines. Texas still reports a slim prospect for grass beef to arrive during the spring months.

Female cattle are going through their spring depreciation in value and are selling unusually close to the price of medium and good steers. This situation usually lasts till June. There is a broad interest in breeding cattle, which is helping the cow and heifer market materially.

The veal calf market is becoming more stable and is slightly higher than a week ago, with the movement from dairy districts at or very near its zenith. Many light veals are arriving and are selling at extremely low prices.

Stockers and Feeders

Transactions involved in moving steers to Oklahoma and Kansas pastures are gradually getting past the conversation stage and some deals are being closed right along. The price of grass seems to be the chief bone of contention and some pasture owners are buying cattle instead of leasing their grazing areas. How heavy the total movement will be is problematcal and estimates are far apart, although available grass probably will be nearly all used. Advance orders for cars are said to forecast a movement of about 7000 carloads. This is 1500 cars less than last year.

The northwestern range country also is in the market for grazing cattle and one observer estimates that war finance corporation funds will make possible the movement of about 150,000 head in that direction. Without this money such purchases would be small indeed.

In the middle west the movement of stockers and feeders has slowed down slightly since the fat cattle market became steady, but the 12 leading markets are still sending nearly 50,000 head countryward each week and interest appears to be broadening again. Yearlings suitable for grazing through until grass is ready have the preference.

Hog Slump Checked

The slump in hog prices appears to have been checked for the time being at least. The range of fluctuations has been narrow recently and the market is higher than a week ago. The fresh pork market has scored a smart advance.

Hog receipts at the 11 leading markets have been running below the 10-year average, although during March they exceeded arrivals of last year, which indicates that hogs were held back to some extent. This is confirmed by the weights of hogs being marketed, which at Chicago are running about 10 pounds above the 10-year average.

The shipping outlet, which declined from about 90,000 head per week at Chicago to 35,000 head or less and bears chief responsibility for the slump in prices, widens out occasionally, but thus far has shown no marked improvement.

Prices on lard and salted and pickled meats remain too low to make the packing of these products a profitable enterprise, so that fresh meat trade is the only support and the packers are closing their purses whenever more hogs arrive than are needed to supply the latter demand.

Heavy Loss of Spring Pigs

The most important development at the present time bearing on the future of the market is the reported heavy loss of spring pigs. These advices are not unanimous in character, but the great majority indicate that there will be only a small increase in the number of hogs raised compared with a year ago.

Coloradoes Dominate Lamb Market

Colorado lamb feeders practically have the market to themselves at present and are keeping it well under control. Prices have advanced into new high ground and are now highest since July, 1920. Fluctuations are relatively small.

The approach of Easter is creating a special demand for light lambs, so that the discount on weighty offerings is widening. The decline in wool values has narrowed the difference between shorn offerings and those in the fleece. A few spring lambs are arriving from the southeast. They are quoted at a range of $13 to $20 at Chicago and Cincinnati. A few California lambs are scheduled to arrive in April, but they will not come freely until May.

Eastern Farms After Horses

Another heavy run of horses was cleared at Chicago, mostly to dealers catering to the eastern farm trade. Good chunks weighing 1300 to 1600 pounds sold at $125 to $200 per head and a few choice drafters sold for $250 or higher. Wet weather is delaying spring seeding operations and may cause a rush for extra horses later on. It has had the opposite effect on southern buying, however, and prices at St. Louis, the principal gateway for the southern trade, were $10 to $15 lower on both horses and mules. Coal mine labor troubles also were a factor in the mule market.

Wool Prices Quoted Lower

Wool markets are extremely quiet, but there is a small amount of buying, part of it speculative and part of it by mills which are piecing out orders.

The sales made show a decline of 5 to 10 per cent, or 3 to 5 cents per pound from the recent high point.

Foreign markets are mixed. The London auction closed relatively strong, due primarily to British and continental buying, while the last Australian auction was weak. The cloth market is dragging, although some mills have sufficient orders to keep them busy for several months. The strike of cotton mill workers threatens to spread through the woolen mills which are endeavoring to reduce wages. The leading factor in the industry has not yet been affected.

Boston wool prices are quoted as follows:

Wisconsin, Missouri and average New England—Half-blood, 36@37c; 3-8 blood, 35c; quarter blood, 34c.

Scoured basis:

Territory—Fine staple, choice, $1.05@1.10; 1-2 blood combing, 95c@$1; 3-8 blood combing, 75c; quarter blood combing, 62@63c.

Wheat Statistics and Market

The outlook for the wheat market remains strong, although prices have been weak most of the time during the last month. Statistical compilations show a close adjustment between probable supply and probable demand for the rest of the crop year, but this fact is obscured by the presence of ample stocks in commercial channels for which there is only an apathetic demand at the present time. Furthermore, statistical calculations have frequently gone awry during the last year and the grain trade is waiting to see whether they will be discredited again.

A dull flour trade and congestion of Canadian wheat at Fort William and Port Arthur, as well as along railroads leading to those points, have been the principal depressing factors recently. The Canadian situation can hardly be relieved before the opening of navigation, which is expected in about three weeks. The domestic flour trade has an occasional spurt, however, and mills are distributing a fairly large quantity all the time, even when they report that trade is dull. It is estimated, for example, that flour disappearance since July 1 has run 12,000,000 barrels ahead of the corresponding period a year ago and throughout March mills were operating at a higher percentage of capacity than they were last year. In spite of these conditions stocks of flour are believed to be light. It is chiefly by comparison with the best record during the war years that the flour trade can be considered dull.

Europe Buying Little Wheat

Europe is buying a little wheat from North America, chiefly Manitobas, and on a recent day England, France, Germany and Italy all were in the market and Greece is expected to place a large order soon. Clearances from the United States are running around 2,000,000 to 2,500,000 bushels per week, a rate sufficient to absorb more than our estimated surplus before July 1.

World's shipments have fallen off sharply in the last two weeks, due to a decline in clearances from Australia and the Argentine. Argentine has shipped 51,000,000 bushels since January 1, or nearly half of her estimated surplus. In the same period last year she cleared only 18,688,000 bushels. There is still enough wheat in the southern hemisphere to maintain a heavy movement for three months if all of it is to be disposed of in that time. This is not likely to occur, however, and Europe will be obliged to resort to North America for a larger fraction of her supply and will probably do so as soon as lake navigation opens.

With smaller world shipments there has been no difficulty in the last 10 days in absorbing the wheat on arrival at European ports, even though about 40 per cent of the quantity afloat was sent abroad on consignment.

Cash markets for wheat have been laggard recently, especially at Kansas City and St. Louis.

New Wheat Condition Improves

Unofficial reports upon the condition of the winter wheat crop range from 78.7 to 79.6 per cent, compared with 76 per cent on December 1; on April 1 last year it was 91 per cent, and the 10-year average for that date is 84.3 per cent. There has not been enough growing weather over most of the winter wheat area to estimate the probable abandonment with any degree of accuracy, but assuming that it is equal to the average of around 10 per cent, these unofficial reports point to a yield of 550,000,000 to 580,000,000 bushels, compared with an average final yield during the last 10 years of 570,000,000 bushels. Green bugs are reported to be numerous in Oklahoma and unfavorable reports from Kansas deserve attention. With the world outlook indicating that a large quantity of wheat will be needed for export from the United States during the next year, the market will undoubtedly respond promptly to reports upon the progress of the crop.

Corn and Oats

Primary receipts of corn are still decreasing and with three or four exceptions were the lightest last week since early August. Much of this grain is at lake ports waiting for lake traffic to begin. Corn buying is less urgent than a month ago.

The oats market is laboring under a heavy burden of supplies at terminals and lake ports. The demand for oats is disappointing, although in the last two weeks shipments from primary markets have exceeded arrivals. The oats seeding season has been delayed by wet weather and is one or two weeks late in many sections. Apprehension over the crop may give the market support later on.

Cash Grain Markets

The range of cash grain prices for the week ending April 5 was as follows:

CHICAGO—Corn: No. 2 mixed, 55 1-4@57 3-4c; No. 3, 53 3-4@57c; No. 4, 53@55 3-4c; No. 2 yellow, 56@58 1-4c; No. 3, 53 3-4@56 3-4c; No. 4, 53 1-2@55 1-2c; No. 2 white, 57@58 1-4c; No. 3, 54 1-2@57 1-4c; No. 4, 53 1-4@55 1-4c.

Oats—No. 2 white, 37@40 1-2c; No. 3, 35@38 1-2c; No. 4, 33 1-2@36 1-4c.

Rye—98 1-4c@$1.00 3-4.

Barley—54@68c.

Wet Weather Depresses Seed Market

Wet weather in practically all sections of the country has affected the demand for seeds and caused a sharp slump in prices recently, but the market has become steady on a lower level. Red clover especially has been depressed.

Toledo, per bushel—Prime red clover, $14.50; prime alsike, $11.50; prime timothy, $2.95.

Feedstuffs Decline Sharply

Influenced by the weakness in the bran market, wheat feeds have declined sharply in the last two weeks. Hominy feed and linseed meal weakened also. Thus far cottonseed meal and gluten feed prices have held. Feed jobbers are well stocked up in most sections and have been shading prices below those quoted by mills in order to make a clearance. With the arrival of spring feeders and dairymen are buying as little as possible.

Prices per ton (100-pound bags) in carlots—Chicago: Bran, $22; standard middlings, $23; flour middlings, $29; cottonseed meal, 36 per cent, $48; 43 per cent, $52; hominy feed, $20.50; gluten feed, $32.65; old process oil meal, $53; tankage, $60.

Hay Market Higher

Hay markets have advanced slightly in the last week or two, due primarily to light receipts, as the demand is narrow and limited mostly to local buyers. Unseasonable weather is delaying the progress of the new crop in the southwest, but it is probable that lower prices will be seen after another month or two, when pasture becomes generally available.

Prices per ton in carlots—Chicago: No. 1 timothy, $24@26; No. 2, $22@24; No. 3, $17@20; No. 1 light clover mixed, $23@24; No. 1 clover $19@20; No. 1 clover mixed, $20@21.50; alfalfa, $17@28; upland prairie, $17@19; midland prairie, $14@17; rye straw, $16@17; oat and wheat straw, $14@16.

Egg Slump Is Over

The egg market has been fluctuating over a limited range and the slump in prices appears to be practically over. Receipts are increasing rather steadily and are now about 30 per cent larger than two weeks ago. They usually reach high water mark around the middle of April. With prices comparatively stable speculative buying has broadened and the movement into cold storage has expanded rapidly, although holdings at the four leading cities are much less than at this time last year, when the storing season began a week or two earlier. Country dealers in eggs have become bullish on the market and in some cases prices at country points have been above those in the larger cities. A similar situation developed last year at about the time the egg market reached bottom.

Butter Supply Becoming Excessive

Although the demand for butter has expanded recently, the supply has increased rather steadily during the last two weeks and the four leading cities are now receiving much more butter than usual at this season of the year. Buyers are taking less storage butter and are turning to fresh butter, particularly of the medium and undergrades, so that the effect of the liberal supply has been more noticeable on the fancy scores. The supply of cold storage butter is considerably below the average for this season, but it is not as small as it usually becomes before the storing season begins. Ordinarily storage stocks do not begin to increase until the latter part of April or the first part of May. The California market particularly has been weak recently, as the season is earlier in that state than in the middle west, and California butter has been offered for shipment to the east. The decline in prices is of a seasonal character and probably has not yet run its course. The high point in receipts of butter generally arrives in June.

Prices for 92-score fresh butter on April 5 are as follows:

Chicago, 34c; New York, 35c; Boston, 36c; Philadelphia, 36c.

Cheese Market in Distress

The cheese market has been extremely weak recently, due to offerings from producing sections in excess of the needs of the trade. With prices working lower, dealers have been unwilling to buy a bit more than necessary and have been making concessions whenever required to clean up stocks. Daisies, especially, have been abundant and it has not been possible to dispose of all of this style. The market for held cheese, however, is firm and more could be sold than is available. White cheese is scarce and commands a premium of 1-2 to 1 1-2 cents per pound over colored cheese.

Prices for No. 1 American cheese on April 5 were: Chicago: Flats, 17 1-2@18c; twins, 17@17 1-2c; S. daisies, 17@17 1-2c; D. daisies, 16 1-2@17c; longhorns, 18@18 1-2c; square prints 18@18 1-2c.

Potato Shipments Remain Large

The potato market has been slow, dull and slightly lower, with the supply of old potatoes arriving at distributing centers about 50 per cent greater than last year and considerably above the average for this season. New potatoes also are coming forward more rapidly than usual at this time of the year and the acreage in the early and intermediate states is 18 per cent larger than a year ago. Round whites are quoted at $1.50 to $1.65 per 100 pound

Statement on "30-10" Plan

By JOSEPHINE CORLISS PRESTON, State School Superintendent

This department is receiving many inquiries concerning the 30-10 plan for the support of schools. These inquiries seek information of two kinds: First, statistical, and second, the attitude of the department toward the measure.

We have thus far listened to a number of talks in important meetings throughout the state regarding the proposed 30-10 bill.

The presentation to date has been based largely upon the argument that the rich districts should take care of the poor districts—in other words, the necessity of using the wealth of the state of Washington for the benefit of all of the children in the state.

In the different presentations the speakers have failed to recognize the fact that nearly 27 years ago the state of Washington adopted the principle of equalizing the educational opportunity of the child in both city and country by providing that the wealth of the state should be taxed for the education of all of the children in the state.

This principle of state support was adopted in 1895 when the famous "barefoot boy school law" was passed, providing for $6 per census child. In 1899 this was increased to $8 per census child; in 1901 to $10. In 1909 our state aid of $10 per census child was supplemented by a county fund of $10 per census child, thus doubling the income for the support of the public school over and above local or district taxation and giving us the 10-10 plan; thus, for nearly 27 years the state of Washington has adhered by direct taxation to this principle to give equality of educational opportunity.

In the extraordinary session of the legislature held in March, 1920, the state department of education inaugurated a campaign for an increase of the state support from $10 to $20 per census child. We felt justified in the determined stand that we took because of the crisis in education which we were then facing. This increase in state support was secured primarily to provide better salaries for teachers. As superintendent of public instruction I have felt deeply gratefuly to the members of the legislature in the special session assembled in 1920 for the passage of the 20-10 law.

The annual increase under the 20-10 law is approximately $3,750,000.

The state and county fund as provided in the 20-10 law gives the schools approximately $11,000,000 annually over and above the money raised by local district taxes.

The proposed 30-10 bill will mean, according to the best estimate and information of the state department of education another increase of $3,750,000 in state tax annually.

Since the 30-10 measure is being initiated rather then presented through the regular channels of legislative action, we feel that the question of increased state school tax is an issue strictly for the people of the state to decide.

As a state department of education we are prepared to give detailed information as to the collection and distribution of school funds for any county or district under our present law or under the proposed new plan.

We are presenting some statistical tables herewith dealing with the cost of public school education in Washington. The figures are for the school year ended June 30, 1921:

GENERAL FUND.

I. General Control.

1. Clerk or secretary.
2. Election and census.
3. Other expenses.
4. Supervision.

Total, $895,773.

II. Instruction.

1. Teachers' salaries, $15,147,225.
2. Text books.
3. Supplies.
4. Other expenses.

Total, $1,326,211.

III. Operation School Plant.

1. Janitors' employees.
2. Fuel.
3. Water.
4. Light and power.
5. Janitors' expenses.

Total, $2,443,610.

IV. Maintenance School Plant.

1. Repairs buildings; upkeep grounds.
2. Repairs, replacement equipment.
3. Insurance.
4. Other expenses.

Total, $1,330,543.

V. Auxiliary Agencies.

1. Libraries.
2. Promotion of health.
3. Transportation.

Total, $954,765.

VI. Miscellaneous.

1. Rent.
2. Other expenses.

Total, $462,418.

Total current expenses, $22,560,545.

VII. Outlays (Acquisition—Construction).

1. Land.
2. New buildings.
3. Addition to old buildings.
4. Equipment, new buildings, grounds.
5. Equipment, old buildings, grounds.

Total, $1,499,989.

BUILDING FUND (BOND ISSUES.)

1. Land.
2. New buildings.
3. Additions to old buildings.
4. Equipment, new buildings, grounds.
5. Equipment, old buildings, grounds.

Total, $3,187,845.

INTEREST.

1. Warrants, $376,032.
2. Bonds, $928,922.

Total for outlays and interest, $5,992,788.

Total expenditures, $28,553,333.

Pupils in average daily attendance, 230,555.

Current expenses: Cost per pupil in average daily attendance, $97.85.

Total expenditures: Cost per pupil in average daily attendance, $123.85.

The Cover Page

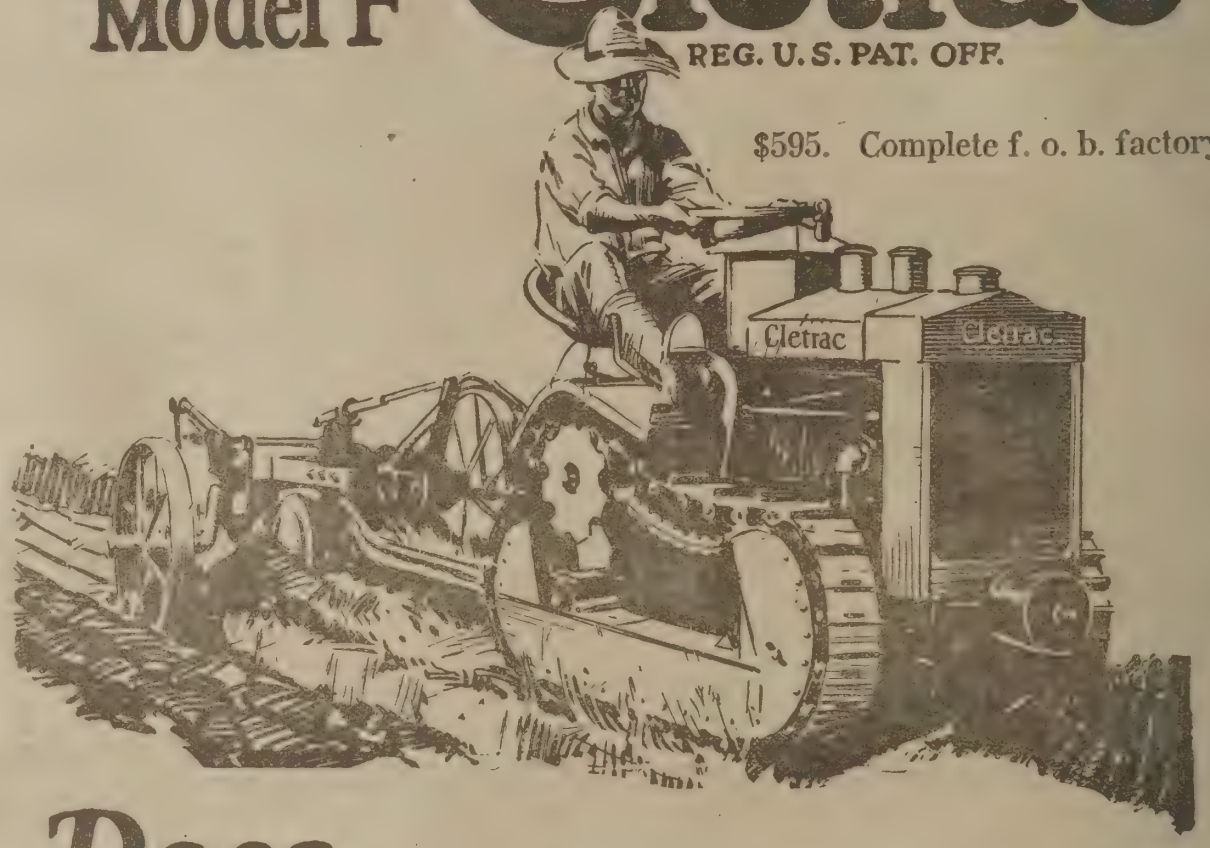
On the cover page of this week's issue is a picture of a pioneer in the horticultural industry of the state of Washington. The old man behind the grape arbor is the late Lambert B. Evans of Stretch Island, Mason county, and the arbor is a part of his original planting of grapes, which were destined to play a great part in the grape-growing industry of the Pacific northwest. Mr. Evans came to Washington 40 years ago, homesteading 160 acres in what is now Mason county. Grapes did so well that he increased his plantings from year to year, giving them careful attention and scientific improvement.

In 1899 Adam Eckert, a tourist on his way to California in search of a climate suitable for commercial grape production, saw the Evans vineyard. He was so impressed that he purchased a part of the place and began there the development of a strain of fruit so distinct that it is today known as a separate variety, the Island Belle.

In an early issue of The Washington Farmer will appear a discussion of the Island Belle grape and grape culture in Washington by Mr. Eckert, the originator of the variety.

Guernseys for Boys and Girls

A carload of purebred Guernsey heifers 12 to 20 months old will be purchased in the middle west for boys and girls of Yakima county Guernsey calf clubs by H. E. Angel, president, and Ray N. West, secretary, of the Yakima Valley Guernsey Breeders' association, who left early in April on the mission. Already 22 boys in the county have made definite arrangements for club membership, and there are enough more who have shown interest to convince County Club Agent E. C. Scott that four standard clubs can be formed



General Goethals' Report

The builder of the Panama canal last week filed the report of his survey of the Columbia basin irrigation project. He finds the proposed plan of watering 1,753,000 acres of land in the great Columbia basin feasible. He is as enthusiastic over the proposed project as are others who have studied it and the remarkable possibilities of creation of wealth that it possesses.

On page 20 of this issue of THE FARMER is a brief summary of his report. A comprehensive report of his findings and of the plans for putting this vast area under irrigation will be contained in next week's issue.

The New Model "F" Cletrac

REG. U. S. PAT. OFF.

$595. Complete f. o. b. factory.

Does All Farm Work

HERE is a tractor so far in advance of any tractor you have seen that it will make you figure power farming all over again.

Until we actually *saw* Cletrac F at work and learned its price, we did not believe it was possible to build a crawler-type tractor with chrome steel for every part subject to severe wear and sell it for so low a price.

Cletrac F is *the* value of the hour. Its power is ample to pull two 12 inch bottoms—to turn under 6 to 8 acres a day. In the same proportion it speeds up all other farm work—discing, seeding, haying, harvesting, hauling, belt work.

Lays its own tracks anywhere and everywhere you want it to go—automatically lubricated—all working parts accessible—handles any job on the farm—and its low price will meet your means today.

Remember this—here is a tractor against which old methods of farming cannot compete. We'll be glad to put it through any test or demonstration—without obligation to you—and stake our reputation on the result.

Will This Improve Our Beef?

Cattalo steaks are a delicacy which may soon find a place on the menu of all first-class hotels and restaurants if experiments which have been carried on for some time in western Canada prove ultimately successful, says Robert J. C. Stead, Canadian department of immigration.

These experiments involve an attempt to produce a new breed of animals by crossing the wild buffalo with the domestic cow. A favorable opportunity was afforded by the 100,000-acre buffalo park at Wainwright, where range cattle were allowed to roam the prairies along with the buffalo. The result produced a certain number of hybrids, but no systematic efforts were made to segregate these hybrids or to develop a mixed type until the late Mosson Boyd, a Canadian cattle breeder with advanced ideas, interested himself and suceeded where so many had failed.

"Half the cattalo herd."

He began his experiments several years ago by crossing a pure buffalo bull from the Canadian government herd upon a variety of domestic cows. Shortly before his death in 1913 Mr. Boyd furnished the parks branch of the Canadian department of the interior with a detailed report of this experiment. The following year, in order to continue the experiments, the Canadian departments of the interior and agriculture bought 20 of these developed hybrids, which Mr. Boyd had named cattaloes, the name by which they are now registered.

The first stage in cross breeding between species is always a difficult one, and it was not until the third or fourth generation that the heavy mortality in calving was reduced. A yak element has been imported with good results, so that there are really three continents as godparents to the cattalo.

So far the looks of the cattalo are against him. He shows up as a rather gloomy and unusual type of bovine, with a bigger head, a distrustful eye and a circumferential shagginess. He has, however, a hide which possesses thickness, color and luster, and this pelt of his, it is said by experts, is worth more than ordinary cattle hides.

So far he has proved to be free from infection and disease. He is equal to facing storms, thriving on poor or indifferent pastures and grazing through snow, so that, like the caribou, he bids fair to flourish in the northern regions and "rustle" for himself through a trying winter.

Moreover, the cattalo cuts up well, for his flesh is a palatable blend of domestic beef and buffalo, and his tissues are rich enough to yield along the back a roast nine inches deep, for the buffalo's hump, which the cattalo inherits, is not fat, as generally supposed, but good edible flesh.

Recently samples of cattalo meat were sent to 25 householders, and the following is a summary of their opinions: Twelve declared in favor of the texture of the cattalo meat as compared with domestic beef, six declared in favor of the palatability of cattalo meat as compared with domestic beef and 16 preferred the cattalo meat to a prime cut of the domestic product. The samples were not from a young cattalo steer, but from a fully matured bull.

If the continued experiments are successful another important source of meat supply may result and a new branch of animal husbandry will have had its birth in the Canadian west.

Cool Shoulders Gradually

To the Editor of The Washington Farmer: I would like to give my experience on how to prevent sore shoulders on horses. I am a firm believer in collar pads, as they hold the collar close to the neck, which prevents the collar from working back and forth and causing irritation. The main thing is to never allow cold air to get under the collar, especially when the horse is warm. I have seen the whole shoulder peel clear from the top of the neck down as far as the collar touched it. That is caused by removing the collar while the horse is warm. My practice has been, since I handled horses, and that is about 40 years, never to remove the harness or the collars from the horses when they come in warm. Wait until they are thoroughly cooled off. If you practice this method you will never have sore shoulders on your horses, provided the collar fits anywhere near right

Bossburg, Wash. P. A. RASMUSSEN.

To Poison Gophers

I would like to know how to get rid of gophers, as they are a great pest on my farm. W. E. P.

Chehalis, Wash.

David E. Lantz, in his bulletin, "Use of Poisons for Destroying Noxious Mammals," issued by the United States department of agriculture, tells of having excellent success in destroying pocket gophers with various baits in the late fall and early winter, and reasonably good results at other seasons. Crystals of strychnine may be inserted into pieces of potato, carrot or sweet potato, or in raisins, and the baits placed in the tunnels several feet from the fresh mounds. If placed in the laterals near the mounds they are likely to be pushed out by the animals in bringing out soil and so not be found. An instrument consisting of a spade handle shod with metal point and having a metal bar for the foot about 15 inches from the point is admirably adapted to making openings into the tunnels into which the baits may be dropped. The holes need not be closed.

With the instrument described it is possible for one man in a day to distribute gopher poison on 30 to 40 acres of badly infested meadow or alfalfa land. A sharp-pointed stick may be substituted for the spade handle, but it can not be operated successfully in any but loose soils.

Corn soaked in strychnine sirup is an excellent bait for pocket gophers. A few kernels are dropped into holes made in runways as described above. The strychnine sirup is prepared as follows:

For one gallon poisoned sirup use four ounces of powdered strychnia sulphate, four ounces of potassium cyanid, four ounces of green coffee, six ounces of alcohol, four eggs (whites only), one-half gallon thick sugar sirup.

To prepare, mix the coffee and whites of eggs and let the mixture stand over night. Dissolve the cyanid of potassium in a little less than a quart of hot water and let it cool before using. Prepare the sugar sirup previously, so that it is not hot when used. Pour the cyanid of potassium solution over the coffee and egg mixture, stir, and then strain into the mixing vessel through a sieve fine enough to hold the coffee, which is rejected. Add the sugar sirup and stir thoroughly. Dissolve the strychnia in a little less than a quart of boiling water. Pour the alcohol into this solution and stir. Then add the mixture of strychnine, alcohol and water to the contents of the mixing vessel and stir thoroughly.

DIRECT STEAMER TO MANCHESTER.

Announcement is made of a direct steamer service to Manchester, England, to be inaugurated with the Howick Hall loading at Portland the latter part of May or early in June. The latter part of the voyage to Manchester is made via the famed Manchester ship canal.

WHEAT EXPORTS MAKE RECORD.

More wheat was exported during last year than in any preceding year of our history, according to an analysis made by the United States department of agriculture. For the first time the export value of wheat and wheat flour exceeded the value of cotton exports.

NOW That Coupon is Worth $2 on a Famous New Butterfly

More than 200,000 New Butterfly Cream Separators Now in Use.

—But You Must Act NOW!

We will accept the coupon below the same as cash for full payment of $2 on any 1922 model New Butterfly Cream Separator. Don't send a single penny in advance. Just fill out the coupon telling us which size machine you want (see list below) and we will ship it for you to try 30 days in your own home. Then you can find out for yourself just how much a New Butterfly Cream Separator will save and make for you. You can see for yourself before you pay a cent how easily this great labor-saving money-making machine will save enough extra cream to meet all the monthly payments before they are due.

In this way you won't feel the cost at all. You will have the Separator to use on your farm and your money in your pocket.

If at the end of 30 days' trial, you are not pleased just send the machine back at our expense. We will pay the freight both ways. You don't risk a single penny.

(9)

Send No Money Just The Coupon Save $2.00

How the COUPON Saves You $2

By ordering direct from this advertisement you save all expense of catalogs, postage, letters and time. And we give you the benefit of this saving if you send the coupon now. Furthermore, isn't it better to have one of these big money-making machines to *use* instead of a catalog to *read?* Wouldn't you like to compare the New Butterfly with other Separators in your neighborhood regardless of price? Wouldn't you like to see just how much more cream you would save if you owned a Separator? We believe you would, so we send you a machine from our factory to try 30 days. Then if you decide you want to keep it the coupon counts the same as a $2 payment. You take that much right off from our factory price on any size Separator you select. For example, if you choose a *$44* machine you have only *$42* left to pay in 12 easy payments of only *$3.50* a mo. If you select the *$50* machine you will have only *$48* left to pay in 12 easy payments of only *$4* a mo.—and so on.

The Coupon Makes First Payment
And the Separator Itself Pays the Rest

You get the benefit of the great saving in time and work while the Separator is paying for itself. After that the profit is all yours, and you own one of the best Separators made—a steady profit producer the year 'round—a machine guaranteed a lifetime against all defects in material and workmanship, and you won't feel the cost at all. If you decide to keep the Separator we send you, you can pay by the month, or you can pay in full at any time and get a discount for cash. The coupon will count as $2 just the same. The important thing to do now is to *send the coupon,* whether you want to buy for cash or on the easy payment plan. We have shipped thousands of New Butterfly Cream Separators direct from our factory to other farmers in your State on this liberal plan.

No Discs to Clean

The New Butterfly is the easiest cleaned of all Cream Separators. It uses no discs—there are only 3 parts inside the bowl, all easy to wash. It is also very light running with bearings continually bathed in oil. Free circular tells all about these and many other improved features.

Pick Out Size You Need

Order from this Advertisement on 30 Days' Trial. Use Coupon

You take no risk whatever. You have 30 days in which to try the New Butterfly we send you before you decide to keep it. Every machine we build carries a written Lifetime Guarantee against defects in material and workmanship.

No. 2½—Machine illustrated at left. Capacity up to 275 lbs. or 125 qts. of milk per hour. Price, $44.00

TERMS: Free $2.00 coupon with order. Balance, $3.50 a month for 12 months.

No. 3½—Machine shown at left. Capacity up to 375 lbs. or 185 qts. of milk per hour. Price, $50.00

TERMS: Free $2.00 coupon with order. Balance $4.00 a month for twelve months.

No. 4—Machine shown here. Capacity up to 425 lbs. or 210 qts. of milk per hour. Price $62.00

Terms: Free $2 coupon with order. Balance $5.00 a month for 12 months.

No. 4½—Machine shown here. Capacity 475 lbs. or 235 qts. of milk per hour. Price $65.60

Terms: Free $2.00 coupon with order. Balance $5.30 a month for 12 months.

No. 5½—Machine shown here. Capacity up to 600 lbs. or 300 qts. of milk per hour. Price, $69.20

Terms: Free $2.00 coupon with order. Balance $5.60 a month for 12 months.

It Is Always Best—

to select a larger machine than you need. Later on you may want to keep more cows. Another thing also, remember, the larger capacity the less time it will take to do the work.

Limitations of Cooperation

Are Producers Cutting Each Other's Throats?

A new kink in dairy warfare is reported from New York. Heretofore the conflicts have been between the producers, on one side, and the distributors or condenseries on the other. Now a big fight is on in the New York territory, with some of the producers and some of the distributors lined up on one side and other producers and other distributors lined up on the other.

This peculiar development is the outgrowth of an ultimatum from the Dairymen's Cooperative association demanding that the large milk distributors in New York line up definitely, either with the association or with the independent producers. This action of the Dairymen's Cooperative association, which takes the place of the old dairymen's league, which ceased to exist on April 1, is expected to be a long war among the 75,000 to 90,000 dairymen in New York and near-by states who serve the metropolitan district.

The old dairymen's league maintained friendly relations with all producers. The new association has decided that it will secure a favored position for its members, and the agreement to be signed by those who purpose to purchase milk from them does this in a direct manner. It contains a clause requiring that milk from association members shall be granted the highest classification and paid for at correspondingly high prices. Milk from independent producers, it is stipulated, shall be classified as of lower grade and shall be used only after all offered by the cooperative association has been absorbed.

There are about 125 distributors in that region, but the big business is done by the Borden company and the Sheffield company. The Borden company has lined up with the Dairymen's Cooperative association, but the Sheffield company and the Empire State Dairy company, third in size, will throw in their lot with the independent producers. The secretary of the conference board of the associated distributors believes that most of its members have gone over to the independent and will buy without reference to the price-fixing instituted by the cooperative association.

While the distributors are divided in their lineup, it seems that they have divided in a friendly way, and it looks as if the real warfare will be between the two classes of producers. When the proposition was put up to the distributors their conference board reported to its 125 members that it could not safely recommend acceptance of the agreement as submitted to it. It pointed out to them that the price clause, according to legal opinion, might bring on serious litigation and make them subject to paying triple damages. The individual distributors were advised to act as they thought best with these facts in view.

Notwithstanding the Borden company is on one side and the Sheffield Farms company on the other, the two have announced a reduction of 1 cent in the price for bottled milk of all grades and corresponding drops in the prices of specialties, such as cream, buttermilk and condensed milk. Other distributors are expected to follow suit.

Here we have another striking illustration of the unfortunate limitations that are put upon cooperative farm organizations by the refusal of so many of the producers to enter into cooperation. In this instance it looks as if 75,000 or 80,000 producers in the New York territory are in danger of cutting each others' throats, and as if the distributors, through their closely-knit conference board, are getting ready to play one side of the producers against the other side and reap the big benefits.

N. W. D.

West Tops Big Sale

Dairymen of the northwest may well be proud of the showing that their Holsteins made at the Brentwood sale in Philadelphia, March 20. There were 32 animals entered from Washington and California was represented by the Bridgeford herd of Patterson. The consignments from the two western states took 75 per cent of the sale money as well as winning first and second prizes in the show which took place the first day.

The largest consignment was sent from the Carnation stock farms of Tolt, Wash., which sent 21 head and their average was higher than any other herd. Carnation Pietertje Colantha, a son of Carnation Pietertje, topped the sale at $5000, while Carnation Sylvia sold for $3575. Carnation Matador Pontiac, a junior 2-year-old daughter of Matador Segis Walker, won the $1000 grand prize of the show and sold for $4200. She was junior champion at the Pacific International Live Stock expositon last fall.

The second highest sale was made by a cow in the Bridgeford herd of California, which sold for $4300. Alec Todd & Sons of Yakima, consigned a 3-year-old, Cascade Pietertje, who sold for $3325 and won first prize of milk producers in the 3-year class. Thomas J. Owens of Kirkland entered two individuals, the new world's record 2-year-old and her dam, Leona Gerben Bracelet, both of which he sold to Fred Field of Brockton, Mass., for $7500. Hollywood farms of Seattle sold three head, one of which was a daughter of Judge Segis, their well-known herd sire. Ralph Tuttle of Walla Walla sent five head to the sale, for which good prices were received.

The sale as a whole averaged $800 per head lower than the event last year and the bidding was said to be less keen. This year marks the third annual sale of the Brentwood Holstein exposition, which was held in the Commercial museum in Philadelphia. The fact that the herds of the northwest can take such a large percentage of the sale prices demonstrates that western dairymen are beginning to rank high in the production of purebred Holsteins.

S. D. GRIFFITH, Ephrata, Wash.—Your paper is a dandy—one of the necessities for a man on a ranch.

Will Sell Guernseys

To aid in meeting the demand for Guernseys in this state A. L. Wallace and Mr. Herron of Sunnyside, Wash., went east in January and purchased 27 head of females and shipped them to the Wallace & Fordyce farm, near Sunnyside, for dispersion. They will be sold at auction at the farm next Tuesday, April 18. In the lot are several granddaughters of Ne Plus Ultra, one of the leading sires of the Guernsey breed. He has 78 registered daughters and 59 sons.

There will also be several daughters in the sale by Lizette's Topsy Boy, a grandson of Yeksa's Tops Gold's Fanny, a cow with a record of 19,794.9 pounds of milk and 981.53 pounds of fat.

In the lot are seven cows 2 years old and over, 10 heifers 12 to 18 months old and 10 calves 3 to 6 months old. Several of the open heifers are being bred to Chicona Lover Bold, the herd sire owned by Wallace & Fordyce. This animal was grand champion at many fairs last year. He is by Langwater Traveler, the senior herd sire at Chicona farm, owned by A. L. Gile.

An important factor in hog raising is the pen.

Farm Engineering Information

Professor L. J. Smith, with whom we have made arrangements to handle agricultural engineering problems for readers of The Washington Farmer, is one of the pioneers in engineering for the farm. In 1906 he organized the department of farm mechanics at the Michigan Agricultural college. After that work was well established he was called to the Manitoba Agricultural college at Winnipeg to develop a similar department for northwestern Canada. For the last two years he has been head of the department of agricultural engineering at the State College of Washington.

Professor Smith.

Professor Smith has written a number of bulletins relating to the mechanical side of farm life. His department is engaged in an investigation of the methods of clearing logged-off lands, one of the greatest problems of the northwest. Under his instigation last spring the state college conducted a statewide competition of plans for better farm homes, the prize plans of which will appear in bulletin form this month. This bulletin will present the best ideas of the farm women of the state of Washington as to what is the ideal farm home for the Pacific northwest.

Almost every issue of The Washington Farmer contains an article of practical interest to readers, or answers to questions on all manner of farm engineering, mechanical and building problems. His writings comprise another of those features that would prove of inestimable value if clipped each week as they appear and pasted into a well-arranged and indexed scrapbook.

This Truck Builds Profits—*and*

Adds to the Pleasure in Farming

TO MAKE large savings in the time and cost of farm hauling, a motor truck must be ready for use right when it is needed. From the first step in design and manufacture, ***International Motor Trucks*** are built with this requirement in mind. They are sturdy and dependable in every part, from the four-cylinder, block-cast engine to the hub caps.

But our interest in your International truck goes still further. When some part needs replacement or adjustment, the unequaled International after-sale service is at your command. You can always depend on your International being ready for work.

There is a size and style for your requirements. Capacities range from the 1,500-pound Speed Truck to the 10,000-pound truck for heavy duty. Body types include grain-tight boxes, hay racks, stock racks, panel delivery bodies and many others.

Ask the International Motor Truck dealer nearest you for complete information, or write us.

Community and County Fairs

Plans Already Being Made in All Parts of the State

Believing that the basic idea of a fair is educational and that it must be made to teach the visitors the type and variety of products to grow in their locality and the market demand for the same, the Washington state college extension service has placed Mrs. Winnie Braden in the field to demonstrate to different communities how to put on a community or county fair.

Mrs. Winnie Braden.

In an interview with a representative of The Washington Farmer Mrs. Braden said she works through the county agents, boys and girls' club leaders, home demonstration agents, farm bureau leaders and heads of the fair departments. Her first trip to each place is for a sort of survey to determine what each county needs and to form committees. She returns later to help the workers plan the program, put on demonstration and give any assistance needed.

Already Mrs. Braden has visited Chehalis, Olympia, Seattle, Everett, Ellensburg, Yakima, Pasco, Kennewick, Walla Walla and Spokane. In many of these places county agents from adjoining counties were present at her meeting.

Lewis county already has planned for community fairs at Randall, Toledo, Mossy Rock and Winlock. Cowlitz county has planned five, at Kelso, Stockport, Kalama, Eufaula, Bunker Hill and a county fair at Woodland September 28, 29 and 30.

The community fair in Thurston county will be largely exhibits of boys and girls' club work and will be held at Spurgeon Creek, Yelm, Tenino, South Bay, Schneider's prairie. A large potato show is also being planned at Olympia. King county is planning to hold community fairs at Tolt, Bothell and Newaukum.

Pierce county is putting most of its effort into a display at the western Washington fair at Puyallup. Mrs. Braden will go to Tacoma later in the season to put on a one-day school for exhibitors and department heads.

Agent W. L. Davis of Kittitas county is puting most of his efforts for fair work into their county fair, as he is able to reach the majority of the people in that way.

Besides several community fairs, Yakima county is planning a potato and corn show, to be held after the state fair. The object of this potato show is to demonstrate to the potato and corn growers the value of properly selected seed. The potato show is to be divided into two distinct classes. One class will be for the displays of local growers, as this community is growing mostly market potatoes. The other department will be for the displays of seed growers, seed associations, etc. The question of selecting seed is a vital one to them because they do not produce their own seed, but purchase it every year from outside points. This year the growers are planting potatoes from tested seed from the different seed-growing localities to determine where they can secure seed which will produce the best results with their soil and climatic conditions.

Pasco, Franklin county, is putting all its efforts toward creating greater interest in the county fair at Connell. Up to this year, Pasco has held an industrial fair of its own. Benton county is also putting its efforts into a good display at the county fair at Prosser.

County Agent N. C. Donaldson of Adams county, contemplates creating more interest in their county fair, and may decide later to have two or three community fairs. Mrs. Braden plans to return to that county June 3, to remain two days.

In Walla Walla county, Agent W. H. Talley, cooperating with the farm bureau leaders in the various communities, is planning to have an agricultural fair in Walla Walla which will be representative of the entire county. Mrs. Braden is to be there May 19, 20 and 21, to assist in planning the general exhibit.

County Club Leader W. J. Green and Agent O. V. Patton of Spokane county are planning to assist at community fairs at Sunset, Deep Creek, Cheney and Latah, as well as having a big display at the Spokane Interstate fair, showing the different projects which have been carried on.

Any community which wants to put on a fair this fall may secure this assistance by writing to the county agent.

Crop Insurance

Eight principles as fundamental to a sound plan for crop insurance are laid down in department bulletin 1043, crop insurance, risks, losses and principles of protection, prepared by V. N. Valgren and recently issued by the United States department of agriculture.

The insurance must cover only such crop damage as will result in serious financial loss to the farmer. This means that only a reasonable amount of insurance an acre must be written. For establishing such reasonable amount the average yield and price for a series of past years is perhaps the best basis. The total loss of crop on one or a few acres out of a hundred is not a serious loss if the acreage as a whole gives average returns or a substantial part of such average.

The insurance must cover any and all hazards which are beyond the farmer's control. Insurance which protects against certain hazards and leaves the insured exposed to total loss from other hazards beyond his control is not real crop insurance.

In no case must the insurance protect against loss from carelessness or negligence on the part of the insured.

The premium, or cost of insurance, must bear a reasonable relationship to the value of the protection that it purchases.

The method of adjusting loss must be such that the insured will receive indemnity for crop damage in the amount or on the basis that he is led to expect from the figures indicating the amount of insurance an acre. The company should not profit by a calamity to the farmer in the form of reduced prices for his product.

An early adjustment should be provided for in case of total failure of an insured crop, or such an approximation to failure that it would not pay to mature and harvest the crop.

All adjustments involving only partial damage should, so far as possible, be left until after the crop has been harvested and put into marketable form so that quantity and grade can be determined.

There must be a certain degree of understanding between the farmer and the company or agency offering the insurance if protection is to be available on truly favorable terms. Crop insurance must be bought on the same principle as fire insurance, merely as a guaranty against serious loss and not with the expectation of securing an idemnity every two or three years.

Copies of the bulletin may be had free upon application to the department at Washington, D. C.

Oleomargarine

Materials Used in Manufacture

According to the report of the commissioner of internal revenue, nearly 342,000,000 pounds of materials were used in the manufacture of oleomargarine in this country during the fiscal year ended June 30, 1921. The manufactured oleomargarine made nearly 315,000,000 pounds, the difference of some 60-odd million pounds manufactured and the amount of material used is chiefly accounted for by the expulsion from the finished oleomargarine of the moisture content of the milk consumed.

It will be noticed in the following table that coconut oil furnished about one-third of all the materials used in the manufacture of oleomargarine. Eighty million pounds of milk, 50,000,000 pounds of oleo oil, 29,000,000 pounds of neutral oil, 19,000,000 pounds of cottonseed oil and 15,000,000 pounds of peanut oil formed the large bulk of the remainder of materials used outside of coconut oil.

Kind of Material.	Amount Pounds.	Kind of Material.	Amount Pounds.
Coconut oil	103,111,916	Butter	1,498,625
Milk	79,715,584	Corn oil.....	921,[illegible]
Oleo oil....	49,675,749	Soy bean oil	461,[illegible]
Neutral oil..	29,261,960	Edible tallow	233,227
Salt	25,365,499	Mst. seed oil	109,748
Cot'nseed oil	18,532,860	Coloring	25,915
Peanut oil..	16,332,498	Miscellaneous	3,216,742
V'gtable oil	6,559,034		
Oleo stearine	4,857,972	Total 314,955,683	
Oleo stock..	2,065,231		

As a side light the United States department of commerce gives the exports of oleomargarine during January, 1922, Canada taking 118,990 pounds; Panama 20,550 pounds; British West Indies, 16,401 pounds; England, 8400 pounds; Jamaica, 7580 pounds; Bermuda, 5270 pounds.

State Fairgrounds

Erection of additional cattle barns with stalls for 300 animals, removal of racing stables to make room for another general entrance on the north side of the grounds, interior alteration of the horticultural building to provide additional exhibit space and reconstruction of the irrigation system are among the improvements which will be made at the state fair grounds at Yakima this season, it is announced by Secretary H. P. Vermilye. Commissioner of Agriculture E. L. French recently visited the grounds and authorized the expenditure of about $10,000.

The Hood Service Man speaks:

SOONER or later the motorist reaches a point where experimentation in tires ceases to be a novelty.

It's like the puppy chasing his tail—fine exercise and lots of fun. But try to get the wise old dog interested—he just remembers it was a lot of work which did not get him anywhere.

A seasoned motorist really appreciates the true value of a good tire—a uniformly good tire. He knows its economy, and its safety and its dependability.

Hood Tires are made for the men who do not want to be obliged to talk or think anything about their tires, excepting, when between long intervals a new tire is needed.

LIVESTOCK AND DAIRY

Feeding Dairy Calf

By A. B. NYSTROM.

How much milk should a dairy calf bet fed and how long fresh milk, also how long skimmed milk? C. F. K.
Odessa, Wash.

The most common method of feeding a dairy calf is to take it away from its mother at once, but give it fresh colostrum milk for four or five days. After that any whole milk fresh from the cow will do. Feed from two to three pounds three times a day for the first week, changing to twice a day feeding the second week. When two weeks old a gradual change of skim milk may be started. The change period should take about a week or 10 days gradually increasing the amount of skim milk and decreasing the amount of whole milk. When four weeks old, the calf may be fed skim milk alone. Do not feed more skim milk than you would whole milk. Be sure that the milk is warm and fed in clean pails.

Some dairymen prefer to give whole milk for the first three or four weeks, claiming that if the calf gets a good start, it is easier to keep it growing on skim milk when the change is made. A good deal of judgment must be used in this connection. If whole milk is cheap, and you are raising a valuable calf, do not be stingy with it. Weak calves should be given whole milk longer than strong ones. Skim milk may be fed five or six months or longer if it is cheap and the animal valuable. Many breeders of purebred dairy cattle feed their calves skim milk up to eight or nine months of age. However, the average dairyman who must make the most out of the milk, usually stops feeding milk to calves at four months of age.

The Pig Creep

By PAUL C. ADAMS.

In articles dealing with the raising of young pigs we frequently come to the statement that "a creep should be made when the pigs are 2 weeks old, so they may eat from a self-feeder away from the sow." This advice has caused more sway-backed hogs for feeders and breeders than any one other suggestion or practice.

The idea of the self-feeder is not the cause of the injury, because the pigs have been on a "self-feeder" since birth and should be given access to a continuous supply of bone and muscle-making feeds, especially skimmed milk. It is the method of making the creep that causes the damage. Nine out of 10 farmers will think of an opening under a fence when they read about the "creep." Any pen separation made in this way causes the young pigs to "hollow out" or sway their backs in going to and from the self-feeder, and this contortion inflicted on young, gristly bones, many times each day during the time their bodies are most susceptible to frame injury, causes a large percentage of the "hand-wide" hollows just back of the shoulders, and the resulting weak backs, so common among mature hogs. "As the twig is bent, etc."

By constructing the opening in the way shown below this hazard is entirely eliminated. The crosses shown represent posts set in the manner of cattle guards often seen at the entrances to country school yards. It is the same idea on a smaller scale.

O O O O O O O
O O O O O O

These posts are either set in the ground, if used outdoors, or are nailed to pieces across a corner of the pen so high the pigs will not notice them. If firmly set they will allow the small pigs to go between the upright posts, but will stop any hog not able to force its body through the first row.

Another cause of deformed backs is the usual V-shaped trough used to feed small pigs. It takes but little longer to construct a frame of 2x4-inch or 2x2-inch stuff as long as desired and 13 or 14 inches wide, and nail a piece of one-inch board 12 or 14 inches wide and the length of the trough on one side. This will make a flat, low trough that will be easy and safe for the youngest pigs to eat from. A few pieces may be nailed across to prevent crowding.

Give the young porker a chance to develop a rainbow back.

VETERINARY

By DR. S. B. NELSON.

Cough—I have a small mare that has a cough when eating or after a hard pull or fast run; had been fed dusty hay before I got her. No other signs of heaves except above. What can be done to relieve her?—P. B., Arlington, Wash.

Give the mare one ounce of Fowler's solution of arsenic on her feed once daily for some time.

Sow Is Weak.—I have a sow 5 months old. Two months ago she would stiffen out and fall over when first starting to eat. She was that way for a month, then she got so she could not get up on her front feet. She has a good appetite and I feed her shorts in slop and soaked wheat. She can hardly stand up now.
Proctor, Mont. V. V. W.

Give the hog two ounces of castor oil, lesson the feed one-half, give sloppy material like bran mash, but take away the grain. If you can get them, give her alfalfa hay and roots. On the second day after you begin this treatment, give her 10 grains of potassium iodide once daily for a few days in her slop.

Inflamed Kidneys.—I butchered an old sow recently that dressed about 300 pounds and seemed in good health, but upon cutting her up I found her kidneys hard and full of hard, white lumps. The liver and heart were all right, but the meat was two different colors, light and dark. Is the meat fit to use? M. L.
Hamilton.

Apparently the sow had a chronic inflammation of the kidneys, which prevented them from performing their full physiological action of eliminating the excretory salts from the body. Without seeing the meat I would be unable to state whether or not it was fit for human consumption.

Warbles.—My cows have numerous warbles or grubs. How do they get on the cows and is there any treatment to kill them? O. L. D.
Troy, Idaho.

Warbles or grubs are the adult larva of the gad fly or ox warble fly. This fly flies the latter part of June, July and early part of August. It deposits its eggs on the hair of the animal generally around the forepart of the animal. The larva gains entrance into the body and there spends the time until the spring months. The best treatment is a preventive treatment of applying an oily substance to the hair during the time that the fly may lay its eggs. This substance might be composed of raw linseed oil and fish oil with a little tar added to them. Some use linseed oil and tar and some fish oil and tar. Now if the warbles that are present are allowed to escape and fall on the ground they will bury themselves and come out another fly to cause trouble next summer. Squeeze them out and destroy them.

Rough Teats.—We have a cow with rough teats. They crack and bleed every time she is milked. What can be done for her? MRS. E. M'K.
Ellensburg, Wash.

Apply a little mercuric oxide ointment to the teats after each milking.

Hair Comes Off.—I have a mare and the hair is coming off of her neck in spots. Will it grow again? G. S. K.
Lowden, Wash.

Yes, the hair will grow out again. You may get very good results by giving the mare one or two treatments of sulphur mixed with petroleum. Mix it to the consistency of a medium soup and apply. You may repeat in five or six days, if necessary.

Sharples
SUCTION-FEED CREAM SEPARATOR

Now Offered at the Lowest Price In Its History

You can now secure this wonderful separator for about one-half the price of two years ago. Any person who milks two cows or more certainly cannot afford to be without a Sharples Separator at this low price.

But "low price" is not the only reason why you should select the SHARPLES.

Consider These Advantages

The NEW SHARPLES SUCTION FEED SEPARATOR skims clean at widely varying speeds; the "Suction Feed" sucks milk into bowl in exact proportion to speed. **No other separator can do this.**

Whatever the speed, the cream will be of even quality—not thin today and thick tomorrow. Other separators vary the density of the cream when the speed is varied.

Call or write for our FREE catalog which gives full information on separators, garden and field seeds, poultry and bee supplies, etc.

The large, low supply-can saves heavy lifting. The simple tubular bowl has only three pieces. There are no discs to wash.

The SHARPLES is ruggedly built for long, hard service, and is fully guaranteed.

Western Canada Offers Health and Wealth

and has brought contentment and happiness to thousands of home seekers and their families who have settled on her FREE homesteads or bought land at attractive prices. They have established their own homes and secured prosperity and independence.
In the great grain-growing sections of the prairie provinces there is still to be had **on easy terms**
Fertile Land at $15 to $30 an Acre
—land similar to that which through many years **has yielded from 20 to 45 bushels of wheat to the acre**—oats, barley and flax also in great abundance, while **raising horses, cattle, sheep and hogs** is equally profitable. Hundreds of farmers in Western Canada have raised crops in a single season worth more than the whole cost of their land. Healthful climate, good neighbors, churches, schools, rural telephone, excellent markets and shipping facilities. The climate and soil offer inducements for almost every branch of agriculture. The advantages for
Dairying, Mixed Farming and Stock Raising
make a tremendous appeal to industrious settlers wishing to improve their circumstances.
For illustrated literature, maps, description of farm opportunities in Manitoba, Saskatchewan, Alberta and British Columbia, reduced railway rates, etc., write

"Inland Seeds Are Quality Seeds"

The Bull Association

The cooperative bull association is designed for a particular purpose, just as a machine is designed to do a particular kind of work, says the United States department of agriculture.

Owning a good dairy bull jointly with a number of your neighbors does not give you the full benefits of a bull association, because you have efficient bull service for about two years only.

A bull association is made up of three or more blocks, all united in an organization which provides at a low cost for the cooperative ownership, use, and exchange of superior bulls, and many other advantages not obtained by members of single independent blocks.

The bull association gives each member bull service for six or more years for his share of the initial cost of one good bull.

All the members together make the rules (the constitution and bylaws) and elect the officers, including a board of directors.

One member from each block is elected director.

The business of the association is handled by the directors. They select and buy bulls, arrange for a man in each block as keeper, provide a safe and satisfactory place for keeping the bull in each block, and are responsible for keeping the bulls in vigorous breeding condition.

All the bulls belong to the association as a whole and not to any separate block. The directors may sell any bull that becomes unsatisfactory and replace him with a satisfactory one.

All bulls must be of the same breed, uniform in type and conformation, and descended from ancestors with average butterfat records of at least 400 pounds a year.

The bull association:

(1) Gives you an exchange of three or more bulls for the first small investment.

(2) Offers an opportunity to try bulls, and retain the best.

(3) Makes the dairy cattle in a community uniform, helps to sell them, and may also assist in buying.

(4) Provides good purebred bulls for the farmer with a small herd, even down to one cow.

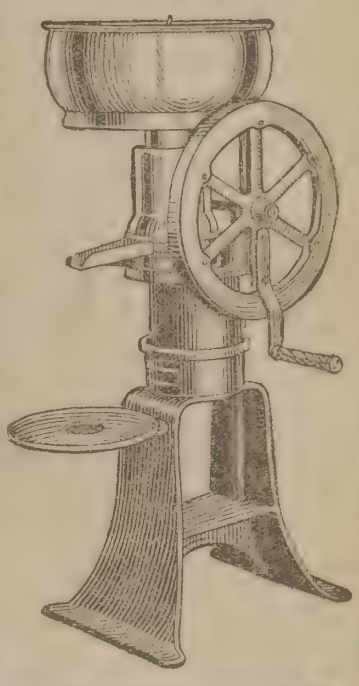
(5) Is useful to all breeders of dairy stock, but most useful to the one with so few cows that he alone can not afford to buy a good bull.

(6) Helps the ambitious dairyman, strengthens his hopes and arouses his enthusiasm.

(7) Permanently establishes in a community one breed of cattle, and a systematic means of continuous dairy herd improvement by making the maximum use of prepotent sires and by reducing losses caused by undesirable bulls.

A bull association does not necessarily contribute to the spread of abortion or tuberculosis.

When you want a bull association, plan a block with your neighbors (or be a whole block by yourself if you have no neighbors); then go to your county agent and arrange for two or more other communities to form blocks. When they become interested call a general meeting and organize. Get your state dairy extension man to be present at this meeting to assist.



Farmers' bulletin 993, published by the United States department of agriculture, Washington, D. C., gives constitution and bylaws and detailed information about organizing cooperative bull associations.

It's the LINK BLADE does it!

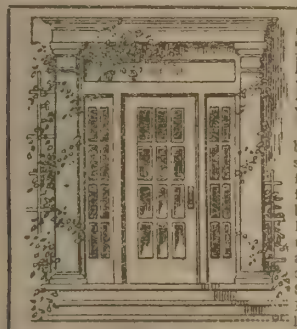
---The Heart of a Separator Is the Bowl!

Whether or not a separator gets all the cream from the milk depends upon its bowls. In the bowl of the Simplex are the link blades accepted throughout the world as the most efficient device for cream separators.

THE NEW SIMPLEX LINK BLADE SEPARATOR

The link blades divide the milk into thin curved sheets. Skimming is facilitated by this arrangement because the currents of cream and skim milk never interfere with each other.

The blades are so assembled that they never come out of their proper position. This means proper balance of the bowl at all times.



The Simplex bowl opens readily for washing and drying. It is strongly made for long service.

10 Days' Free Trial

Try out a Simplex without cost. If you don't find it better than other separators in 10 days, return at our expense. Write today for literature.

KELLY GARDENS **Spokane, Wash.**

Inspection Tour

A considerable number of breeders in western Washington are making a success of Shorthorn cattle. Recently a number of farmers of the Kamilchie community, Mason county, made a tour of inspection to the farms of a number of milking Shorthorn breeders in Thurston, Lewis and Grays Harbor counties. Members of the party were H. E. Drew, county agent of Mason county; L. H. Jacobs, Dave Ellison and Jim Frazer, the latter three being breeders of milking Shorthorns of Kamilchie.

At Centralia other breeders met the party and R. G. Fowler, county agent of Lewis county, took them to the herd of C. E. Truesdale & Son, which is only a short distance from town. This herd is made up entirely of registered milking Shorthorns, including a number of young heifers from the old herd sire. The new herd bull is an animal which has recently been secured from a New York herd.

The visitors next stopped at the Bert Furrer farm, southwest of Chehalis, where a registered milking Shorthorn sire heads a herd of grade cows, all of which are descended from an old cow which is still in the herd.

The Frank Glenn herd of Brady, Grays Harbor county, was the main stop in that county, while on the return trip the visitors visited the J. D. McGuire herd of beef Shorthorns at Tenino, Thurston county.

GRAZING FEE RULING.

Easier conditions for stockmen are provided in a ruling just issued by the secretary of agriculture to the effect that only half of the annual grazing fee need be paid at the beginning of the season for stock on the range.

POULTRY AND RABBITS

Hatching Eggs
Should Be Selected Carefully

By W. D. BUCHANAN.
Poultry Extension Specialist, State College.

Hatching eggs should be gathered several times a day. A fertile egg starts germinating at 67 degrees F. If left in the nest all day, under one hen or another, development begins and the chick dies unless incubating temperature is maintained without interruption. To keep hatching eggs in good condition they should be placed in clean containers and kept at a temperature of 45 degrees to 65 degrees.

Not every fertile egg is fit to set. Discard eggs that are too round or too long, bumpy, rough or porous shelled. Do not set small eggs. The size of the egg determines the relative size of the chick. A small chick is a sure indication of a chick hatched from a pullet, or a hen that lays a small egg. In either case it is not desirable. If it is from a pullet egg it will likely be lacking in vigor and will be hard to raise. If it is from a hen that lays a small egg it will be likely to develop into a pullet that lays a small egg and small eggs bring less on the market.

Another thing which breeders of hens producing white shelled eggs must guard with great care is the color of the shell. Chalk white shelled eggs bring from 3 to 12 cents a dozen more on the New York market than tinted or mixed white and tinted shells. The food value is no greater, but it is up to the producer to give the public what it wants and is willing to pay for.

Finally, if you have a chance to select eggs from hens confined to the house, or from hens running out of doors, be sure to select the latter. They will not only hatch more chicks, but, what is of more importance, they will hatch better chicks. This winter has put the final verdict on this problem. It has been severe, the birds have been housed more, the eggs have not hatched so well and the chicks are harder to raise.

Poultry Problems

By W. D. BUCHANAN, Poultry Extension Specialist, Washington State College.

GEESE AND DUCKS.

I would like to get a book or pamphlet of some kind that gives correct information on geese raising, also duck raising. Can a person make a fair profit by raising geese on a big scale, say from 400 to 500? I. W. S.
Chewelah, Wash.

Farmers' bulletin 697 on duck raising and Farmers' bulletin 767 on goose raising, which may be had by writing to the state college at Pullman, are good. Both geese and ducks can be grown profitably on a big scale if you know how, but it would be better to start small. The market in the west is somewhat limited.

ROOSTS ARE TOO HIGH.

I recently lost two fine chickens. I feed wheat, some bran-shorts and now I am going to use egg mash. Do you think it is in the roosts? The roost is about four or five feet high and so are the nests. Will you tell me if Hamburg chickens are hard to raise around Spokane county, Washington, as we are thinking of going there?
Portland, Ore. MRS. T.

We can not tell the cause of death without knowing more of the symptoms. Roosts are too high. Two and one-half feet is better. If necessary to have high roosts, place a lighting board midway between floor and platform. Hamburgs should do well in Spokane county, as elsewhere.

TROUBLE WITH TURKEYS.

What is the matter with my turkeys? They stand around the barnyard, drooping and sick and will not eat. In a few days they die. I opened one turkey and looked at the liver and it seemed all right.
Buckeye, Wash. P. E. Mc.

Blackhead is a common cause of loss among turkeys. Droppings are greenish-yellow and watery, head has dark appearance, which suggests the name; live enlarged and spotted. Are you sure your turkeys are getting only clean food and water? If you have examined the livers and they are all right, it might be well to examine the food for source of poisoning, examine the turkeys for lice and the roosting quarters for mites.

EXCEPTIONAL TURKEY HEN.

I would like to find out if there is anything exceptional about my turkey hens. One of them laid about a dozen eggs this spring, then tried to hatch them, but they were not fertile. After a week she laid another batch and wanted to sit on them, but we broke her up. This was in the latter part of June. Then after a few days she started laying again and never missed a day until October 18.
Forks, Wash. T. R. H. S.

Turkey hens usually lay a first clutch of from 15 to 20 eggs. If broken up they will generally lay another clutch, but it is exceptional if they lay in late summer and early fall.

HATCHING DUCK EGGS.

Will duck eggs hatch in an incubator? How long after placing a male bird in the flock are the eggs fertile? MRS. H. S.
Touchet, Wash.

Duck eggs are successfully hatched in incubators. Eggs should be fertile a week after service.

NOT A SURE SIGN.

What would be good to give my chickens? I believe they have cholera. They are fat and many are laying, but they take suddenly sick and their manure is thin and white. What is the difference between a guinea hen and rooster?
Quincy, Wash. J. B. M.

If you have any reason to suspect that your chickens have cholera it would be wise to consult a veterinarian at once. The fact that they have thin white diarrhea is not a sure sign of cholera, but if they are dying you should find the cause and remove it. There is very little difference between male and female guinea fowl in appearance. The female says "buckwheat" and the male just "wheat."

BLOOD SPOTS IN EGGS.

Please tell me what causes blood spots to come in the eggs. L. E. K.
Palouse, Wash.

Blood spots in eggs are usually indication that the birds are slightly out of condition. The egg yolks in the ovary are surrounded by a thin membrane called the follicle. When the birds are in normal condition this follicle breaks on a line which is free from blood vessels. When the birds are out of condition from any cause this follicle sometimes breaks at one side of this line, rupturing a blood vessel. The drop of blood thus formed drops into the oviduct with the yolk, and is included in the egg.

Pelt Is Valuable

By dressing one's rabbits before marketing them one receives much more for the meat and retains, beside, a pelt worth often from 30 cents to 75 cents. The White Flemish Giant's fur, well produced, often brings $1. Pelts will vary in value with breed, of course, a factor to consider in selecting the variety and strain to raise. Those yielding fur of reliable solid color are much in demand. "Electric seal" and "near seal" are artificially made from rabbit fur. From the utility standpoint, including fecundity, size and meat-yielding value, hardiness and beauty of fur, the practical breeds of rabbit are the Flemish Giant, Belgian hare and New Zealand Red.

When Will There Be A Disarmament Of Dining Tables?

Suppose everybody would recognize the fact that there's no gain but much loss in keeping up hostilities with the stomach!

Suppose the ancient aggravation of improper food on indignant digestive organs should be settled with guarantees of sensible diet and tranquil digestion!

The saving would be beyond all possibility of counting.

Yet millions go on declaring war on the stomach and accepting war in return—loading up on starchy, heavy, unbalanced and highly-seasoned food at breakfast or lunch—and wondering why comfort and happiness and efficiency are out of reach.

Grape-Nuts makes a friend of the taste and an ally of the stomach.

There's a charm and satisfaction to this delicious food which prompts appetite to say, "There's a meal!" and digestion to answer, "Thank goodness, here's peace at last!"

Grape-Nuts is the perfected nutriment of wheat and malted barley—sweet, crisp, and wonderfully nourishing. It digests quickly and provides the necessary elements, including the vital mineral salts, for body, nerve and brain.

Order Grape-Nuts from your grocer today, and let a delighted taste pass a treaty of peace along to an enthusiastic digestion and assimilation.

ORCHARD AND GARDEN

Questions Answered

By O. M. MORRIS,
Head Horticultural Department, State College.

SHAPING PRUNE TREES.

I planted one acre of standard prune trees a year ago that were then 2 years old. They were cut down to about three feet, leaving three or more buds. These trees have grown profusely. Will you kindly give me instructions regarding pruning them? S. C. L.
Yakima, Wash.

In pruning your prune trees simply remove enough limbs to give a reasonable opportunity for those that are to form your main frame work to develop side branches. This also means that you will do relatively little pruning and be benefited thereby.

RASPBERRY PLANTS.

How many raspberries does it take to set out one acre? How far apart should the rows be, and what is the best variety? What is the most profitable strawberry to set out, or would it be best to have two or three different kinds? W. D. G.
Stella (Cowlitz county), Wash.

You should use some 2000 or 3000 plants of raspberries per acre. The very common spacing is to set them about two feet apart in rows about eight feet apart. This will require 2722 plants per acre. You can set them a little further apart in your rows if you desire and permit them to fill in the space as they grow older. Three feet apart in the row, with rows seven feet apart, is also a very common spacing. This will give you 2074 plants per acre.

The Cuthbert is at present one of the most popular varieties. It is a large fruited kind and is especially desirable for the canneries and the fresh fruit market. The Antwerp is another red variety which is more resistant to winter injury and fruits a little heavier than the Cuthbert, but is not quite as good a berry.

In your district you will find the Marshall, Gold Dollar and Clark Seedling among the most popular varieties of strawberries. Any of these varieties will give you entire satisfaction when planted alone. The Gold Dollar is an early mid-season variety. The Marshall is distinctly one of the later-season varieties.

CURRANTS NEED PRUNING.

Will you please tell me what is the matter with my currant bushes? They are 2 years old, four feet high and all matted and mixed up. Is it all right to cut them down and thin them out? My gooseberries are in the same condition.
J. R. H.
Kirkland (King county), Wash.

There is nothing in your statement about your gooseberries and currants to cause me to believe that there is anything the matter with them. They have simply grown very rapidly and very vigorously. About all you need to do is to remove enough of the stock so that those remaining will have an opportunity to produce side branches and produce a normal crop of fruit.

If you will do this they will probably give you very satisfactory results.

GRAPE CUTTINGS.

When should one get the limb cutting of grapes for planting, before the sap raises or after? A. L. W.
Grandview, Wash.

You will have a great deal better success with the grape cuttings if you make them from the plants before any evidences of growth are apparent or in other words they should be entirely dormant.

If the sap has started so that the vine bleeds when the branch is removed, your probabilities of success are clearly reduced.

Orchard Problems

By C. C. VINCENT.

Why do our prune trees that have plenty of manure, water and such care put on plenty of prunes and when almost ready to ripen fall off? F. C. S.

Our prune growers have had considerable trouble the last two or three years from prunes dropping from time to time throughout the summer. This trouble appears to be more or less prevalent throughout the prune growing sections here in the northwest. Of course, you understand that it is a tendency of the prune trees to shed a considerable portion of their crop. Under normal conditions enough fruit remains on the trees to give one a fairly good crop. If this trouble is excessive in your case I might suggest that you apply a little nitrate of soda this year to each tree, say, at the rate of two to three pounds per tree, sometime during the middle of April, for I am under the impression that this might strengthen the blossoms considerably.

BIRDS THAT DESTROY MICE.

I would like to know the names of 10 birds of prey useful for the destruction of rats and mice. Also 10 species of birds useful in protecting the trunks of trees from borers, bark lice and scale insect.
W. N.

Herrick in his book entitled "Insects of Economic Importance" has the following to say concerning birds:

"Protecting Birds.—Birds should be protected and encouraged to make their homes on the farm and about the orchards. They help to hold the balance of nature and certainly aid greatly in holding insects in check.

"One hawk after a chicken condemns the whole bird tribe; the great horned owl is a friend of man wherever mice and rabbits abound, but where these are scarce, as in thickly populated districts, the owl is driven to other food; the sharp-shinned and copper's hawk are enemies to wild birds and chickens and should be killed; other hawks and owls feed mostly on mice and insects; many species of birds are known to live almost wholly upon insects.

"Insects constitute 65 per cent of the annual food supply of the downy woodpecker, a very large per cent of the food of warblers, 95 per cent of the food of the house wren, and 95 per cent of the food of the flycatchers. Three hundred to 500 insects have been found in the stomach of one bird.

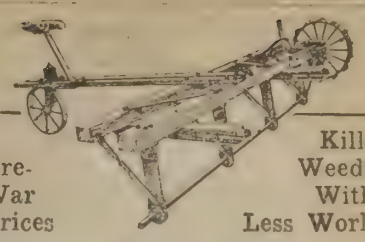
"The mobility of birds makes them very efficient. Forbes showed that in orchards where cankerworms were abundant birds became abnormally plentiful.

"Flycatchers and swallows live upon flying insects, while robins and meadowlarks catch ground insects. Cuckoos, orioles, warblers and vireos devour leaf-eating insects, while nuthatches, titmice and creepers explore trunks of trees for small insects."

For more detailed information on this subject I would refer you to an article by H. W. Henshaw, entitled "Does It Pay the Farmer to Protect Birds?" appearing in the 1907 Year Book, page 165. Another article by F. E. L. Beal on "The Relation Between Birds and Insects," appearing in the 1908 Year Book, page 343, might also be of interest to you.

Brussels Sprouts Under Glass

"If we were to emphasize any one truck garden crop it would certainly be Brussels sprouts," remarked L. T. Hass of Bellevue, King county, Wash., who has specialized in the raising of vegetables under glass. "We raised a few plants for our own use last season and we have had sprouts practically all winter. I am telling this to show how hardy a plant they are even during one of the most severe winters we have ever had. In fact, the flavor seems to be improved by a frost and even a freeze will not stop their growing when the weather opens up again."



The plants can be grown outside in the same manner as kale, but they will get a much better start if the young plants are grown under glass and transplanted into the garden when the proper size.

BRIDGE GRAFTING DEMONSTRATION.

A bridge grafting and top-working demonstration will be held at the I. Anderson ranch, two miles west of Wiley City, on April 7 at 2 p. m. E. G. Wood, extension horticulturist of the Washington State college extension service, will conduct the demonstration.

DIPPING POTATOES.

Potatoes dipped for one to one and one-half hours in corrosive sublimate will help control rhizoctonia.

Buy Lubrication—*not just "oil"*

and protect your automotive investment

You bought your trucks and tractors as an investment in power. And you expect big returns through better, quicker and cheaper work.

Are you protecting this investment—helping it stand the hard, exacting service you call on it to perform?

If you want to avoid costly breakdowns, insure uninterrupted service, obtain maximum power from every gallon of fuel and prolong the life of your power equipment, *you must keep it properly lubricated.*

Buying just "oil" won't do. *You must buy lubrication.* That means using the right oils for your particular engines—oils that meet *all* their lubricating demands.

A safe and certain way is to use SUNOCO Motor Oil. It leaves no gummy residue to carbonize in the cylinders, foul the spark plugs and clog the valves.

SUNOCO maintains its extraordinarily heavy body under all operating conditions. That means compression-tight, leak-proof cylinders for full power and fuel economy.

Begin using SUNOCO now. Buy it in 30 or 50 gallon faucet-equipped steel drums. Use the correct types for your tractor, truck, passenger car and all your power machinery.

You'll save money, save trouble and protect your automotive investment. The next time insist on SUNOCO.

Ask your dealer for a copy of our new booklet, "Lubrication or Just Oil." If he can't supply you, write to us.

SUNOCO MOTOR OIL

Marketing California Grain

The California farm bureau has completed arrangements to market a third of the California grain crop for 1922, mostly barley, by the grain farmers themselves directly to England and other foreign markets. The value of the crops to be marketed in this manner is estimated at $9,000,000. From 50,000 to 100,000 tons already have been contracted for from the farmers by the state marketing exchange, the central organization, which buys and sells products for the county farm bureaus which make up the California state farm bureau.

COLD STORAGE WAREHOUSES.

A recent check on the states of Washington, Oregon and Idaho develops the fact that there are 74 cold storage warehouses in the Pacific northwest, with a total of 17,284,000 cubic feet of refrigerated space.

FARMERS' WANT ADS

This is the farmers' "want," "sale" and "exchange" department for small advertisements of farmers, including live stock and poultry.

Advertising rates for ads running 1 to 3 times, 10c per word per insertion, with a special rate to Farmer subscribers, as follows: Ads running 4 to 12 times, 9c per word per insertion; ads running 13 times or more, 8c per word per insertion.

All commercial and land advertising 10 cents per word each insertion. Open also to nonsubscribers.

In using these columns advertisers must observe: (1) No advertisements will be inserted for less than $1.00. (2) Every word, number and initial, including name and address, must be paid for. (3) New advertisements, changes of copy or cancellations must reach general office, Spokane, Wash., 10 days in advance of publication date. (4) Cash must accompany order.

Above rates include insertion in The Washington Farmer, The Idaho Farmer and The Oregon Farmer, which constitute the Pacific Northwest Farm Trio, 46 Review Building, Spokane, Wash.

POULTRY (Baby Chicks) 174

THE LARGEST LEGHORN BREEDING ESTablishment and hatchery in the northwest, and on the Pacific coast, has a housing capacity of 12,000 breeders; brooding capacity for 15,000 chicks; incubator capacity for 142,200 chicks at one time. It was started 16 years ago, by its present owner, without capital or poultry experience, on a barren ten-acre tract of land. The White Leghorns produced there have made possible its growth. It is the Oak Heights Poultry Farm, Capt. A. Waldwick, proprietor. Route 3, Box T67, Tacoma, Wash. This is the place where real good baby chicks come from. They are bred for eggs, vigor, size. The price is low. No order too large or too small. Prompt delivery and safe arrival guaranteed. Free book on "Raising the Chicks." Write us now.

HENACRES BABY CHICKS FOR JUNE ARE only $16 per 100; $140 per 1000; best quality chicks at common chick price. Special instructions for winter layers of June chicks free. We have a few May chicks left at $22 per 100. Safe delivery guaranteed; plenty of hatching eggs at $2 per 15; $9 per 100; 90 per cent fertility guaranteed. Eight weeks old pullets $1.50 each, satisfaction or money back. We sell the famous Sol Hot brooders at $10.50 to $23.50. Prompt shipment. Our illustrated catalog and booklet on poultry management is free. Henacres, Box A, Prosser, Wash.

400,000 BABY CHICKS—OUR WHITE LEGhorns are bred to lay; priced at $15 per 100. We hatch from some of the best flocks of R. I. Reds, Barred Rocks, Anconas and Minorcas to be found in the northwest. Chicks are priced at $22.50 per 100. Send $1 deposit per 100 with your order, paying the balance on inspection of chicks. Safe arrival guaranteed. We have a few standard makes of incubators and brooders at greatly reduced prices. Send for our circular offer. Seattle Hatchery, 1906 Pike place, Seattle.

"FRESHLAID" WHITE LEGHORN CHICKS have the qualities you want; vigor and scientific breeding for the heaviest egg production; every "Freshlaid" male is from a high record hen. Freshlaid Farms is one of largest and oldest chick plants in the Inland Empire. There is a real demand for "Freshlaid" chicks, especially from our old customers. We are sold out until May 1. Write at once if you wish May chicks. May chicks make ideal winter layers. Catalog. Freshlaid Farm, Colfax, Wash.

BABY CHIX—WHITE LEGHORNS ONLY; May delivery, $13 per 100; June delivery, $12 per 100; order now as the supply is limited and these are not just baby chix, but are chix from stock that has been bred for 20 years for vigor and vitality; mated to male birds from hens with records up to 298 eggs in pullet year; hatched by the oldest established hatchery in the northwest. Lakeside Poultry Farm, Roy, Wash.

FOR SALE—WHITE LEGHORN BABY chicks from free range selected hens mated with pedigreed cockerels from 200-287 egg trap nest records. May and June prices $3.50 per 25; $6.50 per 50; $12 per 100. Special prices 500 and 1000 lots. Safe arrival guaranteed. You pay only for chix received alive and in good condition. No money in advance, pay on delivery. Order now. Established 1898. Must Hatch Incubator Co., 445 Seventh st., Petaluma, Cal.

SUMMER SALE OF BUTLER POULTRY Farm White Leghorn and Barred Rock chicks. May and June chicks are profitable and easy to raise when you know how. Write us for circular how we do it. All stock trap nested and pedigreed for years. Discount prices on all late chicks and eggs. Butler Poultry Farm, Jennings Lodge, Ore.

TRY OUR PARCEL POST PACKAGE—KEEP the old hen busy. We will ship you first-class baby chicks, postpaid to your door, direct from the hatchery and guaranteed all alive. Price, $4.50 per 25; $8 per 50. For delivery April, May or June. Order now. The White Hatchery, Petaluma, Cal.

WHITE LEGHORN BABY CHIX FOR MAY and June delivery at $12 per 100; $115 per 1000, from flocks inspected and accredited by the Sonoma county farm bureau. Safe arrival of full count, live, strong chix guaranteed. The Pioneer Hatchery, 422 Sixth street, Petaluma, Cal.

The GAUNT GRAY WOLF

By DILLON WALLACE

Copyright, 1914, by Fleming H. Revell Co. Published by special arrangement with the International Feature Service, Inc.

SYNOPSIS.

Shad Trowbridge, a New England lad of about 20 years, sails on a mail boat to Labrador, where he plans to spend a few weeks of summer hunting and fishing in the wilderness. Upon his arrival he meets two experienced fishermen and trappers, Dick Blake and Ed Matheson, who recommend to him a young lad of 17 known as Ungava Bob, as a guide for his hunting and fishing trip inland. Desiring to lose the least time possible in securing Ungava Bob's services and starting inland for his vacation, Shad starts across the bay in his canoe in the face of a threatening storm. In the darkness his canoe is capsized and he is plunged into the icy water. As he rises to the surface a rope is thrown to him and he hears a voice shouting to make it fast. He is soon drawn aboard a little sailboat which, unknown to him had approached at the moment of his great need.

"I'm sure I owe my life to you," he said to the lad piloting the sailboat. "It was lucky for me you saw me."

"'Twercn't luck, sir," said the lad. "'Twere Providence. 'Twere the Lord who were takin' care of you."

To his surprise, Shad discovers that his new friend, the lad with the sailboat, is none other than Ungava Bob. Together, they make their way to Bob's home, where Shad enjoys the hospitality of the northland while they consider ways and means of making inland excursions. Shad decides to remain a month or more and make the first leg of a long winter of trapping planned by Bob, returning to the settlement in time to sail back home before college opens. To lay in additional supplies for the trip they cross the bay to the Hudson's Bay trading post, where Shad meets with other friends of Ungava Bob and his parents, including Mr. and Mrs. Black, whose daughter Bessie and Bob are great friends.

They leave for the wild trapping grounds and Shad is so delighted with the wilderness that he decides to remain with Bob on the trails all winter. The other members of the party start back home, leaving the two boys alone to start their long winter of adventure. But they are not alone! Hardly has the boat carried their friends around the bend of the river before Bob and Shad see two Indians watching them from the shadows of the forest trees.

The Indians proved to be old friends of Bob, but it was not many days until enemies appeared. A group of Mingen Indians, catching Bob and Shad out in their canoe on the river above the Great Falls of Labrador, fired upon them, compelling them to remain in the current and be dragged down to the rapids and seeming certain destruction.

CHAPTER VIII.

After the Indian Attack.

Below them rose the appalling roar of the hungry rapids and the dull, thunderous, monotonous undertone of the falls themselves.

Before their vision a vivid picture passed of the scene they had so recently beheld—the onrushing, white piled billows above the cataract, gathering strength for their mighty leap—the final plunge of the resistless torrent—the bank of rainbow-colored mist hovering in space over a dark abyss—and far below and beyond the mist-bank the murky chasm, where a white seething flood was beating its wild anger out against jagged rocks in its mad endeavor to fight its way to freedom between narrow canyon walls rising in frowning cliffs on either side.

Impotent to resist the power that was drawing them down, Shad Trowbridge and Ungava Bob were certain beyond a doubt that presently they were to be hurled into this awful chasm, and that in all human probability but a few minutes more of life remained to them.

Then suddenly there flashed upon Bob's memory the recollection of an island which he had observed when walking along the river bank from the falls to the portage trail.

He remembered that this island was of curious formation, with high polished cliffs rising on its upper end and on either side, like bulwarks to guard it from the rushing tide.

At its lower end a long, low, gravelly point reached downward, like a pencil point, among the swirling eddies. The gravel which formed this point, he had remarked at the time, had been deposited by the eddies created by the meeting of the waters where they rushed together from either side below the island.

With the recollection of the island came also a realization that here possibly lay a means of escape. A quick estimate of the distance they had already drifted below the portage trail satisfied him that they were still perhaps half a mile above the island, and probably not too far amidstream to enable them to swing in upon it before it was passed, in which case a landing might be made with comparative ease upon the gravelly point.

The canoe, as previously stated, was heading upstream, with Bob in the bow, Shad in the stern. It was necessary that they turn around and secure a view of the river in order to avoid possible reefs near the island shore and to properly pick an available landing place.

But to attempt to turn the canoe itself in the swift current would in all probability result in fatal delay. Therefore, acting upon the moment's instinct, Bob ceased paddling, arose, and himself quickly turned, seating himself face to the stern, shouting to Shad as he did so:

"Turn! I'll steer!"

Shad had no doubt Bob had become demented, but without question obeyed the command. In this position what had previously been the stern of the canoe now became the bow, Shad Trowbridge the bowman and Ungava Bob the steersman.

The moment paddling ceased the canoe shot forward in the current, heading toward the white waters of the rapids. The maneuver had not been made a moment too soon, for directly before them, a little to the left, lay the island.

With a quick, dexterous turn of the paddle Bob swung the canoe toward the island shore farthest from the mainland and, close under the cliffs, caught the retarding shore current. A few seconds later the bow of the little craft ground upon the gravelly point Shad sprang ashore, Bob at his heels, and the canoe was drawn after them to safety.

For a moment Bob and Shad looked at each other in silence, then Shad exclaimed simply:

"Thank God!"

"Aye," said Bob reverently, "thank th' Lard. He were watchin' an' guardin' us when we were thinkin' we was lost. 'Tis th' Lard's way, Shad."

"My God, Bob! Look at that!" exclaimed Shad, pointing toward the mad white waters below them. "If you hadn't thought of this island, Bob, we'd be in there now—in there—dead! My God, what an escape! And such a death!"

Shad sank upon a bowlder, white and trembling. He was no coward, but he was highly imaginative at times. During the trying period in the canoe he was cool and brave. He had done his part at the paddle equally as well as Bob. He would have gone to his death without a visible tremor. But now the reaction had come, and his imagination ran riot with his reason.

"Why, Shad, what's th' matter now?" asked Bob solicitously. "Were th' strain at th' paddle too much? You looks sick."

"No—I'm all right—just foolish. I'm afraid you'll think I'm not game, Bob."

"Oh, but I knows you is, Shad. I seen you turned over in th' bay, Shad—an, I knows you'm wonderful brave."

"Thank you, Bob. I hope I deserve your opinion."

"I were terrible scart first, when I finds th' canoe's slippin' back toward th' rapid

I knows you're wonderful brave.

an' I'm seein' no way t' land," said Bob. "Then I stops bein' scairt an' has a feelin' that I don't care——"

"Just as I felt," broke in Shad. "A sort of hopeless speculation on what was going to happen, but not much caring."

"Aye," continued Bob. "Then I thinks 'twill be sore hard on mother—my never goin' home—an' I prays th' Lard t' help us, an' soon's I says 'Amen' I thinks o' this island. 'Twere th' Lard puts un in my head, Shad."

"I think," said Shad, "it was your quick wit and resourcefulness, Bob."

"No," Bob insisted positively, "'twere th' Lard. An', Shad, we must be thankin' th' Lard now."

Then Ungava Bob and Shad Trowbridge knelt by the side of the boulder, the former reverently, the latter courteously, while Bob prayed aloud:

"Dear Lard, Shad and me is wonderful thankful that you p'inted out t' us th' landin' place on this island, an', Lard, we wants t' thank you. We knows, Lard, if you hadn't been p'intin' she out t' us we'd be dead in th' rapids now, or handy t' un. We'll never be forgettin.' An', Lard, keep clost t' Shad an' me always. Amen."

"That," said Shad, when they rose to their feet, "was the most honest, simple, straight-forward prayer I ever heard offered. Thank you, Bob, for including me. If the Lord hears prayers, Bob, he heard yours, for it was honest and from the heart and to the point."

"He hears un, Shad, an' he answers un."

There was a note of conviction in Bob's tone that left no room for doubt.

"We're here, because we're here, because we're here——" Shad began to sing. "Bob, I'm feeling all right now, and I guess I've got my nerve back again. Foolish, wasn't it, to get frightened after it was all over? Let's see, now, what the prospects are of getting away."

From an eminence in the center of the island they surveyed their surroundings. The mainland lay not more than a short stone's throw away, but between it and the island the water ran as swift as a mill race. Some 200 yards below the point on which they had landed the heavy white rapids began, and with but one exception the perpendicular wall of rock that formed the mainland shore extended to and beyond the white water.

This exception occurred about half-way between the island and the heavy rapids, where for a distance of some six or eight yards frost action had caused disintegration of the rock, and the wall sloped down toward the river at an angle of 45 degrees.

At the foot of this slope, and on a level with the water, a narrow platform had been formed by the dislodged portion of the rock. Under the most favorable conditions exceedingly expert canoemen might succeed in making a landing here, but it was plain that the foothold offered was so narrow and so unstable that any attempt to make a landing upon it would prove perilous and more than likely fatal.

The island itself was oblong in shape and contained an area of three or four acres. Its rocky surface sustained a scant growth of gnarled black spruce and stunted white birch, with here and there patches of brush.

From their vantage point no sign of the Indians who had caused their trouble could be seen, and it was evident they had not descended the river bank below the portage trail.

"Well, what do you think of it, Bob?" Shad asked.

"I'm thinkin', now, th' Injuns are headin' for th' tilt up th' river, an' that they'll be cleanin' un out an' burnin' un. Th' Injuns t' th' post tells me they never comes below th' portage. They's afraid o' th' evil spirits o' th' falls. But they goes back in th' country sometimes an' circles around by th' Big Hill trail."

"But what do you think of trying to cross, and make a landing down there where the rock slopes?" inquired Shad.

"We'd never make un, Shad," decided Bob. "I knows th' handlin' o' boats. I'm too uncertain in a canoe, an' so be you, Shad."

"What are we to do, then? We can't stay here," insisted Shad.

"I'm not knowin' yet. They'll be some way showin'," promised Bob, "but we'll have t' think un out first."

"What was the matter with those Indians, anyway? I thought all the Indians were friendly to white men," Shad asked, as they turned down again to the canoe.

"They's Mingen Injuns," explained Bob. "I were forgettin' t' tell you, Shad. When we was t' th' post Douglas Campbell tells me that last fall some Mingens comes t' th' last tilt o' th' Big Hill trail an' tells he they'd not let any white trapper hunt above th' Big Hill trail. They's likely seen our tilt up th' river, an' laid for us. I'm sorry, now, I were bringin' you here an' not tellin' you, Shad."

"Oh, don't worry about that, Bob. I'd have come just the same," assured Shad. "In fact, I'd have been all the more ready to come, with the prospect of a scrap with Indians in view. If I'd known, though, I'd have had my eyes open and my rifle ready, and dropped a bullet or two among them before we got caught in the current."

"Injuns were never givin' me trouble before, an' I weren't takin' their threatenin' t' Douglas in earnest, so I forgets all about un till I sees th' Injuns at th' portage trail," Bob explained.

"'Twouldn't have done t' kill any of un, Shad. If you had, th' rest would have laid in th' bushes an' killed us, for they's no knowin' how many they is of un. Then they'd gone back an' laid for Ed an' Dick an' Bill an' killed they before they'd be knowin' they was any trouble.

"Now 'tis more'n likely th' Injuns is thinkin' we be th' only white men about, an' when we thinks up a way o' gettin' out o' here we'll give warnin' t' Ed an' th' others, an' being on th' lookout one of us can hold off a hull passel o' Injuns, for we has Winchesters, an' all they has is muzzle-loadin' trade guns."

"But suppose we don't get off this island before the others come to look for us? What then?" asked Shad.

"If they misses us an' goes lookin' for us, they'll be knowin' we're missin' for some cause. Bill Campbell's been hearin' from his father what th' Mingens were sayin' last year, an' they'll suspicion 'tis th' Mingens an' be watchin' for un."

"But I don't understand yet what objection the Mingens have to our trapping here. I supposed this was the country of your Nascaupee friends."

"'Tis this way," Bob explained. "Th' Nascaupees hunts t' th' n'uth'ard, th' Bay Mountaineers t' th' east'ard, an' th' Mingens t' th' s'uth'ard, an' all of un comes in hereabouts t' get deer's meat, mostly th' Mingens, when deer's scarce t' th' s'uth'ard, an' they thinks if white trappers is about th' deer'll be drove out."

"Well, Bob, let's boil the kettle and try to figure out a plan of escape,' suggested Shad. "With the reaction from the morning's excitement, I'm developing a vast hunger."

"They's not a mouthful o' grub in th' bag, Shad," Bob announced sorrowfully, "only a bit o' tea with th' kettle an' our cups. I leaves un all in th' tilt, thinkin' we'd get back t' th' next tilt an' use th' grub that's there, an' I just leaves th' bit o' tea in th' bag."

"No grub!" exclaimed Shad. "Then we've got to try to make a landing down on that wall. We can't stay here and starve!"

"An' we can't make th' landin'. 'Twould be sure drownin' t' try."

"Then it is just a choice between drowning an dstarving? For my part, I'd rather drown and have it over with, than starve to death!"

"Th' Lard weren't showin' us here just t' have us die right off," said Bob quietly. "He were savin' us because he's wantin' us t' live, an' he'll be thinkin' if we tries t' make th' landin' knowin' we can't make un, that we're not wantin' t' live. If we takes time now t' plan un out, th' Lard'll show us how."

A picture of mingled horror and grief.

"I wish I had your faith, Bob, but I haven't, and I'm still in favor of making a try for the shore," insisted Shad. "However, let us make some tea and argue the matter out later."

"Aye, we'll boil th' kettle an' talk un over whatever," agreed Bob, rising from the rock upon which they had seated themselves, and turning into the scant growth to collect dry sticks for a fire.

But instead of collecting the sticks he returned to the canoe, secured Shad's double-barrelled shotgun, and a moment later Shad, who was dipping a kettle of water for their tea and had not noticed the movement, was startled by the report of the gun. Looking up, he saw Bob stoop, reach into a clump of bushes and bring forth a rabbit.

"Well, I'll be jiggered!" exclaimed Shad, as Bob held his game aloft for inspection. "I didn't suppose there was hide or hair or feather on this wind-blasted, forsaken island of desolation!"

"I sees th' signs," said Bob, "an' then I looks about an' sees th' rabbit. Where they's one they's like t' be quite a passel of un. They likely crosses over last winter on th' ice an' th' breakup catches un here an' they can't get off."

"That's some relief to the situation. But we've only about a dozen shells in the canoe," announced Shad, "and when they are gone we'll be as badly off as ever."

"We'll not be wastin' shells, now, on rabbits," said Bob. "They's other ways t' catch un. I uses that shell t' get our dinner. I'll get th' rabbit ready now whilst you puts a fire on."

"Very well," agreed Shad, collecting wood for a fire, "and when we've eaten I hope we can think of some way of escape."

CHAPTER IX.

The Indian Maiden at the River Tilt.

"Well," said Ed Matheson, as the boat rounded a bend in the river, "there's the river tilt, an' she looks good."

"That she do," agreed Dick Blake. "I hopes, now, Bob's there an' has a fire on. I'm wet t' th' last rag."

"So be I. This snow an' rain comin mixed always 'pears t' make a wetter wet'n just rain alone," observed Ed.

"Bob's there now," broke in Bill Campbell. "I sees smoke comin' from th' tilt pipe."

The voyagers were returning from Eskimo bay with their second cargo of winter supplies for the trails. Five weeks had elapsed since the morning Ungava Bob and Shad Trowbridge had watched them disappear around the river bend, and returning to camp had found Sishetakushin and

Mookoomahn awaiting them at the edge of the forest.

Since early morning there had been a steady drizzle of snow and rain, accompanied by a raw, searching, easterly wind, a condition of weather that renders wilderness travel most disheartening and disagreeable.

This was, however, the first break in a long series of delightfully cool, transparent days, characteristic of Labrador during the month of September, when nature pauses to take breath and assemble her forces preparatory to casting upon the land the smothering snows and withering blasts of a sub-Arctic winter.

Despite the pleasant weather, the whole journey from Eskimo bay had been one of tremendous effort. With but three, instead of five, as on the previous journey, to transport the boat and carry the loads over portages, the labor had been proportionately increased.

It was, then, with a feeling of intense satisfaction and relief that the voyagers hailed the end of their journey, with its promised rest, when they finally ran their boat to the landing below the river tilt of the Big Hill trail.

"I'll be tellin' Bob an' Shad we're here now, an' have un help us up with th' outfit," said Ed Matheson cheerily, stepping ashore and striding up the trail leading to the clearing a few yards above, in the center of which stood the trail.

But at the edge of the clearing he stopped in open-mouthed amazement. Before the open door of the tilt stood a tall, comely Indian maiden, perhaps 17 years of age. She was clad in fringed buckskin garments, decorated in colored designs. Her hair hung in two long black braids, while around her forehead she wore a band of dark red cloth ornamented with intricate beadwork. From her shoulder hung a quiver of arrows, and resting against the tilt at her side was a long bow.

She stood motionless as a statue, striking, picturesque and graceful, and for a full minute the usually collected and loquacious Ed gazed at her in speechless surprise.

"Good evenin'," said he finally, regaining his composure and his power of speech at the same time. "I weren't expectin' t' find any one here but Ungava Bob an' Shad Toobridge. Be they in th' tilt?"

With Ed's words she took a step forward, and in evident excitement launched upon him a torrent of Indian sentences spoken so rapidly and with such vehemence that, though he boasted a smattering of the language, he was unable to comprehend in the least what she was saying. It was evident, however, she was addressing him upon some subject of import.

"There now," he interrupted finally, forgetting even his smattering of Indian and addressing her in English, "just 'bide there a bit, lass, whilst I gets Dick Blake. He knows your lingo better'n me. I'll send he up."

And, hurrying down the trail, he called: "Dick, come up here. They's a Injun lass at th' tilt, firn' a lot o' lingo at me I can't fathom."

"A Injun lass!" exclaimed Dick. "What's she doin' there, now? An' where's Bob an' Shad?"

"Yes, a Injun lass," said Ed impatiently, "an' what she's doin' you'll have t' find out. It seems like she's achin' t' tell somethin'. I'm not seein' Bob an' Shad."

"They must be somethin' wrong, Ed. Come down an' help Bill get th' cargo ashore, an' I'll find out what 'tis," and Dick hurried up the trail past Ed, to meet Manikawan, for she it was.

She was still standing where Ed had left her, and Dick asked kindly in Indian:

"What message does the maiden bring to her white brothers?"

"Listen!" she commanded, in a clear, musical voice. "I am Manikawan, the daughter of Sishetakushin, whose lodge is pitched on the shores of tne Great lake, to the north. Yesterday some men of the south visited the lodge of my father."

"Mingens!" exclaimed Dick.

"They told him," she continued, not heeding the interruption, "that five suns back they had found a lodge built where the big river broadens. The lodge was newly made. It was a white man's lodge, for it was built of trees. The men of the south waited in hiding at the end of the portage that was once used by my people. It is above the place where evil spirits dwell."

"How many of the men of the south were there?" asked Dick, again interrupting.

"Six," she answered promptly. "While they waited two white men passed with a painted canoe and much provisions. Then, while they still waited, the white men returned with the canoe empty.

"They fired their guns at the white men. Then the evil spirits that dwell where the river falls reached up for the canoe and dragged it down to the place of thunder.

"I have come to tell you this, and to ask if White brother of the Snow and his friend are here. All night and all day have I traveled, for I am afraid for White Brother of the Snow. He has lived in the lodge of Sishetakushin, my father. He is one of my people, and I am afraid foi him."

Her rapid speech, her dramatic pose and gestures and her intensely earnest manner left no doubt in Dick Blake's mind that she spoke the truth. Neither had he any doubt that she referred to Ungava Bob and Shad Trowbridge as the two white men, for no other white men were in the region, or, he was sure, within several hundred miles of the place, at the time to which she referred.

"No," said he, after a moment's pause, "White Brother of the Snow and his friend are not with us."

"They are not here!" she wailed, lifting her arms in a gesture of despair. "Where is he? Tell me? It was not White Brother of the Snow sent to the torment of the evil spirits?"

"I'm afraid, Manikawan, it was. There were no other white men here than White Brother of the Snow and his friend."

Manikawan's hands dropped at her side, and for an instant she stood, a picture of mingled horror and grief. But it was for only an instant. Then her face grew hard and vengeful, and, in low, even tones she said:

"These men of the south killed White Brother of the Snow. They are no longer of my people. They must die."

"They must die," echoed Dick.

"Come!" she said laconically, reaching for her bow and slinging it on her back.

"No, we will rest tonight, and tomorrow at dawn we will go. Rest tonight and be strong for the chase tomorrow," Dick counseled, kindly, as she turned toward the portage trail leading around the rapids.

"I can not rest," she answered. "I go now," and like a shadow, and as silently, she melted into the darkening forest.

Big Dick Blake's heart was full of vengeance as he strode down the trail to rejoin his companions.

"What speech were th' Injun maid tryin' t' get rid of, now?" asked Ed Matheson, pausing in his work of unloading the canoe as Dick appeared.

"Bob an' Shad's dead!" announced Dick bluntly.

"Dead! Dead!" echoed Ed and Bill together.

"Aye, dead. Drove over th' falls by Mingen Injuns," continued Dick. "Five or six days ago, she's sayin'. They's six o' them Injuns down north o' here, huntin' deer, an' their camp's up th' river somewheres. I'm not knowin' rightly where, but we'll find un, an' we'll shoot them Injuns just like a passel o' wolves. If we don't, they'll sure be layin' for us an' shoot us."

"Be you sure, now, th' lads is dead?" insisted Ed.

"They's no doubtin' it. She tells th' story straight an' clean as a rifle shot," and Dick went on to repeat in detail the story he had heard from Manikawan.

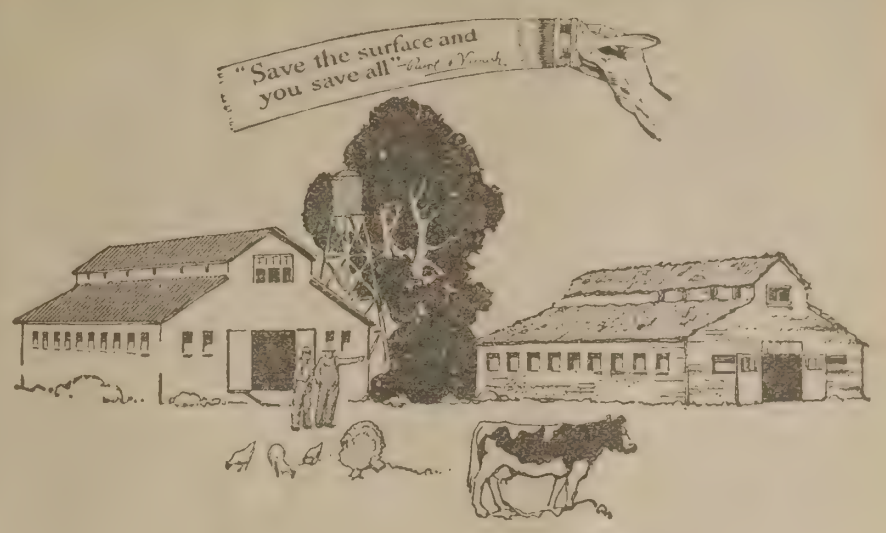
"It looks bad, now, whatever," commented Ed. "But they's a chanct they gets ashore. I were caught onct in th' rapids above Muskrat falls, an' thinks it all up with me—right in th' middle o' th' rapids, too—an'——"

"Ed," broke in Dick, with vast impatience, "this be no time for yarnin'. You knows you never could be gettin' out o' them rapids an' not goin' over th' falls. An' these rapids is a wonderful sight worse."

"Maybe they be," admitted Ed. "Th' poor lad, now, bein' killed in that way. Dick," he continued, raising his tall,

(Continued on page twenty-one.)

Advertising Is Beneficial



"Any manufacturer has two methods of procedure in marketing his product," says Collier's, the big national weekly. "He can attempt to reach thousands of dealers exclusively through a huge force of salesmen, or he can supplement his salesmen's efforts by intelligent advertising. By the first method he creates for the dealer a problem of getting the product into the consumer's hands; by advertising he acquaints the consumer with the product and influences him to buy from the dealer.

"Thus, creating a big market, he increases his production, lowers manufacturing costs, buys in quantities at lower prices, and can make a lower price to the consumer. Quantity buying, manufacturing and selling are not so easily achieved by the nonadvertiser.

"The nonadvertiser is generally the first to take advantage of any tendency to higher prices. He has no good will with the consumer to maintain—his responsibility to the buying public is less. 'Higher prices are velvet for him.'"

The quotation above focuses attention on the fact that it pays, and pays well to read the advertisements in your state farm weekly, to send for the free information which they offer, and to buy such merchandise from the advertisers as answers your requirements.

When you do write our advertisers, please mention the fact that you became acquainted with them through The Washington Farmer.

The Cost of Rotting Buildings

Now Running into Millions

ROTTING buildings or rusting equipment are absolute waste, because a small investment in paint will save them. Property that is not protected by paint must either be rebuilt or repaired in a few years at a costly figure.

Check the costs. Compare the prices of paint and lumber, or repair parts. Can you afford to bear the expense of rebuilding or repairing your property, when to save it costs so little?

When you paint, make an additional saving by using the best paint. It spreads easily—saves labor cost. It covers more surface per gallon than "cheap" paint.

But more important, the best paint serves many years longer than "cheap" paint.

The best paints are scientific in formula and preparation. We've been making them for 73 years.

The best materials—PIONEER WHITE LEAD, pure linseed oil, pure zinc and pure colors—are combined in Fuller's House Paints in scientifically exact proportion with long-time skill.

House Paint: Fuller's Pure Prepared Paint, Phoenix Pure Paint, for painting houses. The purest, best protective and most durable paint manufactured —32 colors.

Barn and Roof Paint: A protective coating for barns, roofs, fences. Dries with a good gloss and wears. Economical in cost and dependable in quality —6 colors.

Floor Paint: Fuller's Rubber Cement Floor Paint—a sanitary, waterproof and durable paint for floors of kitchens, closets, etc. Attractive in color and gloss. Dries hard over night—12 colors.

Implement Paints: Fuller's Pacific Wagon Paint, adapted for repainting agricultural implements, farm wagons, farm machinery, wind mills. A glossy, durable finish—7 colors.

Also makers of Fullerwear, an all-purpose Varnish, Silkenwhite Enamel, Fifteen-for-Floors Varnish, Decoret, Washable Wall Finish, Auto Enamel, Fuller's Hot Water Wall Finish (kalsomine), Porch and Step Paint, Silo Paint, Milk Can Enamel, PIONEER WHITE LEAD, Tractor Paint, and Fuller's Oil Stains.

Advice on Painting FREE

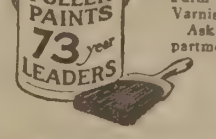
If you want to do your own work and get the best results, ask our Specification Department for *free advice.*

We'll tell you how to treat old paint, how many coats to use, what kind of brush, etc.

Use *Fuller Service* as well as Fuller Paints and Varnishes to insure good work.

Fuller's SPECIFICATION Farm Paints

House Paint - Barn & Roof Paint
Wagon Paint - Rubber Cement Floor Paint
Pioneer Shingle Stain



Manufactured by W. P. Fuller & Co. Dept. 00, San Francisco

Pioneer Manufacturers of Paints, Varnishes, Enamels, Stains and PIONEER WHITE LEAD for 73 years.
Branches in 19 cities in the West. Established 1849. Dealers Everywhere.

Free Book—Send Coupon

Send coupon for "Save the Surface," a free book which tells the importance of good paint, and the need for painting now if your paint is wearing off. Also ask for Fuller's "Home Service" booklet which includes Fuller's Farm (specification) Paints and Varnishes.

Ask our Specification Department any question that you'd like to have answered about painting—complete detailed advice is given free.

Experience Letters

From Our Family Circle Women

AN EASTER GREETING.

Dear Family Circle:

"Every day is a new beginning,
Listen my soul to the glad refrain,
Souls that are old and dead in sinning,
Hear this message, take heart again."

There are periods which are as milestones along life's pathway, where we may pause or come to a full stop and get our bearings; where we may look back over the road traveled and forward into the the untrodden way.

We have New Year's day with its good resolutions, Christmas day full of thoughts of loving remembrance, July Fourth when we pause in the daily routine to think gratefully of our country and all it means to us, and now we have added to these, Armistice day, which, let us hope, will stand for world's peace for evermore.

I come to you today with a greeting for the most important of all the milestones which mark the fleeting year, Easter, celebrated in every Christian country the world around.

The word Easter corresponds to a similar word from the French which means a goddess of light or spring and in another sense it stands for the dawn or the rising of the sun, the beginning of a new day.

And so it came about that the day kept in commemoration of Christ's resurrection is called Easter, signifying the rising from the dead into a new life. I said, it is the most important of all the days we keep because time is measured by this day. Every letter we date is a reminder of the beginning of a new era—Anno Domini (A. D.), the year of our lord 1922.

Let us think a little about Easter in the connection of the new life of all nature in spring. The winter has been long and hard and down under the snow and ice have lain little dead-looking seeds and roots, so shriveled and brown that it seemed there could be no life left there.

The rays of the sun grow warmer day by day and he comes out of the east earlier and remains with us longer as the days lengthen. Down beneath the dead leaves and even the mantle of snow and ice, those tiny dead-looking seeds begin to swell, and, bursting forth from the protecting shell, will come forth the sprout, which will go up and up while the roots will go down to get sustenance from mother earth. And here begins a new life for each tiny plant. Who placed the bit of a germ in the heart of those little plants? Who indeed but the great creator, God himself? Man has attained to great inventions, but all the accumulated wisdom of all the great minds who have achieved since the world began, can not put into the tiniest plant that wonderful something which will cause it to force its way upward in response to the rays of the sun, as it faithfully begins its new life year by year.

The little lambs frisk about on the hillsides while the meadowlark builds her nest amid the very grasses where they feed. Perhaps there was a tragic ending to her plans last year; maybe a snake invaded her nest and destroyed her family, but her song this year is just as sweet and her nest as carefully made and as softly lined as she can make it. She is willing to try again, to make another beginning.

Dear hearts, who read this, here is our lesson. Why all this beauty, why all these budding trees in which the sweet birds are building their nests and singing their love songs? Over us, far beyond our mortal ken there is a master hand controlling all. He made the world for us. Is it reasonable to believe that he will ever forget us for whom he took so much upon himself?

Never let us feel forlorn or bereft. Never let us forget that all nature makes a new beginning every Easter time. If we have made mistakes, if we have seemed to have made a muddle of things, let us not waste time or energy looking back, except to avoid repeating, but keep in mind that the beautiful world is ours, that happy people are always more useful than those despondent. Let us strive to keep the spirit of Easter in our hearts the year around.

Your friend,
ALICE W. BARLAND.

Dear Mrs. Barland: Child training is a hobby with my husband and me. We always work together in training our children and never contradict each other concerning what they should or should not do. If there is a difference of opinion it is talked over and an agreement reached when the children are not present.

Many people think a child's disposition is an inheritance and, of course, that is true to a certain extent; but observation and experience convince us that much may be done to keep children sweet and sunny and easily managed by seeing that they get plenty of sleep, with a nourishing diet without too great a proportion of meat or sweets. Many times a child is cross and unmanageable from having had too much candy, for instance, and shows no other sign of anything wrong.

It is easier to form good habits than to break bad ones. Some things tiny tots do seem very funny and cute but often lead to a habit that must be broken when the child is older. Such things shouldn't be laughed at and encouraged, but should be nipped in the bud to prevent trouble later.

We think that if from babyhood children are put to bed early and the light put out it helps to prevent fear of the dark and promotes the habit of early rising, which is a great help when they reach the school age.

Poking at tasks must be dealt with in various ways. Urging to hurry avails very little, I find, but whatever arouses interest has a good effect. Racing is a favorite with our children, but there is an understanding that unless the work is well done it must be done again. We try to cultivate pride in doing tasks quickly and well. We don't call them from play, but make it clear that their work must be done first and they may play undisturbed for a while.

To teach care of clothing we put up hooks in easy reach for them and teach them to hang up their own wraps from the time they are able to toddle. With a low bar in the closet they can put away their best clothes on hangers while quite young. Our little 3-year-old enjoys getting his own little suit when he is going to wear it and putting it away when he takes it off.

"Sauciness" has never given any trouble so far; we chum with the children, but they have always been taught to obey. We never "talk back" to each other and anything like sauciness from them is checked instantly.

Personal neatness is taught by having pockets in the clothing where handkerchiefs may be carried and by insisting that they wash hands and face before meals "like daddy."

Indeed, example comes first in all training, but must be accompanied by daily watchfulness and care. It may seem a great deal of trouble, but we feel that we are being well repaid as the children grow older.

MRS. E. W. W.
———, Wash.

Dear Sisters: I have received from one of our men readers of the Family Circle a very fine recipe for a preparation for cleaning rugs. I know that it cleans them wonderfully because I have stood by and seen about the dirtiest rug I ever saw, come out like a new one. I can not print this recipe, but any one sending for it with a 2-cent stamp enclosed shall have it in time for spring cleaning.

There seems to be some doubt about how to address me. Send all letters in care of THE FARMER.

Please send in your personal experiences on raising turkeys. Several sisters want to know about them. Also a sister says she has a large plant of wormwood and wishes to know if it has any special value as a medicine or what use it can be.

ALICE W. BARLAND.

One Had to Lose.

He—Why did she marry Dick? I thought she valued her freedom. She—She did. But she couldn't bear to think of Dick having any.—Detroit Saturday Night.

Rennet Desserts

To the Editor: One woman writes that she has trouble in making her rennet desserts. She speaks of new calves that they intend to butcher if they are not heifers, so I judge that her rennet is from very young calves. These are all right, only the rennet has very little strength and probably won't make a quart of good liquid rennet in 10 days. I should try a pint at first and perhaps leave it two weeks. Add salt enough to keep it well in a place that is not very cold; there should be all the salt that will dissolve and more does no harm; it will eventually become liquid. Don't start with less than a cupful.

I always test mine when I begin to use it by taking just a cup of warm milk and adding a little rennet at a time till I find just how much is required to "set" it. By that means only one cup of milk is wasted and the pigs will like that. Don't sweeten it.

MRS. E. M. ANDERSON.
Ashville, N. Y.

CARROT SALAD.

Put six carrots on to boil in plenty of water, when half done remove and turn out the water and finish cooking in fresh water; when done take out and cut into one-half inch dice. Make a dressing of one small cup of vinegar, four tablespoons of melted butter, the yolk of one hard-boiled egg with a little salt and pepper. Line a dish with crisp lettuce leaves, add two-thirds of the dressing, then the carrots diced, then the remainder of the dressing.

This makes a novel and ornamental dish.

Your Health

By Royal S. Copeland, M. D., F. A. C. S.

Cause of Heartburn.

Heartburn is one of the most common of the human ailments. Lots of folks never eat a meal without suffering within an hour or two. There are pains in the stomach, belching of gas and sometimes vomiting of sour material.

Dr. Copeland.

All sorts of reasons are given for the trouble. Coffee, tea, pastry, lobster and various kinds of foodstuffs are pointed to as the things responsible for the acidity. Exercise after meals, heavy lifting, excessive smoking and a multitude of other things are apt to be regarded as causes of the symptom.

As a matter of fact, no one of these things is likely to be the real cause of the acidity of the stomach. Any one of them might contribute to the difficulty, and might aggravate it, but there must be found something more important than these.

Almost always there is failure of elimination of the body wastes. If the kidneys fail to function properly there will be dammed up in the body poisons which affect the whole system.

A more common cause is constipation. When the intestines fail to carry away, quickly and effectively, the waste substances there is sure to be trouble about digestion.

In short, acidity of the stomach is due to failure of the digestive and eliminative processes.

We must go back of the symptoms to see why kidney and intestinal function is delayed. Lowered vitality and improper eating are the chief causes.

Lowered vitality may come from loss of sleep, dissipation, excesses of every sort, worry, overwork, lack of exercise and fresh air, and shallow breathing. Muscular action is essential to proper stomach and intestinal function. Without tone in the muscles of these organs digestion is sure to be delayed or utterly to fail, and without right living the muscle power is sure to suffer.

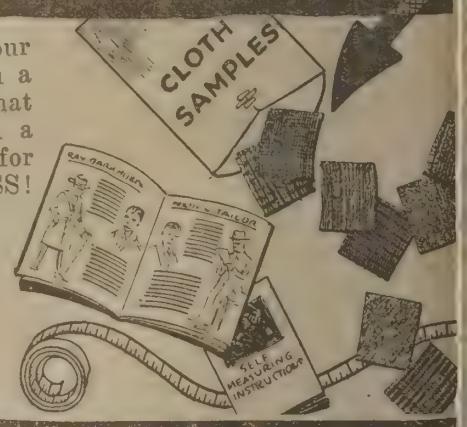
Wrong eating is another factor, of course. If you eat candy, ice cream and pastry between meals your appetite for what may be called "normal foods" will suffer. Fermentation, gas formation and discomfort follow.

Without the right choice of food, after a long time the constipation becomes very difficult to overcome.

To overcome acidity, you should make sure you are in first-class condition. Have your teeth and tonsils examined to see if they are right.

Then proceed to select a diet which will meet your needs. This is a difficult problem and will require careful study.

Do not resort to drugs or to remedies which are purely palliative in their effects. Go to the bottom of the matter and find the underlying causes of your ill health.



You can not afford to overlook this acidity. If neglected, you stand the chance of serious kidney trouble, of ulceration of the stomach, and of the undermining of your general health. Proper treatment and exercise will remedy the trouble.

I want every Man in the Northwest to have this FREE Sample Packet
-including Virgin Wool Cloth Samples - Tape Measure and Self-measuring Blank!

I can make a suit to your own measure, give you a better FIT and one that will wear longer than a factory made suit—for the same money or LESS!

"You can't fool me. You've had one."

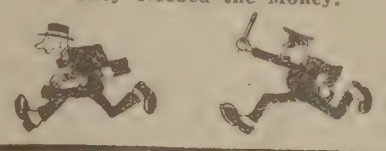
Wins First Prize.

The prize winner in the contest for absent-mindedness is said to be the fellow who left his office, with a note pinned on the door saying that he would be back at 4 o'clock. Upon returning at 3:30, half an hour earlier than he expected to, he read his own note and sat down to wait for himself.

How Could She Tell?

He—Where you come from are all the girls as pretty as you are? She—I don't know, sir—I only notice the boys.—Paris Sans-Gene.

There's a Difference, Though.



"That," said the lawyer, whose office boy had dropped a tack in his chair, "is a very interesting point."

And the Editor Left Town.

Somebody sent the editor of the Poketown Gazette a few bottles of home brew. The same day he received for publication a wedding announcement and a notice of an auction sale. Here are the results:

"William Smith and Miss Lucy Anderson were disposed of at public auction at my farm, one mile east of a beautiful cluster of roses on her breast and two white calves, before a background at farm implements too numerous to mention in the presence of about 70 guests, including two milch cows, six mules and one bobsled. The Rev. Jackson tied the nuptial knot with 200 feet of hay rope and the bridal couple left on one good gang plow for an extended trip with terms to suit purchasers. They will be at home to their friends with one good baby buggy and a few kitchen utensils after one year from date of sale to responsible parties and some 50 chickens."—Dry Goods Economist.

They Needed the Money.

Church—I see a visitor to Chicago was arrested the other day because he had $350 in his pocket.

Gotham—And it wasn't his own money?

"Oh, yes; it was proved in court that it was his own money."

"Why on earth did they arrest him, then?"

"He was trying to get out of town with it."—Yonkers Statesman.

Signs of Maturity.

Mother—Bobby behaved just like a man in church.

Father—Good! Sat up and listened to the sermon, eh?

Mother—No, he went to sleep!—Tit-Bits.

Those Sad Feelings.

Nite: "Have you ever seen a mosquito weep?"

Day: "No, but I've seen a moth ball."

Latest High Class Patterns for the Home

Please order the patterns you desire at least two or three weeks before you wish to use them. Desiring to obtain the latest high-class patterns for its readers, THE FARMER has made arrangements to have them sent direct from the east, and under present mailing conditions it takes about that time for them to reach you.

3518-3908. Ladies' costume. Waist 3518, cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Skirt 3908, cut in six sizes: 25, 27, 29, 31, 33 and 35 inches waist measure. To make this style for a medium size and of one material will require 6 3-8 yards of 40 inches wide. As illustrated vest, collar, cuffs and drapery will require 2 1-8 yards. The width at the foot is about 2 1-4 yards. Two separate patterns, 10 cents for each pattern.

3932. Girls' coat. Cut in four sizes: 4, 6, 8 and 10 years. A 10-year size requires 3 1-4 yards of 44-inch material. Price 10 cents.

3912. Ladies' coat dress. Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size requires 4 1-2 yards of 44-inch material. The width of the dress at the foot is about two yards. Price 10 cents.

3717. Misses' dress. Cut in four sizes: 14, 16, 18 and 20 years. A 20-year size requires 5 1-8 yards of 36-inch material. The width of the skirt at the foot is two yards. Price 10 cents.

3719. Ladies' apron. Cut in four sizes: Small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size requires 5 1-4 yards of 27-inch material. Price 10 cents.

3929. Ladies' house dress. Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size requires 6 1-8 yards of 36-inch material. The width of the skirt at the foot is two yards. Price 10 cents.

3500. Girl's dress. Cut in four sizes: 4, 6, 8 and 10 years. A 6-year-old size will require 2 3-4 yards of 36-inch material. Price 10 cents.

3917. Girl's dress. Cut in four sizes: 8, 10, 12 and 14 years. A 12-year size will require three yards of 40-inch material. Price 10 cents.

3921. Child's play dress. Cut in four sizes: 1, 2, 3 and 4 years. A 2-year size requires 2 3-8 yards of 36-inch material. Price 10 cents.

3931. Girl's dress. Cut in four sizes: 4, 6, 8 and 10 years. A 6-year size requires 2 3-8 yards of 36-inch material. Price 10 cents.

3674. A comfortable corset substitute. Cut in four sizes: Small, 34-36; medium, 38-40; large, 42-44, and extra large, 46-48 inches bust measure. A medium size requires 1 1-2 yards of 32-inch material. Price 10 cents.

3925. A pretty negligee. Cut in four sizes: 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size requires three yards of 40-inch material. Price 10 cents.

Catalogue Notice.

Send 12 cents in silver or stamps for our up-to-date spring and summer 1922 catalogue, showing color plates, and containing 500 designs of ladies', misses and children's patterns, a concise and comprehensive article on dressing, also some points for the needle (illustrating 30 of the various, simple stitches), all valuable hints to the home dressmaker.

Please fill in this order and mail with remittance to:

Breaking Construction Records

Since 1920, faced with the greatest demand for service in telephone history, the Bell System has surpassed all previous records for the installation of new telephone equipment. In the last two years more than 1,000,000 additional stations have been added to the system by construction. This is equal to the entire number of telephones in Great Britain.

In 1921 alone, 450,000 new poles were placed—enough to make a telephone line from New York to Hong Kong. The aerial wire put into service in the same year, 835,000 miles in all, is enough to string 60 wires on such a telephone line.

1,875,000 miles of wire, enclosed in 1,500 miles of cable, were added to underground and submarine lines in 1921. New underground duct totaling 11,000,000 feet was constructed, this representing approximately 300 miles of subway. 69 new central office buildings and important additions were completed or in progress, and new switchboards with a capacity of many thousands of connections were installed.

This equipment added to the Bell System, great though it is in volume and value, represents but a small part of the vast property which enables the telephone on your desk to give the service to which you are accustomed. And to meet the increasing demands for new service, the work of construction goes on.

Goethals Approves Columbia Basin Plan

The report of General George W. Goethals, builder of the Panama canal, was made last week on his recent survey of the proposed Columbia basin irrigation project. He finds the project a feasible one and recommends that the gravity system from the Pend Oreille river be used in preference to a pumping system from a dam on the Columbia river. He declares that the development of the Columbia basin project would add more wealth to the United States than did either the Panama canal or the Alaska railroad and, therefore, urges it as a national enterprise rather than a Pacific northwest or state undertaking. "The work should be provided for and carried out as were these other two national projects—by direct appropriation," he said in his report.

The following is the language in which the famous engineer summarizes the lengthy and detailed report of his survey of the project:

"1—Of more than 3,000,000 acres embraced within the Columbia basin, lying between the Columbia and Snake rivers, 1,753,000 are irrigable by the Pend Oreille gravity project and 1,403,000 by the Columbia river pumping project.

"2.—The gravity project provides water by gravity flow from the Pend Oreille river and its tributaries above Newport, Wash.

"3.—The pumping project provides water from the Columbia river. A pool is formed by a dam, varying from 200 to 285 feet in height, with respective effective heads of 123 to 211 feet, across the gorge of the Columbia at the head of Grand coulee, from which water is pumped by hydro-electric units, each lifting 1000 second feet approximately 482 feet, or by direct connected units of equal capacity lifting approximately 450 feet, to an artificial lake, whence the water is carried to the land by gravity.

"4.—The estimated cost of the gravity project is $254,170,351, or $145.56 an acre.

"5.—The construction of the gravity system is feasible and offers no unusual difficulties.

"6.—The cost of operation and maintenance for the gravity project is estimated at $841,450 or 48 cents an acre each year.

"7.—Lowest estimated cost for the pumping project is $223,096,943, or $159.01 an acre. The difficulties attending the construction are unusual and the pumps proposed have never been built.

"8.—The cost of operation and maintenance for the pumping project is estimated from $2,610,275 to $2,192,605 a year, or from $1.86 to $1.51 an acre, depending on height of dam adopted.

"9.—The gravity project is recommended for adoption.

"10.—It is recommended that the entire project be undertaken with a view to completing it in its entirety rather than attempting it piecemeal or adopting temporary construction.

"11.—The estimated time for completion is six years.

"12.—The soils of the irrigable lands are fertile and abundant; being in all respects similar to Yakima and Wenatchee valleys; large production will result from water on the lands.

13.—A great variety of crops can be produced, and due to the excellent transportation facilities, can be carried to the markets of the world.

"14.—No apprehension need be felt about settlement of the lands after water has been placed thereon.

"15.—All things considered, the project is justified from an economic standpoint if the land can be made ready for planting at a cost ranging from $200 to $275 an acre; at the latter price a profitable return will be secured on the investment.

"16.—The project, because of the benefits that will accrue to the United States as a whole, is a national one and as such should be carried out by the federal government through direct appropriation.

"17.—Following the existing volicy of the government in its irrigation projects, the farmer or land holder should be taxed to amortize the cost of construction. The government should bear or absorb the interest charges, which will be more than repaid through the increase that will result to the natural wealth, affecting industries and products of all kinds over the entire country."

Five definite reasons are given by General Goethals for prefering the gravity system from the Pend Oreille river to the Columbia river pumping plans as follows:

1. It develops the largest acreage—1,753,000 acres under gravity system, as against 1,403,000 under pumping project.

2. The construction cost an acre will be lower—$145.56 under gravity, as against $159.01 to $172.12 an acre under the pumping project, the variant in the latter figures being due to the type of proposed dam construction.

3. The annual operating cost will be much lower—48 cents an acre under the gravity system, as against $1.86 to $1.56 under the pumping project.

4. The reliability and simplicity of a direct gravity flow of water are immeasurably superior to the complexity of operating a power and pumping plant with a large number of turbines and pumps which would be stressed higher than any existing equipment of equal capacity.

5. No treaty stipulations have to be solved, enabling construction work to start immediately funds become available.

Next week's issue of THE FARMER will contain a comprehensive report of the findings of General Goethals, and a discussion of the plans for carrying out the development program of the great Columbia basin.

* * *

E. A. Bryan, state commissioner of education for Idaho, and for many years a frequent contributor to the columns of THE FARMER, was last week elected president of the Inland Empire Teachers' association.

* * *

The coal strike continued throughout last week with increasing tieup of mines throughout the country. Practically all of the union miners are now idle, and it is declared by the union heads that of the 140,000 nonunion miners in the country about 75,000 have joined in the strike. Comparatively little disturbance was noted anywhere. In one or two state martial law, enforced by state troops, has been put into effect because of small riots in strike localities. The government continues to maintain its original policy of keeping its hands off unless the welfare of the general public becomes menaced.

Senator McCroskey

As The Washington Farmer goes to press comes word of the death at his home in Garfield of Robert C. McCroskey, one of the pioneer builders of the Pacific northwest. Death came as a result of a stroke of paralysis, induced in part, it is believed, by shock received in a train wreck at Pasco last winter. Senator McCroskey was 77 years old, was a large holder of Palouse wheat lands and exceptionally active in public affairs since his coming to Whitman county in 1877. He had served continuously as a regent of the State College of Washington since 1897, and has been active in national, state and local politics. He was a staunch friend of farm organizations, being for several years a member of the Farmers' union and being a familiar figure at farmers' conventions throughout the Inland Empire.

Farm Business and Markets Outlook

F. WYATT MFG. CO., 942 N. 5th ST., SALINA, KANS.

STATEMENT OF THE OWNERSHIP, MANagement, circulation, etc., required by the act of congress of August 24, 1912, of The Washington Farmer, published weekly at Spokane, Washington, for April 1, 1922.

State of Washington, county of Spokane, ss.

Before me, a notary public in and for the state and county aforesaid, personally appeared J. F. Young, who, having been duly sworn according to law, deposes and says that he is the vice president of The Washington Farmer, and that the following is to the best of his knowledge and belief, a true statement of the ownership, management (and if a daily paper, the circulation), etc., of the aforesaid publication for the date shown in the above caption, required by the act of August 24, 1912, embodied in section 443, Postal Laws and Regulations, printed on the reverse side of this form, to wit:

1. That the names and addresses of the publisher, editor, managing editor and business managers are:

Publisher, Cowles Publishing Company, Spokane, Washington; editor, ——; managing editor, Edwan A. Smith, Spokane, Washington; business managers, none.

2. That the owners are: (Give names and addresses of individual owners, or if a corporation, give its name and the names and addresses of stockholders owning or holding 1 per cent or more of the total amount of stock.) Cowles Publishing Company (a corporation), Spokane, Washington; W. H. Cowles, Spokane, Washington; H. C. Cowles, Spokane, Washington; J. F. Young, Spokane, Washington; F. J. Whaley, Spokane, Washington.

3. That the known bondholders, mortgagees and other security holders owning or holding 1 per cent or more of total amount of bonds, mortgages or other securities are: (If there are none, so state.) none.

4. That the two paragraphs next above, giving the names of the owners, stockholders and security holders, if any, contain not only the list of stockholders and security holders as they appear upon the books of the company, but also in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation; the name of the person or corporation for whom such trustee is acting, is given; also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees, hold stock and securities in a capacity other than that of a bona fide owner; and this affiant has no reason to believe that any other person, association or corporation has any interest, direct or indirect, in the said stock, bonds or other securities than as so stated by him.

COWLES PUBLISHING COMPANY.
By J. F. YOUNG, Vice Pres.

Sworn to and subscribed before me, this 27th day of March, 1922.

(Seal.) F. J. WHALEY.

(My commission expires Oct. 17, 1923.)

Please mention THE WASHINGTON FARMER when writing advertisers.

We are glad to hear from Lucille Thwing, Cowlitz county, Washington, girl. Lucille received nine "Es" and one "G" on her school report card. Aunt Nellie thinks that is very good. (Tell your friend to write to Aunt Nellie on some subject in which she is interested, Lucille, such as club work, sewing, a trip, or she may write a short original story. Personal letters from cousins over 12 years are not published.—Aunt Nellie.)

Pearl House, southwestern Cowlitz county, Washington, writes to tell Aunt Nellie she would like to receive "the paper she has heard so much about." She means The Junior Farmer. Pearl was 11 December 4, 1921. On her school report card, she got three "Es." That means from 95 to 100 per cent on a subject.

Thelma Phillips says the weather has been fine in Grant county, Washington, where she lives. Her home is near Soap Lake. She was 11 years old July 2, 1921. At school she gets along well. Sometimes Thelma gets lonesome. A sister 5 years old and a brother 2 are her little playmates.

Cora E. Brown, a 7-year-old cousin, north of the Colville Indian reservation, in northern Washington, has never written to the Corner before. She has brown hair and blue eyes. Her birthday is November 30. Tom and Rainbow are her pet cats.

Birthday Greetings

THURSDAY, April 13—Dollie Hundt, 9 years old; Lawrence Wade, 10.

FRIDAY, April 14—Ethel Gordon, 9 years old; Kathleen Prousce, 10.

SATURDAY, April 15—Calvin Edward Bates, 8 years old; Victor Knight, 10; Hellen Oleson, 10; Alice Sargant, 11.

SUNDAY, April 16—Myron Moran, 10 years old; Bayard Taylor Snell, 10; Lilly Bell Vernon, 10.

MONDAY, April 17—Estella Ellison, 11 years old; Ethel Gordon; Ina Huovinen, 11; Helena Schweikl, 11; Josie Smith, 11; Marie Thomas, 9; Marian Bridges, 11.

TUESDAY, April 18—Alice Lovos, 11 years old.

WEDNESDAY, April 19—Ruth Dow, 11 years old; Helen Kissler, 8.

LETTERS WELCOMED BY AUNT NELLIE.

Among recent letters received by Aunt Nellie are those from cousins whose names follow. A few of these will be published each week in the regular edition of THE FARMER, and others will appear from time to time in The Junior Farmer:

Martha Slikker, Kenneth Coleman, Mabel and Mina Hamilton, Dorothy Peterson, Lena Reinhart, Violet Main, Mary Salvadalena, Clarence Lemming, Bernice Tobin, Eva Charlotte Cole, Clara Mary Beardsley, Kathleen Prausce, Sigrid Kiya, Virgil Byford, Vennie Mae Beardsley, Louis Rostad, Jimmy Betz, George Foutch, Lois McAlvey, Viola Robbins, Emily Dowell, Dortha Malone, Violet Gossau, Sigrun Agnes Runolfson, Iris Bellingar, Faith Elm, Doris Decker, Frances Ruchert, Virginia Fife, Grace Warren, Emma Hochstatter, Jeannette Byford.

BEDTIME STORIES

By THORNTON W. BURGESS.

Copyright, 1919, T. W. B.

JERRY DECIDES TO HAVE SOME FUN.

Billy Mink ran around the edge of the Smiling Pool on his way to the Laughing Brook. His eyes twinkled with mischief, and he hurried as only Billy can. As he passed Jerry Muskrat's home Jerry saw him.

"Hi, Billy Mink! Where are you going in such a hurry this fine morning?" he called.

"To find Little Joe Otter. Have you seen anything of him?" replied Billy.

"No," said Jerry. "He's probably gone down to the Big River fishing. I heard him say last night that he was going."

"Thanks," said Billy Mink, and without waiting to say more he was off like a little brown flash.

Jerry watched him out of sight. "Humph!" exclaimed Jerry. "Billy Mink is in a terrible hurry this morning. Now I wonder why he is so anxious to find Little Joe Otter. When they get their heads together it is usually for some mischief."

Jerry climbed to the top of his house and looked over the Smiling Pool in the direction from which Billy Mink had just come. Almost at once he saw Grandfather Frog fast asleep on his big green lily pad. The legs of a foolish green fly were sticking out of one corner of his big mouth. Jerry couldn't help laughing, for Grandfather Frog certainly did look funny.

"He's had a good breakfast this morning, and his full stomach has made him sleepy," thought Jerry. "But he's getting careless in his old age. He certainly is getting careless. The idea of going to sleep right out in plain sight like that!"

Suddenly a new thought popped into his head. "Billy Mink saw him, and that is why he is so anxious to find Little Joe Otter. He is planning to play some trick on Grandfather Frog as sure as pollywogs have tails!" exclaimed Jerry. Then his eyes began to twinkle as he added: "I think I'll have some fun myself."

Without another word Jerry slipped down into the water and swam to the big green lily pad of Grandfather Frog. Then

"Have a nice nap?" inquired Jerry, with a broad grin.

he hit the water a smart blow with his tail. Grandfather Frog's big, goggly eyes flew open and he was just about to make a frightened plunge into the Smiling Pool when he saw Jerry.

"Have a nice nap?" inquired Jerry, with a broad grin.

"I wasn't asleep!" protested Grandfather Frog indignantly. "I was just thinking."

"Don't you think it a rather dangerous plan to think so long with your eyes closed?" asked Jerry.

"Well, maybe I did just doze off," admitted Grandfather Frog, sheepishly.

"Maybe you did," replied Jerry. "Now, listen." Then Jerry whispered in Grandfather Frog's ear, and both chuckled as if they were enjoying some joke, for they were great friends, you know. Afterward Jerry swam back to his house and Grandfather Frog closed his eyes so as to look just as he did when he was asleep.

Meanwhile, Billy Mink had hurried down the Laughing Brook. Half way to the Big River he met Little Joe Otter bringing home a big fish, for, you know, Little Joe is a great fisherman. Billy Mink hurried to tell him how Grandfather Frog had fallen fast asleep on his big green lily pad.

"It's a splendid chance to have some fun with Grandfather Frog and give him a great scare," concluded Billy. Little Joe Otter put his fish down and grinned. He likes to play pranks almost as well as he likes to go fishing.

"What can we do?" said he.

"I've thought of a plan," replied Billy. "Do you happen to know where we can find Longlegs the Blue Heron?"

"Yes," said Little Joe. "I saw him fishing not five minutes ago."

Then Billy told Little Joe his plan, and, laughing and giggling, the two little scamps hurried off to find Longlegs the Blue Heron.

The Gaunt Gray Wolf

(Continued from page seventeen.)

awkward figure to its full height and placing his hand on Dick's shoulder, "me an' you's stood by one 'nother for a good many years, an' in all sorts o' hard places, an' if it's fight Injuns with you now, Dick, it's fight un, an' Bill's with us."

"Aye," said Bill, "that I am."

The boat was unloaded, and with heavy hearts the men prepared and ate their evening meal. Then while they smoked their pipes, light packs were put up and all was made sung for an early start the following morning.

With the first blink of dawn the three determined men, armed with their rifles, swung out into the forest, and rapidly but cautiously filed up the old portage trail in the direction Manikawan had taken.

(To be continued.)

Veteran Goodyear users tell us that our tires today give more than twice the mileage they did ten years ago

The average decrease in the price of Goodyear Tires since the year 1910 is more than sixty per cent

QUALITY WAS NEVER SO HIGH
PRICES WERE NEVER SO LOW

It is a favorite practice nowadays to refer more or less sagely to the good values of "before the war."

So far as tires are concerned, any such reference is an illusion.

The plain fact is, pre-war tire values were only a pale shadow alongside those of today.

Every tire in the Goodyear line proves this to be true.

If you are a veteran Goodyear user you have probably noticed that our tires today give more than twice the mileage they did ten years ago.

If you have compared the prices of then and now you have seen that present Goodyear prices are less than half of what they were.

Just to make this clear, consider our 30 x 3½-inch Cross-Rib clincher.

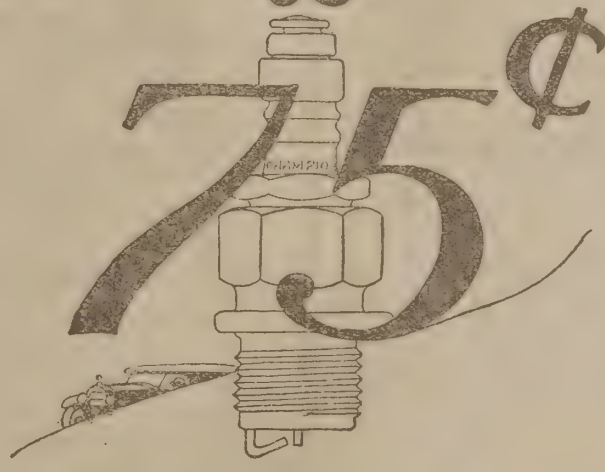
In 1910, for example, you paid $33.90 for this size tire.

Today, for a vastly better tire of the same type, you pay $10.95!

All other Goodyear Tires show similarly important reductions, the average decrease in price since 1910 being more than sixty per cent.

Goodyear quality was never so high—Goodyear Tires are larger, heavier and more durable than ever before.

Goodyear prices were never so low—as the figures here listed will show.



30 x 3½ Cross-Rib Fabric	$10.95		
30 x 3½ All-Weather Tread Fabric	$14.75	33 x 4 All-Weather Tread Cord	$33.40
30 x 3½ All-Weather Tread Cord	$18.00	33 x 4½ All-Weather Tread Cord	$42.85
32 x 3½ All-Weather Tread Cord	$25.50	34 x 4½ All-Weather Tread Cord	$43.90
32 x 4 All-Weather Tread Cord	$32.40	35 x 5 All-Weather Tread Cord	$54.75

Sweet Cream Butter

By W. H. UNDERWOOD.

Some people would rather make butter from sweet cream than from sour or ripened cream. It takes less time to make sweet cream butter than it does to make the ripened cream product and if the proper control and attention to details are given to the process the amount of fat lost in the buttermilk is not any greater than that lost in the buttermilk by the usual methods of making ripened cream butter.

For making sweet cream butter cream should be skimmed that contains about 30 per cent of butterfat. Such cream will churn without difficulty at the required temperature. It also will be less likely to sour or to develop undesirable flavors if for any reason it can not be churned at the expected time and has to be held over for a time.

That the cream must be from clean, sweet milk is obvious. Stable or feed taints must in particular be guarded against. The cream is cooled as soon as possible after it has been separated. The temperature to which to cool will depend upon how soon churning is to take place. For immediate churning 40 to 45 degrees will give the best results, but if three or four hours must elapse before the churning can be commenced 48 to 50 degrees will be all right provided the cream is held at this temperature until churned. If it is held at too low a temperature for several hours the butterfat will become so hard that churning will be difficult or long delayed.

To give a more distinctive flavor and aroma to the butter a "starter" or sour buttermilk is added to the cream just before churning. The use of a starter is not necessary, but it will give a finer and more pleasing flavor to the butter, especially if the quality of the cream is not as good as it ought to be. The cold cream is placed in the churn and the starter added. As a rule 25 to 30 per cent of starter will be sufficient for winter use and 20 per cent for summer use. If desired a small amount of butter color may be added at this time.

The churning is then begun and continued until the butter granules are about half the size of grains of wheat or rice. This will require about 45 minutes of churning, according to the richness of the cream, the season of the year and the temperature. Care must be exercised not to overchurn the butter. If the granules are too large too much water and curd will be incorporated.

As soon as the churning is finished the buttermilk is drawn off through a strainer and the butter allowed to drain. In most cases draining it for 10 minutes will be sufficient, after which water at 50 or 52 degrees equal in volume to the cream used is added. After revolving the churn a few times the water is drawn off and the butter again drained. Excessive washing must be avoided, as it will remove the delicate flavor and aroma of the butter. The butter is salted to taste and worked in the same manner ar ordinary ripened cream butter.

The New Queen

In order to get the new queen to work in all the frames it is a good plan to place a brood comb in the top super, explained W. L. Cox of Elma, Wash., when talking of honey production. The queen often has a tendency to work on the lower super only, and allow this one to become too crowded. This condition can also be avoided by putting in a new super between the top and the bottom ones. In any case the bees should have plenty of room to make use of the honey flow and store it away in clean combs.

The super next to the comb is generally worked on most and if this is raised when nearly full and a new one slipped in it will be finished more carefully and it will also be cleaner.

When getting a new queen one should put in the order long enough before needed that the colony will not be held back for the lack of a queen. Never kill the old one before the new one arrives.

The new queen will sometimes leave the hive if she is not properly cared for. Let the workers gnaw her out of the shipping case. After she is placed in the hive it should never be opened before that time, as the workers are easily annoyed before their new queen has become established.

All bee furniture should be made up during the winter months, so that all will be in readiness when the good weather comes in the spring. As a general rule it is better to give the bees a solid foundation in the center of the frames, since they save much time in making the comb.

In sections where there are two main honey flows it is a good plan to make two extractions, since the first is usually of a clearer color. This is especially true in climates where the fire weed blooms in the early spring. The amber-colored honey is from such flowers as clover and alfalfa, which is a different quality than the early flowers. Where there is enough of the fire weed it will pay to make a separate extraction.

ON SEMI-OFFICIAL TEST.

D. F. Nugent of Granger, Wash., reports that he is putting all the cows in his dairy herd on semi-official test. The herd is headed by Allamuchy Sadie Vale Rose. Zillah Ragapple Fobes Segis Aaggie, a senior 4-year-old, recently completed a seven-day test in which she made a record of 476.3 pounds of milk and 25.23 pounds of butter. She had also just finished the first 30 days of her semi-official test with a record of 1905.5 pounds of milk and 101.65 pounds of butter.

SHIP BY WARREN FORMULA.

New York state dairymen who ships whole milk to the metropolis will hereafter be paid for their product on the basis of the Warren formula, originated by Professor G. F. Warren of the state agricultural college after a careful survey of production costs in various dairying sections of the country. Using this formula, class 1 milk will be sold at cost of production plus a fair profit. This action was taken only after many years' discussion, and only through the efforts of thousands of dairymen, united in the dairymen's league.

Real Job of Home Making

(Continued from page three.)

draining swamp lands: Buy sufficient powder to loosen the stumps; provide powerful steam or gasoline-propelled land-clearing machinery, and employ a few skilled men to direct the work. Unskilled labor is available in every community.

Payments for this improvement might be extended over a period of years. There is no question but that the majority of people thus aided would be able to repay the cost well within a five-year period.

Under present conditions, with many being compelled to work out the greater part of the year, it is a fortunate land owner who gets more than an acre or two cleared and into crop each year. It is a long, heart-breaking road to travel, this home making without means, but the woods are full of those sturdy men and women who seek independence from wage making in the fertile and pleasant lands of western Washington.

DRY AND SUNSHINY.

It is necessary to have a hog house which is dry and free from drafts. at the same time admitting sunshine.

Fix Your Eye on Live Stock!

Live stock is at the root of the agricultural success of this state. It is already a tremendous business and an asset to be watched and guarded. To this task your state farm weekly bends its efforts and lends its resources. Experienced veterinarians and authorities are in charge of its live stock department, and readers are given a great deal of practical and reliable information on the proper care of stock, treatment of sick animals, news of sales, market quotations, and reports of every important development in the live stock world.

Such information and service are often worth many dollars to our subscribers, yet are available at low cost on account of our cooperative subscription plan.

We say to our friends: "Send your subscription order direct. Get your neighbor to do the same. We will give you and your neighbor the benefit of every penny which would ordinarily go to the agent handling the subscription."

If you believe in cooperation, help us make our plan a success. Send in your order if you haven't already done so, and let as many neighbors as possible know about our money-saving plan.

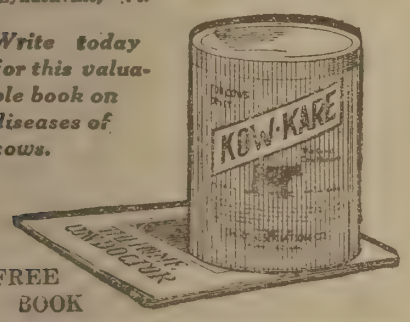
HALF A CAN SAVED HIS COW

Trouble After Calving Quickly Cleared Up

So many cow ailments have their origin at the calving period simply because cows are left to shift for themselves during this critical time, when the simplest kind of medicinal care would insure health and safety. E. A. Hale of Chatham, Mass., writes us:



"Please send me a copy of 'The Home Cow Doctor.' I had one cow this spring that did not do well after calving. I tried everything and she grew worse all the time. Her milk about stopped. A friend of mine gave me about half of a small can of Kow-Kare. I gave her that and she began to pick up and eat before that half box was gone, and gave ten quarts a day. I got more Kow-Kare and now she is giving fifteen quarts a day, and is hungry as a wolf."

Kow-Kare has carried thousands of valuable cows safely through calving. The best plan is to use it for two weeks before and after. Barrenness, Abortion, Retained Afterbirth, Scouring, Bunches, Milk Fever, Loss of Appetite and all similar disorders that arise from weakened digestive or genital organs are quickly cleared up by Kow-Kare, because it is these organs that are toned up and strengthened by this great cow medicine.

General stores, feed dealers and druggists sell Kow-Kare at the new reduced prices, 65c and $1.25

DR. HESS DIP and DISINFECTANT

Use the sprinkling can about your premises—the dipping tank where the occasion demands. For your hogs, a wallow is the most convenient, and quite effective. To every 70 to 100 gallons of water add one gallon of Dr. Hess Dip and Disinfectant. Then your premises—the cow barn, the stables, the pig pen, the poultry house, the sink, drains, closets, cesspools—everything, everywhere, will be pure and healthful.

You can dip, or you can spray or sprinkle, or apply with a sponge or brush, Dr. Hess Dip and Disinfectant to the animal body. There's scarcely an animal parasite, skin disease, or infection that Dr. Hess D. and D. will not remedy. *Guaranteed.*

DR. HESS & CLARK Ashland, Ohio

News for Breeders

TO BUY GUERNSEY STOCK.

Members of the Washington Guernsey Cattle club contemplate buying a shipment of breeding stock from middle western breeders with the view of holding in the near future one or more sales in western Washington. At present the plans are to hold one sale in some part of northern Washington, while the second sale will be held at either Puyallup or Chehalis. There is an unusual call for Guernsey heifers and milch cows in the entire western Washington district and it is the hope of the officers to bring a number of animals to the breeders, the great majority of whom do not have the time or means to go away to buy cattle of their own accord.

"We find that there is a good demand for breed heifers and for proven sires with tested daughters," said Leland J. Clark of Seattle, vice president of the club. "The local demand can not be supplied from Washington breeders and even the bull calves are by no means a drug on the market. There are, however, a few breeders who have a cow or heifer to sell and we plan on getting a few local animals consigned to the sale. This will give the buyers a better opportunity to fill their needs."

The Thurston County Guernsey association has taken up the matter of new stock with one of its local banks and plans are now under foot for the purchase of a carload of animals which will be disposed of in that county alone.

Officers of the state organization are J. E. Wrage, Arlington, president; Leland J. Clark, Seattle, vice president; H. B Douglas, Ferndale, secretary-treasurer. Additional members of the board are R. N West of Yakima and Mrs. S. P. Davis, Olga Orcas island.

GARRETSON BUYS TOP COW.

Chimacum Wayne Pontiac Burke 2d, by a son of the famous 33-pound Chimacum Wayne Boone and from a daughter of another son, was the top-priced cow at the Davis-Butchart dispersal sale at Granger early in February. She was bid in at $850 by Lloyd Garretson of Yakima, who thus obtained a 30-pound junior 4-year-old to add to his growing herd of purebreds at Painted Rocks ranch. She was consigned by Butchart Brother. Her picture is shown herewith.

BREAKS SEVEN-DAY MILK RECORD.

About the same time that word was received in Washington that the Todd bred Holstein, Cascade Pietertje, had topped the Brentwood sale at $3325, it was announced that Cascade Pauline Mercedes, another daughter of Sir Korndyke Ormsby Pieve bred by the Todds, had broken the American seven-day milk record for senior 4-year-olds with 849.2 pounds of milk and 33.5 of butter. She is owned by the Minnesota breeders who recently bought her sire, and who paid $10,000 a year or two ago for one of her sisters She is the new Minnesota state leader also for butter production in the 30-day division, senior 3-year-olds, with a 10 months' record of 869.61 pounds of butter from 21,507.5 of milk.

HOLSTEIN SALE AT ELMA.

Lewis and Thurston county Holstein breeders, as well as those of Grays Harbor county, are expected to participate in the sale of 50 to 75 heads which Jefferson county breeders are planning at the county fairgrounds, near Elma May 6. The Grays Harbor county farm bureau is cooperating to make the sale a success, and a committee, consisting of W. T. McBride, J. E. Ebinger and County Agent Robert Cowan inspected the cattle which will be sold.

HOLSTEIN SALE.

"The sale will be held at the Southwest Washington fairgrounds and it will be a dandy," says Secretary E. A. Donaldson regarding the cooperative consignment sale which the Lewis County Holstein club has set for May 24. Nathan Hamilton is dispersing his entire herd of 20 head, and the sale is to be made up entirely of cattle consigned by local club members. There will be about 50 head, of which over 40 will be females."

GUERNSEY SALE.

A date that is of considerable importance to Yakima valley Guernsey breeders, at least, is that of April 18, when 30 head of purebreds recently imported from Wisconsin will be auctioned off at Fawndale farms, owned by Wallace & Fordyce, near Sunnyside, Wash.

THE WASHINGTON FARMER

ESTABLISHED 1894 SPOKANE. SEATTLE.

Is Big With Farm Prosperity

Columbia Basin Project Gives Pacific Northwest Its Greatest Agricultural Opportunity

Who is this man Goethals who deliberately reports, after due investigations, that the Columbia basin irrigation project, including 1,753,000 acres of land and providing 43,000 40-acre farms, has in its soil, in its water supply, in its transportation facilities, in its access to world markets, in its cost of the watered lands to settlers, in its engineering feasibility, the capacity of adding much more to the national wealth than either the Panama canal or the Alaska railroad; and that "this work should be provided for and carried out as were these other two national projects—by direct appropriation?"

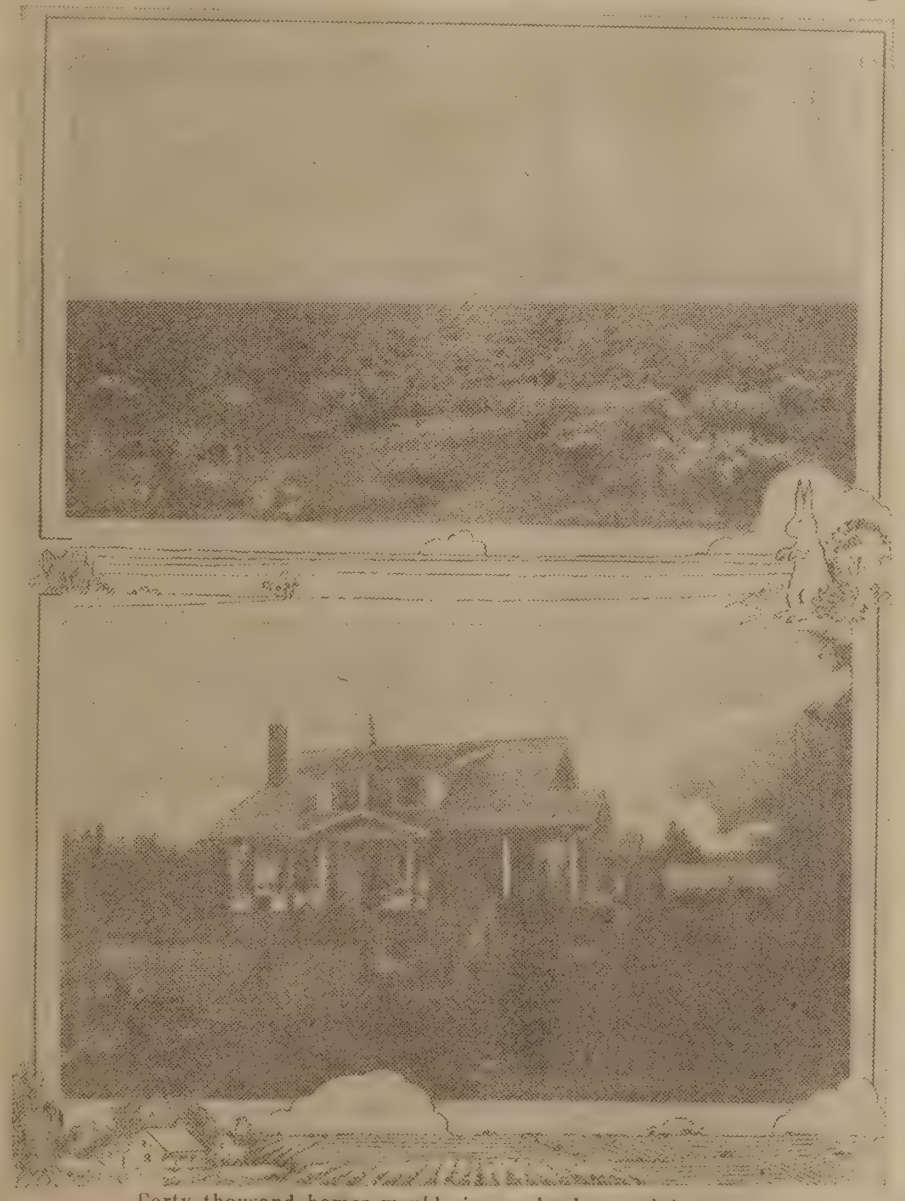
General Goethals further recommends

That the entire project be undertaken with a view to complete it in its entirety, rather than in piecemeal or adopting temporary construction;

That the estimated time for completion be six years;

That no apprehension need be felt about settlement of the land after water has been placed thereon;

That the payment for land by the settler may extend over a long period of years.



That the government should bear or absorb the interest charges, "which will be more than repaid through the increase that will result to the natural wealth affecting industries and products of all kinds over the entire country."

Most of us know that a man named Goethals built the Panama canal, and we naively surmise that it must have been rather a big job. Not so many of us realize that Major-General Goethals has done something vastly more tremendous, difficult and complex.

Dutch by descent, a

Greater Quality Production, Better Quantity Markets, More Neighbors, Better Schools, Churches and Social Privileges, Making Farm Life More Worth While to the Young Folks.

West Point man by training, and coming honestly by what became recognized as "Goethals' terrible tenacity" from a number of distinguished and likewise tenacious progenitors, George Washington Goethals has a decidedly forceful personality.

Forty thousand homes would rise on lands now lying waste.

After graduation from West Point he was for a number of years stationed in the Pacific northwest, a part of the time at old Fort Spokane on the Columbia river, but in 1898, when we went to war with Spain, became the chief engineer of the volunteer forces.

Later, he built the fortifications and harbor works of the city of Newport, R. I., and had charge of Muscle Shoals canal construction, and still later of all improvements of the Tennessee river below Chattanooga.

It was in 1907 that President Roosevelt saw in him the man for the big, thrice-attempted task to the southward, and appointed him chief engineer and chairman of the canal board.

The building of the Panama canal was a vast engineering feat, but it was a still more remarkable achievement in organization and administration. Goethals had been trained in a military career. It was confidently expected that administration of the great piece of work would be along militaristic lines: desirable places would fall, by natural reasons of accordant policy and fullest knowledge and trust, to military men. Desirable places did not. They fell to responsible men, indiscriminately, and administration took on at once a civilian aspect.

The success of the thing demanded the organization and maintenance of a complex little American state of 65,000 souls, with schools, courts, postal system, taxation and revenue-raising system, policing and all the rest of the problems of a state.

In addition it demanded the solution of problems of sanitation on a large scale;

What Are the Prospects for the Wool Man?—Page 6

The Tariff Bill

Should Protect All Industry Alike

The administration's tariff bill, laid before the senate last Monday, seems fair to agriculture. In framing the agricultural schedule the committee gave the republican agricultural bloc about the rates asked for. The bill includes most items of foodstuffs, many of which were on the free list in the Underwood bill passed by the democratic congress in President Wilson's first administration.

This proposed new tariff measure may be defective in certain particulars. It is yet too early to pass unreserved judgment upon it. It may be found that protection in some cases is too high and in others too low; it may develop that some of the big industries that ought to be able to stand alone by this time have been given too much protection.

But in its broad, general principles, this bill undeniably is fairer than the Underwood law, which it proposes to repeal. The Underwood law put most agricultural products on the free list and sharply reduced the protection that had been given to other farm products. At the same time continued protection to manufactured commodities.

We have always contended that if the country is to have protection it should be protection all round, without discrimination for or against any of our great, basic industries. On the other hand, if we are to have free trade or a tariff for revenue only it should be all-round free trade or tariff for revenue only.

The injustice of the Underwood bill lay in the fact that while it took protection away from the American farmers it compelled them to go on buying their merchandise in protected markets.

The old Payne-Aldrich republican tariff law was not perfect. It levied tariff duties that were too high for those times. But it at least had the merit of giving a square deal to agriculture, and the bill now brought forward by the Harding administration has that same virtue. The congressman who drafted it gave an attentive ear to the farmers of the United States and we are convinced that agriculture will have justice under it that it has long been denied under the Underwood law.

Comparisons of the proposed tariff on products of special interest to the farmer with those prevailing in the Fordney, Underwood and Payne-Aldrich bills follow:

Wheat—30 cents bushel; Fordney and Payne-Aldrich, 25 cents; Underwood, free.

Corn—Including cracked, 15 cents bushel; Fordney and Payne-Aldrich, same; Underwood, free.

Oats—15 cents bushel; Fordney, 10 cents; Payne-Aldrich, 15 cents; Underwood, 6 cents.

Barley—20 cents bushel; Fordney, 15 cents; Payne-Aldrich, 30 cents; Underwood, 5 cents.

Rye—15 cents bushel; Fordney and Payne-Aldrich, 10 cents; Underwood, free.

Cattle—1½ cents pound to 2 cents per pound; Fordney, 1 to 1¼ cents; Payne-Aldrich, $2 head to 27½ per cent; Underwood, free.

Fresh beef and veal, 3½ cents pound; Fordney, 2 cents; Payne-Aldrich, 1½ cents; Underwood, free.

Sheep and Goats—$2 head; Fordney, 1 cent pound; Payne-Aldrich, 75 cents head to 20 per cent; Underwood, free.

Mutton—2½ cents pound; Fordney, 1¼ cents; Payne-Aldrich, 1½ cents; Underwood, free.

Swine—½ cent pound; Fordney, same; Payne-Aldrich, $1.50 head; Underwood, free.

Fresh pork—¾ cent pound; Fordney, same; Payne-Aldrich 1½ cents; Underwood, free.

Bacon, hams and shoulders and other pork, prepared or preserved—2 cents pound; Fordney, 1¼ cents; Payne-Aldrich, 4 cents; Underwood, free.

Apples—30 cents bushel; Fordney and Payne-Aldrich, 25 cents; Underwood, 10 cents.

Peaches and pears—½ cent a pound; Fordney, same; Payne-Aldrich, 25 cents bushel; Underwood, 10 cents bushel. Dried or evaporated, 2 cents pound; Payne-Aldrich, same; Fordney and Underwood, each 1 cent.

Plums and prunes—½ cent pound; Fordney, same; Payne-Aldrich, 25 cents bushel; Underwood, 10 cents bushel; dried, ½ cent per pound; Fordney, same; Payne-Aldrich, 2 cents; Underwood, 1 cent.

Hides of cattle of bovine species—Green, 2 cents per pound; dried, 4 cents pound; Fordney, Payne-Aldrich and Underwood, free.

Earwig Comes Across

Certain parts of the United States are becoming infested with the European ear wig. This pest, which is very much like the cockroach, has for many years been known in European countries with climates similar to the northeastern and northwestern parts of the United States.

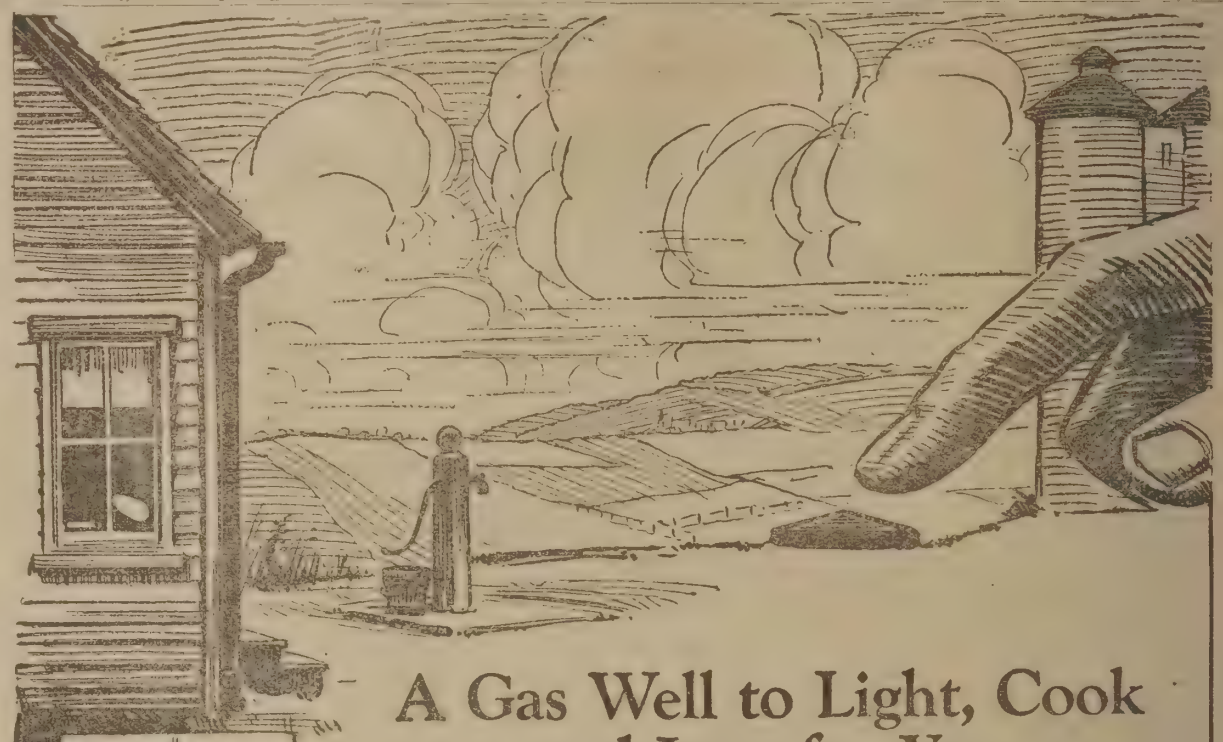
"The insect takes its name from its supposed habits of concealment," says W. D. Whitcombe of the United States bureau of entomology. "Traditions tell of its hiding in the ears of animal or, in some instances, of human beings. On the end of its abdomen are a pair of forceps similar to the instrument used in former times for the piercing of ear lobes for earrings.

"Ear wigs live on vegetation of almost any kind. They are very fond of concealing themselves behind clinging vines or close growing shrubs of any kind. They have the peculiar habit of feeding at night and hiding themselves during the day. Some of them have been known to climb to the tops of telephone poles, where they would hide in cracks of the pole or under the yard arms. They will also hide in strange places about the house, as, for instance, under a doormat or in unused rubbers about the porch. They are very quick when found and are hard to catch."

"The eggs are laid in the fall," says Mr. Whitcombe, "and both the male and female live over winter, the female protecting the young in the spring. The eggs are apt to hatch as early as February in case warm nights occur. It is during this hatching period, the first two weeks of their lives, that control methods are most successful. Poisoned bait has been found very effective if used in the early spring when the pest is first noticed. Sixteen parts of stale bread ground up thoroughly and mixed with one part paris green is recommended. It is important to apply this bait during the night. The insects are very fond of new grass or young leaves, but will eat this mixture in preference if it is spread before them.

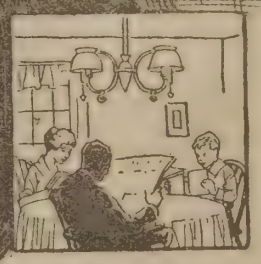
"Spraying with arsenate of lead will kill the insect when they are feeding upon plants. This also should be applied early in order to thoroughly cover the young leaves.

"Later in the season, when the ear wig is well grown, an insect trap can be used to good advantage. A concealed flower pot, the top of which can be closed quickly, gets results. This pest is more easily trapped than other insects, due to its desire to hide in almost any thing



"A contact insecticide is also successful in killing the mature insect. This should be applied behind vines and bushes and upon the shrubbery itself. Black leaf 40 is best for this purpose.

The injury caused by the pest is mostly to the leaves of valuable shrubs and flowers about the lawn. Chrysanthemums and dahlia buds are its favorite diet. But in addition to this it is a great nusiance to the housewife because of the places in which it hides.

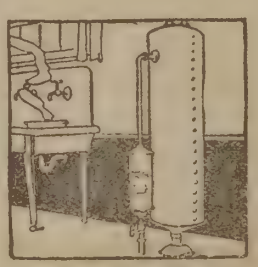


WHO BRED GREAT GUERNSEYS?

The questions of who bred the great Guernsey cows and where they were bred is answered in a recent number of the breed's official organ with a list of 212 men and women who have bred one or more Guernsey cows that on official test have produced 700 or more pounds of butterfat in one year. A total of 337 Guernseys are shown, the list being dated March 1. There are three Oregon and three Washington breeders in it: Fred Groner, D. H. Looney and Clarence True Wilson of Oregon and C. V. Lochridge, Albion L. Gile and Dr. Park Weed Willis of Washington. Each has bred one 700-pounder.

Needless to say, most of the great producing cows have been bred on the Isle of Guernsey and in eastern states. Forty-nine "island" breeders have produced 58 700-pound cows, and Massachusetts, New Jersey, New York, Pennsylvania and Wisconsin breeders have brought out more than half of the total of 337.

A Gas Well to Light, Cook and Iron for You



For Lighting

For Cooking

For Ironing

For Water Heating

FROM that simple out-of-the-way tank you see pictured in the back yard comes the most remarkable servant you can employ—carbide gas; the wonder gas of the age. An artificial, non-poisonous gas.

Produces wherever you want it—in your home, outbuildings and barn—a clear, flickerless light so mellow, radiant and restful as to rival sunlight. No constant replacement of chimneys or bulbs. *You don't even use matches in lighting!* With this light one user increased egg laying from 10 to 100 eggs a day. That plants grow under carbide light has been conclusively established by Cornell University.

Makes Cooking Easy—the Kitchen Cool

To the kitchen it brings you the hottest cooking flame. Clean and orderless—you can draw a white cloth across the bottom of a pan after usage and not soil it. Boils, broils or fries the meal in one-third the time. When carbide gas is used no coal, wood and ash carrying. Your wife can work in shade tree coolness on the hottest day. No fussing, priming or adjusting—fuel at the fingers' touch. Quickly heats water for dish washing, shaving and bathing. Gives you an even, sustained heat for ironing—a *time* saver. All these wonderful city conveniences from that simple, out-of-the-way tank—THE COLT LIGHTING and COOKING PLANT.

Simplest and Most Economical Automatic System

Don't put money into any system until you have thoroughly investigated the COLT. See how simple it works. Just run water into the water chambers and pour carbide (a gas-filled compound) into the hopper of the COLT. The machine does all the rest—mixes the carbide automatically with water, releasing this marvelous gas. *No expensive parts to replace in a short time—maintenance practically nothing.* Nothing to adjust. The only attention required is some carbide and water once in a while. Gas is generated when you need it, and only as you need it. No waste.

From Factory to Farm

Sold direct to you by COLT solicitors—no distributors or dealers to take a profit. This applies everywhere, from coast to coast, from Canada to the Gulf. A lighting and cooking plant tested and proven by many years of service, and sold by a responsible concern doing business with the farmer for a generation.

PAY IN A YEAR — NO MONEY DOWN

Send Postal Card Today for Full Story

More than 341,000 farmers own carbide gas systems—you should hear them praise it. No more wick trimming, lamp filling and cleaning; no more stuffy, stifling kitchens and burdens—*gas on tap.* Get the *full* COLT story—send a postal today, *now.*

For Good Farming, Attractive Country Homes and Happy Country People

Says Pooling Was Not the Issue

Washington Farmer Gets Interesting Letter From U. S. Grain Growers

Editor Washington Farmer: I have read your report of the first annual convention of the United States Grain Growers, Inc., as carried in the March 30 issue of The Washington Farmer, with considerable interest. Doubtless you have by this time received the copy of the Grain Growers' News, published by this department at the close of the convention. I am enclosing a copy in the event that same was not brought to your attention.

You should be advised that the issues in our convention were not concerned with the pooling features of the contract in any way, but had to do with much more fundamental problems and primarily that of administration. The administration of President Gustafson was charged with having been too slow in the development of the organization. On the other hand, it was apparent to men outside the organization—and I present their views rather than my own because mine would be subject to the charge of prejudice—that the organization was needlessly delayed throughout the year because of the factional differences on the board. Either one side or the other of those factions had to be given a majority in this convention if that situation was to be changed.

The majority favored the administration of C. H. Gustafson to that which they felt Mr. Eckhardt would give for reasons of economy and practicability. Mr. Gustafson has had a long experience in cooperative organization work which has been uniformly successful, notably the development of the farmers' cooperative live stock commission firm on the Omaha market. He is conservative, careful and does not take a step until he has given due consideration of all angles of the problem under consideration. He pleads guilty to the charge of slowness, if it be so called, but he has never been charged with carelessness or wasteful expenditure of farmers' money.

He favors an economical administration of the funds derived from this organization, whereas compromise measures which the administration was forced to accept last year in an effort to work with a contrary faction on the board, who apparently favored a program of mushroom growth, resulted in wasteful and unnecessary expenditures. Chief among these were the items of renting an entire floor at $25,000 a year, whereas an expenditure of $5000 to $7000 would have been ample; an expenditure of $65,000 for paid advertising before the organization was on its feet financially, which contributed to a serious financial crisis at one time last summer, and the employment of several men at salaries of $7500 and $6000 a year, when they had not heretofore drawn salaries of that grade, and which the organization was later forced to drop from the payroll, with the result that one man successfully made claim for half of the balance of his year's salary on the $7500 basis. These and other things in the administration of the treasury and the organization department under the direction of Mr. Eckhardt could not be kept within the office. They constituted a case that resulted in the reelection of certain men becoming an issue in the first annual convention. The minority, I am sure, did not understand what the real issues were as the majority understood them. Furthermore, the majority understood that it would be useless to try to argue the cases, for the minority representation had been forewarned that "lies" were being circulated about the "biggest men in the movement." They conceded that the case was before the jury—the evidence was in—and they were here to render a decision instead of presenting more evidence.

As to caucus rule, I wish only to present the facts to you. In the last board of directors' meeting there were 11 directors voting for a districting scheme, which is explained in the Grain Growers' News, enclosed herewith. If you will study this plan, whereby Minnesota nomination was dominated by the "minority" votes of North Dakota and the Colorado delegation dominated by the "minority" votes of Oklahoma and Kansas, and, furthermore, that the nomination for a "director at large" would have been controlled by the "minority" states, you will readily discover that had the voting for directors been restricted to the nomination by districts as they had been gerrymandered by Messrs. Hyde and Eckhardt and wished upon the convention by the old board of directors, the "minority" would have elected 11 or possibly 12 of the board. Further, the minority of the convention would have insured the reelection of certain members of the board whom for reasons above outlined they knew the majority of the states were convinced they could not support—not because of any issue as to pooling in any form, but for reasons of economy and businesslike administration of the organization.

This is a statement of the fact in the case. I might go into much more detail, but I do not wish to lay myself open to the charge of discussing the personalities involved. True friends of cooperation are not interested in farm organization results from the standpoint of personalities as much as they are in results. As a result of the decisive action of the majority of the delegates from the farms in the middle west, the new directorate of the United States Grain Growers, Inc., can go forward harmoniously and show results, and that is what the grain growers want most—dealt out in the form of dollars and cents saved through their marketing organization.

I am satisfied that the minute details of all the family dissensions in the United States Grain Growers, through which it passed last year in its first annual convention, might be presented to the grain producers' membership and prospective membership with considerable advantage to the majority element of that convention, but after it was all said, the grain grower would ask, somewhat wearily: "What has been done and what is going to be accomplished?" The answer that can be made to that question, in the last analysis will be the answer that must spell success or failure of the United States Grain Growers, Inc. It is with that in mind that the officers are spending more time in sawing wood than in presenting controvelsial answers to the varied charges of the minority in the convention.

Very truly yours, LEO C. MOSER,
Director, Department of Information.

But Pooling Was Involved.

An official statement issued by President C. H. Gustafson and the vice president and secretary of the United States Grain Growers refers to pooling as at least an indirect issue. The statement reads, in part, as follows:

"It is true that some radical changes were made in the board of directors. It should be remembered that the new board was selected by delegates representing the membership of the United States Grain Growers. Naturally, directors from grain states appointed last year from producing sections where organization work has not been conducted had to be supplanted by others. Among those appointed were those who favored a 100 per cent compulsory pooling system of marketing, whereas the committee of 17 plan supposedly committed the directors to the optional methods approved by the ratification conference. While the question of compulsory pooling was not a direct issue at the national convention, nevertheless, the time had come when the directorate of the United States Grain Growers had to be either whole-heartedly in favor of a pooling plan or in favor of the plan of the committee of 17. That question was decided by the 41,000 or more farmer members who are the United States Grain Growers, speaking through their delegates at the national convention. When it is considered that in the states of Indiana, Illinois, Iowa, Nebraska, Kansas, Missouri and South Dakota, with more than four-fifths of the total membership, less than 1 per cent of the members, have chosen the pooling option method in the United States Grain Growers' contract, it is not difficult to understand the results of this convention. It was but natural that the majority of delegates should return a board of directors who unmistakably reflected that viewpoint.

"We expect to follow the same policy this year as in the past with respect to our relationships with other organizations. We will continue to sell our own goods and let the other fellow sell his. We are anxious to cooperate and work in harmony with every other farmers' organization, but we are determined that the ideal of the farmers' marketing committee of 17 for a national program of cooperative grain marketing shall not be defeated. While we will attempt to make use of every existing farmers' terminal marketing organization, we will not do so at the expense of sacrificing the original plan of the 'committee of 17.' We are convinced that that plan is fundamentally sound and that it will succeed."

Protect the Home Dairyman

By J. A. SCOLLARD, President United Dairy Associations Washington

Just now the dairymen of the United States and particularly the dairymen of the northwest, are intensely interested in national legislation directly affecting, in a serious way, their business. Two bills now pending are of such immense importance that their failure to pass would cause a serious setback to the dairy industry and might actually imperil the existence of certain branches of it.

The two measures to which I refer particularly are the Voight bill and that part of the tariff measure covering the duties on importations of dairy products, substitutes for dairy products and vegetable oils.

Butter, butter substitutes and vegetable oils—these three items in the Fordney bill, are the ones that are causing the dairymen of the northwest the greatest anxiety, and every dairymen's association in the United States is, through the National Milk Producers' federation, doing everything possible to see that an adequate duty is laid on these products. It is true that evaporated milk, sweetened condensed milk, whole milk, cream, whole and skimmed milk powder, casein, sugar of milk and other items claim special attention from certain sections of the country, but the important items are the three first enumerated, for with an adequate import tax on these, the congress will hardly fail to put in proper ratio an import tax on other dairy products.

Result of Importations.

Every dairyman on the Pacific coast and adjacent states has lost heavily in reduced butterfat prices during the last year through New Zealand and Australian butter importations. A chart maintained by the Associated Dairymen of California at San Francisco, where practically all of these shipments make entry, shows that the drop in butter prices coincident with the arrival of these antipodean shipments averaged about 4 cents per pounds, and this in spite of the import duty of 6 cents per pound now imposed in the emergency tariff schedule.

If such shipments can be profitably disposed of with a duty of 6 cents per pound, and the natural butter quotations must be dropped 4 cents to compete with them, it must be apparent that a duty of less than 10 cents per pound would not adequately protect the American product.

Therefore, the milk producers' federation and every farm organization worthy the name is bending every effort toward having a duty of 10 cents per pound imposed on imported butter and butter substitutes. The dairymen of every section are writing and wiring their representatives in the congress to support an adequate duty on these two items. It is understood that the tentative schedule named 8 cents as the duty on butter and butter substitutes. The representatives of dairymen and farmer organizations in the national capitol are hopeful, however, that the bill as passed will impose a 10 per cent duty.

Protect Home Industry.

The dairymen of the United States were thrown into consternation by a recent report that vegetable oils were slated to be on the free list. No greater calamity could befall the dairy industry than this, and every dairy section of the country was aroused to immediate action, and the congress has been bombarded with letters and telegrams of protest. It now seems unlikely that this product will escape a tax that will to some extent at least protect the dairy industry from this menace to its existence. A powerful lobby composed of oleo and nut margerine manufacturers and soap manufacturers, assisted by the importers, were responsible for this effort to put vegetable oils on the free list.

Some idea of the calamity that free entry of vegetable oil would mean to the dairy industry can be gained in the knowledge that to a great extent it is used, pound for pound, to displace an equal amount of butterfat in butter and milk imitations. At present the price of coconut oil is less than 10 cents per pound. What dairyman can exist under such competition, with the imitation butter selling at half the price of the real article?

I wonder if the dairymen and the people of the communities dependent upon dairying have even a faint conception of the inroads nut margerines have made and are making upon their market? I do not wish to burden the reader with figures, but every one interested in dairying should consider and weigh the following facts, for they are alarming.

A Tremendous Increase.

In 1916 there was used in the United States in the manufacture of imitation butter 563,000 pounds of coconut oil.

In 1920 there was used in the manufacture of imitation butter 80,784,000 pounds of coconut oil—over 140 times as much as in 1916. And remember, this is but one variety of oil where many are used. Remember also, that these figures do not include the coconut oil used in imitation milk. And here is a bit of information that ought to hit you right between the eyes, Mr. Dairyman: One hundred and ninety-three thousand pounds of one brand of nut margerine, or imitation butter, was distributed by one Seattle house in the month of December, 1921. There are many different brands distributed in Seattle.

If a tariff is imposed upon vegetable oils we can thank the dairy associations, county, state and national, for their vigilance and for their energy and perseverance in fighting a strongly organized effort to put it on the free list. We hope that every dairyman in the northwest will assist in this effort by writing or wiring his congress representative to fight for an adequate duty on vegetable oils.

The foregoing is the first in a series of two articles by Mr. Scollard on vital matters to the dairymen of this state. His second article will discuss the Voight bill now before congress, designed to prohibit interstate traffic in filled milk.

Favors Reduced Wool Rate

Examiner W. A. Disque of the interstate commerce commission, who recently held hearings in the Pacific northwest on wool freight rates, has recommended to the commission that a reduction of 31.5 cents per 100 pounds on wool in the grease be made for Inland Empire wool men on shipments to Boston. The examiner, however, did not favor the request of the interior wool men for release from the discrimination against Inland Empire points in favor of Portland. This discrimination amounts to a difference of 92.5 cents per 100 pounds in wool shipments to Boston, in favor of Portland. The present wool rate from Portland to Boston is $1.66 1-2 per 100 pounds, while the rate from Spokane to Boston is $2.59, notwithstanding the fact that Spokane is over 300 miles nearer Boston than is Portland. The new rate as recommended by the examiner will be, if approved by the commission, $2.27 1-2 per 100 pounds for Inland Empire wool, using Spokane as the typical shipping point. The rate from Portland to Boston, as recommended, is $1.35 per 100 pounds.

Leads Jerseys of All Ages

A new world butterfat record for Jerseys of all ages was established by an Oregon cow recently when her year's record showed that she had produced 1047.94 pounds of butterfat. Her milk production was 18,320 pounds. The new champion is Lad's Iota, owned by S. J. McKee of Independence, Ore. The previous world record was held by Plain Mary, owned when the record was made by Airedale farm of Bangor, Maine. Plain Mary's production was 1040.08 pounds of fat, with a milk production of 15,256 pounds. Plain Mary had taken the world record from Vive La France, an Oregon cow owned by Pickard Brothers of Marion, Ore., that had a record of 1039.29 pounds of butterfat for a year.

COOPERATIVE SPIRIT GROWING.

Director E. L. French of the state department of agriculture, in a recent talk to the Seattle Milk Shippers' association, stated that the cooperative spirit was growing, as is shown by the large number of cooperative organizations that have been authorized by the department. During the last year 14 new associations have been filed and are now operating. "We expect even greater showings to be made in the future than have been made in the past," said Mr. French, "and we are better able to help them to become established."

THE WASHINGTON FARMER

VOL. XLVI. NO. 15

Trade Mark registered U. S. Patent Office.

Subscription price: Five years, $1.00; three years, 50c; one year, 25c. Canadian, one year, 75c. Foreign, one year, $1.25.

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter, January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible bankrupts. Complaints must be sent to us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of diseasee in stock sold through these columns.

To Furnish Thousands of Good Farm Homes for Young Folks

Congress and the country will be favorably impressed by Major General Goethals' report on the Columbia basin irrigation project. The eminence of General Goethals, who built the Panama canal, and his unqualified indorsement of the project in its varying aspects of engineering, the soil, the water supply, transportation facilities, access to world markets and cost of the watered lands to settlers, give this great undertaking a standing before the American people that it has not had before.

THE FARMER is glad that General Goethals has reported favorably upon this fine project. We are for it and for all other meritorious reclamation projects in the Pacific northwest for the following reasons:

THE FARM MOTIVE

First, we want the young men and young women now growing up on the farms of this region to have an opportunity to get good farm homes for themselves, just as the fathers and mothers of so many of them had their opportunities when abundant good homestead land was yet to be taken. But good homestead lands are a thing of the past, and if the boys and girls of the future are to have a chance to make new farm homes it must come largely from the reclamation of the country's waste lands.

Second, the Pacific northwest is lagging behind the Pacific southwest in progress and development. That is because they are reclaiming more lands down in the southwest. Washington state, for instance, has under irrigation only about 530,000 acres as against California's 4,200,000 acres. But California is not content with that big irrigation acreage. It is working hard for the Colorado basin project, for which claims are made of the ultimate irrigation of more than 4,000,000 acres of now arid land. The Pacific southwest, holding out big inducements of large and continuing development, is getting the attention of homeseekers. It is reliably reported that 45,000 tourists are coming into southern California every month. Of course, most of these tourists return to their eastern homes, but many of them stay and make investments. They buy lands and help to build up communities. That means better schools, better roads, better mail service, bigger and better cooperative producing and marketing associations.

WOULD DRAW HOMESEEKERS

Third, once it became known throughout the United States that the federal government had approved the Columbia basin project and would soon start construction, the assurance of that big development would draw thousands of homeseekers into the Pacific northwest. They would find on arriving here that, while the great project could not be completed short of six or seven years, they need not wait in order to buy good irrigated land, because we have scores of smaller projects that need settlement and quick development. More than that, a great many of the newcomers would look over the country and decide that they would like to buy good, tillable farms not under irrigation.

That is what happened when we opened the Indian reservations in the Pacific northwest several years ago. Land seekers came out here by the thousands, but most of them, on looking over the field, decided that they did not care to take a homestead on an Indian reservation and go through the hardships of pioneering. Consequently, thousands of them bought deeded lands from farmers who had larger holdings than they cared to keep up.

FIGURES FROM HISTORY

Some fears have been expressed that there might be overproduction from the development of these new lands. We do not share that apprehension. After the Civil war there was deep complaint in the Mississippi, Missouri and Ohio valleys about overproduction. Agricultural products between 1865 and 1875 sold at ruinously low prices. At that time—for instance in 1866—the records of the agricultural department show that we produced only 152,000,000 bushels of wheat in the United States. We are now producing an annual crop of from 800,000,000 bushels to 1,000,000,000 bushels. At that time the corn crop was around a billion bushels a year; now it is about 3,500,000,000 bushels. In all the basic crops, we are producing now from three to eight times as much as we produced in 1866. If we had stopped our agricultural production in 1866, the growth of the nation would have been arrested and we could not have won the World war.

Secretary of Agriculture Wallace has shown in a recent statement that the increase of population in the United States is running ahead of the increase of agricultural production. He calculates that we shall have a population of 150,000,000 people by 1950, and that we shall need to add 243,000,000 acres of improved agricultural land if we maintain our present per capita acreage. Two hundred and forty-three million acres of land is equivalent to the total area of New York, Illinois, Iowa, Minnesota and Kansas.

General Goethals is right. The nation needs the Columbia basin project.

"Snooping Constables"

A citizen of Deer Lodge, Mont., was seen carrying a handbag from which the neck of a demijohn was protruding. He was arrested by a Deer Lodge officer. The lower court released the defendant, but ordered the liquor destroyed and the bag and the demijohn sold. An appeal was taken from this decision, claiming unlawful search and seizure. The action of the lower court was affirmed by the supreme court of the state.

The noticeable feature of this case, however, is the fact that Associate Justice Albert J. Galen of the supreme court filed a dissenting opinion, in which he said: "The passage of the prohibition amendment to the federal Constitution did not inaugurate a reign of legislative despotism to be carried out by snooping constables or peace officers."

This dissenting opinion will not be received with good grace by the farm folks in the country. Long years ago the grange, among farm organizations, took the lead in fighting for prohibition. Members of the order fought hard and long for this law. It was a long period from the time Neal Dow of Maine lived and died fighting for prohibition, until prohibition became established by Constitutional amendment as one of the fundamental laws of the land.

If a man smashes in the plate glass window of a jewelry store, snatches a case of diamonds, and runs around a corner, is caught by an officer who sees the end of the diamond case sticking out from under his coat, shall that officer be charged with being a "snooping constable"?

How else can any law be enforced than by arresting persons under reasonable suspicion of breaking them?

The petty thief may enter a shoe store, steal a pair of shoes, and hurry out of the store. The warning is given and an officer sees a man with a pair of shoes sticking out of his pocket. Shall he refrain from seizing this petty thief for fear of being called a "snooping constable"?

The usual methods of law enforcement must be applied to violators of the prohibition law, as well as to violators of the laws of burglary or murder.

State Farm News

The bid of M. R. Smith Lumber and Shingle company of Seattle was accepted by the Indian forest service at Taholah for the 305,000,000-foot Point Grenville Indian timber tract placed on the market three months ago.

The company's bid was: Cedar, $2.60 a thousand; spruce and fir, $2.25; white pine, $1.50, and hemlock, 60 cents, making a total of approximately $650,000.

The company will remove 15,000,000 feet by March 31, 1924, and must have the entire stand cut and removed by March 31, 1935. An initial installment of $15,000 was paid, and the remainder will be paid installments of $10,000 each during the time the timber is logged.

* * *

Jacob Koog, Holstein breeder of Elma, Grays Harbor county, has purchased the J. H. Galyean farm, three miles west of Montesano. Mr. Koog came to the county a few years ago from Tillamook, Ore., and is now president of the Grays Harbor Holstein association.

* * *

The North Pacific Cooperative Berry Growers have employed Frank L. Grossman of Seattle as sales manager for the association for the next two years. Mr. Grossman has for the last five years been sales manager for the Ollala Berry Growers' association and is considered a capable man for the handling of this work. The association plans on selling as much of the strawberry crop from the members as possible on a f. o. b. Seattle basis.

* * *

Mrs. Emma H. Symons, former owner of a fruit ranch in the Selah district, has purchased a 30-acre tract three miles west of Prosser, that formerly was known as the Tom Erwin place. It is an improved farm, with a large orchard.

* * *

Careful records kept by James Carstairs, a dairyman of the Satsop valley, in western Washington, have proved that the addition of a good purebred sire to his herd resulted in increasing milk production by 100 per cent. Carstairs has many young cows, daughters of this sire, that are producing 50 to 75 pounds of milk a day, whose mothers never gave more than 30 to 35 pounds a day.

* * *

Five registered Shorthorns were purchased at the recent live stock sale at Spokane by farmers of Pend Oreille county. One will be used to replace a scrub sire.

* * *

What is said to be the largest deal ever consummated in the timber business on Grays Harbor was completed at Hoquiam when William E. Boeing and associates of Seattle sold 600,000,000 feet of timber at the head of the Hoquiam river to H. J. Miller of the Miller Lumber and Logging company of Everett for $2,000,000, mostly cash. The timber is largely fir.

Miller purchased the tract for immediate logging and surveys have been completed for a railroad from the tract into Hoquiam, a distance of about eight miles.

* * *

Claude White of Grandview, county project leader in farm crops of the farm bureau, has returned from Bend, Ore., where he purchased five cars of seed potatoes to fill orders placed with the farm bureau.

* * *

Tenino citizens and residents of adjacent farming communities have made preliminary arrangements for the holding of a community fair next fall. An organization was perfected, with J. D. McGuire as president, A. G. Dempsey vice president, Ira Kelsey director and L. H. Hubbard secretary-treasurer.

* * *

Ten acres of pears have just been set out by D. A. McDonald at Donald, the varieties being Bartlett and Winter Nellis.

* * *

The Yakima valley will this year show a larger increase in strawberry production than any other district in the northwest. Both the Yakima district and the Kennewick district will double their production against last year. The Yakima valley produced last year about 17,000 crates and shippers conversant with the situation predict that the tonnage will be twice as large this season. Strawberry production in the Yakima valley, however, is small as compared with Hood River and western Washington. Estimates place the Hood River crop at 100,000 crates for this season against 85,000 crates produced in 1921. Production in western Washington will be 15 to 20 per cent less than that of last year, the estimate for this season being 400,000 crates. Reports from practically every strawberry production district in the United States indicate that there will be one of the biggest crops in history produced this year. The acreage in practically every district shows an increase and a good deal of planting coming in this spring for first and second crops. It is possible that weather conditions will change the present outlook.

Coming Events of Interest

April 22—Mock sale and show, state college.
April 24-29—"Be Kind to Animals" week.
April 26-28—Kittitas county nutrition campaign.
May 1-13—Dry kiln operation course, Hoquiam.
May 4-6—Tulip festival, Bellingham.
May 6—Jefferson county Holstein sale, Elma.
May 24—Lewis county Holstein sale, Chehalis, Centralia.
June 5—Northwest Guernsey breeders' sale, Portland.
June 7—Guernsey consignment sale, Chehalis.
June 20-22—Lincoln-Adams pioneer picnic, Keystone.
July 27-28—Whatcom co. Guernsey gallop, Bellingham.

FARM BUSINESS AND MARKETS OUTLOOK

The Business Outlook:

Something more than cold comfort for the farmer can be read in the following signs of an improved business and industrial situation:

Price index numbers were higher in March than in February although the month ended lower than it began. Bradstreet's index was higher on April 1 than on the same date last year, the first time such a comparison has held good since deflation started.

Industrial employment, according to reports from 65 cities, was 2.5 per cent larger at the end of March than at the end of February.

Building permits issued in the leading cities were twice as large in March as in the same month last year.

Steel companies are operating at about 65 per cent of capacity, which is twice the rate at the lowest point.

Pig iron production in March exceeded 2,000,000 tons for the first time since January, 1921, March showing a gain of nearly 13 per cent over February.

Railroads placed more orders for equipment in the last three months than in the whole of 1921.

Automobile sales in March were largest since August, 1920.

Bond prices have continued to advance. Some of the Liberty issues have reached the highest point since they were first sold on the open market and all of them are selling close to or above par.

Stocks have reached new high levels and the total volume of sales on a recent day reached the highest point since the boom in the spring of 1920.

Bank deposits in some of the strictly agricultural sections have increased.

Money rates hardened a little during February, but were shaded again in March.

Bank clearings, which measure the volume of buying and trade turnover, were 6 5-8 per cent larger in March than in March, 1921.

The business sky is seldom absolutely free from clouds. There are some now in the form of the coal strike, the textile wage dispute, and the uncertainty as to the tariff and freight rates. Foreign financial conditions still cast shadows across the water.

But the evidence of progress in industry and trade in this country can have but one conclusion drawn from it; we are moving toward a period of larger consumption and a better market for the food and raw materials for manufacture which the farm produces.

Beef Appetite Due to Return

The forecast of a lighter run of cattle during April has been abundantly fulfilled. Receipts last week at the seven leading markets dropped to about 135,000 head, compared with an average of around 170,000 head during the first quarter of the year. The dressed beef market, however, has made no equivalent response. Demand has been listless, due, apparently, to the influence of Lent, soggy weather, which dulled the appetite for beef and possibly to the influence of the coal strike. Since the second week in April marks the end of the lenten period as well as certain Hebrew holidays, when people of Jewish extraction abstain from eating red meat, the public's appetite for beef is expected to return.

Beef steer prices have shown no pronounced trend either way recently and in the last week ranged from a shade higher at some markets to slightly lower at others. Steers which have had greater or less acquaintance with corn comprise the bulk of receipts, while the latter have shown more strength than steers. They closed the week at most points slightly higher than a week ago. This situation usually lasts until the season for grass cattle is near at hand.

Yearling steers have gone to a slight premium, although it is smaller than usual at this season and does not apply to those grading less than "good," of which there are entirely too many.

The veal market, which had the support of Easter trade, has declined again. At least another month of heavy runs from dairy farms can be expected and prices can not advance much in that time. Extremely light calves are available in excessive numbers.

Cattle Feeders Not Eager

The muddy state of feedlots, the dullness of the fat cattle market and the backwardness of the spring season have repressed buying of stocker and feeder cattle. Purchases have not increased as they usually do at this season, but have remained uniform from week to week since the middle of January.

In the southwest the movement of cattle northward to be put on pasture will reach maximum about May 1, but the total will be 20 per cent less than last year. In 1921 there was a small decrease compared with 1920, while the number pastured in 1920 was estimated at 25 per cent less than in 1919.

Light Runs Boost Hog Values

Receipts of hogs at the 11 principal markets during March were heavier than those of last year, but they have been running consistently below the 10-year average by a wide margin ever since the first of the year.

During the last three weeks the usual spring bare spot in hog receipts has shown up. As a result fresh pork loins, smoked hams and bacon are selling at nearly the highest prices of the year. A good sized advance in mess pork and lard prices also has taken place recently. These advances, however, have not been as sharp as the small run of live hogs would have indicated. Some decrease in domestic consumption of pork has occurred recently and there has been a falling off in clearances for export.

The increase in stocks of hog meats at the leading packing points during March was the largest that has occurred during that month since 1921, another sign that pork consumers are less greedy than in midwinter. Lard holdings also increased over 15,000,000 pounds, but total holdings of both lard and meats are much below those of last year. Receipts of hogs usually pick up again during the latter part of April. If this performance is repeated this year the advance in hog prices during the last 10 days may not be fully maintained unless the outlet for pork broadens again.

The department of agriculture reports that an average of about 17 per cent more sows were bred during the period from September, 1921, to February, 1922, inclusive, on about 6000 sample farms than in the same period last year. This is in line with general expectancy. It will be necessary to wait for later reports to determine the extent to which the increase has been offset by losses among spring pigs. Such losses were exceptionally light last spring.

The department's reports also indicate that the number of hogs on farms decreased 16.3 per cent from January 1 to March 1. During the same period in 1921 they decreased 15.1 per cent, in 1920, 14.8 per cent and in 1919, 17.2 per cent. These reports do not indicate that more hogs than usual were held back this year to be marketed during the spring.

Spring Lambs on Horizon

California lambs are scheduled to appear at middle western markets during the latter part of April, although the run from that state usually suffices only to replace the fading supply of fed lambs. When the southeastern crop begins to move in the latter part of May, however, readjustment in prices usually starts and by July 1 lower quotations are in order. This year the entire native crop is short as a result of liquidation which has been in progress for several years. With consumers ready, apparently, to eat lamb at a high level of prices, the summer decline may be much less than usual.

Most of the lambs arriving now are shorn. Wooled lambs sold up to $16.50 at Chicago last week, the highest price since July, 1920. A few fleshy, heavily fleeced lambs are going out for shearing and a brief period on feed at prices ranging from $14.00 to $14.75.

Horse Values Shrink

Horse buyers were less numerous last week and values at Chicago declined $10 to $15 a head. The revival in industrial activity thus far has not helped the horse market noticeably.

Wool Steady at Decline

Wool prices are holding steady at the decline of 3 to 5 cents a pound. Mills are buying in a very limited way and both mills and dealers are waiting the outcome of tariff legislation. In some sections speculators are anxious to buy new clip wool at the present price scale, but producers are sitting tight. One big lot of Arizona wool has been sold at a price said to equal 35 to 40 cents in the grease or about $1 clean at Boston. Foreign wool auctions have been strong because of European buying.

The woolen goods situation has not been improved and the wage dispute has become more acute.

Wool consumption by American mills is holding up better than expected. During February it amounted to 55,882,000 pounds, compared with 54,550,000 pounds in January.

Boston prices are as follows—Wisconsin, Missouri and average New England: Half blood, 36@37c; 3-8 blood, 35c; 1-4 blood, 34c.

Scoured basis—Oregon: Eastern No. 1 staple, $1.05@1.10; fine and fine medium combing, $1; eastern clothing, 85c; valley No. 1, 80c. Territory: Fine staple choice, $1.05@1.10; 1-2 blood combing, 95c@$1; 3-8 blood combing, 75c; quarter blood combing, 62@65c.

Wheat Owners on Anxious Seat

In spite of a statistical situation which forecasts a carryover at the end of the crop year considerably below the 10-year average most wheat buyers have been indifferent and wheat owners are anxious lest the demand fail to absorb the usual amount of wheat before harvest.

The course of cash wheat prices at this season is closely bound up with the behavior of the May option or contracts for May delivery at Chicago. Whether the holders of these contracts include enough exporters and millers who want wheat delivered to them to make that side victorious is an open question. Until this situation has worked itself out the trend of the market is anybody's guess.

Exporters have been buying three or four million bushels weekly from North America, mostly Manitobas, for shipment after navigation opens. A little durum has been sold abroad, but wheat for shipment via the gulf has been neglected, so that southwestern markets have been especially slow.

The latest report on the rate of flour production was lowest since early January and dropped very close to the corresponding week last year. Most recent weeks have shown an increase of 1 to 10 per cent over a year ago. Mills have been buying a little more wheat in the last two days, but it is still too early to determine whether the increase in demand will be lasting. It is noteworthy that in spite of widely advertised absence of demand prices have swung over a very narrow range for two weeks, usually a sign that the next move is upward.

Argentina and Australia are still putting a good deal of wheat afloat each week and total stocks in commercial storage in exporting countries or on passage are larger than at this time last year. There is reason for believing that the large available stocks are at the expense of interior holdings from which future supplies must be drawn.

Crop Estimate as Expected

The official estimate upon the winter wheat crop was in line with expectation. Condition was placed at 78.4 per cent, compared with 76 per cent last December, 91 last April and a 10-year April 1 average of 84.3 per cent.

This condition indicates a yield of 573,000,000 bushels of winter wheat provided later conditions are equal to the average. The yield last year was 587,000,000 bushels and the 10-year average is 570,000,000 bushels.

The condition of the rye crop was placed at 89 per cent, compared with a 10-year average of 88.5 per cent. The yield is forecasted at 69,667,000 bushels, compared with 57,918,000 bushels last year.

Corn Industries Closing Down

The extraordinary demand for corn which featured the market during the winter has departed. Corn industries, which have been conspicuous buyers for months, are curtailing operations and are now working at less than 50 per cent of capacity.

Oats Crop Getting Late Start

Wet weather has delayed oats seeding and the crop is now about two weeks late. Unofficial reports point to a decrease of about 5 per cent in acreage.

Cash demand is slow. Primary receipts have decreased nearly 50 per cent in the last 30 to 60 days, while primary shipments have exceeded receipts for three weeks. The visible supply was so large, however, that the decreases made still leave it larger than was ever known before at this season.

Cash Grain Markets

The range of cash grain prices for the week ending April 12 was:

CHICAGO—Wheat, No. 2 hard, $1.32 1-2@1.34 1-4; $1.28@1.30 1-2. Corn, No. 2 mixed, 56 1-2@58 3-4c; No. 3, 55@57 3-4c; No. 4, 54@56 3-4c; No. 2 yellow, 57@59 3-4c; No. 3, 55 1-2@58 1-2c; No. 4, 54@57 1-2c; No. 2 white, 57 1-2@59 3-4c; No. 3, 56 1-2@58 3-4c; No. 4, 53 1-2@56 1-4c. Oats, No. 2 white, 36 3-4@40c; No. 3, 35 1-2@39c; No. 4, 34 1-2@37 1-4c. Rye, 99 1-2c@$1.02 1-2c. Barley, 57@67c.

Clover Seed Markets

Unfavorable weather for spring seeding remained the dominant influence in the clover seed market last week. Prices declined a little further as the demand has been light. Alsike prices were unchanged. There is a scarcity of alfalfa seed and that market is showing strength.

Toledo, per bushel—Prime red clover, $14.60; prime alsike, $11.50; prime timothy, $2.90.

Chicago, per 100 lbs.—Clover, $15@22; timothy, $5.50@6.

Feed Market Turns Upward

The decline in feed markets seems to have run its course for the present, at least, and a small upturn occurred toward the close last week. Bran prices at the low point were off nearly 20 per cent. Production of wheat and corn feeds is decreasing and jobbers were more ready to take hold.

Prices per ton (100-pound bags) in carlots: Chicago—Bran, $23.75; standard middlings, $25; flour middlings, $27; cottonseed meal, 36 per cent, $47.50; 43 per cent, $52; hominy feed, $20.50; gluten feed, $32.65; old process oil meal, $52.50; tankage, $60.

Light Receipts Hold Hay Prices

Light receipts are given sole credit for a firm hay market, as the demand is limited. There is no buying ahead. Larger receipts are expected as soon as country roads improve and live stock is gradually being put on pasture.

Prices per ton in carlots: Chicago—No. 1 timothy, $25@28; No. 2, $23@25; No. 3, $17@20; No. 1 light clover mixed, $24@25; No. 1 clover, $20@21; No. 1 clover mixed, $21@23; No. 1 alfalfa, $17@28; upland prairie, $17@19; midland prairie, $14@17; rye straw, $16@17; oat and wheat straw, $14@16.

Egg Receipts Near Maximum

Values, especially upon choice eggs, have held up well in spite of receipts of near record proportions at the four leading cities. Speculative interest is increasing and about half of the arrivals are going into cold storage. The market is on a rather solid bottom. Receipts of eggs usually reach maximum anywhere from the second to the fourth

Looking Ahead With the Wool Grower

By GILBERT GUSLER

The outlook for marketing the wool clip at a good price this spring is better than it has been for two years.

For over a year the market was submerged under an avalanche of wool and tall columns of figures showing enormous stocks of wool held in various parts of the world were erected over the remains. But, as Mark Twain once said of a premature report of his death, "The story was greatly exaggerated." In the last six months stocks of wool have ceased to look huge and it now appears that they never were so excessive as the statistics made them seem to be.

The all-important fact that there is normally a large carryover of wool seems to have been forgotten when the bottom dropped out of the market in the spring of 1920.

Some of the chief wool producing countries are in the southern hemisphere, so that comparable statistics upon the quantities held in all parts of the world at any one time are hard to obtain. Only in the later years of the war and since have reports upon holdings been assembled in any comprehensive and consistant manner.

Competent observers state that in the United States we seldom have less than 400,000,000 pounds on hand. This is two-thirds of a year's supply.

In the last four years, since our government began to report holdings by dealers, manufacturers and the government, the total has never fallen below this figure. This does not take holdings by growers into account.

The large wool exporting countries, Australia, New Zealand, South Africa, Argentina and Uruguay, generally dispose of most of their old clips before the new one is ready, but in the prominent wool manufacturing countries of Europe generous stocks at all times from which manufacturers can select the kinds they want are the rule rather than the exception. Total holdings of 2,000,000,000 pounds of wool in all parts of the world at any one time are not unusual. This is equal to two-thirds of the entire world's clip for one year.

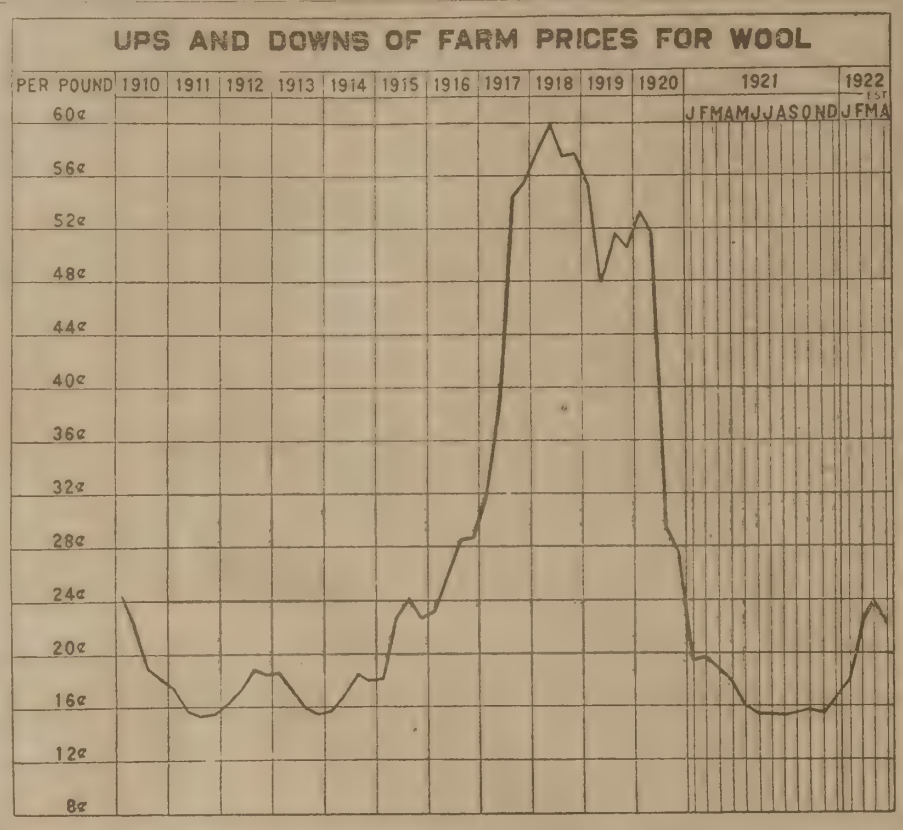
During the war the countries of Europe were unable, because of blockades and submarines and a shortage of shipping, to obtain all the wool they could have used from Australia, South Africa and Argentina, so that wool accumulated in those countries.

After the war was over European financial conditions caused a decline in consumption of wool and the accumulations continued, especially in Great Britain and her chief wool producing colonies. Wool piled up in the United States also after the "buyers'" strike" began. This situation gradually became more acute until a little over a year ago. Summaries of holdings made at that time, excluding the new clip in the northern hemisphere, showed about 3,250,000,000 pounds. This total is not so staggering, however, when the size of the normal carryover is considered and really only meant a surplus of about 1,250,000,000 pounds

The chart which accompanies this discussion shows the course of farm prices for wool for recent years as reported by the department of agriculture. The war caused a phenomenal rise in value, but wool was one of the first farm products to feel the effect of deflation.

The decline, starting from 53.3 cents per pound at the farm in January, 1920, continued almost without interruption until last summer. Prices then were but little more than 25 per cent of those paid when the market was at the extreme top four years ago. After remaining comparatively stable from June to October, an upturn began which brought an advance of nearly 50 per cent in the farm price. In the last few week the market has softened again.

Two factors were mainly responsible for the advance last fall and winter. First of these was the emergency tariff enacted last May, which carries a duty of 30 cents per pound on skirted wools, under which classification most of the Australian fleeces come. Barring carpet wools, which are now admitted free, imports of clothing and combing wools dropped from 90,477,000 pounds in March, 1921, to 342,000 pounds in September. They have risen since to several million pounds a month, but have been much less than our average import requirements.



The other factor has been the increase in manufacturing operations.

Consumption by mills, which dropped down to the equivalent of 24,372,000 pounds of grease wool in December, 1920, gradually rose to 66,287,000 pounds in October, 1921, compared with 72,721,000 pounds in the best month of the post war boom.

During 1921 total consumption in terms of grease wool amounted to 650,000,000 pounds, compared with 579,000,000 pounds in 1920. The 1921 total is more than in any pre-war years, and about equal to the average of the war years. Naturally such a rate of manufacture made big holes in stocks in this country, since our own clip is only equal to about 45 per cent of the wool we consumed and only small quantities were coming in from the outside.

Prices in foreign primary markets and manufacturing countries have advanced also, although less rapidly than in the United States. The cessation of manufacturing operations during 1920, which allowed wool to pile up, did not put an end to the wearing out of clothes and retailers' shelves eventually became bare. Finally manufacturers began to receive large or-

(Continued on page twenty-two.)

The chart shows the course of farm prices for wool as reported by the department of agriculture on the 15th of the months of January, April, July and October for 11 years and monthly since January, 1921. The price line went up like a church steeple during the war. To the wool grower the decline in 1920 bore close resemblance to a steeplejack's bad dream. The pre-war level was reached during 1921, but a good-sized advance has occurred since.

Is Big With Farm Prosperity

(Continued from page one)

of efficiency and morale in a body of many thousands in a region to which they were unacclimated—always a serious matter; of keeping the administration necessarily autocratic and strongly centralized, yet popular, because effective, wholesome and acceptable. And that's what the canal administration was made. It was administration that stood the test of seven years unquestionad, save by deplorable relays of tourists of the congressional persuasion.

Three men had failed to make the thing go.

Goethals made it go forward and go smoothly—housing, sanitation, labor problems and all, infinitely complicated by the heterogeneous racial composition of that little state. It went ahead with an esprit de corps among the workers, rank and file, that entitles it to distinction among large achievements. No better proof could be cited than that the huge task was completed a year before the scheduled hour. It was an achievement famous for confidence to the end in its leader; for the fairness of his "Sunday morning courts"; for the indefatigable hours maintained by him—it was said that Goethals "took the canal to bed with him"—and for the fact that the men "on the ditch" believed in the ditch, "loved the ditch," in some one's phrase, and came home singing the reminiscences of days on the ditch in a way it is good to hear from men who have worked seven years together.

Though the great work carried forward in the canal zone was free from the attending atmosphere of caste that characterizes militarism, there were no town debates over orders once issued from headquarters.

It is related that, of the congressional delegations sent to the zone at various times, one member, observing a comfortable new house that was going up for one of the officials of the project, inquired: "The type of house that is constructed for an official on the project is about proportioned to the salary he is receiving?"

"Yes," replied the man responsible for matters in the canal zone.

"Then," said the congressman, "since I, now, am earning $7500 a year, I, if I were employed on this job, would have a house costing about——" and he named his estimate.

"No," was Goethals' rejoinder, "for if you were on this job you wouldn't be earning $7500 a year."

There are long lists of commissions, boards and other things of which G. W. Goethals has been chief, chairman and moving spirit, that one might go into. There are longer lists of appointments which he has had to decline.

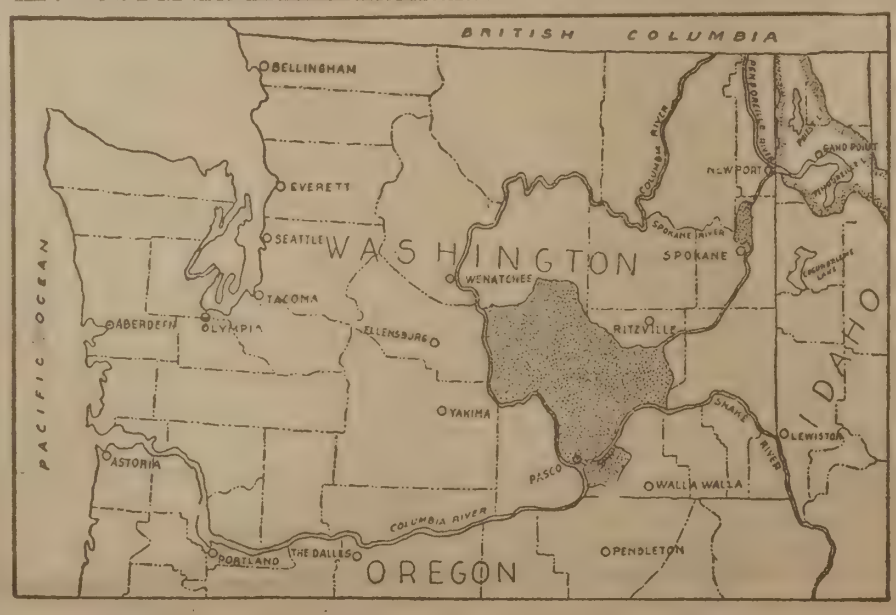
What was the other task, greater and more complex than the cleaving in twain of the western hemisphere?

During the war 90,000 men were being sent overseas every week. Along with them went about four tons of freight per man. All the purchase of munitions and supplies, all their protection, all storage, refrigeration and transfer, all provision for the comfort of those 90,000 men till they reached Pershing's own area of responsibility, were in the hands of the director of purchase, storage and traffic. In April, 1918, Major General Goethals became that officer. The railroads and steamships of the country were largely at his direction. He was the biggest shipper the world has ever seen.

Things that move with the brand "U. S. A." upon them don't just move; they have to be transported under certain fixed rules. There must be certain reserves always at bases of shipment, certain percentages always in motion, certain order and precedence and ceremony and tape-winding. And, during a world war, there must also be dispatch, for the urgency is real.

G. W. Goethals, as acting quartermaster general, with the more specific title mentioned above, was the clearing house for everything that was moving or awaiting movement toward the European continent,

General Goethals.



in those days, under the inclusive password, "U. S. A." "Somewhere in America" there was a storage depot that required an area of 50 miles square. From every minor center of industry where army contracts had been secured, and from every center where men were trained, the complexity of his problem had its beginnings. "Somewhere in America" there is railroad track enough to girdle the globe 10 times. Its McAdoos and the great powers of our systems of navigation were necessarily subject to the will of the director of purchase, storage and traffic for the army, who, in addition, held the office of assistant to the chief of staff.

It was during those days that Goethals' "cold fury" of work and drive became established. Short shrift was made of callers, of lunch and other irrelevant things.

As on the great canal, so in the titanic army task, there is a chief where he is in charge, and men know it.

On one occasion that dates from his younger services, he had an admiral's orders to construct temporary bridgework and had given the order that certain barges be sunk for a foundation. The plan brought him into conflict immediately with subordinate officers of the navy. He ignored them. The thing was reported back to the admiral himself, who put immediate injunction on the barge-sinking. Goethals ignored that, too. To sink those barges was the way to build that bridge, and the way to do it was the way that Goethals purposed to do and did it. The admiral threatened him with court-martial for a long time. The brushing aside of superiors' orders is a serious thing for an officer to be charged with. But the court-martial never was held.

Goethals not merely has drive; he is drive, it is said. "To the major general, an obstacle is a thing to go over, or through." When he was appointed chairman of the railway labor board to report on the Adamson eight-hour law the Independent predicted that the work of the board would be well done, for that was the only way Major General Goethals did things. "Goethals is a finisher," in the verdict of a widely ranging contemporary press. That "terrible, but open-eyed, intelligent tenacity" arrives.

The shaded portion shows the land to be irrigated, totaling over 1,750,000 acres. Note the line of the canal from near Newport on the Pend Oreille river.

Sees Only Indirect Relief

Farm Bureau Man Cites Case Against War Corporation

Simultaneously with the announcement in Portland, Spokane and other northwestern cities last week by Eugene Meyers Jr., head of the war finance corporation, that the corporation had loaned $320,000,000, largely for agriculture and that further assistance was planned for the Pacific northwest, President George A. Mansfield of the Oregon State Farm Bureau federation declared in an interview that in his opinion the corporation had brought little direct benefit to the farmers and stockmen. He said that indirect benefit had been received through stimulating exports and aiding the cotton, wool and grain pools, but that agricultural conditions now and in the last month have needed direct and immediate financial assistance to carry their obligations.

In explaining this point, Mr. Mansfield said: "In the vicinity of Klamath Falls Ore., live stock was being shipped out in large quantities and sold at a great sacrifice because the bankers could not help the situation through the war finance corporation. The live stock men were advised to visit Portland and consult the committee of the corporation as to how to proceed.

"They were advised to incorporate and the local committee gave them every assistance within its power. Four stockmen incorporated with a paid-in capital of $10,000, but were advised to raise this figure to $25,000, which was done after considerable trouble had been experienced. When this was done Carey V. Loosley, one of the four, received a letter in which he was told that if they put up $50,000 in a bank as a guarantee they could hope to secure some loans. Let me inquire how many farmers could expect benefit if they had to produce $12,500 as a guarantee?

"Things of this sort illustrate how very much harder it is for the farmer to get money from the war finance corporation than it would be from a bank. I know of no bank that requires a man to put up more than the amount he wants to borrow in cash in the bank as a prerequisite, or any considerable portion of it."

"The worst of the business depression has passed and I believe that the improvement in conditions practically everywhere is on a solid foundation," said Eugene Meyers Jr., managing director of the war finance corporation, in Spokane. Mr. Meyers continued: "When I made my trip through the country six months ago every one was discouraged. Today there is optimism. In Montana the sacrifice of breeding and young stock was staring them in the face. T. A. Marlow of Helena, chairman of the board, asked how far the corporation would support him and I told him. Since that time $10,500,000 has been lent in Montana and the breeding of young stock saved.

"In all the states I have been in—Iowa, Nebraska, Oklahoma, Kansas, Texas, Colorado, Wyoming, New Mexico, Arizona, California, Utah, Idaho and Oregon, I have found a marked change. There are better prices better markets, and bankers and farmers are going ahead.

"One of the most important developments of the last few months has been the organization of live stock loan companies in most of the live stock states, locally owned and managed. The capital of these new companies, all organized in the last three or four months, is more than the combined capital of all the live stock loan companies in business prior to 1921. Large advances to the companies have stabilized the live stock industry.

"The war finance corporation was created as an emergency institution and found it necessary to create its entire organization. Six months ago we had 25 or 30 in the office at Washington and today there are 325, while 33 agencies have been created in the field, in each of which there are 5 to 10 of the best of the local bankers serving gratis and rendering most efficient aid.

"Many loans have been made to cooperative marketing organizations. Between $5,000,000 and $6,000,000 were promised to the Washington Wheat Growers, but they found it necessary to borrow only $1,000,000.

"The corporation has loaned $320,000,000 in the last year. Of this $70,000,000 was for agricultural cooperative marketing organizations: $50,000,000 for exports, mostly agricultural, and $210,000,000 for banks and live stock loan companies. Of this $210,000,000 $70,000,000 was for strictly live stock loans as distinguished from the general agricultural paper.

"The law does not authorize dealing directly with individual farmers. Those who can borrow money from the war finance corporation are:

"Cooperative marketing organizations upon negotiable warehouse receipts representing staple agricultural marketing.

"Banking and financial institutions which have made or may make advances for agricultural purposes on which have been counted notes, drafts or other negotiable paper issued for such purposes. Proper security is, of course, desired.

"Application should be made on the form provided to the nearest agricultural loan agency of the corporation."

A Week at W. S. C.

Five club members from each of 29 counties in Washington, which are doing club work, making a total of 145 in all, will spend a whole week at Washington State college, June 19 to 24, attending classes in sewing, canning, cooking, dairying, live stock raising and other farm and home work under professors of the college and extension service specialists. They and their escorts will be given free lodging in campus dormitories and the program for the week includes various forms of entertainment, such as games, rallies, movies and tours of the college farm and experiment station plots. State Club Leader F. L. Audrain, cooperating with the county club leader or agricultural agent, will select those who are to represent the various counties, on the following basis:

Each member must be enrolled in club work for the year 1922, and will be rated for last year's work on accuracy of record, 30 points; attendance at club meetings, 20 points; activity in club work, 10; quality of work done, 20; value of the project, 10; and exhibits, 10.

Poultrymen, Attention!

The largest hatchery in the world offers special low prices on S. C. White Leghorn baby chicks, from heavy egg-laying strain, during the months of May and June, 1922. We pay all express charges on shipments for these months.

REO SPEED WAGON

A Truly Marvelous Motor!

If there is any one unit that, more than any other, accounts for the stamina and the long life of the Reo Speed Wagon, it is the power plant.

Of course the other units—transmission, axles, driving shafts and gears—must be strong enough to sustain the full thrust of the motor.

But in the final analysis, it is the motor that must withstand the grief—must do the work.

That four cylinder motor was designed and built in the Reo shops for precisely this work.

Crank shaft is "50 per cent oversize," and all bearings, connecting rods, camshaft, valves and other parts, conform to the same Reo standard.

This isn't a "carriage horse," hitched to a heavy truck—this is a big, powerful "drafter"—bred for this special work.

"Bred" is right—for this motor was the result of long years of development.

It is an evolution—not an inspiration.

We maintain that no other motor—and certainly none of lighter construction—can stand up beside this great Reo engine.

Experienced users—owners of individual trucks and of fleets—indorse our contention by standardizing on Reo Speed Wagons.

A matchless combination of brutal ruggedness in design, and of watchwork fineness in construction, this Reo motor has proven equal to the most strenuous work over a long period of years.

Until you have found an equal for this motor, it is futile to look for a truck that will stand up beside a Reo Speed Wagon.

Besides those here illustrated, there are several other standard body types for all kinds of hauling. Get particulars from your Reo dealer. Prices shown are f. o. b. factory, plus Federal Tax.

Reo Motor Car Company, Lansing, Michigan

"The Gold Standard of Values"

Loss of Pigs Leaves a Lesson

By C. M. HUBBARD, Live Stock Extension Specialist, W. S. C.

No amount of attention and care will bring the lost pig back to life. There is no use mourning the loss of the unusually large number of pigs that have failed to survive this spring. But another farrowing season is coming. Now, while the losses are fresh in our minds, let us look over the situation and see just what we, as individuals, did or did not do that is responsible for our losses this year and plan to do differently next spring. There is a valuable lesson in this spring's wide-spread losses of pigs. Read this article and then file it away for careful re-reading and study next winter and early spring.—Editor.

"What is causing the heavy loss of small pigs this spring?"

This question is being asked the state college extension service by stockmen and farmers quite frequently. Naturally this loss over the state as a whole is brought about by a variety of, or a combination of causes, among them the unusually cold weather. One factor may bring it about on this place and another be responsible elsewhere. In some instances hog men who are known to be old hands at the game, who use foresight and good judgment, have had a more or less heavy loss; in most instances, however, a greater or less degree of lack of knowledge or of carelessness may be found responsible. A little extra care and attention during the time the sow is pregnant usually means more pigs saved and more money, as well as satisfaction in the business. This means that the bred sow should be fed on the right type of ration, should have a very considerable amount of exercise daily and should have her farrowing quarters properly arranged as the time for the birth of her litter approaches. Again, the owner or his attendant certainly should be near at hand when the sow gives birth to her pigs.

Ration for the Sow.

The proper amount of the proper type of ration, together with a sufficiency of exercise, would eliminate about one-half of the losses at farrowing time, other things being equal. Sows should not approach the critical tme carrying too much fat. The ration should contain a reasonably heavy amount of muscle and bone building constituents. These nutrients are found in such feeds as shorts, millrun, peas, oats, skim milk, tankage and fishmeal, as well as in legume hays and pastures. On the other hand, such feeds as corn, barley, wheat and rye are essentially fattening in nature. Consequently, the proper type of ration for the pregnant sows, or for sows nursing pigs, will be within a variety of combinations of these two types of feeds, depending on whether one is handling purebreds or grade market swine, on the feeds grown in the locality and on the prices of these feeds.

In feeding purebred pregnant sows a ration consisting of ground barley, ground oats, shorts or millrun and tankage 3-3-3-1 parts each, respectively, by weight, will give splendid results. Naturally corn or wheat will substitute for barley, peas (to a certain extent), for shorts or millrun and skim milk should always replace tankage or fishmeal whenever it is available. In the latter case equal parts by weight of ground barley, ground oats and millrun would be furnished with the milk. Equal parts of oats and wheat, together with skim milk or 10 per cent tankage, makes another good ration which tends to put vitality as well as bone and stretch into the foetal pig.

For grade sows, barley, shorts and tankage, 6-3-1 parts each, respectively, by weight, form a very acceptable ration, the necessary substitutions being made as outlined above. Finely chopped alfalfa may be mixed into the grain ration, about 20 per cent of this roughage replacing a corresponding weight of grain mixture. This statement applies to both purebred and grades and an even greater amount of the cut alfalfa may be utilized if the brood sows have a tendency to become too fat. However, many hog men prefer to feed the hay whole in racks.

Exercise Is Important.

A lack of exercise, together with a heavy grain ration, makes the sow lazy and so clumsy that a heavy loss of little pigs is almost certain to occur. Again, under such conditions, the size of the pigs in the same litter varies greatly and the whole litter lacks in vigor and vitality.

Exercise, as noted above, is all important. The sows may be made to take a considerable amount through feed, the grain rations in one corner of the lot, placing the hayrack in a second, their house in a third and possibly watering them in a fourth. Small matters, are they not? Still, just such little items added together help spell success for the hog man, or failure in many instances, where they are lacking.

It is wise to have a sufficiency of room in the farrowing pen. It should be warm, dry under foot and not too deeply bedded. Experienced hog men place a 2x4 or other railing around the pen about 10 or 12 inches from the floor and the same distance from the walls. This lessens the danger of the sow crushing her pigs.

Feed for Farrowing Time.

Another point to remember is that the ration should be cut down shortly before farrowing, held down for a few days, and then gradually increased as the sow recovers and the little pigs demand more from her.

A weak slop at this time, using millrun or shorts, is highly satisfactory. Many a good sow has been killed by overfeeding immediately after the birth of her pigs.

The experienced hog man knows when his sows will farrow, has everything in readiness and he himself is "on the job." He knows that the old sow and pigs will not take any excuse for his absence. If his presence could have saved several pigs, then surely his absence has killed them and the year's profits, too, perhaps. Any attention given the farrowing sow should be done quietly so as not to disturb her. If all goes well, leave her entirely alone; if not, assist her with her work, taking care of the little pigs temporarily, so that they are not crushed or do not become chilled. After the farrowing is over return them immediately so that they may nurse. Immersion in a pail of water, hot as the hand will bear, will often save chilled pigs.

Why Are Pigs Eaten?

Constipation, if present at farrowing, may cause serious trouble. Sows in this condition are quite prone to eat their pigs at birth. A lack of animal byproduct in the ration will also make a sow carnivorous. Replacing the shorts or millrun in the ration with bran has a tendency toward promoting laxativeness. A small amount of epsom salts in the ration will also act as a corrective for constipation. If tankage or fishmeal form a part of the ration and the bowels are moved the sow will seldom consume her pigs.

Sunlight is one of the best known vitalizers of small pigs. It puts the vigor and the "jump" into them. All hog houses should face the south and be so constructed that sunlight flows into every farrowing pen. Again, as soon as the litter is old enough and the weather has warmed they should be out of doors on the sunny side of the shed, basking in the sunlight.

"Thumps" is one of the troubles to which small pigs are quite prone. It is caused by indigestion brought about by too much food and too little exercise. The symptoms are a sudden jerking movement or "thumping" of the flanks, somewhat resembling hiccoughs in man. More exercise and less feed immediately suggest themselves as the remedy.

Probably in no other class of live stock do these various small items mean so much as in the case of swine, mean so much in the way of saving pigs and garnering a profit if they are followed, or in causing heavy loss if ignored.

Wireless Grips Interest

It is doubtful if any single development of an industrial, entertainment or educational nature ever created such widespread interest as has the recent development of wireless correspondence.

The discovery of the possibility of sending messages by unseen waves in the ether that fills all space was astounding to most of us several years ago. For a long time it was made practical only for big, outstanding uses. A few powerful broadcasting stations were able to send messages successfully, and a few well-equipped receiving stations were capable of receiving the messages. Development was slow, however, until a few short months ago, when simpler equipment became possible and when there loomed on the horizon the possibility that some day almost anybody anywhere could receive messages from any one or from many of a multitude of broadcasting stations. The possibilities were recognized of central stations sending out public addresses, musical programs, market reports or anything else of general interest and thousands of people here, there and everywhere, in cities and in farming communities, listening in on these speeches, programs and market reports with their own simple receiving sets.

Is it all a wild dream? Hardly so. Undoubtedly the public mind is somewhat overwrought with the excitement incident to the great development, but wireless (commonly called radio) is undoubtedly destined to play an ever increasing part in our daily lives. Its possibilities are limited, it would seem, only by our imagination.

The secretary of state of New York announced the other day that since January 1 there had been more corporations formed for the purpose of manufacturing radio equipment than for any other single class of manufacture. He declared that millions of dollars were being invested in the business by the sanest business men of the country.

In order to meet the widespread desire for information on the general subject the United States government has published a book entitled "The Principles Underlying Radio Communication." This is but one of a multitude of books and pamphlets dealing with the subject, all of which indicate the widespread interest that is being manifest in this new development.

Winter Wheat

Improvement in Crop Conditions

The April 1 crop report indicates for Washington an improvement in the condition of winter wheat over the December condition, while for the United States conditions point to a winter wheat crop about 14,000,000 bushels smaller than the 1921 crop.

Breeding sows, as stated in the report by G. S. Ray of the federal bureau of markets and crop estimates, show a decrease of 4 per cent in number in Washington as compared with last year, while for the United States as a whole there has been an increase of 11.1 per cent over last year.

Winter wheat in Washington on April 1 averaged 85 per cent of normal as compared with 100 per cent on April 1, 1921; 73 per cent on April 1, 1920, and 90 per cent, the average condition for the last 10 years on April 1. The crop shows an increase of 6 points from the December 1 condition of 79 per cent. Due to the dry fall in 1921, much of the winter wheat was not seeded until late and had made but little growth when winter came. On the whole, the winter months were quite favorable to the crop. Snow covered a large portion of the winter wheat territory continuously for a long period. The snow melted slowly this spring and most of the resulting moisture has soaked into the ground. Spring has been very late in all parts of the state and the growth of the wheat crop up to April 1 was slow. An estimate of the area of winter wheat abandoned will be made on May 1.

For the United States the average condition of winter wheat on April 1 was 78.4 per cent of a normal, against 91.0 on April 1, 1921; 75.6 on April 1, 1920, and 84.3, the average condition for the last 10 years on April 1.

Rye in Washington on April 1 averaged 90 per cent of normal against 98 per cent on April 1, 1921; 82 per cent on April 1, 1920, and 94 per cent, the average condition for the last 10 years on April 1.

The average condition of rye for the United States on April 1 was 89.0 per cent of a normal, against 90.3 on April 1, 1921.

The number of breeding sows in Washington on April 1 was estimated to be 96 per cent of the number one year ago, while the United States was estimated to have 111.1 per cent of the number last year.

Honey Production

The value of raising bees as an industry itself is shown by the results obtained by Fred Brittian of Humptulips, Grays Harbor county, Washington.

Mr. Brittian started wih a small farm of logged-loff land four years ago with only three hives of bees. A number of small farms have developed in his community and have afforded a variety of blossoms, making honey production profitable. Such crops as clover, orchard blossoms and other farm crops make a valuable combination with fire weed and other native blossoms which are abundant in this territory.

Since this part of the county is somewhat secluded it is a difficult matter to market ordinary farm crops, but honey has been found a very convenient crop to transport. Mr. Brittian now has 160 colonies of healthy bees and is introducing as many Black Italian bees as possible in order to guard against foul brood. He is a member of the Peninsula Bee Keepers' association and believes that better results are to be had by more thorough cooperative methods among farmers.

Treating Seed Potatoes

By F. D. HEALD, Plant Pathologist, State College of Washington.

How many potatoes will four ounces of corrosive sublimate to 30 gallons of water treat before it gets too weak? F. L. D. Amboy, Wash.

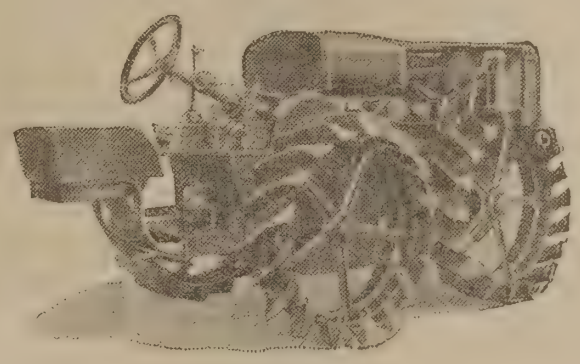
Thirty gallons of the solution can be used four times, dipping each time all the potatoes that will be immersed in the solution. For larger lots of seed a solution can be used for a longer time by adding more of the corrosive sublimate.

Seed stock to be disinfected should be as free as possible from dirt, preferably washed clean.

Dip in water, drain and allow them to stand in the moist sacks for 12 to 24 hours.

Using barrels or wooden vats, dip the whole tubers in corrosive sublimate, four ounces to 30 gallons of water, in open vats or crates and not in burlap sacks:

(a) For small lots of seed (one bushel or less) treat the first bushel 1 1-2 hours, the second 1 3-4 hours, the third two hours, the fourth 2 1-4 hours and then discard the solution.



(b) For larger lots of seed, for each four bushels of clean stock treated by the standard formula, add one-half ounce of the chemical, corrosive sublimate, keeping the volume of the solution constant. Soak for 1 1-2 to 2 hours. Discard the solution entirely after making eight treatments.

Treat preferably before sprouting, but at least two weeks before planting and dry the seed immediately after treatment.

MRS. E. BORDEN, Darrington, Wash.—We like The Washington Farmer and enjoy the stories therein.

KROYER BUILT

For the Toughest Jobs on Farms or Roads

WIZARD 4-PULL TRACTOR

Because of its outstanding advantages of tremendous traction and durability, the Wizard 4-Pull Tractor tackles the most gruelling jobs, and makes good.

The 4-Wheel Drive principle, with the power delivered first to the front wheels, then to the rear wheels, gives the Wizard all the traction of the track machine—and under some conditions **more**—at exceptionally low up-keep cost.

Enormous Traction Plus Durability

Super-strength, super-power and super-life are built into the Wizard by making it 35% more stalwart than it needs to be for its listed drawbar pull. This means that it works harder, faster and steadier—more hours a day—more days a year—and more years during its long life.

The Wizard is admirably fitted for road work, logging, hauling, stationary work, orchard work, vineyard work and general farming—or any other job where a tractor of exceptional stamina is needed.

For specifications, price and other particulars, write your name and address on this advertisement and mail it to us.

LIVESTOCK AND DAIRY

With the Dairyman
By RALPH ERSKINE

Speaking of the value of succulent feeds for dairy-cows, Bert Vandermeer of Tolt, in western Washington, said he felt that it paid better to raise mangles on well manured ground than to attempt to raise a crop for silage.

"It would be different if we could depend on a good crop of corn," said Mr. Vandermeer, "but there are years when the crops don't do so well and that cuts down the supply for the winter. It also takes a greater output for labor and it all must be done when the crop is ready.

"On the other hand, the root crops can be taken care of by the regular farm help and it does not have to be harvested at any specific time as long as they are not allowed to lie in the field too long. I find that the cows like the mangles as well as or better than silage and I doubt if there is any difference in the milk production."

Mr. Vandermeer said that he had raised as much as 85 tons of mangles to the acre where land had been heavily manured. The crop was stored in the root cellar and kept in fine condition until late winter. Next winter he expects to have a larger tonnage to feed from this season's planting.

SURPLUS MILK.

When confronted with the question of surplus milk for the early spring months, Robert Koostra of Tolt, Wash., stated emphatically that he would have nothing over the usual shipment to sell from his farm this year. He went on to say that there was no use of any trouble with this question in the spring of the year, but it should all be taken care of at home.

"I have realized as much at $3 per hundred for my surplus milk," said Mr. Koostra, "and I believe I can show better figures in the future by feeding pigs. If all of the dairy farmers would take this matter into their own hands they would come out better in the long run and the distributors would not have to fight the large amount of milk that is produced in the spring and it would not have the tendency to make a drop in the price at this time."

Mr. Koostra believes in feeding anything he can get hold of that will consume skimmed milk, with the addition of some kind of a grain to keep them growing. Pigs have been the main factor in this regard, but calves have proven very profitable feeders when properly cared for and it is an easy matter to dispose of the sweet cream at a good price.

LIFE PRESERVERS FOR LIVE STOCK
By DR. E. E. WEGNER, W. S. C.

INFECTIOUS DISEASES, ARTICLE V.

Lumpy Jaw.

Probably no disease is more commonly seen and recognized than the above. It

affects cattle usually, though hogs occasionally suffer from it. It confines itself to the head as a general thing, though it is occasionally met in other parts of the body. In the beginning it appears as an enlargement in the region of the throat or farther forward toward the jaw; first it may be no larger than a walnut or only large enough to be noticed, and at this time it is free in the tissues and not attached to the bone, as it may be later. In unusual cases it may attack the bone first, but these instances are rare.

The cause of this condition is a small fungus or kind of mold that thrives on the bearded grains usually and gets into the animal tissue directly from the grain, as the membrane of the mouth may easily be slightly injured by barley and other similar ones and this opening is sufficient for the passage of the organism. It then finds its way probably into the lymph stream and is taken downward toward the throat and there it is held up by the glands of that region. Being held here it begins at once to grow in the tissues and the above mentioned swelling results. Very infrequently it gets past the glands of the throat and gets farther down into the body and may at times become generalized over the body and grow in the lungs or other organs.

Attacks the Bone.

Since most cases are near the throat we may discuss it in this region to the best advantage. If the growth is not molested but allowed to advance it soon gets much larger and may attack the bone of the lower jaw. When such occurs the bone becomes invaded and in time is so diseased and honeycombed that the teeth are badly loosened in their sockets and the animal is quite unable to eat. When such a stage is reached the animal is quite useless, as the damaged condition of the jaw can not be repaired. After attaining considerable size the tumor-like growth becomes soft in several places in the center and these break together or to the outside and a discharge begins which persists until the destructive action of the disease causes death. These may heal up for a short time, but they break out in another place. If these tracts are explored it will be found that they run deeply into the center of the growth. The pus discharged from these places has a very characteristic appearance, as it contains small granules that are very readily recognized, and it may in this way be quite certainly distinguished from some other conditions.

Nontransferrable.

The discharge from this swelling is not capable of carrying the disease from one animal to another and when animals have been closely tied and closely associated the healthy ones have not contracted the disease from the diseased one. They get the infection from the grains and not from one another. It appears, however, that the life cycle of this fungus is not complete unless it grows in animal tissue, so that the spreading of pus from a diseased animal over a premises is only sowing the seed for a greater crop for the following year. For this reason animals should not be allowed to constantly spread this material.

Many times we are asked if the milk is fit for food when the animal has this disease. The milk is not affected in any way unless the disease has advanced to a point where the animal has some fever as a result. As long as they appear all right in other ways and keep up in flesh it is unlikely that there is any danger in using the milk, though one may not care to use it.

The Treatment.

The treatment of lumpy jaw is quite a success and in the early stages surgical treatment is probably the best if the growth is so located that it can be readily reached. In cases where the disease has extended to a stage where surgical treatment could not succeed then the medical treatment is to be used. Potassium iodide in teaspoonful doses night and morning until symptoms of poisoning result is probably the best and causes many positive cures. The milk should not be used during this treatment, as the drug has saturated the system.

Like many other diseases, the early treatment is best, as delay means prolonged treatment and some permanent damage to the tissues involved.

Okanogan Stock Sale

Thirty-three head of Hereford bulls, Shorthorn heifers and bulls brought an average of $125 at the second annual sale of Okanogan County Purebred Breeders' association April 6. Sales ranged from $80 to $175. Only two cows sold for less than $100. A Hereford bull topped the sale at $175.

Nine Hereford bulls were sold by the Methow Valley Live Stock company for $1195. Some of the string were exhibited at the Spokane, Lewiston and Portland live stock shows. Ten Shorthorn cows brought $1285.

The Okanogan County Live Stock association reelected E. F. Banker president and P. T. Harris secretary-treasurer. Okanogan County Federal Live Stock Loan association reelected E. F. Banker president and C. H. Yand secretary-treasurer.

Gothic Roof Gives More Room

By PROFESSOR L. J. SMITH, State College of Washington.

Ten years ago the gambrel roof barn was the last word in barn architecture. A new type, however, is slowly but surely rising to compete with this widely accepted two-pitch roof. It is not new except as applied to farm building for the Gothic arch has long been famous because of its wide use in the great European cathedrals, and is widely used in our modern churches.

In Gothic roof construction the rafters are made up of several layers of one-inch boards, the outer edges of which are cut to an arc of a true circle, or of layers of narrow one-inch boards bent to conform to such a curve and nailed together. The proportions of the Gothic roof are simple. The sketch lettered "A" is used on the narrow type barns, while "B" is used on the barns of greater width, say, beyond 36 feet.

In "A" the radius of the curve is two-thirds the width of the barn, and the center is on a horizontal line with the top of the plate "P."

In "B" the radius is slightly over three-quarters the width of the barn, and the center for striking the curve is one-fourth in from the side wall, and one-twelfth below the plate.

The dotted lines in "B" show a commonly used proportion for the gambrel roof barn, which will give the reader a comparative idea of the loft space under the two types of roofs. The Gothic roof gives considerably more space than the gambrel. The Gothic roof "A" has a slightly larger volume than when the proportions in "B" are used.

VETERINARY

By DR. S. B. NELSON.

Colds—I have a rat terrier dog that has had a cold nearly all winter. Is there a remedy? S. J.
Oak Harbor, Wash.

Try giving the dog one grain of quinine night and morning for some time. You can put it on a little piece of meat and throw it to him probably better than any other way.

Sores—We have an 8-month-old pig that has sores breaking out all over its body, forming scabs which peel off and new sores reappear in other places. S. H.
Bothell, Wash.

Try painting the sore spots with a one-half of one per cent solution of picric acid in water once daily. Use a small brush for the purpose.

Carrots for Feed—Are carrots good feed for horses and how much should be fed?
Ariel, Wash. M. E. B.

Carrots fed in limited quantity are good adjunct feed with hay and grain. They should be sliced lengthwise and horses can take from four to eight slices daily of good sized carrots. Some people like to feed them only three or four times a week, but horses can stand them daily.

Ticks—Can you give me a remedy for ticks? The horses in this neghborhood are fairly eaten alive by them. They seem to catch them off greasewood. S. P.
Plum, Wash.

If you have not too many horses, I believe that the curry comb is the best tick remover that we have. Of course, if you have a large number of horses, then they should be dipped in a solution of any of the standard sheep dips.

Lame Shoulder.—I have a cow that is to be fresh in May. I dried her up the first of February and since then she became lame in the left shoulder and is apparently paralyzed on the left side now. I can find no swelling nor sores from bruises of any kind. When walking about she can hardly bear any weight on the left side. She eats well. E. A.
Olympia, Wash.

Give your cow one ounce of sodium salicylate morning, noon and night for two or three days.

Slobbers—I have a work horse that slobbers when he eats his oats. I am feeding timothy hay and two quarts of oats night and morning, and he gets just enough work for exercise. A. W. M'C.
Spokane, Wash.

Have your horse's mouth and teeth examined to see if there is a foreign substance or sharpness of the teeth or an abraded surface in the mouth that causes a soreness which results in the slobbering. I think that the removal of the cause will stop the condition.

Has Dry Cough—I have a horse that wintered well the first part of the season, but lately she seems to have developed a dry cough. She seems lifeless, but eats quite well. I feed timothy hay with some straw in the night feed and a little bran with about a handful of oil meal once or twice a week.—A. W. L., Deer Park, Wash.

Stop giving your horse bran and replace it with good oats, for this reason, timothy hay and straw or bran is too wide a ration for a horse to live on and keep its liveliness. She needs some real feed like oats in order to do this.

WHITE FLAME

BURNERS make your old kerosene lamps and lanterns give a brilliant white light better than electricity or gas. Doubles your light. Saves oil. No Mantle to Break. Guaranteed Safe and Reliable. New "Z" Engine

$44.80 F.O.B. FACTORY

1½ H. P. (Battery Equipt)

A most remarkable engine value

To meet the needs of those who want a thoroughly dependable engine at a comparatively small investment, we have designed this new engine. It is a genuine "Z," and is built to the same *high standards.* Its remarkable value has been made possible by scientific study and large production facilities. We believe it one of the greatest engine values in years.

The new "Z" Engine has simple, high tension battery ignition; suction fuel feed; hit and miss governor; positive lubrication; quiet running spiral cut gears; generous bearing surfaces; renewable die-cast bearings; parts liable to wear are made of hardened and ground steel. The crankshaft, connecting rod and camshaft are drop forgings. The safety flywheels are balanced. Operates on gasoline alone.

The engine is wonderfully simple—no complicated parts—and has clean-cut lines. It starts easily, runs steadily; requires little attendance; carburetor requires no adjusting; delivers more than rated horse power; control lever gives six speed changes. Rigid inspection insures against flaws and minor faults. All parts are positively interchangeable and easily accessible. The engine is built to give years of satisfactory service.

New low prices on other "Z" Engines

With high tension magneto and throttling governor

THE AUTO-OILED AERMOTOR

A Real Self-Oiling Windmill

Oil an Aermotor once a year and it is always oiled. Every moving part is completely and fully oiled. A constant stream of oil flows on every bearing. The shafts run in oil. The double gears run in oil in a tightly enclosed gear case. Friction and wear are practically eliminated.

A year's supply of oil is sent with every Aermotor

Any windmill which does not have the gears running in oil is only half oiled. A modern windmill, like a modern automobile, must have its gears enclosed and run in oil. Dry gears, exposed to dust, wear rapidly. Dry bearings and dry gears cause friction and loss of power. The Aermotor pumps in the lightest breeze because it is correctly designed and well oiled. To get everlasting windmill satisfaction, buy the Aermotor.

Aermotor Towers are Towers of Strength

By W. D. BUCHANAN, Poultry Extension Specialist, Washington State College.

MATE UNRELATED BIRDS.

Is it good policy to use a gander from the same hatch as the goose for breeding purposes? What is the correct way to kill and dress a goose for market?
Olympia, Wash. MRS. O. M. L.

It is best to mate unrelated birds. Geese are generally killed by sticking in the mouth with a long-bladed knife and then stunned by a sharp blow on the head. This is necessary if they are to be dry picked.

LITTLE CHICK TROUBLES.

Will you tell me if sweet skimmed milk will injure baby chicks, and what is the best ration for incubator chicks where you must keep them penned up? What is wrong with baby chicks when they become lame and throw themselves backward and are affected with diarrhea?
Walla Walla, Wash. MRS. G. N. M.

Skimmed milk is good for baby chicks, but it must always be clean, wholesome and either sweet or sour. You can not switch from sweet to sour, neither can you feed milk that is just turning sour. It is seldom necessary to keep chicks penned up and it is difficult to raise them if you do.

A good ration would be two parts steel-cut wheat, one part steel-cut corn and one part steel-cut oats for scratch to be fed five or six times a day, and a mash composed of 16 parts bran (by measure), one part bone meal, one part sand and one part charcoal, kept before them after the fourth day. They must have unlimited green feed, exercise and fresh air. Above ration assumes that they have all the buttermilk or sour milk they will drink.

Leg weakness is sometimes caused by overfeeding and close confinement. Diarrhea may be due to same cause, to poison from tainted milk or animal protein, or it may be the contagious kind.

"Outbreeding"

By GEORGE R. SHOUP.

1. Wishing to start in a certain breed of poultry, would it be advisable to cross two different strains of the same breed as by buying a cockerel from one breeder and hens from another? 2. Which is considered the best general purpose fowl, the White Rock or the Rhode Island White?
Prosser, Wash. G. A. B.

In answer to your question No. 1, the method you suggest we term "outbreeding." This practice is meeting with much favor in recent years, as apparently it results in a more certain vigor and less weaklings in the baby chicks than when very close line breeding or inbreeding is practiced. There also seems to be a better average size to the pullets. One tendency of close breeding, apparently, is to gradually reduce the size and consequently the vigor of the offspring.

As to question No. 2, no one can answer it definitely. There are many fine strains and individual flocks of both breeds, also many poor ones. Much depends on the breeding back of them and the care taken in raising the pullets.

Poultry and Cows

When speaking of the relative value of grain crops and live stock on the prairie soils of the Spannaway district, in Pierce county, E. L. Bowers remarked that in his opinion poultry produced the biggest dividends for the amount of labor and expenditure required.

"The best I have done on the cows was about $33 per animal for the year's average," said Mr. Bowers. "This, of course, was from ordinary cows that would average about 255 pounds of fat. If a man can make his hens average $1 each for the year it will beat the cows, because there is not so much work needed in proportion to the amount of income realized.

"I believe, however, that the two should be worked together, because the milk is needed for feeding the hens. I have thought some of going into the poultry game on a larger scale, but I would not get so large a flock that it would hinder the other work on the farm, such as the raising of grains for feeding both the hens and the cows."

Mr. Bowers sells cream to the local market and keeps all his skimmed milk at home. Last fall he tried grinding some oats for feeding to the dairy cows and to the chickens, but found that it was not worth the time and expense of grinding, because the hens could consume it whole to a good advantage and for the cows it was not as good as mill run.

"The methods of modern times are constantly changing our farming operations," concluded Mr. Bowers, "and we are coming to a place where the farmer must adopt business methods, or he will not make his farm pay. If he can manage to feed his grain on the farm and not plan to sell any of it, he stands a better chance of making profit. We can not raise wheat in this district and sell it on a market to compete with the big producers in the wheat-growing sections, who operate their farms on a larger basis. We can, however, raise a few small patches which can be fed to our flocks to good advantage."

Rabbit Production

"I wouldn't keep a doe that didn't make $30 a year," said R. C. Spring of Tillamook, Ore., and he had 70 females when he said it, so there ought to be little difficulty in determining his income from rabbits. He sees many advantages in raising rabbits.

In the first place, he claims it costs almost nothing to keep a doe. The work of caring for them is less constant than that of caring for poultry, though not a whit less exacting. And his rabbits, for example, occupy only the room (16x50) that the hutch stands on. He buys all his feed, including hay, grain and green feed, as he has found this cheaper than hiring help to grow it.

Spring estimates that one man can take care of 3000 head and do it right. He has been in the business about three years, having started in a small way near Chicago before moving west. New Zealands and Flemish Giants are his favorites.

Cooperative Marketing

"There are but two things that cooperative marketing can do," according to W. D. Buchanan, poultry extension specialist of the Washington State college, "eliminate the waste which attends the industry when it is unorganized and prevent manipulation.

"Cooperation is not a cure for inefficiency in production, but it is rather a tool for those who have been successful in production to market their products in a more efficient manner. It is just as necessary for a member of a cooperative association to handle his flock properly as it is for one who sells to his own customers on an independent market. Cooperation, where it is being handled properly, is beginning to show some very promising results and promises to show even greater results in the future."

MINERALIZED WATER ROUTS CHICKEN LICE

Tablets Dropped Into Drinking Founts Banish Vermin, Make Fowls Grow Faster and Increase Egg Yield.

Any poultry raiser can easily rid his flock of lice and mites, make chickens grow faster and increase their egg yield by simply adding minerals to the fowls' drinking water. This does away with all bother, such as dusting, greasing, dipping and spraying. The necessary minerals can now be obtained in convenient tablets, known as Paratabs. Soon after the fowls drink the mineralized water, all lice

and mites leave them. The tablets also act as a tonic conditioner. The health of the fowls quickly improves, they grow faster and the egg yield frequently is doubled. Little chicks that drink freely of the water never will be bothered by mites or lice.

The method is especially recommended for raisers of purebred stock, as there is no risk of soiling the plumage. The tablets are warranted to impart no flavor or odor to the eggs and meat. This remarkable conditioner, egg tonic and lice remedy costs only a trifle and is sold under an absolute guarantee. The tablets are scientifically prepared, perfectly safe, and dissolve readily in water.

Any reader of this paper may try them without risk. The laboratories producing Paratabs are so confident of good results that to introduce them to every poultry raiser they offer two big $1 packages for only $1. Send no money, just your name and address—a card will do—to the Paratab Laboratories, Dept. 878, 1100 Coca Cola Bldg., Kansas City, Mo., and the two $1 packages, enough for 100 gallons of water, will be mailed. Pay the postman $1 and postage on delivery, and if you are not delighted with results in 10 days—if your chickens are not healthier, laying more eggs and entirely free from lice and mites—your money will be promptly refunded. Don't hesitate to accept this trial offer as you are fully protected by this guarantee.—Adv.

The boy who started to town with $100.00

THE advice they gave him for getting on in the world was simple and familiar enough: "Keep what you have, and build on it. Be careful what you do and it will grow into more."

It's a safe rule—with money or health, but a good many overlook the rule with health, until they have lost what they had. Then it's hard to get a new supply.

Postum is a splendid help in saving health from the very common losses through the drug elements of tea and coffee—whose effects on the nervous system any doctor can tell you.

Thousands of people who think it wise to be as careful of their health as they are of their dollars are users of Postum. They find this famous cereal beverage a delightful drink with meals, and it is free from any disturbing element.

You can begin with Postum today, with an order to your grocer. The road to health is a good road for anybody to follow. "Save what you have, and build on it," is sound policy for anybody.

Postum comes in two forms: Instant Postum (in tins) made instantly in the cup by the addition of boiling water. Postum Cereal (in packages of larger bulk, for those who prefer to make the drink while the meal is being prepared) made by boiling for 20 minutes. Sold by all grocers.

Postum *for* Health

Science Discovers Greatest Lice Killer

Changes Old Methods. No Dusting or Spraying. Birds Delouse Themselves. Gives Lasting Relief.

A recent discovery promises to revolutionize all the methods accepted up to now for keeping poultry free from lice and mites. This wonderful lice killer keeps the birds always lice free without the poultry raiser doing any work. It is the simplest, easiest, surest and best method ever discovered.

Hick's Lice Kill, which is the name of this sensational lice killer, is added to the drinking water. The medicine taken into the system of the bird comes out through the pores and every louse or mite dies or leaves the body. It does not injure the hatchability or flavor of the eggs or meat; is harmless to chicks and does not affect the plumage. A few days treatment at the start and then a little in the drinking water each month.

A Trial Costs You Nothing

So confident is Mr. Hick that Hick's Lice Kill will kill every louse or mite, that he is making a special guaranteed offer of two regular full sized, double strength, $1.00 bottles and a regular $1.00 package of Hick's Egg-Lay Tablets all for $1.00. Use one bottle yourself and sell the other at one dollar, thus getting your own free. Send $1.00 today (currency, money order, check, etc.) to Chas. M. Hick & Co., Dept. 1093, 1018 S. Wabash ave., Chicago, Ill. If you prefer, send no money, just your name and address, and pay postman $1.00 and postage on delivery. If after two weeks' trial you are not absolutely satisfied, write Mr. Hick and your money will be refunded.—Adv.

ORCHARD AND GARDEN

Top Grafting

By O. M. MORRIS, Head Department of Horticulture, Washington State College.

A great many farmers and fruit growers find that they have trees in their orchards which are of little value. Some of these apple trees and pear trees can be very successfully grafted over to more satisfactory varieties. Some of them, however, are not worth grafting over.

Vigorous trees between the ages of 3 and 15 years, if resistant to winter injury and blight and well-formed in the main branches, may properly be top-grafted to better varieties. Unsatisfactory trees, like Wagener and Spitzenburg, are seldom worth top grafting.

Top grafting is a makeshift at its best, and is simply an effort to get out of a bad situation. Slow growing varieties should not be worked over to others. The top will outgrow the trunk and base of the tree and usually results in breaking down the new tree soon after it has come into fruit production. Trees that are easily winter killed or are subject to blight, like the Spitzenburg, are not worth top grafting, unless they happen to stand in a place in the home orchard where a vacant spot is not wanted, and no direct financial returns are involved. In the commercial orchard it is usually better to pull these trees and plant a new orchard, or devote the land to some other purpose.

There is not much difference between the trees as far as their ability to grow when top worked on other varieties. Almost any variety of apple will grow well when grafted upon any other apple. They can seldom be grafted successfully upon pears, nor the pears successfully grafted upon apples.

In top grafting work it is not worth while to graft where there is small opportunity for the parts to grow well and heal over the union. Exposed stubs and conditions of that kind usually cause heart rot of the trees so that the new top breaks and fails.

CLEFT GRAFTING.

Cleft grafting is the most common form of top grafting used. The tools needed for this work are a sharp, fine-toothed pruning saw, a sharp, thin-bladed knife with a straight edge, a cleft grafting knife, and a short club or mallet. If a great deal of work is to be done it is worth while to make a special cleft grafting knife. If but little work is to be done a common heavy, hawk-bill knife can be used for the purpose.

An ideal cleft grafting knife should have a chisel point and one edge of the knife should be curved concave, so that it can be placed across the stub to be grafted and used as a splitting knife by striking the back with a mallet. This curved edge will serve to draw in the bark as the stub is split. A straight-edged knife used in the same way will push the bark away from the edge of the split.

The stub for cleft grafting work is prepared by sawing off a limb, usually not more than 2.5 inches in diameter nor less than one inch, and smoothing the edge with a knife. The stub is then split about 2.5 to 3 inches down, running the split straight through the center of the stub. The knife is then removed and the chisel point inserted in the center of the split and driven down to open the cleft made by the former action of the knife. In this form it is ready to receive the scions.

The scions are prepared by making two long sloping cuts at the butt end of the scion. These cuts should be made on opposite sides of the twig and so that one side of the wedge made with sloping cuts is a little thicker than the other.

The thin side of the wedge should be placed nearest the heart of the stub when set. Push it down well into the cut and so that the line between the bark and the wood in the scion and the same line in the stub will meet. A scion should be placed in each side of the stub. Then lift out the chisel or wedge point of the knife and the stub will close against the scions and hold them firmly.

The entire stub then should be covered over with grafting wax or some similar material to prevent drying out. A good plan is to use melted grafting wax and apply this over the entire stub, filling the cleft and up the sides where the scions are set. No further work or attention is required.

The stubs usually should be three or four inches long, and of side branches from the main frame work. It is seldom advisable to set scions out on the end of long branches.

Cut away other branches that will interfere with the growth and development of these scions. They will grow and look like water sprouts for a year or two. The best method of handling them is not to prune them any more than is necessary. Cut away some of the interfering branches where they cross and rub each other. The less they are pruned the quicker they will come into fruit production. Do not head them back unless they are so long and whip-like they bend and droop.

Cleft grafting is most successful if done after the buds begin to swell rapidly and before they show leaves or blossoms.

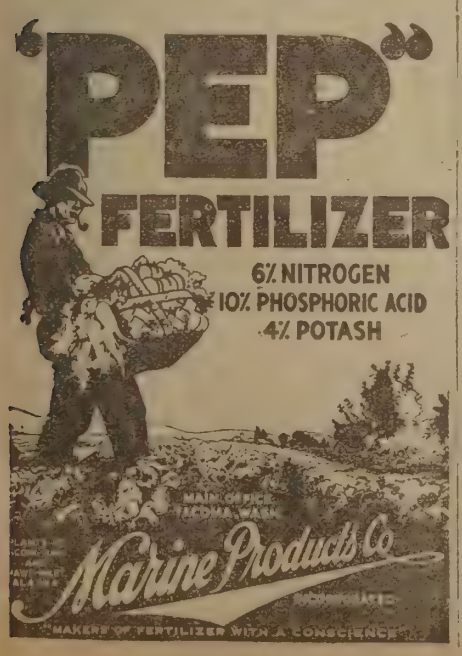
GRAFTING WAX.

Good grafting wax is a necessity to successful top grafting work. It is used to exclude air and moisture and to keep out infections which cause rots, and should be prepared several days before the top grafting is done. The wax may be applied with the bare hands by having it in such condition that it will pull readily like taffy and can then be spread out over the wounds. Another common method of applying it is to melt and apply with a brush.

A good wax is made of one pound of tallow, two pounds of beeswax and four pounds of rosin. Beef tallow is best, and the beeswax may be crude material and need not be refined wax sold at the drug stores. This material should be melted together, and while hot poured into a vessel of cold water. After the mass has hardened sufficiently to handle with the hands it should be lifted out and pulled like taffy until it becomes tough and turns a light yellowish color and is free from grainy appearance. It may be then made into balls or rolls, wrapped in a greased paper and laid away for use at convenience. This may be applied by hand or melted and applied with a brush.

A wax which may be applied by hand in warmer weather than is common before the trees come into blossom is made by using one pound of tallow, one pound of beeswax and four pounds of rosin. This is made the same as the material referred to above.

Linseed oil may be substituted for tallow by using one pint of raw linseed oil, one pound of beeswax, two pounds of rosin. This will make a very soft wax and will require little heat to melt it so that it can be applied with a brush. It can be handled with the hands in quite cold weather.



If beeswax is not available paraffin may be substituted in any of the above combinations. It will not make quite the same consistency of wax, but will serve the purpose well.

The "D" or hard asphalt can be melted and used for painting over wounds where the wood is dead. It should not be used on young, tender growing shoots or on wood less than three or four years old. It can be used sometimes in painting the stubs exposed in making cleft or other forms of top grafting work.

A substitute for grafting waxes to be used in covering wounds on trees can be made by dissolving coal tar or asphalt in creosote. Use proportions of each material so as to make a medium thick paint and apply with a brush. This material will kill live plant tissue and should be applied with care around the edges of the wounds. It is especially valuable in painting over winter killed areas on the trunks and large roots. Roof paints, common coal tar and asphalt paints offered on the market are seldom satisfactory for such purposes. They contain oil that is usually more destructive to plant tissue than is the creosote mentioned above, and do not have any better protective value.

SPREADS BEET NEMATODE.

Dirt from the beet dumps apparently is the most common means of spreading the sugar-beet nematode and should be the first to receive attention in planning control measures, according to Farmers' Bulletin 1248.

Here is the Greatest Motor Car Value in America

Overland is a wonderfully dependable motor car for the American farm. All-steel construction in a chassis that represents the experience of 14 years of successful engineering assures you of a reliability of performance that saves your time and saves your money.

The abundance of quality in the Overland establishes Overland as the greatest automobile value in America.

All-steel body, baked enamel finish, Triplex Springs—real riding comfort, 27 brake h. p. motor, U. S. L. Battery, Auto-Lite Electric Starter, Real One Man top, Demountable rims, Tire carrier. Every driving and riding convenience.

Owners average 25 miles and more per gallon

GRIMM
ALFALFA SEED

Sow only 2-3 as much Grimm as common

How would you like to have a field of alfalfa that would yield from one to two tons more hay per acre? That is just what you will have if you seed GENUINE GRIMM.

The following figures, taken from a ten-year test at the Guelph, Ontario, experiment station, tell their own story:

TONS ALFALFA HAY PER ACRE

	Grimm.	Montana Common.	Common.
1910	3.21	2.35	2.31
1915	5.19	3.25	2.61
1916	4.71	2.48	0.85
1917	1.69	Nearly all winter killed.	
1918	2.63	A slight come back.	

Over a ten-year period the Grimm has averaged 3.6 tons per acre, as against 1.68 tons for Montana Common and 1.11 tons for common.

Can you afford to sow seed that will not give you the greatest return when the cost of seeding of either variety is practically the same?

Write for information and prices.

Your Health

By Royal S. Copeland, M. D., F. A. C. S.

It isn't nice to be sick. If you must be sick, go to a hospital, if possible. If you can not go to a hospital, then your sickroom at home should be converted into the nearest possible approach to a hospital room.

Dr. Copeland.

You will recall that hospital rooms and wards are bare of all adornment. There are no "gimcracks," rugs or other dust collectors.

The sickroom should be prepared by taking down the curtains and hangings. Remove the heavy furniture. Take all the knick-knacks off the dresser, and banish everything that interferes with cleaning and dusting.

Use a damp cloth for dusting, so that the air is kept clean and pure. The windows must be made to move up and down easily. The patient should be protected against direct draft. To this end, it may be well to provide a muslin screen for the window. This is made by stretching a piece of thin muslin over a frame which fits the window.

In fly time, it is needless to say, the window has mosquito netting to keep out insects. Over each window a dark shade is placed, so that the amount of light that enters may be controlled.

The bed should be so placed that the nurse or attendant can walk around both sides. It should be so placed in relation to the windows that the light does not shine into the eyes of the patient. Yet it is a joy to a sick person to be able to look out of the window. Views of the outside world assist his recovery.

The door should have the hinges oiled and be provided with a lock. In making the dressings and bathing the patient there are times when he demands privacy.

There may be limitations as to the amount of help in the household. One person may be nurse, cook, chambermaid and orderly all in one. Even so, the patient's tray should be daintily served.

Food is one of the most important items in the essentials of speedy recovery. A sick person has an appetite which must be coaxed. With no exercise and with the effects of the disease, there is no longing for mealtime. A limited number of pretty dishes, a clean napkin and a flower on the tray will add to the happiness and promote the recovery of the sick one.

When the patient is able to sit up he should have a comfortable chair, a pillow for the small of the back, and be so placed as to get a new view of the outer world. If possible, get him into another room on these occasions.

Don't let him sit up too long. Wrap his legs and knees in a blanket. A low stool will keep the feet off the drafty and cold floor.

Hot water bottles, extra pillows and a bed jacket will help amazingly in increased comfort.

Don't forget about the joys of a cool, palatable drink of some sort. A jaded appetite may be stimulated this way.

LIVE STOCK FREIGHT RATE.

Freight rates on shipments of live stock from the Inland Empire to Portland and Puget sound are to be attacked by the Northwestern Live Stock Shippers' Traffic league, according to decision reached at a recent meeting held in Portland. It is said that freight rates are far too high and that other conditions surrounding shipping are too exacting. Arthur M. Geary, attorney for the league, will present the request of the shippers to the railroads and to the interstate commerce commission, if necessary.

POULTRY (Baby Chicks) 174

THE LARGEST LEGHORN BREEDING ESTablishment and hatchery in the northwest, and on the Pacific coast, has a housing capacity of 12,000 breeders; brooding capacity for 15,000 chicks; incubator capacity for 142,200 chicks at one time. It was started 16 years ago, by its present owner, without capital or poultry experience, on a barren ten-acre tract of land. The White Leghorns produced there have made possible its growth. It is the Oak Heights Poultry Farm, Capt. A. Waldwick, proprietor, Route 3, Box T67, Tacoma, Wash. This is the place where real good baby chicks come from. They are bred for eggs, vigor, size. The price is low. No order too large or too small. Prompt delivery and safe arrival guaranteed. Free book on "Raising the Chicks." Write us now.

400,000 BABY CHICKS—OUR WHITE LEGhorns are bred to lay; priced at $15 per 100. We hatch from some of the best flocks of R. I. Reds, Barred Rocks, Anconas and Minorcas to be found in the northwest. Chicks are priced at $22.50 per 100. Send $1 deposit per 100 with your order, paying the balance on inspection of chicks. Safe arrival guaranteed. We have a few standard makes of incubators and brooders at greatly reduced prices. Send for our circular offer. Seattle Hatchery, 1906 Pike place, Seattle.

POULTRY—Baby Chicks (Continued) 174

HENACRES BABY CHICKS FOR JUNE ARE only $16 per 100; $140 per 1000; best quality chicks at common chick price. Special instructions for winter layers of June chicks free. We have a few May chicks left at $22 per 100. Safe delivery guaranteed; plenty of hatching eggs at $2 per 15; $9 per 100; 90 per cent fertility guaranteed. Eight weeks old pullets $1.50 each, satisfaction or money back. We sell the famous Sol Hot brooders at $10.50 to $23.50. Prompt shipment. Our illustrated catalog and booklet on poultry management is free. Henacres, Box A, Prosser, Wash.

CERTIFIED S. C. WHITE LEGHORN BABY chicks from heaviest laying stock; safe delivery live vigorous chicks guaranteed. No money in advance; pay on delivery. Prices for May and June $3.50 per 25; $6.50 per 50; $12 per 100. Special prices 500 and 1000 lots. Largest electric hatchery in the world. Established 1898. Member Sonoma county farm bureau accredited hatchery list. Must Hatch Incubator Co., 445 Seventh st., Petaluma, Cal.

"FRESHLAID" WHITE LEGHORN CHICKS have the qualities you want; vigor and scientific breeding for the heaviest egg production; every "Freshlaid" male is from a high record hen. Freshlaid Farms is one of largest and oldest chick plants in the Inland Empire. There is a real demand for "Freshlaid" chicks, especially from our old customers. We are sold out until May 1. Write at once if you wish May chicks. May chicks make ideal winter layers. Catalog. Freshlaid Farm, Colfax, Wash.

BABY CHIX—WHITE LEGHORNS ONLY; May delivery, $13 per 100; June delivery, $12 per 100; order now as the supply is limited and these are not just baby chix, but are chix from stock that has been bred for 20 years for vigor and vitality; mated to male birds from hens with records up to 298 eggs in pullet year; hatched by the oldest established hatchery in the northwest. Lakeside Poultry Farm, Roy, Wash.

FARM LANDS FOR SALE. 651

VERY FINEST CRANBERRY PEAT LANDS, in center cranberry growing industry, subdivided, 1 to 5 acres, very reasonable prices, if desired, only 20 per cent down; no other payment for five years. By planting part of the holdings in cranberries, crops should meet future payments. Adjacent land produces 100 bbls. per acre. Last season cranberries returned the grower $15 per bbl. at wholesale. For money maker do you know of any other crop comparing with cranberry growing? Besides cranberries, can raise vegetables and chickens for tourist trade; fine dairy land; first class schools, roads; finest beach on coast within one mile. Write or visit us. Long Beach Land Co., Long Beach, Wash.

A SUBURBAN PRODUCING HOME AT SUMmit View Farms, between Puyallup and Tacoma, with one acre cleared on each five-acre farm. City water, paved road, phone, lights and only short distance from the state experimental station at Puyallup; berries and poultry for income with city conveniences; good berry land and excellent view property. Write us today for map and full details. You deal direct with the loggers. We have no agents. Electric Logging Co., Inc., 216 Marion st., Seattle, Wash. A. R. Todd, Mgr.

440-ACRE DAIRY RANCH; 180 CULTIVATED, balance good pasture, some timber; 40 acres winter wheat; 1 mile from town and high school; 8 from state normal; good terms; will consider 5 acres, well improved, as part payment. J. Hentges, Valley, Wash.

13¾ ACRES WATER FRONT, NEAR OLYMpia, Wash.; 9-year-old orchard; 7¾ acres choice winter pears; one acre sour cherries, balance uncleared; small house, good well, sandy beach; grand view. $7000; terms. Robert Hazen, 3714 N. 24th st., Tacoma, Wash.

LEAVING FOR EUROPE, SELL 160 ACRES fully equipped, chicken and dairy farm; 80 acres cultivated, balance pasture. $5000, $3000 cash, rest on terms, including all stock, machinery, furniture, etc. Henry Humoeller, owner, Lakeview, Ore.

FARM FOR SALE BY OWNER—120 ACRES bench land; 20 acres cleared; good fruit land, fair log buildings; dead cedar may pay for land in fence posts; personal property. $25 per acre; cash or terms. John Austin, Port Hill, Idaho.

FINE 160 ACRES STOCK AND DAIRY RANCH, 128 inches decreed water; 80 acres improved; pasture and timber. Write for price. J. S. Harper, Darlington, Idaho.

ALBERTA FARMS—160 ACRES, $4 ACRE; ANother, $8; another (with machinery), $22. Ask Surry (Alberta Farmer), 505 Trent ave., Spokane.

147 ACRES; GOOD BUILDINGS; SPRING WAter; some timber. $1200; terms. Write F. T. Drumhiller, Granite, Idaho.

FARM FOR SALE—160 ACRES, $26,500, HALF cash. Particulars, write Frank Marquardt, R. 2, Lebanon, Ore.

PRODUCTIVE FARM HOMES ALONG FLAThead lake. Preston Johnson, Rollins, Mont.

MUST SELL 80 ACRES; FAIR IMPROVEments. Box 65, Orin, Wash.

FARM LANDS FOR SALE (Continued) 651

CUTOVER LANDS, EASY TO CLEAR; $8 TO $20 per acre; 25 miles north of Spokane, on paved highway; Great Northern and Milwaukee railways; excellent opportunity for dairying and stock raising with Spokane markets and creamery near at hand. Will help the man who will live upon this land and agree to clear a part each year by giving lumber to help start his buildings, and a pure bred Jersey bull to groups of farmers. Interest and payments low. Write Milan Farms Development company, Dept. T, Old National Bank building, Spokane, Wash.

IRRIGATED ACRES, TWO MILES FROM CITY limits of Spokane; prices less than city lots. Soil especially adapted to vegetables, small fruits and poultry raising. Good graded school and college. Telephone, electric lights, domestic water and paved highway. Some beautiful homes built and others building. Locate your home where you can have city conveniences and enjoy country life. Write or call upon Country Homes Development company, Dept. T, Old National Bank bldg., Spokane, Wash.

LOGGED-OFF LAND IN STEVENS COUNTY, Washington, at greatly reduced prices. Most of land sells at from $5 to $20 per acre; thickly settled community; good schools, hard surfaced and paved roads to Spokane, best county in state for dairy and stock raising; most places water can be found at shallow depths. Write for folder. Phoenix Lumber company, dept. T, Spokane, Wash.

WE SELL FORECLOSED LANDS FOR A loan company for one-third cash, balance easy terms. When writing tell us what you want, where preferred, how much you will invest; kind of farming you contemplate, as we have no list and must write special description in each case. No trades. Hartford Land company, 601 Paulsen building, Spokane, Wash.

SNOHOMISH COUNTY, WASH.—6000 ACRES of the finest dairy, berry or general high-grade farm lands in the northwest, rapidly improving section; no drouths; bumper crops; tracts 1 to 80 acres; 10 yearly payments. This is your opportunity. Send for literature. Brownell Land Co., Birmingham, Wash.

STOCK RANCH, WITH 500 CATTLE, 200 range horses, 920 acres land; a modern ranch, fully equipped; in heart of good range; 5-year grazing permit. Lemly reserve. Right dates back to 1883. Any one interested, address J. D. Ellis & Co., Idaho Falls, Idaho.

WE WANT TO TELL YOU MORE ABOUT the famous Deschutes valley in central Oregon; a dairy, potato and stockman's paradise; a card brings full particulars. Redmond Land & Loan Co., Inc., Redmond, Oregon. (King Murphy's capitol.)

WILLAMETTE VALLEY DAIRY FARM, 257 acres, with stock and equipment; now paying $500 a month; good terms. Address owner, W. Hickey, 388 12th st., Portland, Ore.

IF YOU WANT TO BUY PROPERTY OF ANY description, large or small, tell us what you want. We have it. Hale & Hale, Realtors, 1111 Paulsen bldg., Spokane, Wash.

TWO GOOD STOCK AND GRAIN RANCHES, 1000 and 640 acres; 175 acres irrigated; 400 acres wheat land; will sell cheap; good terms. Lock Box 545, Heppner, Ore.

SELL YOUR PROPERTY QUICKLY FOR cash; no matter where located. Particulars free. Real Estate Salesman company, 501 Brownell, Lincoln, Neb.

SALE OR LEASE—CALIFORNIA DAIRY farm; conditions ideal; terms liberal. Write A. Gribble, F. & M. bldg., Stockton, Ore.

320 ACRES, DAIRY-HAY RANCH; TWO SETS buildings; reasonable terms. Write owner, Jack Patterson, Winthrop, Wash.

IRRIGATED LANDS—For Sale 663

MUNICIPAL LANDS FOR SALE—A REAL OPportunity to get irrigated land, situated along the Columbia river, with the best railroad facilities and longest growing season in the northwest. Soil and climate especially adapted to gardening, chicken raising, bee culture, dairying, to growing grapes, strawberries and fruit in general. The main state highway passes through the project; our schools are the best; one accredited high school and two grade schools. Write for our most attractive terms and folder. The district, and not the agents is selling this land. There will be no commission to pay. We are interested in getting home builders on the project. Address Burbank Irrigation District No. 4, Burbank, Wash.

5 TO 40 ACRE TRACTS, RICH, LEVEL, IRRIgated land; on paved highway; R. F. D., telephone and electricity available; adapted to alfalfa, fruits, grapes, garden; $50 to $150 per acre; your own terms; 10 years to pay. Dairy, stock and fruit ranches; all sizes. Mountain ranches and stock range, cheap; elevation 450 ft.; no snow. Write for list. G. E. Oaks, Redding, Shasta county, Cal.

RICHLAND IRRIGATED TRACTS PRODUCE from $600 to $1000 per acre. Briscoe Realty Co., 414 Lindelle bldg., Spokane.

EIGHTY ACRES FINE LAND, IRRIGATED; 4 miles from Wendell; terms; no buildings. White, Route 3, Seattle, Wash.

CITY PROPERTY FOR SALE 690

ASHLAND REALTY COMPANY HAVE RESIdences, ranches and business places for sale. Write fully what you want, your expectations and send addressed, stamped envelope. Ashland Realty Company, Ashland, Ore.

7-ROOM HOUSE, 3 LEVEL CORNER LOTS; IN heart of city; complete kitchen, bath, piano and furniture included. $4000 if taken soon. J. P. Rector, 11th and O, Anacortes, Wash.

QUARTER SECTION FOURTEEN MILES north of Goldendale; thirty acres cleared; fair improvements; free water right. Four thousand dollars. E. D. Clark, Route 2, Selah, Wash.

FOR SALE OR TRADE—5-YEAR LEASE OF ½ section; controls 3000 acres fine grazing land. G 5, Washington Farmer, Spokane.

SYNOPSIS.

Shad Trowbridge, a New England lad of about 20 years, sails on a mail boat to Labrador, where he plans to spend a few weeks of summer hunting and fishing in the wilderness. Upon his arrival he meets two experienced fishermen and trappers, Dick Blake and Ed Matheson, who recommend to him a young lad of 17 known as Ungava Bob, as a guide for his hunting and fishing trip inland. Desiring to lose the least time possible in securing Ungava Bob's services and starting inland for his vacation, Shad starts across the bay in his canoe in the face of a threatening storm. In the darkness his canoe is capsized and he is plunged into the icy water. As he rises to the surface a rope is thrown to him and he hears a voice shouting to make it fast. He is soon drawn aboard a little sailboat which, unknown to him, had approached at the moment of his great need.

"I'm sure I owe my life to you," he said to the lad piloting the sailboat. "It was lucky for me you saw me."

"'Tweren't luck, sir," said the lad. "'Twere Providence. 'Twere the Lord who were takin' care of you."

To his surprise, Shad discovers that his new friend, the lad with the sailboat, is none other than Ungava Bob. Together, they make their way to Bob's home, where Shad enjoys the hospitality of the northland while they consider ways and means of making inland excursions. Shad decides to remain a month or more and make the first leg of a long winter of trapping planned by Bob, returning to the settlement in time to sail back home before college opens. To lay in additional supplies for the trip they cross the bay to the Hudson's Bay trading post, where Shad meets with other friends of Ungava Bob and his parents, including Mr. and Mrs. Black, whose daughter Bessie and Bob are great friends.

They leave for the wild trapping grounds and Shad is so delighted with the wilderness that he decides to remain with Bob on the trails all winter. The other members of the party start back home, leaving the two boys alone to start their long winter of adventure. But they are not alone! Hardly has the boat carried their friends around the bend of the river before Bob and Shad see two Indians watching them from the shadows of the forest trees.

The Indians proved to be old friends of Bob, but it was not many days until enemies appeared. A group of Mingen Indians, catching Bob and Shad out in their canoe on the river above the Great Falls of Labrador, fired upon them, compelling them to remain in the current and be dragged down to the rapids and seeming certain destruction.

In the midst of their peril Bob remembers that in the rapids above the falls there is a small, rocky island, and he skillfully guides the canoe to a safe landing on it. In the meantime their friends, Ed. Matheson and Dick Blake, reach their tilts to find Bob and Shad gone. The Indian maiden, Manikawan, tells them of the supposed loss of Bob and Shad over the falls. She plans to leave at once to wreak vengeance on the enemy Indians who sent them to destruction.

CHAPTER X.

The Voices of the Spirits.

Heedless of drizzling rain and snow, of driving wind and gathering darkness, Manikawan ran forward on the trail. Hatred was in her heart. Vengeance was crying to her. Every subtle, cunning instinct of her savage race was aroused in her bosom.

She was determined that those who had sent her beloved White Brother of the Snow to destruction in the deadly place of evil spirits must die. How she should compass their death she did not yet know; this was a detail for circumstances to decide, but it must be done. White Brother of the Snow was of her tribe; the law of her savage nature told her his death must be avenged.

At the end of a mile or so she left the trail and turned sharply to the northward, winding her way deftly through moisture-laden underbrush which scarcely seemed to lessen her pace. Presently she broke out upon the shores of a lake and behind some willow bushes uncovered a small birch-bark canoe, which she had carefully concealed there on her journey to the river tilt.

Turning the canoe over her head, with the middle thwart resting upon her shoulders, she took a southwesterly direction until the old portage trail was again encountered, and resuming the trail she at length came upon the first lake of the chain through which the portage route passed.

The storm had ceased, and the stars were breaking through the clouds as Manikawan launched her canoe. It was a long, narrow lake, and paddling its length she had no difficulty in locating the the place where the stream entered, and not far away a blazed tree, now plainly visible in the light of the rising moon, told her where the trail led out.

Here, as she stepped ashore, she discovered the first of the series of tilts which Bob and Shad had built, and, immediately pushing aside the flimsy bark door, entered the tilt and struck a match. Its flare disclosed a half-burned candle on a shelf near the door, and lighting it she held it aloft for a survey of the interior of the tilt.

On the bunk at the side were two or three bags evidently containing clothing and other supplies, while on the bunk in the rear were some odds and ends of clothing, a folded tent, a coil of rope, doubtless used by the young adventures as a tracking line, to assist them in hauling their canoe up the swift stream which connected the lake with the river below, and a rifle in a sealskin case.

On beholding this last object, Manikawan gave a low exclamation of pleasure. Taking a chip from the floor she bent the candle over it, permitting some of the hot grease to flow upon it, and setting the candle firmly in the grease placed the improvised candlestick upon the tent stove.

Then, reaching for the rifle, she drew it from the case and examined it critically. The magazine proved to be fully charged. Returning the rifle to its case, she now examined the other contents of the tilt, and presently came upon a quantity of cartridges in one of the bags.

Several of these she appropriated, and dropping them into a leathern pouch at her belt, restored the remaining contents of the tilt to the position in which she had found them. Then taking the rifle in its case she blew out the candle and passed out of the tilt, carefully closing the door behind her.

The moon was now sufficiently clear to light the trail, and the blazes which Ungava Bob had made were so clear that Manikawan's progress was rapid.

Spectral shadows lay all about her, flitting here and there across her trail as she sped onward and onward through the dark forests that intervened between the lakes. In the distance she heard the voices of the evil spirits so dreaded by her people, speaking in dull, monotonous undertones, like ceaseless, rolling thunder far away, threatening destruction and death to all who fell within their reach. Even to her, whose home was the wilderness, the situation was weird and uncanny.

At length she passed another tilt near the end of a lake, but she did not pause to enter it. A little beyond the tilt the trail crossed a rise of ground, and upon reaching the summit she beheld in the distance a long, wide, silvery streak glistening in the moonlight. It was the river, and

Manikawan hid the rifle.

with a sense of relief she lowered the canoe from her shoulders and concealed it carefully amongst the underbrush.

She glanced at the stars and calculated the time until dawn. The region into which she had come was wholly unfamiliar to her, and she must have daylight to reconnoiter and locate the camp of her enemies.

There was still ample time for rest, for this was the season of lengthening nights and shortening days, and Manikawan was in much need of rest and food. For nearly 36 hours she had been exerting herself to the utmost of her strength. At the river tilt she had made a fire in the stove and brewed herself some tea, but she had eaten nothing. Now, with the moment's relaxation, a feeling of great fatigue came upon her, and for the first time she realized the length of her fast and the extent of her weariness.

Slowly she retraced her steps to the tilt which she had passed on the lake shore a little way back. Entering it she struck a match and lighted a candle, as she had done at the other tilt, and with its assistance found the flour, pork and tea, together with a frying pan and kettle which Ungava Bob had left there the day that he and Shad Trowbridge were attacked by the Indians.

She went to the lake for a kettle of water, and returning gathered a handful of birch bark. Using the bark for tinder and appropriating wood which she found split and neatly piled near the stove for ready use, she lighted a fire in the stove and set the kettle on to heat for tea. This done she cut several thick slices of fat pork, which she fried in the pan, and mixing a quantity of flour and water into dough, browned the dough in the pork grease.

It was with a keen appetite that she sat down to her long-deferred banquet, and with vast relief she drank the tea and ate the pork and dough cake. Then, wearied to the last degree, she fell back upon one of the bunks, the rifle by her side, and with the distant rumble of the falls in her ears, fell immediately asleep.

It was broad day when Manikawan opened her eyes. She seized the kettle, and hastening to the lake laved her face and head in the cooling water. Then, from a buckskin pouch at her belt, she drew a neat birch-bark case, decorated with porcupine quills, and from the case a rudely-fashioned comb, from which dangled by a buckskin thong a tuft of porcupine tail. The lake was her mirror, as she smoothed and rebraided her hair. This done, she ran the comb several times through the tuft of porcupine tail before returning it to its case.

Her simple toilet completed, Manikawan mounted a high pinnacle of rock and for several minutes stood silently contemplating the rising sun. The eastern sky was ablaze with red and purple and orange, and she beheld the glory of the scene with deep reverence.

Upon her pinnacle of rock she felt herself in the presence of the Mysterious Power which governed her destiny and the world in which she lived, and after the manner of her fathers she besought that Mysterious Presence in unspoken words to made her pure and noble and generous; to make her worthy to stand in its Presence—worthy to live in the beautiful world which surrounded her.

But Manikawan was not a Christian. She knew nothing of the white man's God or of Christ's lessons of forgiveness, and she descended from the rock morally strengthened, perhaps, in her savage way, but no less determined to wreak vengeance upon those whom she deemed her enemies.

While she slept she had heard constantly the voice of the evil spirits of the falls, and the spirits themselves had come to her in a dream, and whispering in her ear had urged her on to vengeance, and promised her immunity from their wrath. Manikawan, like all her people, was superstitious in the extreme. She believed absolutely in the supernatural, and her faith in dreams was unwavering.

The sun was hour high when she set forth again upon her mission. Mounting the semi-barren ridge where she had hidden her canoe, she crouched low behind the bushes, and cat-like and noiselessly descended to the forest on the other side. Here under cover of the trees she proceeded more rapidly to the end of the portage trail.

Peering out from her cover, she first studied every foot of the river and surrounding country that lay within the range of her vision; then moving silently forward she removed the rifle, which she still carried, from its sealskin case and laid the case on the ground behind a boulder and the weapon upon it, where it would be completely hidden from view, but still available for instant use.

This arranged to her satisfaction, she crossed the trail, and gliding as noiselessly as a shadow through the trees, ascended the river bank to reconnoiter for the Mingen camp. The Indians that visited her father's lodge had said that they were encamped near the river, and not far above the portage trail.

CHAPTER XI.

Manikawan's Vengeance.

Therefore, Manikawan in her quest advanced cautiously, at the same time making, as she advanced, a thorough study of the ground.

She had traveled perhaps two miles, when she discovered a thin curl of smoke rising over the trees a short distance in advance, and dropping upon her hands and knees she crawled stealthily forward until from behind a clump of willow bushes she was afforded a clear view of the fire and its surroundings.

A deerskin wigwam stood in the clearing, and near the smouldered embers of a fire two Indians were engaged in making snowshoe frames, but, so far as she could see, they were the only inhabitants of the camp. It was evident that the remainder of the party were absent, probably hunting caribou in the north.

As noiselessly as she had approached, Manikawan now retreated to a safe distance. With a full understanding of the conditions, she had quickly and cunningly formulated her plans, and when well out of view she arose to her feet and boldly approached the camp.

The Indians, with no sign of alarm or surprise, and not deigning either recognition or greeting, continued at their task, quite ignoring her presence as she approached. For a moment Manikawan stood before them in silence; then she spoke:

"I am Manikawan, the daughter of Sishetakushin, whose lodge the men of the south have visited. Manikawan has come to do honor to the men of the south. While they talked with Sishetakushin, her father, she heard how bravely they have guarded the hunting grounds of her people and theirs. They are brave men and she has come to do them honor.

"She heard how they drove the two white invaders of our country into the arms of the evil spirits, whose thunderous voices she hears even now. It was well. White men have come into our land and have made the spirits angry. When the spirits are made angry they drive away the caribou. Then the people of the south and Sishetakushin's people are hungry. The white men have built lodges of trees near the potagan (portage) of our fathers. They stored these lodges with much tea and tobacco, flour and pork. Without these things the white man can not live, for he is not like our people.

"Other white men are coming to our country. If these stores are left in the lodges near the potagan of our fathers the white men will stay. If they do not have these things, they will go away, for without them they will be hungry.

"The men of Sishetakushin's people and the men of the south can not remove them, for the evil spirits dwell there and would do them harm.

"But Manikawan is a maiden. The evil spirits will not harm her. She is too humble for their notice. Manikawan has gone to the lodges of the white men and has removed the things from the lodges, so that the white men will not find them when they come.

"The men of the south are brave. They have sent two of the white men into the arms of the evil spirits. They must be rewarded.

"Manikawan has carried much tobacco and tea and other stores to the place where the potagan reaches up from the river. These things are for the men of the south. Let them bring their canoe. Manikawan will show them the things and they will take them."

The Indians did not deign to reply at once, but presently one of them said:

"Let Manikawan bring the things to the lodge of the men of the south. She is a maiden, and it is a maiden's work. It is not the work of a hunter."

"Manikawan is not of the lodge of the men of the south, and she will not do this. She will wait at the place where the potagan rises from the river until the sun is there," and Manikawan pointed to the zenith. "If the men of the south do not come, she will go, for she will believe the men of the south do not need tea and tobacco."

'Let the maiden return to the place where the potagan rises from the river. Let her wait there. The men of the south will come," said the spokesman.

Manikawan turned away, down the river bank, by the route she had ascended. Her progress was dignified and unhurried so long as she might still be seen by the Indians, but was quickly changed to a run the moment she was beyond their view.

Glibly she had lied to them and her conscience was not troubled. She was not a Christian. The savage teaching upheld subterfuge in dealing with the enemy, and she deemed these Indians her enemies, for had they not destroyed White Brother of the Snow? And was he not of her people by adoption?

Immediately Manikawan arrived at the portage trail she looked sharply about to make certain she was not observed. Then she examined the rifle behind the bowlder and, quite satisfied with her inspection, returned it to its resting place and waited.

She knew that the two Indians, with due attention to their dignity, would make no haste in their coming, and would doubtless keep her waiting until the noonday hour which she had designated, but, nevertheless, her lookout up the river was never for a moment relinquished. She watched as a cat watches a hole—from which it expects the mouse to emerge—ready to pounce upon the unwary prey.

At last she was rewarded. A birch-bark canoe containing the two Indians came leisurely gliding down the river some hundred yards from shore. Manikawan, like a beautiful statue, stood tall and straight at the end of the portage trail. Two paces from her the rifle lay behind the bowlder.

The Indians, unsuspecting, turned the prow of the canoe toward the shore where she stood. Still she did not move. The cat waits for its victim until the victim beyond peradventure is within reach of its spring. Nearer and nearer drew the canoe. Still Manikanwan stood, a graven image. She was looking out and beyond her intended victims. The roar of the distant rapids, and the monotonous, thunderous undertone of the falls were in her ears, and they came to her as beautiful music. The canoe was now but a hundred feet from shore.

Suddenly Manikawan sprang, and the astonished Indians beheld the statue with a menacing rifle at its shoulder. Then came a flash and a report. The Indians ducked, and the blade of the steerman's paddle, poised in midair, was shattered by a bullet.

Manikawan spoke, her voice ringing out in clear, even tones:

"The men of the south sent White Brother of the Snow and his friend into the arms of the evil spirits. White Brother of the Snow was of Manikawan's people. The men of the south are enemies of Manikawan's people. They are cowards and they must die."

The Indian at the bow paddled desperately away from shore and the menacing rifle. The Indian at the stern made equally desperate but ineffectual attempts with his broken paddle.

Another shot rang out, and the bowman

(Continued on page twenty-one.)

Certificates of Recognition

On my desk I find a curiously interesting photograph. It is the picture of three substantial citizens of the state standing on the steps of one of the principal buildings of the state college at Pullman. Each of these three men is holding in his hand a roll of white parchment paper tied with a ribbon, which are certificates of recognition.

These substantial citizens evidently are as pleased with their parchment rolls as the kids who have just received their diplomas at the state college commencement.

At its last commencement week the state college made a feature of granting certificates of recognition to three practical Washington farmers. These are the three men pictured in the photograph.

The man standing on the left is Frank M. Rothrock of the Hercules stock farm at Sprague. For the last seven or eight years Mr. Rothrock has been specializing in purebred Shorthorn cattle and Hampshire sheep. The big Hercules farm is famed far and wide as a model of efficiency. As one of the leading spirits in the live stock shows of the northwest and for actual achievements in the cattle business, Mr. Rothrock has done much to raise the live stock business in this state to higher levels.

The man on the right in the picture is Alexander Todd of Yakima. Nearly 20 years ago Mr. Todd determined to build up a purebred Holstein herd and since has brought out two world champion cows.

The man in the center of the picture is A. A. Kelly of Spokane, who is a farmer of another kind. Starting in with small beginnings he has developed in Spokane a gardening and nursery business, marked not so much by magnitude as by perfection of organization and educational value to all who study the system he has used and the results he has attained.

The diplomas conferred upon college graduates are more or less things of promise. The certificates of recognition conferred upon the three men appearing in the picture are things of achievement.

It is a happy omen for the state college to inaugurate the practice of conferring these certificates of recognition on leading farmers of the state.

E A S

Drink More Milk

"The home demonstration leaders throughout the country are pleading for a greater consumption of milk, especially by the children of the schools," said Miss Mary E. Sutherland, the specialist of the state college, at a recent gathering of milk producers of western Washington.

"Too many of our children have the wrong habit of diet and we find that many of the absences in the schools can be traced to this improper nourishment," she continued. "Children that are properly fed are always more cheerful and do better work both at school and at home. It is for this reason that we are asking each child to drink at least a pint of milk each day and a quart if possible. They need it in order to have good health and they should do away with tea and coffee.

"In the different milk campaigns last year there were 1129 children out of the total of 2393 that did not drink milk, but after the campaign there were 2010 who used milk in their diet daily and 1053 of them had gained in weight. A large per cent of the children gave up tea and coffee. In most of the counties where these campaigns were carried on there was an increase in the consumption of milk as well as in the health of the children themselves.

"We are also advocating the use of milk dishes, since their food value adds many vitamines to the diet of the whole family."

JUST PLAIN CARELESSNESS.

A great many of our losses are the result of just plain carelessness.

Advertising in The Washington Farmer Reduces Cost of Selling Merchandise

"It is no longer a recommendation to intelligent buyers to be told that an article is not advertised. In fact, it is the reverse," so say N. W. Ayer & Son, the big advertising agency of Philadelphia and authorities on this subject. Thoughtful buyers will agree.

The cost of selling goods must be added to the final cost. The manufacturer or dealer who uses expensive methods of salesmanship must charge extra to make up for these expensive methods. That is why you will find that articles advertised in your state farm weekly are reasonable in price. More than that, they are reliable and trustworthy. The manufacturer stands back of the goods which he is willing to advertise, and the publisher of this paper stands back of the advertising which he is willing to accept. Note the guarantee on the editorial page. In doing business with our advertisers you have a double warranty of fair dealing.

When you write our advertisers, we would appreciate your mentioning the fact that you read about them in The Washington Farmer.

TAKE ADVANTAGE OF GUARANTEE mentioning THE WASHINGTON FARMER when writing to advertisers; you are doubly protected. See the guarantee on the editorial page.—Adv.

Score Cards

YOU know the score cards used by the agricultural college people for judging poultry, livestock, or home products.

Were you—or a group of dentists—to make a score card to help select the best tooth paste for the whole family, you probably would make one like the "Dentifrice Score Card" shown here. And when you compare the various tooth pastes you, like most dentists, would give the high score to Colgate's.

COLGATE'S

Cleans Teeth the Right Way

"Washes" and Polishes—
Doesn't Scratch or Scour

Here are some of the reasons why Colgate's stands first in the choice of farm people and dentists.

Non-Gritty—Colgate's is made of fine, specially prepared chalk—no grit. The U. S. Health Service says a dentifrice should not be gritty.

No Drugs—Colgate's has no drugs or chemicals which harm mouth or gum tissues.

Safe—Colgate's is *safe*—no harsh grit.

Cleans—Colgate's *loosens* clinging particles and *washes* them away.

Flavor—Colgate's has a delicious flavor which makes tooth brushing a pleasure. Use Colgate's after every meal.

Container—Colgate's comes out like a ribbon—lies flat on the brush.

Price—Colgate's costs only 25c for a LARGE tube. Why pay more?

More dentists recommend Colgate's than any other dentifrice. If your store doesn't have all the Colgate products mentioned in the coupon, check those desired and mail it to us as indicated.

FAMILY CIRCLE

ALICE BARLAND
EDITORIAL CONTRIBUTOR

"Wait not till you are backed by numbers. Wait not until you are sure of an echo from a crowd. The fewer voices on the side of truth, the more distinct and strong must be your own." CHANNING.

Dear Mrs. Barland: I have long wanted to do my part for this page, but felt I had no special message nor any special need, though many of the letters have been a great help to me.

Mrs. Barland is a real friend and neighbor to us and her loving understanding has many times lifted me over a rough place.

The letters from all the sisters seem so personal and I read them through at once the same as I do my other letters. I enjoy the glimpses into other farm homes, especially the real pioneer homes, and the exchange of economical makeshifts.

I use the wrapping yarn from packages for mending my husband's socks and the finer yarn ravelled out of flour sacks for darning my own and little girl's stocking feet; being white it is easier to work with and wears better.

I make four or five pairs of bloomers at one time out of flour sacks for my little girl and then dye them all black. I make them with casing for elastic for waist and knees.

I use a wire hen's nest with a heavy wire hook fastened on one side to hook over the end of the boiler, for a clothes drainer.

Can some one give me directions for crocheted mittens, also tell me how and when to prepare pine needles for pillows?

——————, Wash. MRS. S. B. P.

Dear Family Circle: One of our sisters is about to move into a good old log house with walls that can be papered and some old furniture more or less in need of new dressing. She wants suggestions about colors, etc. Thinking this a subject of general interest, I will reply through the Circle.

In the main room of the house, which will be the living room next winter, I would choose for the woodwork a ground color of soft tan, then when thoroughly dry put on the light oak finish, which comes all prepared with the varnish in it.

For the floor I would use a light drab. There are other colors I like as well, but in the country where there is so much tracking in of dust the drab shows it the least.

This old house must be papered, the sister tells me. She didn't say how many windows there are in the living room, but as there are windows on three sides it must be a well lighted room, so I would choose a plain paper, where the prevailing color is coconut brown, but I should prefer it to be a little lighter than what is called coconut brown on the paint or calcimine cards. The paper used so much a few years ago, called oat meal paper, came in brown shades, and I had a couple of rooms papered with the medium shade of brown and it was the most pleasing color I have ever used. It didn't fade at all and the pictures look very well against this plain brown. I would not advise green wall paper, as it always fades and after a little while one can not move a bookcase or change the place of a picture without having the place where it was before show up in a conspicuous way.

The sister says there is a home-made table and some old chairs, good enough but in need of paint. She says: "I am puzzled what color to give these. With so many to choose from it seems as if one could choose another color than brown. On these stump ranches there are enough things brown already. There ought to be any number of colors prettier than brown." It would seem so, sister, but the fact remains, in my judgment, that the browns made in imitation of the natural woods are always best for furniture. I have seen other colors tried out; I have seen green chairs and drab chairs, but they always looked to me like some one had been trying to use up some paint left over from the floor or the porch. In a bedroom where all the furniture is old ivory painted the chairs look all right when painted the same color, but too soon the enamel gets chipped off; then the beauty is gone. If your chairs are hardwood and have never been painted I would not paint them now, but would get the varnish which has the stain in it and sandpaper off the old varnish and give them a coat or two of new. The table never having had any paint will have to have a coat and the same used for the wood work will do, then it could be varnished. But if the chairs are already painted you will have to paint them again, and I would choose either a dark or light oak paint.

Because you are surrounded by brown stumps is the reason why all these colors will look well and you can warm up the room with some pretty cretonne over drapes having some white muslin or marquisette curtains under. For the over drapes choose colors which will harmonize with the tones of the room, something with tan, brown and green in soft colors.

Hang your pictures low. So many rooms are spoiled, when other things are right, by the pictures being hung too high. They should be on a level with the eyes; that is, the center of the picture should be. Choose your pictures carefully. There are so many pretty ones now to secure. Some of the calendars are well worth a frame. Do not have too many, but a few real good ones. A perfectly beautiful room is one where no one object stands out to catch the notice, but all is so harmoniously blended that you feel the beauty as you enter. And one needn't have rich or expensive furniture to get this effect. Give thought to the arrangement of the furniture. Do not have all the heavy pieces of furniture on the same side of the room. I have seen a piano, a bookcase and a couch all at one end of a room and almost nothing at the other. Make your furniture balance up in the room.

To quote further from this letter from the sister: "There are two bedrooms, one on the north and the other on the south. One is dark and gloomy, the other sunny, and each has one window."

I would choose for the dark and gloomy room a tan paper with a small flower of pink. This will have the effect of sunshine in the room and will warm it up. Never choose a large flowered paper for a bedroom or one with any intricate pattern. If one is sick in the room it is apt to annoy. With but one window to the north, I wouldn't have over drapes unless narrow, but one can have a valance at the top, of a color to harmonize with the paper.

In the sunny room choose a paper with a dainty blue flower and have over drapes of a kind to match the blue. I would paint woodwork in both rooms white. Green is very restful for over drapes, but in that case the wall paper should be very quiet in color and no strong suggestion of blue. There is a shade of blue which goes with certain shades of green. To learn harmony in color, study the flowers in the woods and garden. This may not seem important to some, but when God took so much pains to make this world so beautiful it seems to me to be worth while to make ourselves and our homes as beautiful as we can. I must add that beauty of character is more important than any external surroundings, and we should cultivate this and not neglect the other.

ALICE W. BARLAND.

Spinach Recipes

Dandelions Are Also a Favorite

By MISS H. A. LYNAN.

Among green vegetables no two are more favorites than the spinach and dandelion. In combination with bacon or boiled eggs as a decoration they are most pleasing. Many prefer them simply boiled and seasoned with salt and pepper as a vegetable, but in a salad they are very nutritious and healthful. Then, again, when served with chicken, make a good dish. The following recipes are easily prepared:

Spinach Fritters—Take well cooked spinach and mince it. To each cupful take one-half cupful of bread crumbs, a teaspoonful of sugar and a dash of nutmeg. Add a cupful of cream, two eggs and as much flour as will make the mixture a consistent batter and stir in with the flour a teaspoonful of good baking powder. Drop into boiling hot fat and let fry till brown. Serve hot.

Dandelion Favorite—Boil two quarts of dandelions, seasoning same with pepper and salt. When tender arrange in a dish and sprinkle with a little vinegar. Then toss over all about one-half cupful of fried diced bacon. Arrange small olives around edges of dish and completely cover the dandelions with slices of hard boiled eggs. Very delicious.

Spinach With Drawn Butter—Pick over and wash a peck of spinach, drain and shake free of water. Put in a kettle, without water; set over a moderate fire and let steam for 25 minutes. Drain in a colander, chop fine, season with salt, pepper and melted butter. Mould the spinach by pressing tightly in small cups, turn out on slices of hot buttered toast, sprinkle the tops with chopped hard boiled eggs. Pour drawn butter around the toast and serve at once.

Dandelions on Toast—Wash well, cooking in salted boiling water. Drain and chop fine. Put a tablespoonful of butter into a saucepan with seasoning. Stir in the dandelions and heat smooth. When hot add a tablespoonful of cream or two of milk, pour upon buttered toast.

Spinach Croquettes—Boil three quarts of spinach until tender, seasoning with salt and pepper. Dip a tablespoonful at a time into beaten egg and bread crumbs, season with salt and pepper again and a pinch of butter. Fry to a light brown in plenty of hot fat.

Spinach and Baked Chicken—After baking chicken arrange thin slices of the meat on a large platter. Over it put the boiled spinach, freed from all water, and sprinkle with a little salt and pepper, then decorate with some pieces of the hot dressing and over all pour the hot gravy. Arrange some curls of cucumber pickle around the dish and eat hot.

Dandelion and Celery Salad—Boil dandelions until tender, then free from all water, arrange hot on a dish and toss pieces of celery stalk here and there about one cupful in all, and place slices of hard boiled eggs around the dandelions. Then completely cover with any favorite salad dressing.

Just Folks

A smile and a courageous word is worth all the advice in the world.

Every day the coming generation is taking up some of the work of the outgoing generation.

We sometimes complain of the irresponsibility of young folks. Are they to blame for this, or are we to blame for not throwing more responsibilities upon them?

With responsibilities come burdens, and with burdens come heartaches.

How shall the next generation be fitted to carry on the work of the world? While some of us are wondering how this shall be done, the next generation is already entering into the work and is doing it to our astonishment.

"As a man thinketh, so is he." This is an oft-quoted saying, yet when these words were hurled at me many years ago when I was entering upon one of the first jobs of my life, they opened up the realm of responsibility before me as it had never been opened up before.

Did my thoughts and my vision as a young man count? Was I the arbiter of my own fate? Was my own thought the supreme factor in my own success? What about the wisdom of my elders? What about the advice of those who had had long years of experience in life? What about the wisdom of ages past?

"As a man thinketh, so is he."

The moving thought of the young man is what counts, not where he lives, how he is clothed, with whom he associates or even what he has read.

It is true sympathy, the helpful word, the encouraging smile, the emboldening urge, is needed with the young more than counsel and admonition and all that.

The Roman empire fell, but the generations of men are not blotted out. Whether the Armada was destroyed or the Mayflower reached the new continent are incidents.

The one abiding fact is that the new generation is ever treading on the heels of the old generation, and somehow or other the world wags on just the same.

Experience comes by birth, not by adoption.

Something can be done for the young and that something is of importance. It is to provide helpful environment, as far as it may lie in our power to do so. An atmosphere of joyous help is the best antidote to the atmosphere of feverish pleasure. The atmosphere of worth-while work is the best preventive of noxious idleness.

Don't try to do the young folk's work for them, but help them as you can with conditions and environments in which they must work out their own salvation.

E A S

CRACKERJACK PUDDING.

One quart of milk, three eggs, one-third cup of sugar, one-fourth teaspoon of salt, eight soda crackers. Beat whites of eggs light, beat yolks and add sugar and salt. Roll crackers coarse. Bring the milk to near boiling, add the beaten yolks, sugar and salt, stir thoroughly, then add the crackers, stir one minute, then add beaten whites, stir thoroughly and pour into a serving dish and serve cold.MRS. V. M. C.

HOME-PREPARED MUSTARD.

Three tablespoons of mustard, one tablespoon of sugar, one tablespoon of cornstarch; mix well, then add one beaten egg and beat until smooth, add one cup of vinegar and cook in a double boiler till smooth and looks like cream, then add butter size of a walnut.

Bits of Fun for Everyone

The Old, Old Story.

"How do you like your new teacher, Bobbie?" "She's all right, mother." "Has she asked you any questions yet you couldn't answer?" "Yes, ma'am. She asked me how old you were." Yonkers Statesman.

Unto the End.

"How's this?" asked the lawyer. "You've named six bankers in your will to be pallbearers. Of course, it's all right, but wouldn't you rather choose some friends with whom you are on better terms?"

"No, judge, that's all right. Those fellows have carried me for so long they might as well finish the job."—The American Legion Weekly.

it's only when a horses breathes that he heaves."

"I getcha."

"Well, two doses o' that stuff plumb cured my horses of breathin'."

The Calf's Mess Caller.

Algernon (city cousin): "What has that cow got the bell strapped 'round her neck for?"

Bobby: "That's to call the calf when dinner's ready."—Life.

Home, Sweet Home.

"There's no place like home, thank heaven," sighed the hen-pecked man, as he locked his hotel room from the inside.

The Point of View.

No place is so fine as it seems when you are homesick for it, and no place so bad as it seems when you are homesick in it.

Latest High Class Patterns for the Home

Please order the patterns you desire at least two or three weeks before you wish to use them. Desiring to obtain the latest high-class patterns for its readers, THE FARMER has made arrangements to have them sent direct from the east, and under present mailing conditions it takes about that time for them to reach you.

3964. Misses' Dress. Cut in three sizes: 16, 18, and 20 years. An 18-year size requires 5 yards of 40-inch material. The width of the skirt at the foot is 2 yards. Price 10 cents.

3973. Lady's Dress. Cut in six sizes: 34, 36, 38, 40, 42, and 44 inches bust measure. To make as illustrated requires 3 3-8 yards of figured material 38 inches wide and 2 3-8 yards of plain material 40 inches wide. The width at the foot is about 2 yards. Price 10 cents.

3972-3822. Lady's "Knicker" Suit. Skirt 3972 cut in six sizes: 25, 27, 29, 31, 33, and 35 inches waist measure. Blouse and knickers 3822 cut in seven sizes: 34, 36, 38, 40, 42, 44, and 46 inches bust measure. It will require 2 1-4 yards of 36-inch material for the blouse and 2 5-8 yards for the "knickers"; for the skirt 3 3-8 yards of 44-inch material will be required to make this "outfit" for a medium size. The width of the skirt is about 2 3-4 yards. Two separate patterns, 10 cents for each pattern.

3955. Boy's Suit. Cut in four sizes: 2, 3, 4, and 6 years. A 3-year size requires 3 1-8 yards of 27-inch material for the entire suit. Price 10 cents.

3961. Girl's Guimpe Dress. Cut in four sizes: 8, 10, 12, and 14 years. A 12-year size requires 1 7-8 yards of 27-inch material for the guimpe and 2 5-8 yards for skirt and overblouse. Price 10 cents.

3974. Morning Negligee. Cut in four sizes: Small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size requires 3 7-8 yards of 40-inch material. The width at the foot is 2 1-8 yards. Price 10 cents.

3975. Lady's House Dress. Cut in seven sizes: 34, 36, 38, 40, 42, 44, and 46 inches bust measure. A 38-inch size requires 4 1-2 yards of 40-inch material. The width at the foot is 2 1-8 yards. Price 10 cents.

3968. Lady's Apron Dress. Cut in four sizes: Small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size requires 4 yards of 36-inch material. Price 10 cents.

3953. Child's Dress. Cut in four sizes: 2, 4, 6, and 8 years. A 4-year size requires 3 1-4 yards of 27-inch material. Price 10 cents.

3285. A Simple Set of Hat and Apron. Cut in five sizes, 1, 2, 3, 4, and 5 years. A 4-year size will require 2 3-8 yards of 27-inch material for the apron and 1 yard for the hat. Price 10 cents.

3950. Lady's Blouse. Cut in six sizes, 34, 36, 38, 40, 42, and 44 inches bust measure. A 38-inch size requires 3 5-8 yards of 27-inch material. Price 10 cents.

3956. Girl's Middy Blouse. Cut in five sizes: 8, 10, 12, 14, and 16 years. A 14-year size requires 2 3-4 yards of 36-inch material. Price 10 cents.

High Points in News of the Week

The United States senate last week passed the agricultural appropriation bill to raise $37,250,000 for federal agricultural purposes during the ensuing fiscal year. The measure has already been passed by the house of representatives, but will now go to conference between the two houses to agree upon a few senate amendments.

Among the principal changes made in the measure by the senate were increases of $500,000 to the $1,000,000 appropriation for agricultural extension work through farm agents, and $300,000 to the $200,000 fund for eradication of the barberry bush, the wheat rust pest. An addition of $75,000 was made to the appropriation of $175,000 for fighting the white pine blister rust.

An attempt was made by Senator King, democrat, Utah, to add an amendment limiting farm bureau agents to the work of their departments and preventing them from what was described as interference with outside enterprises. After a verbal tilt with Senator McNary of Oregon, in charge of the bill, who said that if such limitation was to be placed on government officials it should be made to apply to senators and members of the house, Mr. King withdrew the attempt.

* * *

Examiner Disque of the interstate commerce commission, who held hearings throughout the northwestern territory recently, has recommended to the commission that the application of the railroads for lower rates to Pacific coast points than to interior points of the Pacific northwest be denied.

The railroads made their application for this discrimination last August. It would cover several hundred of the staple commodities and would virtually annul the long and short haul provision of the interstate commerce law.

* * *

The coal strike situation remained practically unchanged during the last week. Leaders in the strike declared that it was gaining strength, rather than losing. Indications are that the government is taking preliminary steps with a view to taking well-considered action should a serious situation develop as a result of the strike.

* * *

The allies are now in conference in Genoa, Italy, considering important financial problems of Europe. There is little definite information available as to the early success of the conference.

* * *

Easter time found Ireland in considerable uncertainty. Notwithstanding the many advances made during recent weeks toward peaceful settlement of the controversies that have harassed the country for years, many communities have been anything but peaceful. A belligerent message was published by former President De Valera last week, urging the Irish people to stand fast for the complete independence program—the program set aside by the recent agreement with the British government for the formation of the Irish Free State. It is evident that Irish insurgency under the leadership of De Valera still exists with considerable strength.

* * *

Clifford Thorne, attorney for the American Farm Bureau federation, last week announced himself a candidate for United States senator from Iowa. He has tendered his resignation as attorney for the bureau federation. He is also attorney for the United States Grain Growers, Inc., but whether he has resigned this position is not formally announced. Mr. Thorne is one of the most widely known attorneys for agricultural organizations in the country.

* * *

The federal land bank, with headquarters at Spokane for the four Pacific northwestern states, has announced its intention to erect a building in that city to be occupied by the bank alone. The building will not be in the expensive business center of the city, but will be out where building sites are cheaper. It is expected to prove a saving over the present high office rents that are being paid.

Farm Business and Markets Outlook

(Continued from page five.)

week in April. The decline in supply will sustain prices and eventually advance them. The high point in cold storage stocks in the last three years has been reached about the middle of July.

Receipts of dressed poultry begin to pick up toward the last of April as a rule. If history repeats here the market may weaken slightly before many weeks.

SEASONAL DECLINE IN BUTTER.

The seasonal decline in butter prices is under way although losses last week were not severe. Production has increased decidedly and receipts at the large cities are heavy compared with the average for this season of the year in spite of evidence of broad consuming demand at smaller points. Fancy butter especially has been abundant. Large quantities of butter are still being sold from cold storage, although receipts of fresh butter at the four leading cities last week were as large as they usually become when the storing season starts.

Until prices reach a level low enough to attract speculative buying the trend is apt to be downward. Last year 92-score butter reached low point on May 20, when 28 3-4 cents was the Chicago price. On the Chicago futures market fresh standards for May delivery are now quoted at 28 1-2 cents, which indicates the guess of the trade as to the low price this year.

Prices for 92-score fresh butter on April 12 were:

Chicago, 36c; New York, 38c; Boston, 37 1-4c; Philadelphia, 38c; San Francisco exchange quotation, 35c.

CHEESE PRODUCTION IS HEAVY.

The cheese market has been weak and unsettled as production has been heavy and receipts have been too large to be absorbed. Wisconsin country markets were lower and distributing markets followed suit. Small quantities have been placed in cold storage, although there is no real storing demand at the present price scale. The weakness of the situation is shown by the willingness of Wisconsin dealers to sell on the basis of the following week's Plymouth market. As in butter, the trend will be lower as the seansonal increase in production shows up, until cold storage operators are willing to enter the market on a broad scale.

White cheese continues scarce and held cheese is only available at prices far above the market upon the fresh article.

Prices on No. 1 American cheese on April 12 were:

CHICAGO—Twins, 15 3-4@16 1-2c; S. daisies, 16 1-2@17c; D. daisies, 16 1-4@16 3-4c; longhorns, 16 1-2@17c; square prints, 16 1-2@17c.

FRUITS AND VEGETABLES.

Over 4000 cars more of potatoes were shipped from producing sections for the season up to April 1 than were shipped in the entire season last year and arrivals are still running 50 per cent ahead of those a year ago. The supply is too large to be absorbed except at lower prices, although the decline in recent weeks has not been drastic. Sacked Rurals are quoted at 60 to 70 cents per 100 pounds in wagon loads at Idaho and Colorado shipping points.

LATEST QUOTATIONS.

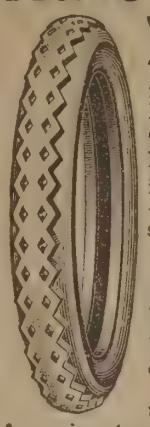
Creamery butter—Cartons, 40c lb; without cartons, 39c lb; in quarters, 40c lb; solid pack, 37@39c lb.

Chicago Wheat Pit Goes Mad

With shorts struggling desperately to cover contracts, a spectacular rise in May wheat Saturday precipitated one of the wildest scrambles seen on the Chicago board of trade since the days of the war markets.

The flurry, which sent May wheat up 8½ to 9 cents, resulted, according to reports, from a titanic struggle for control of millions of bushels of the grain.



James A. Patten, the well-known operator in the wheat pit, attributed Saturday's rise to the purchase of 600,000 bushels of American wheat by England on Good Friday. This, he said, was taken as an indication that Europe was in dire need of grain.

Certain interests were said to have 1,300,000 bushels of wheat at Kansas City which they were trying to bring into Chicago. In addition vessel bottoms were said to have been chartered for the transportation of 1,000,000 bushels from Duluth to Chicago, which, it was said, might mean the moving of some Minneapolis wheat to this market.

Read the "Want Ad" page this week for good offers of all kinds.

Julia Kuchenreuther's friend at school is Jenny Johnson. Thelma Olsen is her teacher. Julia has three sisters and two brothers in high school. This spring she is going to plant some flowers and have a flower garden. She lives in western Whatcom county, Washington.

Alma Smith lives near the head of Moses Coulee in central Douglas county, Washington. Her home is five and a half miles from town. Alma is 11 years old. September 17, 1922, she will be 12. She rides a pony a mile and a half to school. This is Alma's first letter to Aunt Nellie.

Reta Houghton is a southwestern Washington cousin and lives near the Columbia river. She was 8 years old December 19, 1922. Her sister gets The Junior Farmer and Reta enjoys reading it very much.

Because he had the whooping cough, George Lovos has a vacation from school. His bunny ran away since he wrote to us before and now he hasn't any bunny. He has a little goat named Billy. What goes upstairs with four feet and comes down with eight? A cat, when she catches a rat. George is a western Washington boy and lives on Puget sound.

We have another letter from the Wertemberger home, in Grant county, Washington. This one is from Henry, who is 10 years old. September 9, 1922, he will be 11. He is in the fifth grade at school. Mrs. Zeyen is his teacher.

At school Florence Steinar and her brother are taking fourth grade work. Florence likes to go to school. One of her brothers is in the second grade and she has two brothers who do not go to school. Florence had to miss school on account of a bad cold. Her home is in southeastern Whitman county, Washington.

Pauline Wertemberger is an eastern Washington cousin and lives near the Adams county boundary line in Grant county. She was born in Russia in 1910 and is 11 years old. Her birthday is April 23. Pauline has two sisters and one brother. They are Leona, Dorothy and Henry.

On account of whooping cough Alice Lovos and her brother George had a vacation from school. Since Alice wrote to us the last time she and George have gotten a little goat and have named him Billy. He is dark gray with white stripes and is about the size of a little dog. Danny (to his mother—Were Adam and Eve the first people in the world, ma? Mother—Yes, Adam and Eve were the first people in the world. What a silly question to ask, Danny—Well, who was here before they were? Mother—Nobody, of course. Danny—Gee, that nobody must have been lonesome. Alice lives on Puget sound, Kitsap county, Washington.

Esta Rivers is going to keep all her copies of The Junior Farmer and sew them together in a big book. February 24, 1922, when Esta was 11 years old, she received several presents. Here they are:

Birthday Greetings

THURSDAY, April 20—Frances Mae Blevins, 10 years old; Helen Brooking, 11; Margaret Daniels, 11; Dora Duffey, 8; Donald Fry, 8; Molly Litt, 10; Ralph Stratton, 9.

FRIDAY, April 21—Edith Derigio, 11 years old; Andrew Litt, 8; Mildred Owens, 11; Gladys Packer, 10; Annie Phillips, 11.

SATURDAY, April 22—Okel Sperline, 11 years old; Billie Warwick, 4.

SUNDAY, April 23—W. H. Dick, 11 years old.

MONDAY, April 24—Juanita Arrington, 8 years old; Marie Felchlin, 11; Martha Kissler, 10; Orval Van Ausdle, 8; Lloyd Patterson, 6.

TUESDAY, April 25—Pauline Arrington, 10 years old; Elmer Eaton, 11; Arthur McKay, 11; Vera Park, 11; Vernon Peck, 9; Helen Prien, 7.

WEDNESDAY, April 26—Leda Ruby Harrell, 10 years old.

LETTERS WELCOMED BY AUNT NELLIE.

Among recent letters received by Aunt Nellie are those from cousins whose names follow. A few of these will be published each week in the regular edition of THE FARMER, and others will appear from time to time in The Junior Farmer:

Jean MacKenzie, Emilea Pflugrath, Mae Taylor, Hector Salvadalena, Madge Black, Thelma Heimen, Marie Louise Newmann, Arthur Radach, Everett Joseph Scott, Ellen Ludwig, Anna Julia Hendrickson, Dorothea Nelson, Julia Emma Rainbolt, Olive Marr, Edna P. Mosier, Matilda Schniendmiller, Josephine Jantz, Bessie Berglund, Ruth Fletcher, Reinhold Gord, Irene Owens, Esther Reimann, Hazel Mattie Anderson, Frances Felmley, Vivian Peterson, Dorothy Schidleman, Anna Halovanick, Rose Bartell, Eleanor Luther, Emma Hochstatter, Jane Frazier, Josie Smith, Lillian Kunz, Aubrey Randolph, Mary Wagner, Ray Scherman, Louis Rostad.

An ink tablet, a handkerchief box and three hankerchiefs, a Polly Prim apron, three packages of gum and three bars of candy. Esta's home is near Lookout mountain, in Okanogan county, Washington.

Hilda Stark, who lives in central Douglas county, Washington, writes her second letter to Aunt Nellie. There are nine children at school where she goes. She is in the fifth grade in everything but language.

Every Friday afternoon they sew where Rena Rise goes to school. Rena has learned how to make a sewing bag. She says it is pretty. When spring comes Rena will be glad. She thinks all the cousins will be glad, too. Most of the winter they have had hot lunches at school, but now, because it is getting warm, they are not going to much longer. Rena's home is near the Canadian border line, in north central Washington.

Sarah Wood lives on a farm in Whitman county, Washington. Sarah has three pets, a dog named Snip; Tommy, her cat, and a pony. Sarah likes to ride horseback. She was 11 years old January 3, 1922.

Elsie Stark is in the sixth grade in everything but history and geography and those are the studies she does not like. Here is a riddle: There are nine ears of corn in a box and every day a squirrel comes and takes three ears. It takes him nine days to carry them out. How is that? He takes his own ears with him each time and takes away one ear of corn. Elsie lives north of Moses Coulee, in Douglas county, Washington.

Max Fountain, a 7-year-old cousin, lives east of Bonaparte lake, in eastern Okanogan county, Washington. Max has two sisters, Gertrude and Gladys, and a baby brother, Freddy. Max says he has a pet dog and three cats. February 17 is his birthday.

Evelyn G. Claman went visiting and while she was gone her pony ran away. While the pony was away she got kicked and was lame for a long time, so Evelyn could not ride her. The pony is 27 years old. Evelyn is a southern Washington girl. Her home is in Yakima valley.

BEDTIME STORIES

By THORNTON W. BURGESS.

Copyright, 1919, T. W. B.

LONGLEGS RECEIVES CALLERS.

Longlegs the Blue Heron felt decidedly out of sorts. It was a beautiful morning, too beautiful for any one to be feeling that way. Indeed, it was the same beautiful morning Grandfather Frog had caught so many foolish green flies that he had stuffed his white and yellow waistcoat until he couldn't get another one in, and had then gone to sleep right out in plain sight on his big green lily pad in the Smiling Pool. It was the very same morning that Little Joe Otter had gone down to the Big River fishing and had had such success that he was fairly bubbling over with good feeling.

Jolly, round, red Mr. Sun was smiling his broadest. The Merry Little Breezes of

The trouble with Longlegs was an empty stomach.

Old Mother West Wind were dancing happily here and there over the Green Meadows, looking for some good turn to do for others. The little feathered people to whom Old Mother Nature has given the great blessing of music in their throats were pouring out their sweetest songs. So it seemed as if there was no good reason why Longlegs should feel out of sorts. The fact is, the trouble with Longlegs was an empty stomach. Yes, sir, that is what ailed Longlegs the Blue Heron that sunshiny morning. You know, it is hard work to be hungry and happy at the same time.

So Longlegs stood on the edge of a shallow little pool in the Laughing Brook, grumbling to himself. Just a little while before he had seen Little Joe Otter carrying home a big fish, and this made him hungrier and more out or sorts than ever. In the first place, it made him envious, and envy, you know, always stirs up bad feelings. He knew perfectly well that Little Joe had caught that fish by boldly chasing it, for Little Joe can swim even faster than a fish. But Longlegs chose to try to make himself think that it was all luck. Moreover, he wanted to blame some one for his own lack of success, as most people who fail do. So when Little Joe had called out, "Hi, Longlegs, what luck this fine morning?" Longlegs just pretended not to hear. But when Little Joe was out of sight and hearing he began to grumble to himself.

"No wonder I have no luck with that fellow racing up and down the brook," said he. "He isn't content to catch what he wants himself, but frightens the rest of the fish so that an honest fisherman like me has no chance at all. I don't see what Old Mother Nature was thinking of when she gave him a liking for fish. He and Billy Mink are just two worthless little scamps, born to make trouble for other people."

He was still grumbling when these two same little scamps poked their heads out of the grass on the other side of the little pool. "You look happy, Longlegs. Must be that you have had a good breakfast," said Little Joe, nudging Billy Mink.

Longlegs snapped his great bill angrily. "What are you doing here spoiling my fishing?" he demanded. "Haven't you got the Big River and all the rest of the Laughing Brook to fool around in? This is my pool, and I'll thank you to keep away!"

Billy Mink chuckled so that Longlegs heard him, and that didn't improve his temper a bit. But before he could say anything more Little Joe Otter spoke.

"Oh!" said he, "we beg your pardon. Billy Mink just happened to see Grandfather Frog sound asleep, and we thought that if you hadn't had good luck this morning you might like to know about it. But as long as you think so ill of us we'll just run over and tell Blackcap the Night Heron."

Little Joe turned as if to start off in search of Blackcap at once. "Hold on a minute!" called Longlegs, and tried to make his voice sound pleasant, a very difficult thing to do, because, you know, his voice is very harsh and disagreeable. "The truth is, I haven't had a mouthful of breakfast, and to be hungry is apt to make me cross. Where did you say Grandfather Frog is?"

"I didn't say," replied Little Joe, "but if you really want to know, he is sitting on his big, green lily pad in the Smiling Pool, fast asleep right in plain sight."

"Thank you," said Longlegs. "I believe I have an errand up that way, now I think of it. I believe I'll just go over and have a look at him. I have never seen him asleep."

(Copyright by J. G. Lloyd.)

The Gaunt Gray Wolf

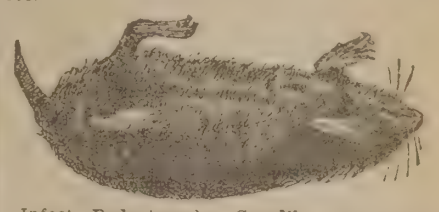
(Continued from page sixteen.)

ducked, and ceased paddling as a bullet sang past his head. Immediately the canoe began drifting, and a moment later the strengthening current caught it.

Then the Indians, alive to this new danger, disregarding bullets, rose to their feet and paddled desperately, the one in the stern seeming not to know that the broken stick he held was useless. They knew that the evil spirits had reached up for their canoe and were drawing them down—down—to something worse than death. Their faces became drawn and terror-stricken.

Faintly, and as a voice far away and unreal, they heard Manikawan's taunts as she ran down the high banks of the river, keeping pace with the doomed canoe and its occupants going headlong to destruction:

"The men of the south are cowards. They are afraid to die. The evil spirits are hungry, and soon they will be fed. Their voices are loud. They are crying with hunger The men of the south will feed them."



(To be continued.)

Motor Questions

I wish to know how to remove an engine and where to disconnect it; whether at the flywheel or somewhere between transmission and flywheel? J. P.
Carrolls, Wash.

It would be preferable to overhaul your motor in the car unless you wish to get the cylinders ground or a bearing rebabbitted. You will save time and not have to remove so many parts if you leave the motor on the frame. In case you remove the motor, loosen it from the frame, remove all parts in front of it, and loosen at the clutch collar. It may be that you will have to loosen the bolts at the transmission a bit in order to give the motor a little play at that and while removing it. If you have no instruction book, get one frome your nearest dealer.—L. J. Smith, W. S. C.

ENGINE GETS TOO HOT

How much clearance should there be between the piston and the cylinder wall on a four-cylinder air-cooled engine, having two and one-half inch bore? When new rings are fitted, how wide a gap should there be at the ends? This motorcycle engine gets very hot sometimes in the summer, so that I have to let it cool off before it will run good. Even when there is no carbon in the engine it acts the same. What is the reason for this? R. W. B.
Perma, Mont.

It may be that your motor gets hot because of improper valve timing, spark adjustment or too rich fuel mixture Any of these cause a high-speed motor to overheat.

The gap for rings is .004 inch per inch diameter of piston, or .01 inch for your motor. If you put in new quick seating rings the gap should be a little less.

Regarding piston clearance, the skirt (part of piston below the three rings) should be 2 1-2 thousandths for your size pistons, assuming the pistons to be cast iron. The diameter between the rings gets smaller as you approach the top of the piston, the diameter at the upper end being about three-hundredths, since the piston is hottest at the top, or in other words, three one-hundredths less than the base of the cylinder.

For aluminum alloy pistons the clearance must be twice that of cast-iron piston.—L. J. Smith, W. S. C.

Looking Ahead With Wool Men

(Continued from page six.)

ders for cloth and mills were obliged to make up for lost time. As operations expanded the stocks of wool abroad begun to shrink and gradually were reduced to more normal size.

The world consumed much more wool than it produced last year and stocks have been reduced nearly 1,000,000,000 pounds from the highest peak.

The department of agriculture, which at one time was a purveyor of statistics showing enormous stocks, reports that on December 31, 1921, holdings in the United States were smallest of any time in the last 10 years. Stocks in Great Britain, France, Germany, the leading European textile countries, also are the lightest in 10 years.

Stocks in wool-exporting countries are above the average, but when the small supply in importing countries is taken into consideration, according to the department of agriculture, holdings of fine wools are smaller than at any time in recent years and the increase in medium and low wools is only a slight one.

The sheep population of the world is estimated at 10 per cent less than in 1913. Furthermore, wool production in the world in 1921 was only 2,608,445,000 pounds, which is 17 per cent less than the pre-war average of 3,151,888,000 pounds. The clip in the United States was the smallest since 1900, while wool consumption, broadly speaking, is increasing rather than decreasing from year to year, both in this country and abroad. It was inevitable, under the circumstances, that the accumulated stocks would disappear.

The present situation finds the United States with a supply below the average, a high tariff and a domestic clip only equal to about 45 per cent of our needs.

These conditions offer promise that the American wool grower will get the full benefit of tariff legislation in the price of future clips. The emergency duty is to stay on until the permanent tariff has been put through. The duty in the latter agreed upon by the senate finance committee is 33 cents per scoured pound, but the duty in the house bill is only 25 cents. Carpet wools are to be admitted free except where they are used in the manufacture of cloth.

At the present time, with the new clip being removed from the sheep's back and buyers of woolen goods asking for lower prices, mills are buying but little raw wool and prices are from 3 to 5 cents a pound lower than at the first of March. There may be some method in the mill's attitude, as they probably would relish an opportunity to accumulate at lower prices.

Consumption of wool by mills is closely related to the trend of business and industrial affairs and to periods of prosperity and depression.

There are some sound reasons for expecting gradual improvement in trade activity during the next 12 months.

The marked increase in the rate at which woolen mills were engaged toward the end of 1921 was one of the first instances of the revival of manufactures. This increase in production of woolen goods filled up some of the holes in channels of distribution, so that there has been some slackening again recently and consumption of wool in 1922 may fall below that of 1921, but there is no reason to expect it to go much, if any, below 600,000,000 pounds.

Stocks of wool in this country at present, based on reports six months ago and consumption and imports since that time, appear large enough when the new clip is added to last through most of the year. Some wool must be brought in from the outside, however, and prices must remain sufficiently high to make possible the payment of the import duty.

In spite of the weakness which developed recently in this country, most foreign auctions are showing strength.

Growers have taken courage from the advance which occurred during the early winter and realize that their position is a strong one. They were not disposed to sell new wool even when the market was at the top. Some of them may cut loose as soon as their clips have been removed, but it is quite probable that a great deal of wool will be held to try the market out further unless prices move upward again.

EXERCISE THE PIGS.

Plenty of exercise is a good conditioner for little pigs, and often prevents losses from so-called thumps.

WATER TANK CONSTRUCTION.

Cypress is perhaps the best wood for water tank construction, though cedar and redwood are often used. J. R. Adamson of Long Beach, Wash., has a 1000-gallon redwood tank which has given immense satisfaction in his house overlooking Shoalwater bay. When concrete is properly mixed and reenforced it makes a tank that should last hundreds of years. The top of the silo is as good a place as any to stow one away.

Many Community Blessings Dependent on Prosperity of Local Merchants

One of the big advantages which modern farm life has over rural existence 50 years ago is the fact that the town is not so far away. The automobile, truck, telephone, good roads, and improved railway service have all tended to bind the farm and trading center into a closer relation of mutual dependence. This, of course, has immeasurably increased the availability of church advantages, good schools, adequate shopping and marketing facilities, and similar benefits.

It should not be forgotten, however, that such advantages are to a large extent made possible and maintained by the business institutions of the home town of which the retail store is a dominant factor. Consequently, the prosperity of the local retail merchants has a decided effect upon these community blessings, and it becomes a matter of self-interest to patronize them, all things being equal.

—Helpful Exchange of Ideas and Experiences offered by —Your State Farm Weekly

The Washington Farmer is welcomed just as much by the wives and daughters on the farm as it is by those who hold the plow handles or who drive the big reaper. It devotes articles, pages and departments in every issue to the special field of women. It aims to lighten the work of those who must perform the endless tasks in the farm home, and to carry a word of inspiration and cheer to those who keep the wheels in the farm household turning smoothly.

The "Family Circle," with its constant interchange of experiences, ideas, opinions and methods, becomes more and more popular as the weeks pass.

The friendly interest of our women readers makes them warm adherents of our cooperative plan for securing and renewing subscriptions. Here is the idea. Many publications charge a high subscription price because it costs so much to gather the subscription orders. We eliminate the expensive system of having a force of agents go from town to town and from farm to farm to secure and renew subscriptions. Instead, we ask our friends to send in their own orders at least sixty days in advance of the expiration date stamped on the wrapper of your paper, and to include the orders of friends and neighbors with your own.

You get the benefit of the money saved by this economical plan. You receive this big, enterprising farm and family magazine for five years for only $1.

Continued cooperation is necessary. We hope to make 1922 ever more successful for cooperation than the past years have been. Please do your part.

Subscription Rates to The Washington Farmer:

$1.00 for Five Years 25 Cents for 1 Year. 50 Cents for 3 Years.

In Canada add 1 cent a copy for extra postage.

April 20, 1922.

If your subscription is already paid in advance, it will be extended from the date to which it is paid.

A State Guernsey Champion

The new Washington state Guernsey champion in class BB (senior 4-year-old), Beauty of Chicona, bred and owned by A. L. Gile of Chinook, carries more than the usual distinction of a state champion. By virtue of a previous record she is also the best junior 3-year-old in the state, and is thus a double champion. Furthermore, she ranks second among all Guernseys in class BB and, therefore, becomes one of the 10 class leaders.

The record recently completed is one of 742.69 pounds of butterfat from 13,563.7 of milk. She carried a calf 270 days of her test, and the bull that was born two weeks after completing it is a splendid specimen, indicating that she did not attain personal glory at the expense of her offspring. Her previous calf was a heifer, dropped November 29, 1920, and sired, as was the bull, by Langwater Traveler, a son of one of the best daughters of Imp. King of the May. Her previous record was 508.94 pounds of fat from 8980 of milk in class E.

Beauty of Chicona is the 11th daughter of King of Medfield to qualify for the advanced register. King of Medfield represents a cross which has produced some of the best animals of the breed, being sired by Imp. King of the May and out of Imp. Hayes Rosie 3d.

As state "BB" champion she displaces Gladiola of Bralee, a cow to which R. A. Tillman of Ferndale gave a record of 660 pounds and subsequently sold in an eastern sale.

Still Feeding Stock

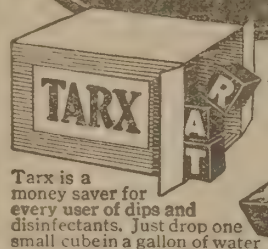
By L. K. COGSWELL, Chehalis, Wash.

It is now April 10 and stock are on full winter feed. We have been feeding since early in October, the longest full feed period I have known in the 39 years I have been in Lewis county. A few cars of wheat, oats and straw were shipped out in the fall and it was expected considerable hay might be sold in the spring, but many hundreds of cars of alfalfa have been shipped into this county and fed as fast as unloaded. Considerable straw has been shipped in from eastern Washington. Wheat, poultry and dairy feed and oats are also being shipped in.

Farmers seem determined to get in a big crop early, but weather conditions would not permit seeding and gardening has scarcely started. There are twice as many farm auctions as common and everything but extra choice fresh cows sell for below cost. Buds are swelling and grass shows a tinge of green now, but there are no blossoms in sight. This is a strong cow and hen county and milk is $1.60 per hundred and eggs 21 cents at your door. Eggs are gathered here for cold storage and to ship to California and the east. Many carloads of fancy snow-white standard eggs have gone to New York and untold thousands of chickens are being raised to supply pullets for next fall's laying. Cockerels are shipped to California as soon as they are large enough to eat.

ABERDEEN ANGUS AS RANGE CATTLE.

That a herd of from 800 to 1000 head of purebred Aberdeen Angus are running as beef cattle in the forest ranges surrounding the Kittitas valley, in Kittitas county, Wash., is known to few people. Still fewer realize that the entire herd is the progeny of 18 purebred Aberdeen Angus cows, originally imported from Scotland some 25 years ago by the then minister of agriculture of Canada. The facts are given by ex-Senator Smithson of Ellensburg, Wash., in a letter to Otto V. Battles of the firm of Congdon & Battles, Aberdeen Angus breeders of Yakima, Wash. Mr. Smithson, "an Englishman by birth but an American by choice," says his company "came into possession of the cows through a bad debt, for the sum of $1400 and interest, a fabulous price to pay in those days for any kind of 'critter.'" He says the Angus cattle were so much better than those he was running that he soon sold off everything but the Angus cows, used a registered bull and has followed that course ever since.



GUERNSEY CALF CLUBS.

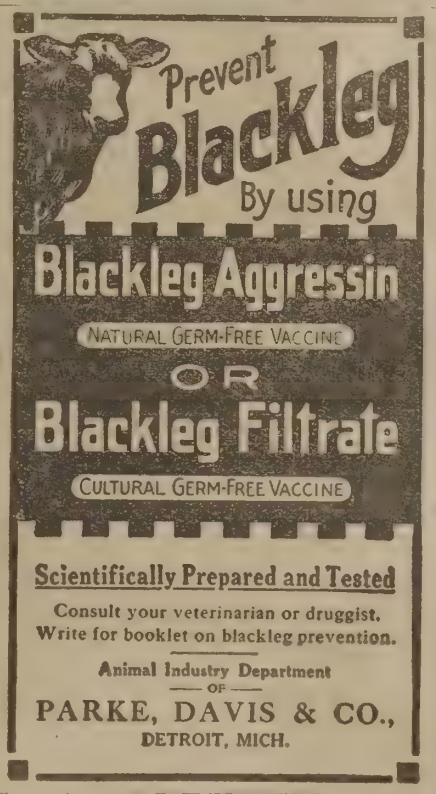
Partly to "father" the Guernsey calf clubs which are being formed in the valley, and partly to protect prospective buyers against speculators, the Yakima Valley Guernsey Breeders' association decided to import from the east the stock which calf club members need and are unable to obtain locally. Accordingly President H. E. Angel of Mabton and Secretary R. N. West of Yakima were selected to make the trip, and left early in April for Ohio, New York and other eastern Guernsey centers. The association recently sponsored a sale near Outlook of adult females brought in by A. L. Wallace.

SELLS RED POLLED BULLS.

L. K. Cogswell of Chehalis recently shipped some young registered Red Polled bulls to Whitman county, Pacific county and to the boundary line in Whatcom county. He reports scrub and grade bulls very closely killed off and even registered bulls carefully culled over and a general determination to improve the quality of all the stock in the state.

TARX
SOLIDIFIED DISINFECTANT

A Better Coal Tar Dip and Disinfectant in a Handier Form



Tarx is a money saver for every user of dips and disinfectants. Just drop one small cube in a gallon of water and you have one gallon of the best dipping and disinfecting solution. You pay nothing for bottles, barrels or cans, nothing for waste or breakage or leakage. No freight on factory water which you can just as well add at home.

Easily Shipped Anywhere by Parcel Post. Takes up small space. Will not freeze. Keeps indefinitely. Won't lose its strength. Makes any strength solution you need. Tarx positively destroys lice, ticks and other vermin.

Comes in 5 lb. package divided into 150 cubes—enough to make 150 gallons of strong solution. Ask your dealer for Tarx or write for Free Book and money-saving prices. Agts. wanted.

90 EGGS AND THE HEN IS JUST PAYING HER KEEP
120 EGGS AND THE HEN IS JUST PAYING A PROFIT

but why stop with 30 EGGS

AUTHORITIES estimate it takes 90 eggs a year to cover the "keep" of a commercial hen—and 120 eggs to make just a profit. But—there's the rub! How are you going to get the extra eggs—the eggs that make the big bank-book difference between just a *profit* and a *just* profit?

The average hen under natural range conditions will produce only about 75 eggs a year. Yet *proper feeding and care* have developed commercial flocks that average 120 to 150 eggs a year per hen. Some flocks will range even higher.

It's all a matter of feed and care. The feed must be clean, tasty, varied. The elements of an egg are derived from many sources. Therefore, the greater the variety of feed ingredients the better. SURELAY contains a dozen tested ingredients balanced and blended according to the famous Sperry formula. It is made so good, so uniform, so tasty, that every time Mrs. Hen takes a peck at it she is eating something that goes into the making of an egg.

You know that Nature provides each hen with a certain number of embryonic ova. These are minute yolks which, under ordinary conditions, will take the hen a number of years to produce. But that isn't very profitable. So it is your job as a poultryman to secure the most eggs in the least time—and keep the hen in *good health* all the while.

SURELAY will give every hen in your flock an opportunity to pay not only her board bill but pay *you* a profit. This prime quality feed calls the "egg-making department" to order—makes it produce—and keeps the hen in "fine fettle" all the time.

Ask your dealer for Sperry SURELAY in the yellow-striped bag; and send for "Makes Hens Happy"—a practical guide to more eggs and more money. Simply clip the coupon and mail today.

The "Filled" Milk Bill Now Before Congress—Page 7

News for Breeders

BLOODED ABERDEEN ANGUS CATTLE.

Two carloads of blooded Aberdeen Angus cattle have just arrived at the Congdon & Battles ranch, in the Yakima valley. The shipment consisted of 35 females and 10 bulls, including Prizemere 9th, which expert judges declare to be one of the finest bulls of the breed in America. These cattle are the remainder of the famous Rosemere herd of Maquoketa, Iowa, owned by Otto V. Battles, for the last three years manager of the firm of Congdon & Battles of Yakima, Wash. In a comparatively short time this Iowa herd of Aberdeen Angus cattle has produced three grand champion bulls at the Chicago International, two grand champion cows and scores of first prize winners.

THE BULL HE PICKED.

"Knowing Alex. Todd's almost uncanny ability to pick successful sires, I am watching with a great deal of interest to see what bull will succeed Sir Korndyke Ormsby Piebe," said Editor M. S. Prescott of the Holstein-Friiesian World. The bull selected, is King Pietertje Ormsby Piebe 35th, bred by Hargrove & Arnold of Norwalk, Iowa, and sold in the Brentwood sale for $800. He is a son of "K. P. O. P.," first prize winner on get of sire for three consecutive years at the Dairy Cattle congress, and world-record bull for combined milk and butter average of his two nearest dams. The latter are the two highest producing daughters of Sir Pietertje Ormsby Mercedes, and it is here that Mr. Todd obtains the same blood that he had in the bull he sold, for Sir Korndyke Ormsby Piebe was out of a daughter of "Sir Piet." The calf himself is one of the highest yearly record bulls of the breed. His five nearest dams average 1150.45 pounds of butter and 23,846 of milk, all except one made under full age. His dam is now making her third consecutive yearly test, started as a 3-year-old.

NATIONAL HOLSTEIN ASSOCIATION.

Nominations for delegates to the annual convention of the Holstein-Friesian association of America at Kansas City, Mo., June 7, include the following: From Washington (entitled to three)—William Bishop, Harold Stimson, Guy McL. Richards, E. A. Stuart, John L. Smith, Alex. Todd, George A. Gue and T. J. Owens. From Oregon (entitled to two)—Oscar L. Dunlap, Henry McCall, F. R. Beals, W. K. Newell and Frank W. Connell. Oregon's quota for the third national cooperative sale which will be held in connection with the meeting is three head, Washington's six.

WORLD-RECORD HEIFER.

By making recently a new world record for fat production for heifers freshening at less than 24 months of age, Daisy Aaagie Ormsby 3d, a Wisconsin Holstein heifer, brings back to the Holstein breed the only championship performance heretoforefore credited to any other breed in the yearly division. In other words, she displaces St. Mawes Lad's Lady, an Oregon Jersey heifer, as world champion senior yearling. "Daisy" freshened at the age of 1 year 11 months and started off with a seven-day record of 23.48 pounds of butter. Her year's record was 22,151.2 pounds of milk and 870.63 of butterfat, which is a world record for combined milk and butter, as well as for butter alone. The record oif St. Mawes Lad's Lady was 11,756 pounds of milk and 829.09 of fat.

BUYS BULL.

J. H. Quick of Castle Rock, Wash., recently purchased from Ed Cary of Carlton, Ore., the young Jersey bull, Poppy's Maiden's Pogis. This youngster is by the gold medal bull, Pogis 75th of Hood Farm, and his dam, Poppy's Maiden, is a gold medal cow of Mr. Cary's St. Mawes-Rosaire's Olga Lad strain.

RESUMES AUCTION WORK.

After an illness of several weeks, which prevented his participation in the Brentwood sale of Holsteins at Philadelphia, a national event, Auctioneer George A. Gue of Yakima and Chehalis was back on the block early in April. His first large sale is that of Guernseys at Sunnyside April 18.

HOLSTEIN BREEDER RENTS FARM.

The large farm in the Ahtanum valley, near Yakima, Wash., which was taken up in 1871 by John Marks and was developed by his son, Elmer Marks, as a Holstein breeding establishment of note, has been rented by M. V. Poynor, who is one of the younger Holstein enthusiasts of the valley.

VEEDOL bids for your business on this business basis

Buy a trial 5-gallon can of the Veedol Oil designated for your tractor. Drain your crankcase, then refill it with Veedol. Immediately, you will notice a new power in your tractor, especially pronounced in the heavy going that has troubled you before. You will find yourself covering more ground—vital time saved.

Soon you will realize that your fuel tank doesn't need filling so often. You will continue to use Veedol and Veedol will continue to keep your tractor on the job and out of the repair shop. By then, you will be a confirmed Veedol enthusiast.

Veedol serves and saves while it protects your tractor and gives it long useful life. Veedol does these things because Veedol is especially manufactured to resist deadly heat and friction—the two greatest enemies of efficient motor operation.

Veedol bids for your oil business on a basis of results. Test it on the job against the oil you now use. Let the results determine your oil. Read the panel at the right.

There are Veedol Oils and Greases for every type of power farming equipment. Consult the Veedol Charts and select the particular Veedol lubricants designated for your automotive equipment. Use these and no others.

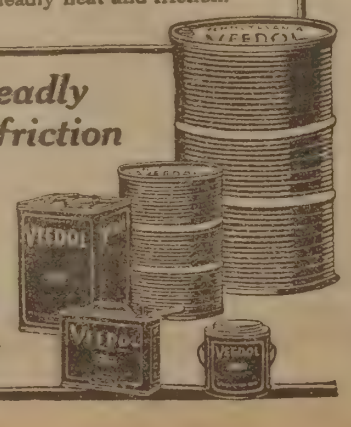
TIDE WATER OIL SALES CORPORATION
11 Broadway, New York

VEEDOL Motor Oils and Greases are sold throughout the world

YES or NO!

Does your oil meet these rigid requirements?

1. Full power—Your engine delivers full power only when the oil maintains a piston seal. Veedol maintains a piston seal, and gives full power even under extreme operating conditions.



2. Fuel savings—Poor compression allows unburned fuel to seep into the crankcase to further weaken and dilute the oil. Veedol holds compression. Therefore, Veedol saves fuel.

3. Minimum repairs—Over 80% of engine repairs are traced to faulty lubrication. Veedol saves you from seized pistons, burned bearings and scored cylinder walls.

4. Continuous operation—A motor laid up loses more money in a few days than the price of a year's supply of oil. Veedol keeps your machinery on the job.

5. Time and money savings—Full power, fuel savings, minimum repairs and continuous operation mean more acres worked in less time at lower cost. Veedol saves time and money.

Veedol is a Pennsylvania base oil, refined *more* than other oils. The exclusive Faulkner process gives Veedol *extra* resistance to deadly heat and friction.

Resist deadly heat and friction

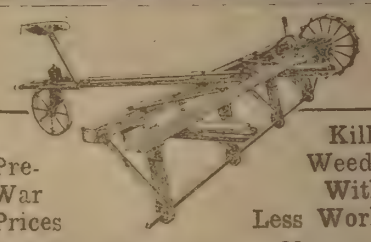
Haying Time Cut in Half

Save time, labor and money by putting up this year's hay crop easily and quickly with

The Jayhawk Stacker and Sweep Rakes



"Two boys and myself can put up more hay with the Jayhawk Stacker than 40 Mexicans," says A. Barter, Mercedes, Texas.

Light—easy to operate—a boy can run it. No ropes or pulleys—entirely automatic. Wood or steel. Elevates full load of sweep rake 20 to 25 feet and puts it exactly where wanted. Saves hay, teams and days. Prevents loss of crop after cutting.

For Good Farming, Attractive Country Homes and Happy Country People

Land Bank Business Grows Steadily

Farmers Have Borrowed Nearly $500,000,000 at Reduced Interest Rates

The interest on $500,000,000 at the average rate charged by mortgage companies on loans to farmers would probably be somewhere between $35,000,000 and $40,000,000 per year. The federal land bank has loaned the farmers of the United States about $500,000,000 at interest rates of 5, 5 1-2 and 6 per cent, depending upon the condition of the bond market in which it sold the bonds by which it raised the money to lend. In other words, the land bank has furnished the farmers of the country this $500,000,000 at an average of about 2 per cent lower interest than they would otherwise have been required to pay, or at a saving of about $10,000,000 per year.

The northwestern branch of the federal land bank, with headquarters at Spokane, has loaned the farmers of Washington, Oregon, Idaho and Montana about $60,000,000. This estimated 2 per cent saving in the interest rate means a direct saving of $1,200,000 a year to the farmers of these four states.

In the face of these figures, a declaration of President D. G. O'Shea of the Spokane branch of the land bank is significant. President O'Shea says that he considers the indirect benefit of the land bank to the farmers much greater than the direct benefits. By this he means that whereas the land bank has saved those who have borrowed through it a large aggregate amount of money as above indicated, it has saved them and the much greater number of farmers who have not borrowed through it still greater amounts in the reduction of general interest rates by mortgage loan companies and in improved borrowing terms offered by these companies.

Just an illustration of this point:

The land bank makes loans on what is called the amortization plan. That is, it requires those who borrow of it to pay the interest and a small percentage (1 per cent) of the principal on each interest-paying date. Thus, at the end of the period for which a loan is to run it is entirely paid off, without any large principal sum remaining to be paid at one time, as in the case of an ordinary loan. The length of an amortization loan in the land bank may be anywhere from 5 to 35 years. The land bank board recommends the latter as the one least burdensome upon the borrower.

Until the land bank came into existence with this form of loan the amortization plan was seldom, if ever, offered by mortgage companies. However, as a result of the land bank's competition and the inauguration of this payment plan, private concerns have not only reduced their rates of interest on regular loans, but in some instances have actually adopted the amortization plan. One such private company recently sent out a printed circular showing how it would lend $1000 at 6 1-2 per cent interest, accepting a payment of $75 per year to cover both interest and amortization payment of the principal to wipe out the entire debt in a period of 32 years. Thus a payment equivalent to a straight 7 1-2 per cent interest rate on the loan would wipe out the loan completely in 32 years.

Seldom, if ever, prior to the coming of the land bank, could a farmer borrow money at any less than 7 1-2 per cent, much less wipe it out by a yearly payment of that percentage.

Is Making Progress.

The northwestern land bank is moving forward efficiently, though conservatively, according to President O'Shea. He summarized the situation for readers of THE FARMER the other day, substantially as follows:

"The land bank was tied up for about a year and a half, pending the settlement of litigation brought to contest the constitutionality of the law. The supreme court finally, a few months ago, sustained the law, thereby removing all doubt as to its validity. When the decision was handed down, however, financial conditions were very close. Liberty bonds were selling at as low as 84 or 85 cents on the dollar in some instances, and the general bond market was correspondingly depressed. Therefore, when the land bank began to resume business following the supreme court's decision, it had to build up a market for its bonds. This was done as expeditiously as could be, and bonds have been offered in as large volume as the market would absorb.

"Many farmers were awaiting loans from the land bank on account of the temporary stoppage of its business and the general financial condition. Naturally, many of them could not be reached with loans at one time, but the land banks have continued steadily to extend their operation and to expand their service until they are now handling much larger volumes of business than ever before."

President O'Shea emphasizes the point that the land bank is not lending government money. The government advanced the money with which to start making loans, with the understanding that as soon as the bank became established and could secure funds of its own through the sale of bonds issued against the mortgages that it holds as security for loans, this original advance would be paid back.

The last issue of land bank bonds totaled $75,000,000 for the entire system. The northwestern branch bank is now operating on funds secured through the sale of its share in this bond issue.

New Bank Buidling Planned.

At the present time the Spokane land bank is occupying offices on the fifth floor of one of the city's downtown business buildings. In order to secure more floor space at a lower cost and better suited to its particular purposes the bank board has decided to erect a building of its own several blocks from the business center where property is less expensive than closer to the heart of the city. The land bank does not handle money as does the common bank, but accumulates an ever-increasing quality of records that require large storage rooms readily accessible to officers and employees.

United Support

Washington, Idaho and Oregon for Columbia Basin Project

More than 500 representatives of Washington, Idaho and Oregon met in convention in Pasco, Wash., Friday, and formed "The Columbia Basin Irrigation league," for the purpose of gaining federal development of the Columbia basin project as recommended by General George W. Goethals. It proposes to lay before the nation by a $150,000 advertising campaign the feasibility of reclaiminng 1,753,000 acres of land lying within the bend of the Columbia river by a gravity flow irrigation system from the Pend Oreille river. It proposes to carry the campaign to the national congress and gain for the Pacific northwest a $250,000,000 federal appropriation for the construction of this great irrigation project.

The Pasco convention was remarkable for its representative character. Portland sent seven delegates, Seattle 12, Tacoma 4, Spokane 72. Pendleton and other towns of eastern Oregon had a dozen or more on hand. Kennewick motored over with 60, Othello sent 57, Linn 50, Ritzville 40, Walla Walla 35, Connell 40, and there were 30 from Grant county. Ellensburg and Yakima were well represented, as was Wenatchee.

John A. Gellatly of Wenatchee was made chairman, and among the speakers were R. A. Ward of Portland, Roy W. Ritner, Pendleton; President E. O. Holland of the state college; former Governor M. E. Hay of Washington; Colonel R. H. Hartley of Everett; E. C. Burlingame, Walla Walla; W. S. Gilbert of Spokane and Professor O. L. Waller of Pullman. W. J. Coates, Spokane labor leader, declared labor stood solidly behind the basin project

The resolutions declare approval of the administration plans for the reclamation of the waste lands of the nation; urge the speedy enactment of the Smith-McNary bill believing that the passage of this measure will expedite the reclamation of all meritorious and feasible lesser projects of the Pacific northwest and that they would naturally, and should, receive earliest recognition and benefit; unqualifiedly urge the speediest possible development of the Columbia basin project, recognizing in this great national undertaking a development that will turn the tide of immigration to the Pacific northwest; is in favor of the enactment by congress of a bill appointing a federal commission to complete the investigation of the Columbia basin project and of a separate appropriation for the construction of the project, at the same time not committing itself to the proposition that it shall be indefinitely excluded from participation in the funds of the Smith-McNary bill.

The Columbia Basin Irrigation league is composed of two trustees in each congressional district in the three states. In the First district of Washington Charles W. Stimson and D. E. Skinner of Seattle were the trustees; Third district, Charles B. Hurley and Frank M. McCandless of Tacoma; Fourth district, Peter McGregor, Hooper, and H. D. McMillan, Ephrata; Fifth district, Charles Hebberd and T. S. Lane, Spokane.

Judge S. A. Lowell and James H. Sturgis of Pendleton were named delegates of the Second district of Oregon.

J. H. Morrow of Coeur d'Alene and Earl B. Farmin of Sandpoint were named as Idaho trustees. Other districts will name their trustees later.

Boost the Apple

Would Unite on Advertising Plan for Entire Northwest

With somewhat incomplete returns from at least one important district (Wenatchee) upon which to work, the committee on advertising the northwest boxed apple, which was appointed at the Spokane meeting of fruit growers last fall, and of which C. I. Lewis of Salem was chairman, decided at its meeting in Portland April 27 to undertake an advertising campaign based on the payment of 1-2 cent per box. C. H. Swigart of Yakima, H. W. Stone of Hood River, H. L. Geary of White Salmon and M. L. Dean of Wenatchee were appointed on a subcommittee to win over Wenatchee sentiment to the undertaking. It is likely that the attitude of Wenatchee will finally determine what action shall be taken on the matter this season, and the committee adjourned to meet again at the call of the new chairman, Mr. Swigart, who was named to succeed Mr. Lewis upon the latter's departure for Chicago.

The most optimistic report of interest in the undertaking was made by J. P. Gray of Nampa, who had attended a number of meetings in southern Idaho and had received enthusiastic and almost universal indorsement of a 1-cent levy for the purpose.

Mr. Swigart reported having taken the question up with commercial clubs, granges, the traffic association and the farm bureau, from which canvass he was "pretty well satisfied" that Yakima would help finance a general advertising campaign on whatever basis might be adopted. Mr. Stone reported that the Hood River Apple Growers' association had definitely decided to continue its district advertising on about the same scope as heretofore, but that if a general campaign for northwest boxed apples were decided upon it would contribute 1-2 cent per box. Mr. Lewis said that the Oregon Growers could be counted upon for their share, but Mr. Dean was not sure what position the Wenatchee growers would take. With a terriflic fight on there for tonnage, a fight in which advertising agencies are taking an active part, it was difficult, he said, to interest them in a general advertising campaign.

It is estimated that 1-2 cent per box will yield $150,000 to $175,000 if all districts join, and while this is but a small fraction of the amount annually spent by California growers, it was regarded as a "fair starter." It was pointed out at the meeting that 44,000 carloads of apples rolled from the three northwest states last year, and not over 10,000 of them paid anything toward advertising. It can not be denied that the northwest boxed apple, quality and package considere, is a product superior to the eastern barreled apple, fet distance from market alone lays upon it a toll that must be counteracted if the industry is to survive in this section. It is stated that, while plantings in the northwest this season will total 700,000 trees, those in the Virginias alone, a district infinitely better located with respect to consuming markets, 7,000,000 trees will be set out this year.

POOL ORDERS FOR VETCH SEED.

Ninety fruit growers attended a cover crop auto tour last July which was conducted by the county agricultural agent in cooperation with the Spokane county farm bureau, and those present at the last orchard visited voted unanimously that every orchard in the valley should raise a cover crop. This conclusion was corroborated by the discussions at the state horticultural convention. This spring the growers are planting over 2000 acres to cover crops, hairy vetch being the favorite crop. Most of the growers are pooling their orders for seed through the farm bureau secretary, T. S. Brown. To offset the double drain upon the land in the first season a great many of the orchards are receiving an application of commercial nitrogenous fertilizer, principally sulphate of ammonia. Over a carload of these fertilizers were also purchased through the farm bureau.

Potato Demonstrations

Potato growers in many parts of the state are to have opportunities this spring and summer to learn from experts many essential points in high-grade potato production.

George L. Zundel, extension plant pathologist of the state college, and E. G. Wood and Professor Armstrong, extension specialist and assistant extension specialist in horticulture, respectively, will hold field demonstrations touching upon seed preparation and treatment and later on detecting and eliminating diseased plants in the field. Some of the later field work will demonstrate roguing for the elimination of plants not true to variety in seed plots.

The schedules as so far announced for these potato specialists are as follows:

George L. Zundel.

Spokane county, May 10-13; Skagit county, May 16-18; Whitman county, June 5-6, 12-15; Pierce county, June 19; Benton county, June 20-21; Franklin county, June 23-24.

Yakima county, July 11-20; Pend Oreille county, July 24-25; Stevens county, July 26-29; Spokane county, August 7-10; Columbia county, September 12-13; Walla Walla county, September 14; Kittitas county, September 15-16; King county, September 18-19; Grays Harbor county, September 20; Lewis county, September 21; Cowlitz county, September 22-23; Stevens county, October 9-10; Whatcom county, October 12-14; San Juan county, October 16-17.

E. G. Wood.

King county, July 1-3; Snohomish county, July 5-6; Whatcom county, July 7-8; Mason county, July 10; Thurston county, July 11-12; Clallam county, July 13-18; San Juan county, July 19-20; Walla Walla county, July 22-24.

Spokane county, October 9-14; Mason county, October 16; Thurston county, October 17; Grays Harbor county, October 18-19; King county, October 20-21; Pierce county, October 23-24; Cowlitz county, October 25-26; Wahkiakum county, October 27-28.

Mr. Armstrong.

Wahkiakum county, July 17-18; Stevens county, August 7-19; Cowlitz county, September 7-8; Lewis county, September 9-11.

Will Sell Grain

Arrangements for handling grain on the principal markets adjacent to territory in which 55,000 farmers already are under contract with the U. S. Grain Growers, Inc., will have been completed in 90 days, according to a statement released by executive offivers of the cooperative grain firm. First, sales offices will be set up in the Chicago, Omaha and Minneapolis markets and efforts will then be directed toward establishing selling agencies on the Indianapolis and Kansas City markets.

The U. S. Grain Growers Sales company, subsidiary of the marketing association, is undtr the direction of the executive officers of the U. S. Grain Growers, Inc., so that they may supervise the details of getting the machinery in working order without creating additional salaried positions. Employment of a high type executive of experience, who will be placed in charge of the actual operations of the company, and subexecutives for the branch agencies is being given attention at the present time. In this connection, it is pointed out that the volume of approximately 125,000,000 bushels to be handled in 1922 will exceed that of any other single grain firm in the world.

"The articles of incorporation of the sales company are broad enough to provide means of selling for export or ownership of warehousing facilities on the terminal markets," according to a statement made by President C. H. Gustafson. "Likewise, it will be able to finance movement of grain to the same extent as other grain firms in the markets do at the present time."

Complaints must be sent to us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of diseasee in stock sold through these columns.

Growth of the Farm Bureau as a Business Concern

The farm bureau is growing as a business institution as well as an educational institution.

Here is the business secretary of the Spokane county farm bureau reporting that he has just delivered three cars of seed potatoes to the Yakima farm bureau. Secretary T. S. Brown also says that an increased acreage of seed potatoes is indicated throughout Spokane county this year.

The announcement is also made that 43 growers at Valleyford, Mica and Freeman, in Spokane county, have pooled orders for a car of Idaho Rurals certified seed potatoes, while seed potato growers at Waverly, Fairfield, Plaza and Latah have pooled orders for a car of Irish Cobbler potatoes from the Dakotas. The seed is certified.

Fifteen carloads of spray oil have been shipped into Spokane county this year by the farm bureau under pooled orders, while County Agent Virgil Patton of Spokane county reports that a total of 3330 quarts of poisoned oats for squirrels have been distributed this year in the county, about twice the amount used last year.

Taking Care of Surplus Milk

A rather unique method of taking care of the surplus milk during the spring months has been adopted by the Seattle Milk Shippers' association.

Instead of paying regular prices for an eight-month average and the surplus going for a butterfat price, the association has succeeded in making an agreement with the Seattle distributors. The price is now based on a nine-month average, beginning July 1 and ending March 31. For all surplus milk the producers will get condensery prices and it is agreed that such milk will not be sold to the public at the regular retail prices unless the difference in price be turned over to the producer who sold the milk.

The association, however, is making an attempt to steer all surplus milk to other points in order to save freight to Seattle and to avoid an oversupply for city consumption.

Fundamentals Are Correct

"Under the old system of marketing his products, the grower does not and can not know the market," said Manager M. J. Newhouse of the Washington Growers' Cooperative association. "The grower loses control of his goods too soon, as well, and the result is speculation and high prices to the consumer. These are the real reasons for cooperative marketing, and although cooperative organizations may tumble down around us, nevertheless the fundamentals of cooperative marketing are correct, and you can't get around them."

Severest Penalties His Due

An instance of easy-going dealing with violators of the prohibition laws is reported from Prosser, Wash. After a sensational pursuit by a deputy sheriff and a fusillade of bullets, a suspected booze runner was stopped in his mad flight by running afoul of an irrigation flume.

The officers of the law found liquors valued at $900 in the tightly curtained automobile, and this was properly confiscated. But the officers seem to have been too lenient in permitting the captured suspect to drive off with his automobile on the deposit of $250 cash bonds with a justice of the peace. This action was taken on the comparatively minor charge that the arrested man had liquor in his possession. That provision of the law is aimed at individuals who may buy illicit liquor for their own consumption, and is not intended to cover the graver violation of law involved in booze-running or bootlegging.

Men who engage in the unlawful traffic will not be deterred by occasional penalties of that mild description. As the profits in the illicit business are large, they can well afford to pay an occasional fine of $250, since much more than that can be made in a single successful transaction. In this case the Yakima county sheriff believes that the captured car left Spokane heavily loaded and that much of the liquor was disposed of at Walla Walla and Pasco before the car reached Kennewick, from which city a telephone message notified the sheriff's office that several cases of booze that had been offered at $100 a case were being taken toward Prosser in an automobile. If the sheriff's surmise is correct, the profits on the illicit liquor sold between Spokane and Kennewick were probably several times the sum that the owner of the intercepted car deposited with the justice to obtain his liberty.

If the facts are as reported, in this case, the captured fugitive was caught in plain violation of the law and should have received its severest penalties.

Loans to Students

The Women's Relief Corps has recently contributed a fund of $500 to the student loan fund of the State College of Washington. That fund is one available to worthy self-supporting students who would otherwise be obliged to abandon their studies.

Such funds are available in a limited way in many institutions, are admirably administered and are doing a very great service. It is stated that the failure of a recipient of student loan money to fully reimburse the fund from which he receives it is one of the rarest moral failures that ever finds its expression in finances. Money loaned to students as a cold matter of investment is declared to be employed in one of the best of risks, and disinterested loans are as strictly held in honor.

Perhaps "disinterested" is a poor and colorless word for the bequests made to institutions with this admirable purpose. Obviously, the donors have an active, helpful, big-brotherly interest in the beneficiaries.

These endowed student loan funds, being made available to the student usually in only such amounts as imminent needs determine, are made to do a great amount of duty. A student for whom they have made it possible to continue an otherwise broken college year could rarely fail to appreciate the fine spirit in which they are given.

Moving the Mountain to Mahomet

Jefferson county Holstein breeders believe in moving the mountain to Mahomet, if necessary to get the business. They desiring to get some of the good money which Grays Harbor county bankers have agreed to loan Grays Harbor county Holstein breeders for stocking up with purebreds, the Jeffersonians decided to take their cattle to Elma and hold a sale there early in May. The Grays Harbor district has heretofore been largely a Jersey district.

State Farm News

R. W. McKenna was elected manager of the Yakima Dairymen's association at a meeting of the board of directors. Mr. McKenna has been with the association for the last three months and has served as secretary and organizer. He will continue to have charge of further organization work and when the product of the membership is called for and the association begins to function will serve as its manager. The product of 2000 cows is now assured and Mr. McKenna and the officers of the association are actively engaged in laying plans for the future of the association. Mr. McKenna is a graduate of the dairy department of the Washington State college and has experience as county agent and dairy organizer in western Washington.

* * *

Experimental work on cover crops has been started by Professor O. M. Morris of the State College of Washington in several Yakima orchards. These orchards are all of matured trees and it is expected they will give results showing the influence on tree growth and fruit production of different cover crops and methods.

* * *

R. I. Fromme, Olympic district forest supervisor, has announced that establishment of the 6574 acres in the Quinault lake district as a recreation unit or park has been authorized.

The area extends from the top of the range of mountains on the north side of the lake to from one to two miles south of the lake, and from the Quinault Indian reservation at the west end of the body of water to about one mile above the east end, covering all national forest lands in the area and excepting only the homesteads.

Under the order the timber will be preserved.

* * *

The Puyallup Packing company has just been incorporated with a capitalization of $50,000. Frank Collinson of Portland, Ore., and B. F. Emery of Puyallup are the incorporators. This marks the entry of another fruit packing concern into the Puyallup valley.

* * *

The Skagit county farm bureau perfected its organization at a meeting in Mount Vernon. Two hundred farmers attended the meeting. Constitution and bylaws were adopted.

Will E. Jennings was elected president, with H. L. Willis as vice president. The office of treasurer fell to J. M. Shields. Five trustees were elected as follows: Charles Newburg, Peter Omdal, James H. Hulbert, H. S. Ruley and C. A. Nelson.

* * *

A dam at McLouglin's canyon developing power for the irrigation of 3300 acres is the plan that is being outlined at Riverside. The dam, which will be 26 feet high, will develop 2500 horsepower. The lands along the river to be irrigated extend south of McLoughlin's canyon for a stretch of 14 miles.

* * *

For road and trail work in the Columbia national forest in Skamania county the federal appropriation this year is $50,560.

* * *

C. O. Kelley, who has a small place on the Parker bottom, Donald, has set out 1200 Concord grape scions this spring. He has two bee yards and one of these, on low ground, was flooded during high water last December and he had to elevate the stands above the water. As a consequence of the dampness resulting from the flooding of the ground he lost half of the colonies in that yard.

* * *

The price of fluid milk for the month of April to dairymen selling to the Seattle milk trade has been allowed to stand the same as for March, $2.50 per hundredweight. This, of course, is on a basis of a 3.6 butterfat test. The price to the consumers has been cut 1 cent a quart, which is 10 cents at the stores and 12 cents delivered.

* * *

A new extension bulletin has just been issued by the state college on women's household exhibits at county and community fairs. Directors are given as to the arrangement of exhibits, entry, entry tags, methods of judging or scoring, score cards and particulars as to food and clothing exhibits, the art and handicraft exhibits, suggested lists for the culinary department, needlework, table linen, art and handicraft. This bulletin is sent free on request within the state of Washington.

* * *

Dr. Paul Cooper of Yakima has purchased the old Scheuller ranch property at the foot of the grade on the Naches road at a figure understood to be approximately $10,000. The tract contains 110 acres. Dr. Cooper is expecting to restock the ranch and build it up generally. He will go in for purebred stock, probably Guernseys.

* * *

According to a survey which has been completed by the extension department of the state college at Pullman, there are 333 purebred females and 178 purebred sires among the dairy cattle of Grays Harbor county. There are many more Holsteins than all other breeds combined, with Jerseys next in line. Several other breeds are represented by a few animals each. Most of the purebreds are owned by dairymen living in the east end of the county.

* * *

Contract for a new apple packing house has been let by the Olive Apple Company, Inc., of Chelan to J. E. Hughes of Cashmere, Wash. The concrete basement is now completed, 56x196 feet, and work will begin at once on the upper structure. Cost when completed and fully equipped will be close to $20,000.

The incorporators of the Olive company are H. J. Olive of Cashmere; his two sons, Walter M. Olive, manager for the Chelan Orchards, Inc., of Manson, and Leonard Olive, vice president of the Wenatchee Beebe Orchard Company, Inc., of Chelan, and C. C. Ward and H. E. Blair, orchardists at Manson. H. J. Olive is president and Mr. Ward secretary.

The Olive Apple company owns about 200 acres of commercial bearing orchard on Lake Chelan and expects to have more than 100,000 boxes of its own apples this fall.

Coming Events of Interest

April 26-28—Kittitas county nutrition campaign.
May 1-13—Dry kiln operation course, Hoquiam.
May 4-6—Tulip festival, Bellingham.
May 6—Jefferson county Holstein sale, Elma.
May 24—Lewis county Holstein sale, Chehalis, Centralia.
June 5—Northwest Guernsey breeders' sale, Portland.
June 7—Guernsey consignment sale, Chehalis.
June 20-22—Lincoln-Adams pioneer picnic, Keystone.
July 27-28—Whatcom co. Guernsey gallop, Bellingham.

FARM BUSINESS AND MARKETS OUTLOOK

Farm Prices Have Best Comeback

Although farm prices led the tumble downhill when deflation started, they are showing most speed on the return. They were so much below other groups when the turning point was reached, however, that, with few exceptions, they are still in the rear.

According to the index numbers of wholesale prices for March, issued by the bureau of labor statistics, farm products in that month were slightly higher than in March, 1921, while all other groups of commodities were lower this year than they were a year ago.

This advantage to the farmer is partly offset by a decline of 8 per cent in prices in the "foods" group, which includes many farm products such as butter, eggs, potatoes and apples, which are sold to the consumer without an intervening process of manufacture.

The biggest declines in other groups occurred in fuel and lighting, metals and metal products and house furnishing goods. The following table gives the actual index numbers, using the 1913 level as 100:

	Mar. 1922.	Mar. 1921.	Feb. 1922.
Farm products	128	125	126
Food, etc.	138	150	138
Cloths and clothing	182	192	183
Fuel and lighting	183	207	183
Metals and metal products	114	139	115
Building materials	202	208	202
Chemicals and drugs	159	171	159
House furnishing goods	213	275	213
Miscellaneous	153	167	150
All commodities	152	162	151

Compared with February, 1922, March prices were slightly higher, while the foods group was unchanged. Most of the others showed little or no change and the general average for all commodities was only .6 per cent higher than in February.

There is still a marked lack of adjustment among the group index numbers. On the one hand are metals and metal products 14 per cent and farm products 28 per cent higher than in 1913 and on the other are house furnishing goods 113 per cent and building materials 102 per cent higher than in the last prewar year. Such a lack of balance is an obstacle to business progress and a lot of it must be eliminated before real prosperity will arrive.

Rental for Money Reduced

A significant event in the commercial world last week was the evidence of lower rates for money. Treasury certificates in the amount of $150,000,000 were issued bearing only 3 1-2 per cent interest. In spite of the low rate more than twice the amount issued was subscribed for. This is the lowest rate since September, 1917, and compares with 6 per cent on an issue late in 1920 when money was tightest.

There are other signs that borrowers are to have easier times. Country banks in some sections are reported to be trying to place their surplus funds instead of being themselves borrowers from the banks in large cities. Apparently local debts are being liquidated. The demand for money to finance spring operations in both city and country has caused no strain and war finance corporation offices in various states report that applications for funds are falling off.

The east is again developing an appetite for good farm mortgages and the farm loan market is returning. Industrial concerns which have had to obtain new funds from bonds are now finding it possible to sell new issues of stocks, both common and preferred.

Finally, in spite of the demand for money abroad, the Bank of England has reduced its rediscount rate to 4 per cent.

With cheaper money Liberty bonds have become more attractive. All issues sold at new high levels last week and a level above par is expected for all of them before long. These issues were at their lowest point about 15 months ago, since which time they have advanced 5 to 16 per cent.

Cheap money is one of the signs of a return of business expansion, of prosperity, so that these events have an importance much greater than the extent to which they reduce the cost of money to the individual borrower.

Trend of Cattle Supply

Since the course of prices upon the rank and file of cattle depends more upon the supply from week to week than changes in the demand, the following table, which shows an eight-year average of receipts by weeks at the seven leading markets, is highly significant in its bearing on the future of the market.

Week Ending:	Receipts.	Week Ending:	Receipts.
April 1	154,000	July 1	152,000
April 8	142,000	July 8	141,000
April 15	147,500	July 15	149,000
April 22	151,000	July 22	179,000
April 29	158,000	July 29	182,000
May 6	147,000	August 5	183,000
May 13	148,000	August 12	176,000
May 20	142,000	August 19	192,000
May 27	150,000	August 26	216,000
June 3	141,000	September 2	237,000
June 10	144,000	September 9	224,000
June 17	147,000	September 16	249,000
June 24	164,000	September 23	289,000

This table shows that relatively light runs are the usual order during May and June, but beginning about the middle of July the runs increase rapidly, reaching maximum about the middle of October. The actual supply of beef, however, does not increase as much as these figures indicate. Cattle arriving in late summer and fall average lighter in weight than those arriving in the first half of the year. Also shipments of stocker and feeder cattle, which must be deducted from the total receipts, reach largest volume in the fall months.

The market invariably becomes a two-sided affair during the late summer, when grain-fed cattle advance in prices while grassers, which compose the bulk of receipts, are apt to decline.

The outlook for the beef cattle market during the next 60 days shows but little change. Light receipts were offset for a time by a decline in the appetite for beef, due partly to religious holidays, but this influence is past and a stronger undertone is manifest. Exporters have filled some good sized orders at Chicago which have helped that market.

The seasonal scarcity of cows and heifers usually continues until along in June. Cutters and canners have been selling well except the "dairymaids," which show evidence of disease and probable condemnation. These are severely discriminated against.

The veal market continues slumpy, with prices the lowest in more than a decade. Receipts have been unusually large for over six weeks, with more than the usual grist of undesirable light "bob" or "deacon" veals selling at prices from $5 per 100 pounds down. This movement should begin to subside within another week or two, although May also brings a rather heavy run as a rule. It is probable that prices have seen bottom for this spring.

Want More Feeders Than Year Ago

With the grazing season at hand light stockers have been popular property. Due to discouraging weather the total movement of feeders has fallen off slightly in the last few weeks, although it is running consistently ahead of that of last year.

The movement into Texas and Oklahoma from Texas is near floodtide. A probable reduction of freight rates on such shipments is a stimulating factor. Nebraska has been absorbing a lot of thin cattle recently and Kansas City reports a generous movement of thin cows to the northwestern range states.

Heavier Hog Run on Horizon

A 10-day advance in the hog market restored the $11 quotation at Chicago, but the event was short lived. Receipts of hogs have increased and it is probable that the lightest run of the spring season is behind us. Usually there is a gradual increase during May, reaching maximum in June after corn planting is over. A sharp decrease then follows in late summer. Prices on the average will follow the course indicated by these changes in receipts.

Besides the increased supply at the larger markets in the middle west, the east has had access to more hogs recently and shipping orders at Chicago last week reached the smallest volume of the year, leaving the market to the tender mercies of the large packers. Fresh pork prices also have not been maintained.

In spite of low prices for lard and salted meats, compared with fresh pork, hams and bacon, hogs are selling within a narrow range. This spread will widen undoubtedly during the summer when sows become more abundant.

Easter Lambs at Record Price

Only a few spring lambs were available for the Easter trade and selected lots sold up to $26 at Chicago, the highest price on record. No California lambs have arrived in the middle west as yet, but one trainload is on the way. The new crop appears to be a little late in all sections.

In spite of a smaller decrease in the run and Easter demand for light lambs in the specialty class dressed lamb prices have declined sharply and prices on the rank and file on the hoof have slumped to the lowest level in six weeks, with heavy shorn lambs 50 to 75 cents cheaper at Chicago. Only about 10 per cent of arrivals are in the fleece and these are as much as $1 lower. At this season discrimination against wooled lambs is not uncommon.

The market may be somewhat erratic during the spring months as readjustment is made to the new crop, but all signs point to a rather high basis, barring occasional periods of over-supply.

Buyers Name Horse Prices

Buyers have had the advantage in the horse market much of the time recently, although competition at this season usually is hot. Most of the 1250 to 1550 pound chunks are bringing $100 to $150 at Chicago.

Wool Buying Revives

Buying of wool increased slightly during both of the last two weeks, with woolen mills more active than worsted concerns. Another purchase of Arizona wool at around 35 cents per pound at Boston has been reported. The amount of the new clip offered thus far has been small or trading probably would be still more general. Foreign wool markets still show strength, much to the surprise of the trade in this country.

In spite of the advance of nearly 40 per cent in the price of wool, cloth prices remained unchanged until last week, when the American Woolen company announced an advance of 10 to 45 cents per yard for woolen cloth. Worsteds have not yet been changed.

With mills consuming more than twice as much wool as is grown in this country, with business conditions generally on the upgrade and foreign wool markets strong, conditions are shaping up to favor a recovery of the loss in wool values which occurred during March.

Wheat Demand Revives

The long contest between the "bulls" and "bears" in May wheat, with its attendant effects upon the cash market, seems to be turning in favor of the bulls, as the statistical position of wheat has indicated that it would. For a time the quantity of May wheat being held by exporters and millers who wished to take delivery was in doubt, but at present the belief prevails that this exceeds the ability of shorts to make delivery, so that the latter are due to be "pinched."

Revival of demand from both mills and exporters was the deciding factor in turning the market. It has made several false starts in the last five weeks, but the present performance bears more evidence of enduring character. If it lasts the wheat in storage which has been trying to find a buyer will be placed without any difficulty.

Renewal of export buying has made the most impressive showing. Both old and new crop wheat have been bought from North America and France and Italy have bought some southern hemisphere wheat on passage. The poor outlook for new winter wheat abroad is a source of alarm and has stimulated the purchase of wheat for July and August shipment. Greece is expected to buy 1,500,000 bushels in another week or two and to need nearly that much each month.

Furthermore, large shipments from the southern hemisphere finally ceased to depress the European market. Instead, world's shipments have now fallen below the weekly disappearance of imported wheat and the last report showed a sharp drop in the amount on ocean passage. Broomhall's last report stated that consumption in the present crop year would take care of all the wheat produced during the year and a large part of the carryover in exporting countries.

Milling demand has improved and flour buyers are showing more activity in some sections, although demand is not as robust as could be desired.

Receipts of wheat have dwindled, but are about equal to the 10-year average for this season of the year, although much lighter than last year.

The new crop is making progress, although the effect of unfavorable conditions last fall and winter is still seen in the character of the reports from the southwest. Abandoned acreage in Kansas has been estimated officially as high as 35 per cent. Much wheat in that state did not germinate until March. All sections need dry, warm weather, especially the spring wheat region, where planting is being delayed.

Corn and Oats.

Although the demand for corn has fallen off sharply, receipts have dwindled to such small volume that the market has strength.

Delay in seeding oats promises to throw more acreage into corn, although the supply of old corn does not indicate that such an increase is desirable.

Oat prices closely follow fluctuations in other grains.

Cash Grain Markets

The range of cash grain prices for the week ended April 19 was:

No. 4, 56 1-2@59c; No. 2 yellow, 58 3-4@61 1-2c; No. 3, 3, $1.30 1-2@1.38 1-2.

Corn—No. 2 mixed, 58 1-2@60 3-4c; No. 3, 57 1-4@60c; 57 3-4@60c; No. 4, 57@59 1-2c; No. 2 white, 59@61 1-2c; No. 4, 57@59 1-2c; No. 2 white, 59@61 1-2c; No. 3, 58 1-4@ No. 3, 58 1-4@61c; No. 4, 58 1-4@60c.

Oats—No. 2 white, 38 1-2@42 1-2c; No. 3, 36 1-2@39 1-2c; No. 4, 35@38 1-4c.

Rye—$1.01 1-2@1.06.

Barley—60@68c.

Seed and Feed

The spring demand for clover and grass seed is nearly over, although wet weather has delayed oats seeding. Prices are about 10 per cent lower than the high point of the season and have changed but little in the last two weeks.

Demand for millfeeds is indifferent, while holders are not crowding, so that the market is quiet. Production is fairly large and stocks in no case are small, with the exception of linseed meal.

More Hay Expected Soon

Heavier receipts of hay are expected as soon as country roads improve. Demand has not broadened at distributing markets, but is limited to local needs. The total quantity of hay, especially clover and alfalfa needed, will decline as the pasture season arrives. Thus far prices have held well.

Prices per ton in carlots: Chicago—No. 1 timothy, $25 @28; No. 1 light clover mixed, $24@25; alfalfa, $17@28.

Egg Receipts at Maximum

Receipts of eggs at the four leading cities are practically at a record level, but it is probable that they are now at or near the maximum. Prices are low enough to induce cold storage operators to take about 60 per cent of the supply. A further decline in values is improbable unless the extremely heavy receipts hold up longer than they usually do.

Receipts since January are but little behind the record movement of last year, while there is a substantial shortage in storage holdings at the four cities compared with a year ago, indicating that consumption is unusually large.

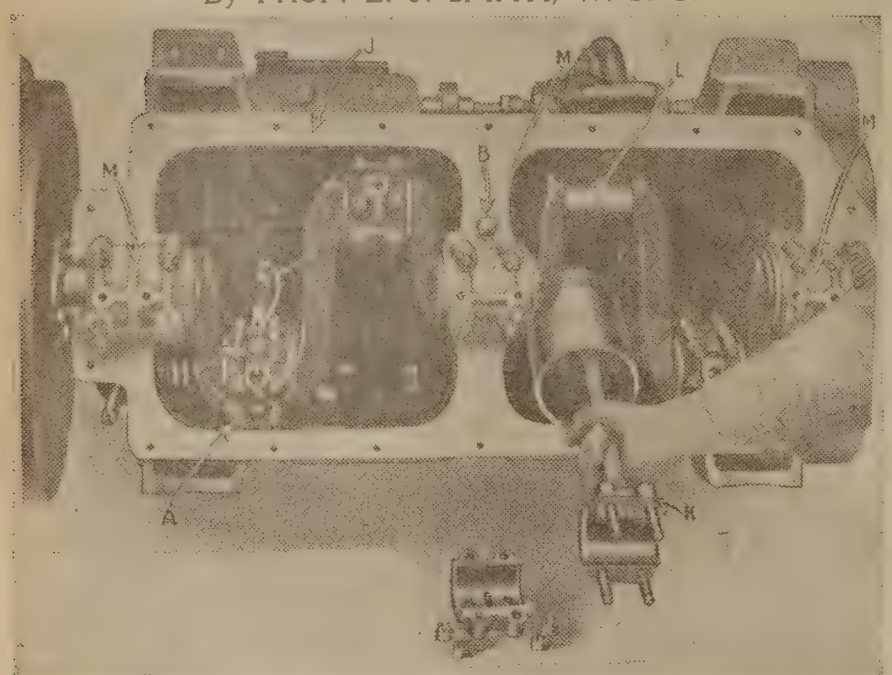
Butter and Cheese

Butter buyers who have been following a hand-to-mouth policy for several weeks in the expectation that prices would decline rather steadily were confronted last week with a small decrease in receipts of fresh butter and by light cold storage holdings. As a result the market turned suddenly and staged a sharp advance. Such behavior is not uncommon at this season of the year, when readjustment is being made to the spring increase in production.

The upturn undoubtedly will prove short-lived, as maximum receipts have not yet been seen and prices are not down to a spring basis.

The cheese market still shows a distinct downward trend.

Potato Shipments Setting Record



Shipments of potatoes from producing states since April 1 have set a new record. The movement is about one-third larger than the average at this season of the year and the season's total is about 30,000 cars larger than at this date last year.

Demand has been limited and prices weak. Northern sacked round whites are quoted at $1.60 to $1.75 in the Chicago carlot market, while Rurals are bringing $1.60 to $1.70.

Tightening Motor Bearings

By PROF. L. J. SMITH, W. S. C.

The bearings of your motor are of vital importance. Never allow them to get loose and pound. A 4-cylinder motor has seven bearings which need taking up each season—the bearings at the lower end of each connecting rod, and the three main bearings of the crank shaft.

First, drain off the oil in the crank case; then remove the oil pan underneath the motor, which allows you to get at all the bearings.

Many motors are so designed that the pistons and connecting rods may be pulled out through the lower part of the motor past the crank shaft, as in the accompanying illustration. This saves removing the cylinder head. The next step is to scrape the surface "J" which holds the pan gasket, so it is perfectly clean, and wipe all parts of the crank case clean with an old cloth, preferably cotton. Never use waste.

One can now test the lower connecting rod or crank pin bearing "L" for looseness be moving the cap back and forth endwise. The crank pin is made a little longer than the width of the cap for this express purpose. If the bearing is tight, you can scarcely move the cap laterally. Now remove the cotter pins "A" from the nuts "H" of the connecting rod in cylinder No. 2 (the one nearest the radiator) and unscrew nuts with a socket wrench. Except in the Ford motor, there are usually a number of shims or lines between the cap and connecting rod. Be very careful not to lose any.

Many make a practice of scraping and refitting the babbitted surfaces of the bearings each season. This is scarcely necessary if the motor has not been overheated or the oil allowed to get too low; so if the crank pin is smooth and shiny, I would remove a single very thin shim from each side, replace the cap the same side to (see marks) and tighten the cap nuts evenly and solidly. Now see if there is any end play on the crank pin. If there is, take out another pair of shims. Sometimes one on one side is all you can remove. If now the bearing has no lateral motion, turn the crank shaft slightly back and forth by hand (with the piston on either dead center). If you can not do this easily, the bearing is too tight, and you will need to put back a shim.

Having adjusted crank pin bearing No. 1 to your satisfaction loosen the cap nuts a half turn and adjust the next crank pin; and continue until all four are adjusted. Then tighten all four caps, and turn crank shaft to see if they make it hard to turn shaft. If O. K., loosen all caps and tighten the three crank shaft bearings "M" as described for crank pin bearings. These bearings do not loosen as quickly as the crank pin bearings and are sometimes tightened every other season. When all five bearings are adjusted, and set up tight, you should be able to crank the motor by hand, though possibly with some effort. Sometimes the bearings have been set up a little too tightly, in which case it may be very hard to turn the crank a complete revolution by hand. These tests should be made with all bearings well oiled with thin oil.

If you find the bearings are a little snug, use a light oil in the crank case, and run the motor a few minutes at a time until the bearings are a little looser and the motor cranks easier; then run the motor idle, stopping it frequently and in a few hours you will have a splendid set of snug bearings.

Skookum Contract

Restraining Injunction Is Asked

An injunction restraining W. F. Gwin, A. R. Rule, A. A. Prince, D. H. White, J. A. Warman, P. R. Parks, the North American Fruit Exchange of the Pacific Coast and the North American Fruit Exchange from soliciting the units of the Skookum Packers' association to cancel their contracts with the Northwestern Fruit Exchange, has been asked for in a suit filed in the Chelan county superior court by the Northwestern Fruit Exchange. Damages in the sum of $100,000 are also asked for in the complaint, which are alleged to have been sustained by the plaintiff.

The filing of the suit followed the action of the Peshastin Fruit Growers' association which had voted to sign up its tonnage with the North American Fruit Exchange of the Pacific coast.

The complaint recites the history of the break between the Northwestern Fruit Exchange, representing the Crutchfield interests, and the North American Fruit Exchange of the Pacific Coast, composed of W. F. Gwin A. R. Rule, A. A. Prince, D. H. White, P. R. Parks and others.

LEGUME INOCULATION.

Growers planting legume crops this spring, such as vetch, red clover, sweet clover, peas and alfalfa, may secure their inoculation direct from the State College of Washington by writing to the farm crops department, Pullman, Wash., and enclosing 25 cents for each acre they wish to inoculate. Each one so ordering should name the crop, give acreage, and approximate date of seeding. The material with direction for putting it on the seed, will be sent them by parcel post in time to use.

Sell 30 Guernseys

Cows and Heifers Average $282

A crowd of over 200 people attended the sale of Guernseys at Fawndale farm of Wallace & Fordyce at Sunnyside, Wash., April 18. There was brisk bidding at all times and the consignors were well pleased with the results.

The sale averaged $282 per head. A large part of the animals were calves. The top animal, a beautiful and typey heifer, was bid off for $700 by Dr. Paul F. Cooper of Yakima. She was a popular senior 3-year-old and for a time it was doubtful whether she would go to Walla Walla with the herd of J. L. Shannon or to Dr. Cooper of Yakima, but the latter succeeded in getting her.

There were 30 head in the entire sale, two-thirds of which were heifers under 2 years, some having been bred to Chicona Lover Bold, the champion herd sire of the Fawndale farm. The first sale made was Fairview's Golden Irene. She was bid in by J. L. Shannon of Walla Walla for $365.

At the beginning of the sale A. L. Wallace of Fawndale farms announced that he would pay half the purchase price of any cow for her first heifer calf by his herd sire, Chicona Lover Bold. It was understood that the calf should be 2 months old. No purchaser accepted the offer. The sale was made up of cattle shipped in by Mr. Wallace and E. T. Hearron, both of Sunnyside, who made a trip recently to the Guernsey sections of Wisconsin and purchased 27 head of females. A few local animals were added to the number. There has been a strong demand for Guernseys in the Yakima valley and the consignors hoped to supply at least a part of the demand and help establish the breed in the valley.

Colonel George Gue of Yakima conducted the sale.

Following is a list of the purchasers:

Dr. Paul F. Cooper, Yakima; D. W. Barclay, Walla Walla; J. L. Shannon, Walla Walla; William Hitchcock, Sunnyside; G. W. Osborn, Granger; Fred C. Drake, Ellensburg; Paul Moritz, Granger; Jacob Kallew, Sunnyside; Jacob Kollen, Sunnyside; R. G. Peterson, Yakima; William Hitchcock, Sunnyside; H. C. Bohlke, Grandview; Royal Wetmore, Sunnyside; Philip Kays, Parker; W. H. Cline, Sunnyside; Philip Hitchcock, Sunnyside.

Stop! Think! *before you buy another quart of motor oil*

Are you buying lubrication or *accepting just "oil"* for your car or tractor?

There is a vast difference. Buying lubrication saves money in reducing repairs and depreciation and in increasing the mileage of gas and oil. Buying just "oil" frequently means constant trouble and expense.

Repair bills for carbon removal, valve grinding, cylinder reboring, new piston-rings, cleaning spark plugs, etc., can nearly always be traced to improper lubrication.

Why not stop this wasteful and costly practice? Cheap oils are too expensive to buy. Insist on SUNOCO Motor Oil and you'll save money, save trouble and protect your investment.

SUNOCO is made in six scientifically refined types to provide a quick-acting, free-flowing oil of proper body for any design of automobile, tractor or truck engine.

SUNOCO increases your engine power and mileage, reduces your operating costs and prolongs the life of your equipment.

Try SUNOCO at once. Buy it in 30 or 50-gallon faucet-equipped drums. Any SUNOCO dealer will tell you the right types to use. Ask your dealer for our booklet, "Lubrication or Just Oil," or write to us.

The Voight "Filled" Milk Bill

By J. A. SCOLLARD, President United Dairy Associations

In a recent article in The Washington Farmer President Scollard discussed the question of an adequate tariff on fats and oils imported to compete with American butterfat. The article following treats of another important phase of the same general dairy problem.—Editor.

There is now before congress a measure of vital interest to the dairymen of Washington and of the country at large. It is known as the Vioght bill (H. R. 8086). This measure prohibits the shipment from state to state or to any of the possessions of the United States of imitation or so-called "filled" milk. This would include mixtures which are produced by extracting the butterfat from whole milk and replacing it with coconut oil. The passage of the Voight bill would result in so limiting the manufacture of these products as to make their detrimental effect upon the dairy industry almost negligible and would open to pure evaporated milk the markets in which these imitations have displaced it. Every person who has studied the subject from an unbiased standpoint knows that practically every can of imitation or "oiled" milk displaces a can of the pure product on the market, thus making a market for coconut oil in a popular disguise, for the reason that for every pound of vegetable oil in each can sold, a pound of real butterfat has been deprived of its natural place within that can.

Effect in This State.

A little consideration of the probable effect of the law in the state of Washington might be enlightening. At present there are four condensing plants in the state in which imitation or "filled" milk is manufactured. All are owned by the same company. Some of these plants are given over exclusively to the manufacture of imitation milk. Some of them manufacture it only at intervals, but the total yearly output is enormous, practically all of it is exported from the state; indeed until recent years no attempt was made to sell it within the state. The amount now marketed in Washington would not keep one of these plants in operation four days a month and the enactment of the Voight bill into law would probably result in the complete abandonment of its manufacture in the state and the plants would be used in the manufacture of pure evaporated milk, as they were prior to advent of imitation, or "oiled" milk.

Some persons with limited experience with the product and lacking knowledge of the method of its manufacture, advance the theory that under the Voight bill condensed skimmed milk could be shipped into the state in which it is to be marketed and the coconut oil emulsified with it at the place of sale. Men with practical experience in condensing and handling the finished product state that the idea is an impractical one, as the expense in connection with such a system would make impossible the introduction of this practice.

Tax Would Not Control.

Although practically all of the dairymen's associations, organized farm bodies and farm publications are strongly behind the Voight bill and have full faith in its effectiveness if passed, a few favor a tax measure as a remedy for restricting the sales of imitation milk and are dividing the strength of the great body of dairymen by supporting the Fordney bill, which proposes a per pound tax—a tax as yet undetermined. Since the Fordney bill is strictly a revenue measure, it seems very probable that any tax imposed would be fixed at a figure which would make it possible to manufacture and sell at a profit, else the very object of the measure, namely, to produce revenue, would be defeated.

Another strong point in favor of the Voight bill is its advanced position. It has been favorably reported out by the house committee on agriculture by a vote of 14 to 4 and is thus advanced considerably over the Fordney bill, which is in the hands of the ways and means committee, known to be unfriendly towards legislation intended to benefit the agricultural industry.

To the writer there seems no reason to doubt the effectiveness of the Voight bill. The dairymen of the districts where the "oiled" milk is made are for it unqualifiedly. The dairymen's associations of every district in the state are for it and the vast majority of the dairymen of the east and middle west are for it and deplore the slight division in their ranks occasioned by those who seem to be unwittingly aiding the manufacturers of spurious milk. It is a significant fact that the manufacturers of "oiled" milk are willing to submit to a tax measure if the tax is not made too high, and those who are in a position to know think that the Fordney revenue measure will never carry a tax over 1 cent per pound on "oiled" milk. This would not retard its sale even to a slight degree.

Why compromise? From the standpoint of the dairymen, its manufacture should be prohibited, so that his industry may survive and not die to make prosperous the South Sea islander, the importer and the corporations engaged in its manufacture. Public welfare and the health and strength of this and future generations demand its abolition, so why compromise by taxing it?

Wheat Farm Tillage

"The Silt Loam Soils of Eastern Washington and Their Management" is the title of a bulletin just published by the agricultural experiment station of the state college. Professor F. J. Sievers, head of the department of soils, and H. F. Holtz of the division of soils of the experiment station are the authors.

The bulletin deals with soil tillage and the utilization of straw and manure as applied to silt loam soils of eastern Washington receiving more than 15 inches of precipitation per annum and in its conclusions pertaining to conditions of cropping and the growing of legumes apply only to the areas receiving more than 18 inches.

The bulletin is the result of experimental work over a series of years, is 62 pages in length and contains 25 illustrations. Some of the conclusions in this bulletin are:

"The most effective summer fallow tillage is that which keeps the highest amount of moisture in the surface foot of soil for the greatest length of time during the summer fallow year.

"Corn or any other intertilled crop when substituted for summer fallow does not materially reduce the yield of the succeeding grain crop.

"The rate of seeding winter grain should be influenced by the nitrate content of the soil and the time available for tilling, high nitrate content and early seeding requiring a lesser rate.

"Lodging and 'burning' of winter wheat can in part be controlled by a lighter rate of seeding.

"During 39 years of cropping 22.1 per cent of the nitrogen and 34.5 per cent of the organic matter have been lost from the soil.

"Legume crops tend to maintain the soil nitrogen and organic matter.

"Alfalfa, red clover and sweet clover, peas and vetch are legumes that can be grown successfully.

"Summer fallow is unnecessary where the annual rainfall is 18 inches or above, provided legumes or intertilled crops are grown in rotation.

"No continuous cropping system can be recommended for that portion of the area where the annual precipitation is less than 18 inches."

SHEEP SHEARERS STRIKE.

In the midst of shearing 300,000 sheep Yakima valley sheepmen are experiencing a shearers' strike. The prevailing wage has been 10 cents a head and is said to be the equivalent of about $7.50 a day for the average shearer. The men are demanding 12 1-2 cents a head. Independent crews are being obtained as rapidly as possible. Most of the work is done by professional shearers who travel from south to north as the season advances.

THE LARGER TASK.

Getting at the little job is sometimes a greater task than doing the job itself.

Why the $10.90 USCO is better than just a $10.90 tire

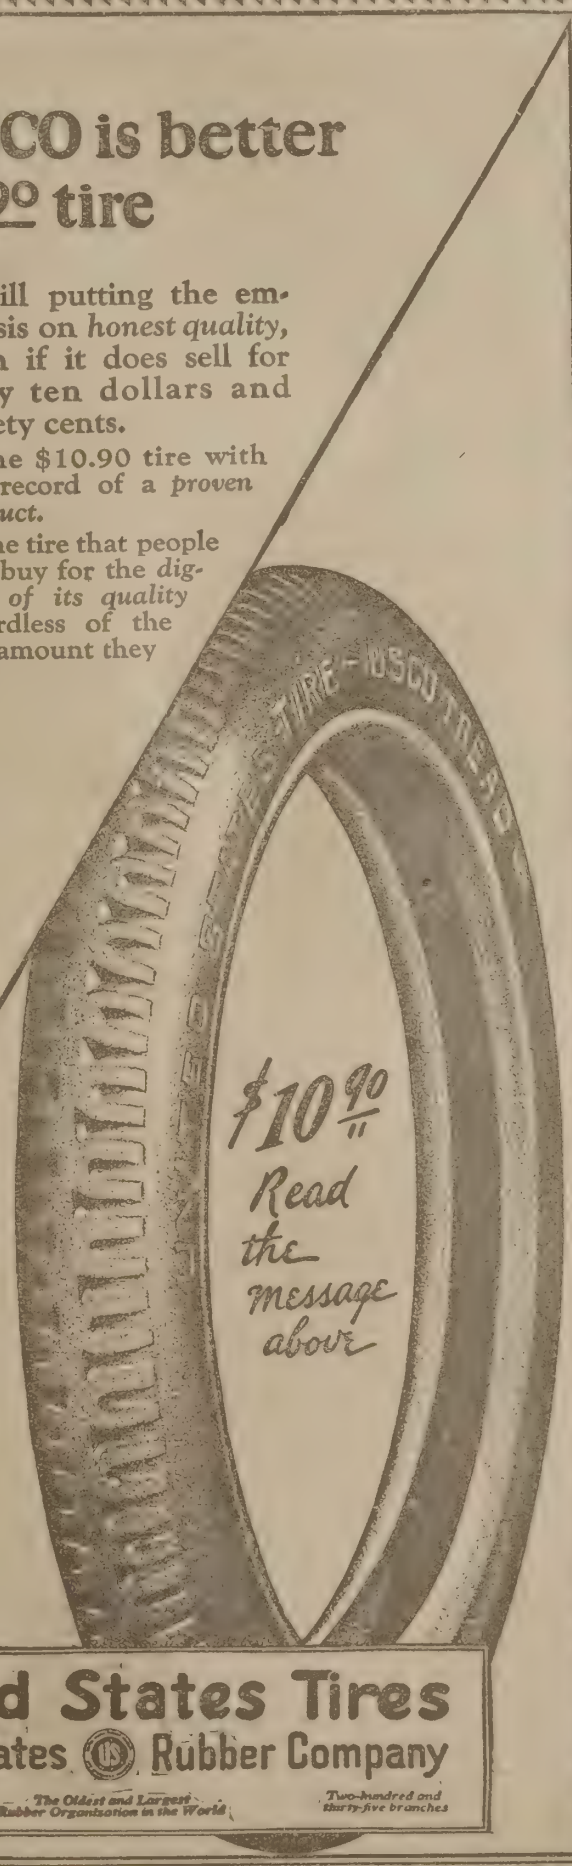
ON November 10, 1921, the 30x3½ "Usco" was marked to sell for $10.90.

This odd and closely figured price was the lowest quotation ever made on any tire of *known standards.*

A genuine pioneering step by the makers of U. S. Tires.

* * *

Now comes a lot of different $10.90 tires being rushed into the market. "Special" tires. "New" treads.



Unfamiliar to look at—with perhaps an atmosphere of having been made to meet the price.

But the "Usco" still occupies a place by itself. A good old standby on millions of cars for years. Better than it ever was.

Still putting the emphasis on *honest quality,* even if it does sell for only ten dollars and ninety cents.

The $10.90 tire with the record of a *proven product.*

The tire that people still buy for the *dignity of its quality* regardless of the low amount they pay.

LIVESTOCK AND DAIRY

Feeding Skim Milk

By R. E. GONGWER, Assistant Professor of Animal Husbandry, W. S. C.

I would like to know something of the feed value of separator milk. Could I, who own the land, afford to go equal partners with a man who is in the creamery business, he to furnish the milk and I to furnish the alfalfa pasture? Would pigs on such ration need any grain for rapid growing? About how much milk would I have to figure on per head, striking an average of big and little? W. I.
Dayton, Wash.

There is no experimental work dealing with the value of skim milk fed to pigs grazing on alfalfa pasture, as two things make such a ration an inadvisable one. The hog is adapted to the consumption of concentrated feeds, i. e., the grains, and although he can use bulky feeds as part of his ration, he must have some grain for even ordinary growth. Alfalfa pasture contains from 74-80 per cent of water, skim milk is 90 per cent water, and in order to support life and make reasonable growth on these two feeds alone, the pig is required to eat more pounds of feed than his stomach and intestines will hold. In the second place, alfalfa pasture contains one pound of protein for every two and a half pounds of carbohydrates and fat, and skim milk contains one pound of protein for every one and a half pounds of carbohydrates and fat. These feed nutrients are decidedly out of proportion as a pig requires from five to six pounds of carbohydrates for every pound of protein. Where the latter is in such an excess, it is necessary to add grain (which is high in carbohydrates) in order to obtain a balanced ration and only by feeding a balanced ration can we hope to get profitable pork production.

Pigs on alfalfa pasture should receive from two to three pounds of grain a day for every hundred pounds of pig. Skim milk may be substituted for about one-fifth of this grain without bad results, using five pounds of skim milk for every pound of grain replaced. Old sows, bred for fall pigs, may be carried through the summer on alfalfa pasture plus five to six pounds of milk daily per hundred pounds of weight. It is the writer's experience that on such a ration the sows will gain from 10 to 30 pounds a head from weaning time until fall.

In the winter you can use quantities of skim milk, but it decreases in value for fattening pigs as the proportion of skim milk to grain exceeds three to one. Old sows averaging 400 pounds in weight may be carried through the winter on alfalfa hay, all they will eat, plus two to three pounds of corn, barley or wheat, and 20 to 30 pounds of skim milk per head daily.

Skim milk is usually valued at one-fourth the price of grain when fed with barley, wheat or corn in proper proportion. When fed alone or with very little grain, skim milk is worth only one-sixth to one-tenth the value of grain.

As to your agreement with the creamery man, I would suggest the following as a basis: If you maintain a breeding herd, furnish the equipment, pasture and labor, the creamery man should furnish a daily supply of milk equal to from 5 to 10 pounds per head, sows, shoats, pigs and all, and at least one-half of the grain. The larger supply of milk should come in the winter time. On this basis, an equal share in all of the pigs produced would be about right.

LIFE PRESERVERS FOR LIVE STOCK

By DR. E. E. WEGNER, W. S. C.

CONTAGIOUS DISEASES. ARTICLE 6.

Glanders.

One of the most dreaded diseases of horses and mules is glanders, since a cure is impossible after the animals are once diseased. It has been responsible for the destruction of many animals and is still far from eradicated. During the time that many animals were being assembled for war purposes and brought together in the various camps many tests were made to determine the existence of this disease and we found that it was very much more prevalent than was generally supposed; in fact, many animals were killed on account of this disease, and quite a number that showed no visible signs.

This disease is infectious and is spread from one animal to another in various ways; no doubt it is spread by contamination of an animal by the nasal discharges of another. The nasal discharges is a very common symptom and one diseased animal can easily contaminate hitching posts, watering troughs, public or private feed racks, mangers, harness, bedding and feeds of all kinds, so it is not hard to understand how a single animal can spread infection to a great many more. Probably the most common way by which it is spread is by the contaminated feeds, one animal nosing about over a manger full of hay and another coming along and feeding from the same place. This takes the infection directly into the digestive tract, from which it may spread to the other organs of the body. The nasal discharges may also be sneezed out and blown for quite a distance in every direction, and in this way may be thrown into the faces of other animals.

Glanders is also transmissible to man and possible this is the most serious aspect of all. It is true that men have worked horses that have glanders for years and the men have not contracted the disease, but the fact remains that the danger is there just the same and when man does get this infection into his system it is very rarely, if ever, cured. For this reason every one should be very careful not to protect the animal that is harboring this disease, as the sooner it is disposed of the better for humanity.

The Common Symptom.

The most common outward symptom is that of the nasal discharge and is the one that is most commonly known to the average man, but the internal changes are very considerable, too, though not so conspicuous.

Animals suffering from this disease may live for several years and work some of this time, while others die in a few months. The average course, however, is several years in length.

Sometimes when the skin is affected the disease is known as "farcy," under the impression that it is not glanders. This is just as truly glanders as any other form, and it should not be distinguished from the disease just because the skin form is encountered, as it usually has all the other symptoms as well.

When this disease is suspected a veterinarian should be called to make a positive diagnosis. The examination of the animal may not reveal even to the trained man whether it is really glanders or not

"Inland Seeds Are Quality Seeds"

It's the LINK BLADE does it!

A Simplex Gets All the Cream

Babcock tests show that the Simplex with its wonderful link blade is the one separator which gets all the cream. Scores of satisfied users in the northwest know the value of its close skimming.

This link blade is the result of experiments in cream separators which began in 1881. For years others have unsuccessfully tried to invent its equal.

The Simplex is an easy running machine. The crank is just the right height. The supply can is low.

Every bearing and gear is always accessible for oiling.

Simplex separators are made in sizes for every farmer, whatever the size of the herd. They are adaptable for any kind of power.

10 DAYS' FREE TRIAL
Send No Money

Use a Simplex for 10 days without cost. If you do not find it gets all the cream and beats all other separators return at our expense. Write today for literature.

WESTERN CANADA
Land of Prosperity

offers to home seekers opportunities that cannot be secured elsewhere. The thousands of farmers from the United States who have accepted Canada's generous offer to settle on FREE homesteads or buy farm land in her provinces have been well repaid by bountiful crops. There is still available **on easy terms**

Fertile Land at $15 to $30 an Acre

—land similar to that which through many years **has yielded from 20 to 45 bushels of wheat to the acre**—oats, barley and flax also in great abundance, while **raising horses, cattle, sheep and hogs** is equally profitable. Hundreds of farmers in western Canada have raised crops in a single season worth more than the whole cost of their land. With such success comes prosperity, independence, good homes and all the comforts and conveniences which make life worth living.

Farm Gardens, Poultry, Dairying

are sources of income second only to grain growing and stock raising. Attractive climate, good neighbors, churches, schools, good markets, railroad facitities, rural telephone, etc.

For illustrated literature, maps, description of farm opportunities in Manitoba, Saskatchewan, Alberta and British Columbia, reduced railway rates, etc., write

and in all such cases the test is applied to determine for certain what the condition is. This test is very reliable when conducted by men who are accustomed to such work and know what to expect in cases of disease, but in the hands of untrained men it may not be reliable enough to base a diagnosis upon.

All contagious diseases are to be controlled by the state officials for that purpose and would probably be reported to them by local veterinarians.

VETERINARY

By DR. S. B. NELSON.

Breeding Problems—I have a young cow which freshened three months ago and she has not been in heat since. Is there anything I can do to encourage it?—A. K., Bellingham, Wash.

Give the cow three-fourths grains of yohimbin twice daily for a few days.

Coughing.—I have a cow that coughs at irregular intervals during the day. The cow seems in good health. Is this serious?
Burton, Wash. J. E. B.

As coughing is only a symptom, I can not tell you what the trouble is, but animals that are heavy eaters like cows frequently have coughs which are not indicative of any serious trouble.

Goiter.—I have a 2 1-2-month-old calf that began to get a large neck about a month ago. It looks like a goiter to me. Can they be cured? MRS. L. H. L.
Tacoma, Wash.

Paint the goiter with tincture of iodine daily, and you might also give the calf two grains of potassium iodide in a little water once daily for a little while.

Tender Feet—I have a 13-year-old mare and the inside of her feet seem to get soft and crumbly, but the outer shell is hard and the frog seems all right, but they seem very tender when she works a while. I keep shoes on her all the time.
Granite Falls, Wash.

A little tar applied to the sole sometimes has a tendency to toughen the mealy condition of the foot.

Butter Is Bitter—We have a cow that freshened two weeks ago and the butter has a bitter taste after it stands two days. We feed alfalfa hay and mill feed and keep the milk in a room with open windows.
Sunnyside, Wash. P. G.

Give the cow one and one-half pounds of Epsom salts in three quarts of water. Wash the stall with a five per cent crude carbolic acid solution. Wash it thoroughly, floor and all, and before milking, wash the udder in a two per cent solution of Lysol in water.

Foundered—I have a fine big horse that was foundered in some way some time ago and now rests first on one foot and then on the other. Could this condition be cured or relieved?—J. M. R., Colton, Wash.

The conditions can probably be relieved, but possibly not cured. Relief may be obtained by thinning the hoof and applying the following ointment night and morning at the hair line: Pine tar, one part; lard, one part. Heat the lard and pour in the tar. Stir until cool. You may also get some benefit by having the horse shod with broad bar shoes which will protect the bottom of the foot.

Leaches—I had a steer that died with leaches. He was sick about six months. He fed last spring on swampy land. I now have another one that is sick the same way. I have moved them on high land, but it don't seem to do any good. They eat heartily until they die.—O. S., Ethel, Wash.

There is no cure against leaches after the animal gets them. The disease comes from the animals pasturing on the low, wet, swampy lands. You have done the right thing when you have moved them on to high, dry land. Keep them there and I think you will have no further trouble to speak of.

Warbles.—I have a cow that has large lumps on her back and a yellow substance runs out of these. M. L. R.
Dixie, Wash.

Your cow is affected with warbles. The abscesses on the back contain larvae of the ox gad fly. The larvae will come out in a few days and will bury itself in the ground, pupate and then come out as a fly later in the season. Squeeze the lumps and destroy the larvae first and then I would suggest that next June, July or August you mix an oily mixture of fish oil and a little tar and rub the hair about the neck and shoulders and front legs and that will keep the eggs from being attached to the hair.

Cribbing.—Please tell me the cause and cure for a horse that is a cribber. My horse is 5 years old; he bites his teeth over wood and rolls his stomach and grunts. He does not eat the wood.
Outlook, Wash. C. W. G.

There are a number of reasons for a horse performing the act known as cribbing. Half the time it is absolutely habit without any cause. It is a most difficult habit to stop. You may overcome it somewhat by having the animal's teeth looked after and by sawing between the front teeth with a small, fine saw. Another means of somewhat checking this bad habit is to fasten a strap rather tightly about the neck of the animal when in the stable and not at work.

Bloody Milk.—I have a cow that freshened three weeks ago that gives bloody milk. G. E. G.
Blaine, Wash.

Give your cow a teaspoonful of sodium hyposulphite in a pint of water once daily for a few days.

Lumps in Udder.—I have a cow that freshened the last of January. There are lumps on both sides in the back of her udder. W. E. M.
Chewelah, Wash.

Paint the lumps with tincture of iodine after each milking for some time.

Lung Worms.—I have a heifer calf 1 month old that coughs before and after feeding. I think it has lung worms.
Arlington, Wash. H. C. F.

A simple treatment for lung worms in calves and which is very good is to put the calf in a small, tight place by itself; in the center of the room put a tub with two inches of water in it and in the center put bricks; on the bricks place a pan of sulphur; burn the sulphur and let the calf breathe the fumes for some time. Repetition of this treatment every four or five days, not to exceed two times, sometimes has to be resorted to.

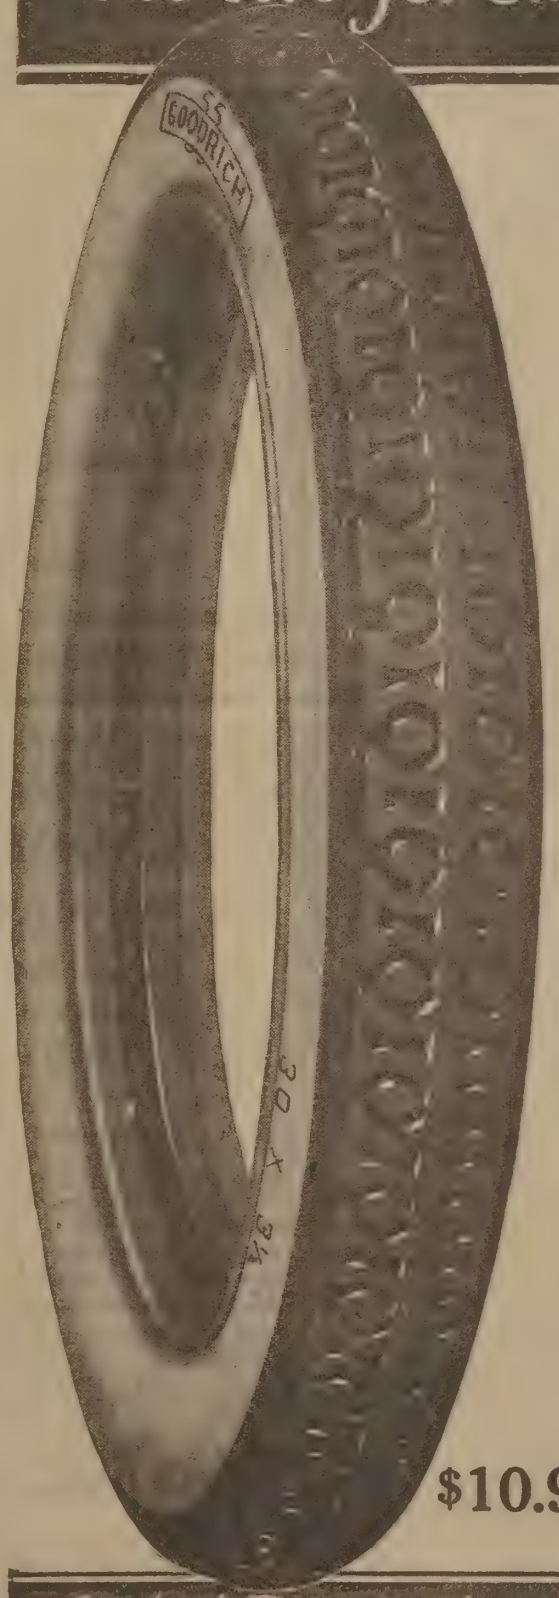
Treating Cut—I have a 4-year-old colt that cut the cord in her leg half way below her right knee. I have been treating her with peroxide and washing the wound with blue rock. Is there anything else I can do to help?—P. S., Graham, Wash.

You do not state how long ago your colt was wounded. Your treatment is very good as far as it goes. Do not use the blue rock solution too strong. You may find at this time that the use of the following wash may be of value: Zinc sulphate, one ounce; lead acetate, one ounce; water, one quart. Shake well and apply to the wound two or three times daily.

Stringy Milk.—I have a cow that is giving stringy milk out of three teats. She also has grubs in her back. F. S.
Wauconda, Wash.

I would suggest that you lessen the feed that you are giving your cow and milk her three or four times a day for a while. Paint the udder with a liniment composed of tincture of iodine, three ounces, and soap liniment, five ounces, using this liniment after each milking. Put on a little and gently massage.

Regarding the grub worms in the back, squeeze them out and destroy them. Then next July and August keep the forepart of the body of the cow fairly well covered with fish oil to which has been added a little tar.



Bog Spavin.—I have a horse that has a bog spavin. Is there a cure for this?
Snake River, Wash. C. J. J.

Possibly the best remedy for the bog spavin, unless it is too old a one, is to have the animal thoroughly fired and then give her two or three months' rest.

Leaky Teat.—I have a cow coming fresh soon and her teat leaks badly. Is there anything that will help this? E. J.
Hobart, Wash.

A very safe way of stopping the teat from leaking would be to place a piece of adhesive tape around the end of the teat just tight enough to keep it from leaking and yet not sufficient to cut off circulation.

Goodrich "55"
The Tire for Small Cars

The Last Word in Tire Economy

If you drive a Ford, Chevrolet, Willys Overland, or any other car using 30x3½ or 30x3 clincher fabrics, *see* and *feel* the Goodrich "55."

New qualities of durability, of strength and of safety added to that half-century old Goodrich quality make the Goodrich "55" a most remarkable value.

Its scientifically designed tread grips like a tractor. It unerringly holds your car to the road. It checks skidding and sliding. It makes driving easier.

And further—

The sidewalls are specially fortified—extra resistant to rut wear. Tread extends around under sidewall to the bead.

The Goodrich "55" is low priced. The quality and construction is on a par with its appearance—you have Goodrich's word for it.

The Goodrich "55" is all on the side of increased tire economy—*see* and *feel* it at your nearest Goodrich Dealer's, and you'll quickly understand why.

POULTRY AND RABBITS

Heating Brooder

With Water Pipes From Furnace

H. M. Ferguson of Sunnydale, King county, has a small three-section brooder house, heated by water pipes from an outside furnace. Both the building and the heating equipment is a home-made arrangement. The latter, including material, is estimated to have cost but $80.

The pipes are arranged so as to run full length of the house, three of which are placed about 10 inches from the floor, while the return pipes come back under the floor. The overhead pipes are covered with three 12-inch boards, from which burlap is hung on either side to complete the hover arrangement. Mr. Ferguson finds that much time can be saved in cleaning the hovers by merely spreading papers over the floor, which are taken up when cleaning. There are now 860 chicks in the house, which are making a rapid growth for their age.

The furnace is constructed of ordinary brick closed tightly over the top, the draft being arranged below the door. The heat coils extend on all three sides of the fire box. Mr. Ferguson finds that he can burn almost any kind of wood as soon as he gets the fire started. The temperature of the water varies from 60 to 95 degrees and when the water is once hot will hold the temperature for several hours.

The farm has a combination of poultry and berries, the latter containing a large variety. Blackcaps, however, predominate and being one-eighth of an acre planted, from which Mr. Ferguson says he harvested 600 crates last year.

The soil is largely shot clay, which is well drained. Last year the berries received an application of barnyard manure, to which was added some phosphoric acid to increase its value as a fertilizer. This is evidently what the soil needs, because the berries thus treated have grown large canes and promise to produce a good crop this season.

New Zealand Reds

This breed of rabbit is more compact than either Belgian hare or Flemish Giant. Buck and doe of typical size weight, respectively, 10 pounds and nine, and when well conditioned the "friers" are in demand at 12 weeks, weighing 4 1-2 pounds. The New Zealand is a somewhat less nervous rabbit than the Belgian hare, and with its better size and compact build is usually considered productive of meat. The flesh is more fine grained than that of the large Flemish breeds. Perhaps the New Zealands are somewhat more subject to ear canker, however. The does make good mothers.

Will Use Trap Nest

After being in the poultry business in the Summit district of Tacoma for the last 10 years, M. S. Rau finds that there is an increasing demand for breeding stock and he is laying more emphasis on the baby chick business. His incubator cellar is located under the main dwelling house and has a capacity of 3200 eggs. The incubator is one of the larger type and is heated with hot water by semi-anthracite coal, a Washington product. It is built in sections and more can be added later as the plant is enlarged. The heating stove is capable of handling double the capacity that it now operates.

When later sections are to be installed Mr. Rau intends to build them himself during the winter. He feels confident that he can build the machine and get it to operate as well as the factory-made article except that the latter is made from hard wood. A good grade of native wood, however, will make the sections air tight.

"When we first bought the incubator," said Mr. Rau, "we used the automatic egg-turner to save so much hand labor. That was one of the features of the machine, but we soon discarded it because we found that, although it would turn every egg perfectly, the eggs would not change their relative positions. It seems to produce a better hatch to turn the eggs by hand because there are none that are left in the center of the trays to become too warm and those along the edge are worked toward the center, thus giving them all a more even incubation.

"I have been keeping track of the coal we are burning and find that the large incubator is much cheaper to operate and does not require as much attention as do any one of the six oil burners that we are running. We are going to equip the plant with a single unit heater as soon as we can do so."

The 500-hen capacity laying house is built on the Shoup plan and used entirely for breeders. The birds are allowed to roam at will. No trap nests are used at present, but later on Mr. Rau expects to have a larger number of birds and handle them all on a trap nest basis.

It was only recently that electric lights have been installed on the farm and they will soon be put into the poultry house to supplant the oil-burning lanterns. Even with this type of lighting, Mr. Rau was able to get a 55 per cent lay during the winter months by using the lamps from 5 a. m. until daylight. He expects to be able to show even greater results next season.

As to Color of Eggs

By MRS. GEORGE R. SHOUP.

Which breeds of hens, both large and small, lay white eggs? Which lay colored eggs? Which breeds when dressed for market have yellow skin? Which have white? MRS. J. S. H.

Washtucna, Wash.

All of the Mediterranean class, including such breeds as the Leghorns, Minorcas and Anconas, lay white eggs.

The American class birds, including such breeds as Rhode Islands, Wyandottes, Rocks, etc., lay colored eggs and also have the yellow skin and yellow legs when dressed.

Any of the English class birds, such as the Orpingtons, are white skinned and white shanked when dressed, though they lay colored eggs.

Oil Tins for Nest Boxes

J. H. Whitten, a poultry breeder of Tacoma, Wash., has a novel plan of making his nest boxes for the laying house. He takes a number of five-gallon oil tins and cuts off the end and part of the side so that it makes the opening from the top as well as the end. This leaves a boxed effect which protects the hen as well as keeps the straw from being scratched out.

Such a nest can easily be removed from its shelf and cleaned, putting in new straw when necessary. The whole tin may be washed or scalded and all vermin killed. There is very little room where lice or mites may hide in such a tin nest, and they are said to be very satisfactory.

WHITE DIARRHEA.

The dread scourge of white diarrhea in poultry might be averted just as tuberculosis is averted in cattle if funds were available for the work, for birds can be tested the same as cattle, and the "spreaders" detected. In spite of the large amount of money invested in poultry, however, very little progress is being made along this line.

Sick Baby Chicks? GERMOZONE is a positive remedy for roup, colds, bowel trouble and such costly ailments. Preventive as well as curative. A wonder worker for poultry. On market over 20 years. Endorsed by many thousand users. Don't lose your baby chicks. Get GERMOZONE TODAY. At drug and seed stores. If no dealer, order by card. 75c and $1.50 sizes. Postman will collect. No extra charge.

Mr. Jenkins Took a Cracked Club To Tame Lions

The exhibition ended rather badly. It very nearly was a big day for the lions and a sad day for Mr. Jenkins—all for want of proper care in getting ready.

Many a man who has business to do and a living to make and a job to fill is as careless how he feeds his body as Mr. Jenkins was in picking out a club. And an improperly nourished body often fails under a hard test.

Some foods are too heavy, some are too starchy, many lack necessary elements and so starve the body—and many load the system down with fermentation and auto-intoxication.

Grape-Nuts helps build health and strength. It contains the full richness of wheat and malted barley, including the vital mineral elements, without which the body cannot be fully sustained. Grape-Nuts digests quickly and wholesomely. Served with cream or good milk, it is a complete food—crisp and delicious.

Grape-Nuts is just the food for those who care to meet life's situations well prepared in health. Order Grape-Nuts from your grocer today. Try it with cream or milk for breakfast or lunch, or made into a delightful pudding for dinner.

ORCHARD AND GARDEN

Issues Warning
Against Quack Tree Powders

A warning has been issued by C. L. Robinson, supervisor of horticulture of the state department of agriculture at Olympia, against so-called "quack" tree powders. A number of these "remedies" have been reported from different parts of Washington. The men who are selling them claim they will destroy any insect pest, or fungus diseases that are common on fruit trees.

"While this is by no means new in the horticultural field the method resorted to this year is different than has been found in the past," said Mr. Robinson. "We have not been able to secure any mixture in its original package, the men being wise enough to treat the trees while on the place instead of selling the powder to be used as needed. Trees have been found which have been treated by boring a hole in the lower part of the trunk and inserting some powder, then closing the hole. The claim is made that the ingredients contain substances which, after mixing with the sap, will immunize a tree from all diseases.

"Analysis of one of these powders was made at the Oregon experiment station last year and found to contain flowers of sulphur, 54.3 per cent; baking soda, 9.1 per cent; brick dust, 63.6 per cent. None of these, however, have contained enough borax to affect the sap in any way.

"Experiments have proven that no substance can be mixed with the sap which would be strong enough to kill any disease and yet not kill the tree itself.

"What labels we have found in the past years," said Mr. Robinson, "indicate that the compound contained calomel, borax and other similar ingredients, but they have not been found true to label upon chemical analysis. Borax, however, is known to be injurious to plant life even when used as a fertilizer."

Berry Pruning

By O. M. MORRIS, Head Department of Horticulture, W. S. C.

I would like the detailed methods used in pruning raspberries and blackberries the first year they were planted and the method used the second year. My bushes are now 2 years old and have not been pruned as yet. Would also like to know how to prune some dewberries.

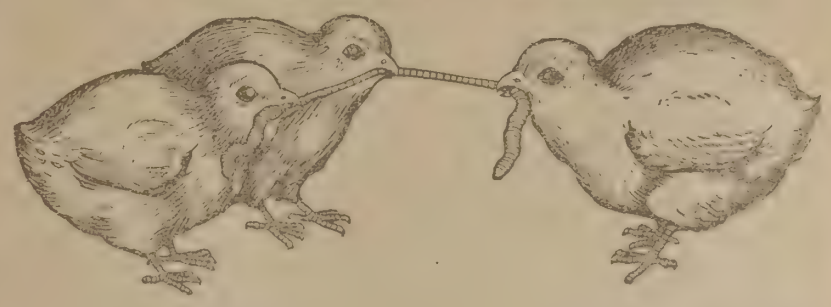
Yakima, Wash. I. C. H.

The most common attention given to pruning raspberries is to simply cut out the dead canes during the fall and early part of the winter. The work is often delayed until spring. Other than this no pruning is absolutely necessary. Sometimes you will have a little better results if you cut the tops back to about four feet in height. The plants will then stand more erect and be able to support more than their own load of fruit. If the vines are six or seven feet high as they often grow in the best berry districts, you will find it easiest to handle them by fastening the vines on a trellis. This can be done by simply tying them in groups to a wire stretched about five feet above the ground and fixed to posts which are set about 30 feet apart. If you are growing raspberries upon a commercial scale, it would probably be worth your while to put in a regular berry trellis.

Blackberries are pruned just the same as the raspberries. The dewberries are ordinarily pruned by taking out the dead vines and trimming back some of the runners that are still alive. They are then ordinarily fastened on a low trellis that is about two or three feet above the ground. One common method is to drive one or two sticks by each hill, and tie all of the plants to these sticks, using it about two or two and a half feet above the ground. If your vines are eight feet or longer, it is easiest to form a trellis of two parallel wires stretched in a horizontal plane, about two and a half feet above the ground. Use cross sticks about every two or three feet, placing one to carry the vines above the wire, the next to bend the vines and tie them below the sticks below the wires. In this wig-wag form the fruiting can be well cared for. The young vines can be permitted to grow and spread in any direction on the ground below. The well fruited canes at the close of the fruiting season can be cut away, and the following winter the new vines placed on the trellis.

GREEN APHIS.

I have several sugar plum trees and soon after they leaf out some insect seems to work on the leaves, which soon curl and some almost destroyed. What spray should be used and should the trees be sprayed before leafing? G. A. M.



Hatton, Wash.

The brief description you give of your plum tree troubles indicates that your tree foliage is attacked by the green aphis, a common louse that is very prevalent during the summer months. Your best method of combatting this pest would be to spray the trees just as the buds are opening. Use nicotine sulphate, commonly called black leaf forty, at the rate of one part of material to one thousand parts of water. Later sprays will help to accomplish the same thing, but your spray just as the buds are opening will be much the most effective.

Orchard Management

Professor O. M. Morris of the State College of Washington has just finished supervision of the planting at the Prosser irrigation branch experiment station in Benton county of a new six-acre orchard, for the study of the use of water in orchards, the production of cover crops, the use of fertilizers and general orchard management. All of the trees were hand-selected by Professor Morris and are of four varieties—Delicious, Red Rome, Winesap and Jonathan.

Poultrymen, Attention!

The largest hatchery in the world offers special low prices on S. C. White Leghorn baby chicks, from heavy egg-laying strain, during the months of May and June, 1922. We pay all express charges on shipments for these months.

THE BIHN HATCHERY—PETALUMA, CALIF.

A LITTLE "WANT AD" FREQUENTLY OFFERS A BIG BARGAIN. MAKE IT A PRACTICE TO READ OUR "WANT ADS"

Chicks of Quality

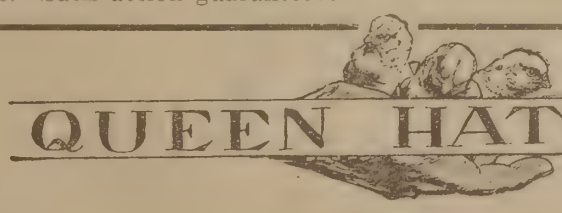
TRAP-NEST records show that May hatched chicks are not only the heaviest layers, but also lay the largest percentage of standard eggs. May hatched chicks, if given proper care for the first three months, allowed to develop bone and muscle until five months of age, then put into the laying house and fed egg producing foods, will come into heavy laying at about six months. They will lay for about 11 or 13 months. Their eggs, being all standard size, will bring the highest price, thus giving high returns at the end of their laying year. May chicks are the cheapest to buy, easiest to raise and have the largest percentage of pullets.

Hollywood or Tancred Chix

HOLLYWOOD and Tancred Farms are conceded to be the best in the west if not in the world. We offer Hollywood or Tancred strains of White Leghorn chicks, for immediate delivery after May 1, at $17.50 per 100.

Commercial Strain W. Leghorns

W. L. CHICKS from commercial flocks, mated with high-grade cockerels of 250-egg strain, are priced, for delivery after May 1, at $15.00 per 100.



White Leghorn Pullets

WE offer April and May hatched Hollywood or Tancred White Leghorn pullets, when three months of age, at $1.65 each. Commercial strains, $1.40 each. Guaranteed to weigh 1¾ lbs. each when shipped. Return in 3 days if unsatisfactory.

Heavy Breeds

OUR R. I. Red and Barred Rock chicks are hatched from the best commercial flocks in western Washington. They have vigor, size and egg-laying qualities bred into them. Per 100 after May 10 ..... $22.50

WHEN ordering, send deposit of 25% with coupon and we will ship C. O. D. for balance, with instructions to express agent to deduct for all dead or crippled chicks. All prices are f. o. b. Seattle. Satisfaction guaranteed.

ALBATROSS BRANDS

No oil for these paints

You Save 75%

The General Basic Products Company of Seattle has perfected a series of coatings for inside use, which require no oil. They come in powdered form—all you have to do is mix them in water as the different varieties require—and apply. The result is a beautiful quickly applied, economical finish—and you save about three-fourths over the cost of paints which require oil. The principle is that of cement—and you know how lasting a cement finish is. Varieties are:

Albatross Cold Water Paint

A standard modern day product—apply to wood, stone, brick, concrete, iron, etc. Made in white only for interior use in warehouses, cellars, barns, poultry houses, etc. Highly sanitary. Very fire retarding. Applied with brush or spray.

For Interior Decorating of Walls and Ceilings

Those beautiful, restful, pleasing and sanitary finishes which are now so popular are obtained through use of

Albatross Wall Finish

A superior quality cold water finish for interiors—walls and ceilings. Comes in a pleasing range of tints and white, or

Albatross Velatone

The very highest quality finish for inside walls and ceilings—to be mixed with hot water. Comes in eighteen beautiful tints and white.

Specialties

Dry putty and wall size are specialties required in conection with practically all interior finishing, refinishing and decorating. If you specify Albatross brand, you'll get the best.

Albatross Wall Size

Economical and easy to apply—stops suction—kills alkali—makes a perfect foundation upon which to paper, paint or calcimine.

Albatross Dry Putty (Rock Hard Putty)

For patching holes in plaster, filling cracks and nail holes in hardwood floors, mending bric-a-brac, etc.

BETTER GARDENS EASY TO KILL WEEDS AND MULCH THE SOIL

BARKER WEEDER-MULCHER AND CULTIVATOR

Don't do garden work the slow, backbreaking way. The BARKER makes the finest gardens possible—quickly, easily. Simply push along rows (like lawn mower)—8 blades revolving against underground knife destroy the weeds and in same operation break the crust into a level, porous, moisture-retaining mulch. Aerates soil. "Best Weed Killer Ever Used." Rue leaf guards, also shovels for deeper cultivation. A boy can run it—do more and better work than 10 men with hoes.

Write for FREE BOOK

Illustrated book, postpaid, gives prices delivered to your station, contains valuable information on gardening, letters from users, etc. A card brings it. Write today.

SYNOPSIS.

Shad Trowbridge, a New England lad of about 20 years, sails on a mail boat to Labrador, where he plans to spend a few weeks of summer hunting and fishing in the wilderness. Upon his arrival he meets two experienced fishermen and trappers, Dick Blake and Ed Matheson, who recommend to him a young lad of 17 known as Ungava Bob, as a guide for his hunting and fishing trip inland. Desiring to lose the least time possible in securing Ungava Bob's services and starting inland for his vacation, Shad starts across the bay in his canoe in the face of a threatening storm. In the darkness his canoe is capsized and he is plunged into the icy water. As he rises to the surface a rope is thrown to him and he hears a voice shouting to make it fast. He is soon drawn aboard a little sailboat which, unknown to him had approached at the moment of his great need.

To his surprise, Shad discovers that his new friend, the lad with the sailboat, is none other than Ungava Bob. Together, they make their way to Bob's home, where Shad enjoys the hospitality of the northland while they consider ways and means of making inland excursions. Shad decides to remain a month or more and make the first leg of a long winter of trapping planned by Bob, returning to the settlement in time to sail back home before college opens.

They leave for the wild trapping grounds and Shad is so delighted with the wilderness that he decides to remain with Bob on the trails all winter. The other members of the party start back home, leaving the two boys alone to start their long winter of adventure. But they are not alone! Hardly has the boat carried their friends around the bend of the river before Bob and Shad see two Indians watching them from the shadows of the forest trees.

The Indians proved to be old friends of Bob, but it was not many days until enemies appeared. A group of Mingen Indians, catching Bob and Shad out in their canoe on the river above the Great Falls of Labrador, fired upon them, compelling them to remain in the current and be dragged down to the rapids and seeming certain destruction. In the midst of their peril Bob remembers that in the rapids above the falls there is a small, rocky island, and he skillfully guides the canoe to a safe landing on it. In the meantime their friends, Ed. Matheson and Dick Blake, reach their tilts to find Bob and Shad gone. The Indian maiden, Manikawan, tells them of the supposed loss of Bob and Shad over the falls. She plans to leave at once to wreak vengeance on the enemy Indians who sent them to destruction. Cunningly she entices them onto the river above the rapids and sends them to their deaths at the foot of the falls.

CHAPTER XII.

The Tragedy of the Rapids.

The two adventurers marooned on the island ate their first meal of rabbit, grilled over the coals, with keen relish, though they had neither salt to season it nor bread to accompany it.

"It might be worse," remarked Shad, when the meal was finished. "Rabbit is good, and," he continued, lolling back lazily and contentedly before the fire, "there's always some bright spot to light the darkest cloud—we've no dishes to wash. A rinse of the teal pail, a rinse of our cups, and, presto! the thing's done. I detest dishwashing."

"Aye," admitted Bob, "dishwashin' is a putterin' job."

"Yes, that's it; a puttering job," resumed Shad. "But now let's come to the important question of the day. Continued banqueting upon rabbit, I've been told, becomes monotonous, and under any conditions imprisonment is sure to become monotonous sooner or later. I have a hunch it will be sooner in our case. I'm beginning to chafe under bonds already. What are we going to do about it?"

"I'm not knowin' so soon," confessed Bob, "but I'm thinkin' before this day week Dick an' Ed an' Bill will be huntin' around for us, an' they's like t' find us, an' when they does they'll be finin' a way t' help us. They might build up th' place down there with stones, so's t' make a footin' t' land on, an' then 'twill be easy goin' ashore."

"But suppose they don't come around this way and don't find us?"

"Then I'm thinkin' we'll be bidin' here till ice forms."

"Till ice forms! And when will that be?"

"An' she comes on frosty, ice'll begin formin' th' middle of October on th' banks. But th' current's wonderful strong, an' I'll not be expectin' ice t' cross on till New Year, whatever."

"January first! October! November! December! Three months on this god-forsaken bit of rock! Great Jehoshaphat, man! That'll be an eternity! We can't endure it!"

"I'm not thinkin' we'll have to. I'm thinkin' they'll find us in a fortni't, whatever," reassured Bob, rising and picking up the axe. "We'll be needin a shelter, an' I'm thinkin' I'll build un now."

"And we have no blankets with us!" exclaimed Shad. "Oh, we're going to have a swell time!"

"We'll be fair snug with a shelter, now. I'll be cuttin' th' sticks, an' you breaks boughs."

"All right, Bob, I'll get the boughs," agreed Shad, languidly rising, and as he went to his task singing:

"'Old Noah, he did build an ark,
He made it out of hick'ry bark.

"'If you belong to Gideon's band,
Why here's my heart, and here's my hand,
Looking for a home.

"'He drove the animiles in two by two,
The elephant and the kangaroo.

"'And then he nailed the hatches down,
And told outsiders they might drown.

"'And when he found he had no sail,
He just ran up his own coat tail.

"'If you belong to Gideon's band,
Why here's my heart, and here's my hand,
Looking for a home.'"

A full stomach sometimes wholly changes one's outlook upon the world. Shad was beginning now to view his adventure from a whimsical standpoint, a result induced partially by his dinner, largely by Bob's philosophical attitude.

It was not anticipated the shelter would be required for long, and a comfortable lean-to under the lee of the hill, with back and ends enclosed, and closely thatched with boughs and moss, was considered sufficient. A thick, springy bed of spruce boughs was then arranged, and the temporary home was completed.

Then Bob proceeded to set deadfalls, utilizing flat stones and raising them on a figure 4, which he baited with tender birch boughs. Several rabbits were started in the course of the afternoon, giving assurance that the deadfalls would yield sufficient food for their needs, though no results could be expected from them until the following morning.

"Now for supper, Shad, we'll have t' be usin' some shells," he announced. "Supposin' you tries un. I were goin' t' make a bow an' arrows t' save th' shells, but they's nothin' t' feather th' arrows with, an' no string that'd be strong enough for th' bow."

"All right," agreed Shad. "I'll get them"; and within half an hour he returned with a bag of two fat young rabbits.

Their fire was built before the lean-to, and a very small blaze was found sufficient to heat it to a cozy warmth. Here they sat and ate their grilled rabbit and drank their tea, quite as comfortably as they would have done in their tent or tilt, though during the night one or the other found it necessary to rise several times to renew the fire.

Bivouacking in this manner was more or less of an ordinary circumstance in Ungava Bob's life. He looked upon it as the sort of thing to be expected, and as a matter of course. He felt indeed that they were very fortunately situated, and for the present he had small doubt that their imprisonment would prove but a temporary inconvenience.

The deadfalls yielded them the first night three rabbits; another was shot. They had quite enough to eat the next day and Shad took a brighter view of the matter.

"By Jove!" he laughed, after breakfast. "I wonder what the fellows at home would say if they should see me now, playing the part of Robinson Crusoe?" and then he began to sing:

"'Fare thee well, for I must leave thee.
Do not let the parting grieve thee,
And remember that the best of friends
must part, must part.
Adieu, adieu, kind friends, adieu, adieu,
adieu.
I can no longer stay with you, stay with
you.
I'll hang my harp on a weeping-willow
tree.
And may the world go well with thee.'"

But when another morning came, with no sugar remaining for the tea, and no other food than the now monotonous unsalted rabbit, Shad rebelled.

"See here, Bob!" he exclaimed irritably, "I can't eat any more rabbit! It nauseates me to even think of it! We've got to do something."

"We can't help un, now, Shad," answered Bob soothingly. "Rabbit ain't so bad."

"Not once or twice, or even three times in succession—but eternally and forever, I can't go it."

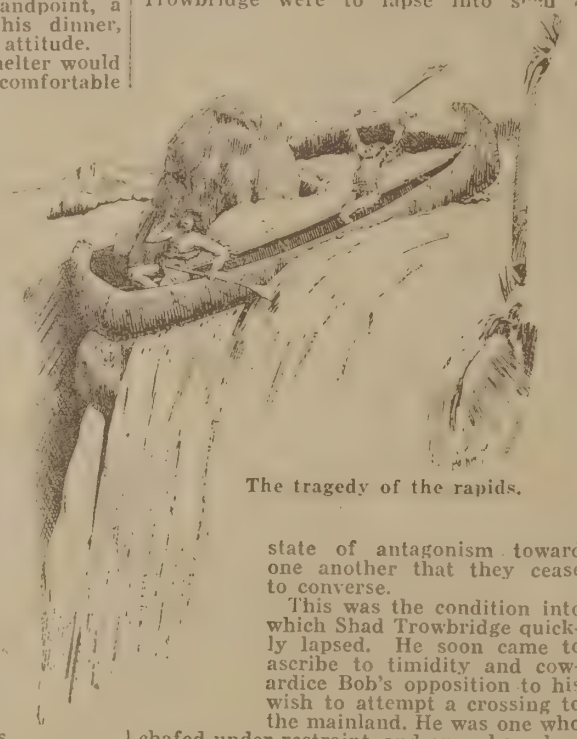
"It does get a bit wearisome, but 'tis a wonderful lot better'n no rabbit, when rabbit's all there is."

"Wearisome! Wearisome! Confound it, Bob, it's disgusting! Now we've got to do something to get ourselves out of here, and that quick."

"I'm not knowin', now, what t' do till th' others comes, an' I'm knowin' they will."

"Come, Bob, let's make a try for that wall down there. Even if the canoe does get away from us, we can make the wall—I know we can."

"No," and Bob shook his head ominously, "I'm ready t' take any fair chanct, Shad, but they wouldn't be even a fair chanct t' make un."



"Oh, bosh!" exclaimed Shad angrily. "I thought you had some nerve."

"'Tisn't a matter o' nerve, Shad; 'tis a matter o' what can be done an' what can't."

"Oh, yes, it can! Any one with two legs and two hands and two eyes and just a grain of grit can do it."

Bob, quiet and unruffled, grilled his rabbit, refusing to take offense or to be moved at Shad's remarks, evidently intended to goad him into what his experience told him would certainly prove a hopeless and foolhardy venture.

It is a psychological phenomenon that men, denied action and confined to limited and solitary surroundings, become highly irascible. They find cause for offense in every word and every action of their companions, and it is not unusual for men situated as Ungava Bob and Shad Trowbridge were to lapse into such a

The tragedy of the rapids.

state of antagonism toward one another that they cease to converse.

This was the condition into which Shad Trowbridge quickly lapsed. He soon came to ascribe to timidity and cowardice Bob's opposition to his wish to attempt a crossing to the mainland. He was one who chafed under restraint, and one who, when he had once decided upon a course of action, could not brook opposition from another; and though at heart he knew that Bob was fearless and brave, and that his arguments were sound, yet he would not now admit this, even to himself.

Normally Shad was a good fellow, and he would endure hardships cheerfully if the hardships were accompanied by physical activity; but the condition of monotonous existence, accompanied by idleness and inactivity, which they were now experiencing, was too great for him to withstand, and he was prepared to take the most desperate chance to escape from it. When at length the tea and his tobacco were gone, and nothing but the daily ration of unseasoned rabbit remained, the thought of thus continuing indefinitely became unendurable to him.

Ungava Bob, on the contrary, had been accustomed to wilderness solitude all his life. This, and a naturally even disposition, coupled with a philosophical temperament, rendered him capable of overlooking Shad's slurs, and when finally Shad ceased to speak to him, or when spoken to by Bob ceased to acknowledge that he heard, Bob permitted the slight to pass unnoticed.

At length, one day, when Shad had nursed his supposed grievance to a point where he could no longer endure it, he blurted out brutally:

"See here, I've stood this devilish cowardice of yours as long as I'm going to. Do you see where the sun is? It's noon. Now I'll give you until that sun drops halfway to the horizon to decide whether or not you're going across with me. If you say 'No,' I'm going without you, that's all, and you can stay here and eat rabbit, and rot, if you choose."

"Now, Shad," Bob placated, "I knows how you feels, an' it's your judgment ag'in mine. But I'm havin' experience with places like that, an' I knows we can't make th' crossin' an' land. Now don't try un, Shad."

"Don't 'Shad' me—— My God, Bob! Look there!" he suddenly broke off.

Shooting past them, half standing in their birch canoe, paddling with the desperation of man facing doom, one with his sound paddle, the other with his broken one, were the Indians that Manikawan had sent adrift.

They were very near the island—so near that every outline of their drawn, terror-stricken faces was visible—but too far away to reach the gravelly point upon which Bob and Shad had found refuge. Indeed, they seemed not to see it, or to see anything but the horrible spectral phantom of the evil spirit that they believed had them in its control.

On—on—on—they sped, ever faster—faster toward the pounding rapids—impotently, though still desperately, wielding their paddles. Bob and Shad stood spellbound and horror-stricken. The Indians were nearing the first white foam! In a moment their canoe would strike it! It was in the foam! It rose for an instant upon a white crest, the Indians' paddles still working—then was swallowed up in the swirling tumult of waves and whirlpools, never to reappear.

Ungava Bob and Shad Trowbridge stood for a moment in awe-stricken horror. Then they sat down upon the rock on which Shad had sunk when overcome with shock on the day of their escape upon the island.

"Bob," said Shad, at last, "that was the most terrible thing I ever beheld!"

"'Twere awful!" assented Bob.

"It shows us, Bob, what you and I escaped. Bob, I've been very disagreeable lately. Take my hand and forgive me, won't you?"

"'Twere th' rabbit meat, Shad," said Bob, taking Shad's hand. "Rabbit meat be wonderful tryin' t' eat steady. I were knowin', now, you'd be all right again, Shad."

"I think I've been demented, Bob—I'm sure I have—anyway, believe it, and don't hold it against me."

"I'll not be holdin' un ag'in you, Shad. 'Twere natural, and——" Bob ceased speaking and sat staring at the high bank of the mainland. "Manikawan!" he exclaimed, spring up and crossing the island point at a bound.

There she stood, joy, wonder, incredulity, written upon her face. She had believed White Brother of the Snow dead, but here she saw him in flesh and alive, and he had spoken her name.

"White Brother of the Snow! Oh, White Brother of the Snow! The evil spirits did not devour you, but like hungry wolves they have devoured your enemies."

Very quickly Bob explained their predicament, and she listened silently. Then she went to the sloping rock, descended its dangerous angle to the water's edge, and returned.

"White Brother of the Snow and his friend would find no lodgment there," said she. "It is a place of deceit. But White Brother of the Snow knows how to be patient. Let him and his friend wait. The evil spirits can not reach up for them where they are. When the sun returns again to the high point in the heavens Manikawan will stand here. Wait."

The next instant she was gone.

"What did she say?" asked Shad.

"She were sayin'," explained Bob, "that if we has patience an' waits she'll be back by noon tomorrow, or thereabouts. An' she says if we waits here we'll be safe, but we couldn't be makin' a footin' on th' rock. She's thinkin' o' some way o' gettin' us off, but I'm not knowin' what 'tis, now."

(To be continued.)

Bits of Fun for Everyone

Poultry Yard Scandal.

She—You promised to love me always.

He—Yes, and you promised to keep yourself neat and attractive. Here it is only three months after I marry you, and you're molting.

A Rough Rider.

Waiter (on the dining coach)—Boss, we can't serve your order of fried eggs. The road is so rough through here that every time the cook puts your eggs in the pan they scramble.

Two of a Kind.

Two women were talking together in the Union station in Chicago.

"My sister and me," said one, "we ain't no more alike than if we wasn't us. Yes, ma'am, she's just as different as I be, only the other way."—Life.

Had to Fit His Shirt.

"What's the matter with Smith? Got lumbago or spinal curvature or something?"

"No; he has to walk that way to fit some shirts his wife made for him."—Richmond Times-Dispatch.

Removed the Cause.

"How about that new heaves medicine you tried?"

"Well, you know that feller said it cured by gettin' at the cause."

"Yep, I remember."

"I figured it out since that he was right. Breathin' is the cause of heaves—that is, a crittur has to breathe if he's goin' to heave. Well, my horse quit breathin' after I tried that medicine."

FAMILY CIRCLE

ALICE BARLAND
EDITORIAL CONTRIBUTOR

Experience Letters

From Our Family Circle Women

Dear Mrs. Barland: Your department is the most interesting part of the paper to me, and especially the articles in regard to rearing children. Perhaps there would be more articles if it were not true that not many mothers have found their attempts to train their children so completely successful that they feel capable of offering advice.

Regardless of how hard we try to do the right thing we see our mistakes and the faults in the children we have as yet been unable to control, which make us feel so humble that we don't like to set ourselves up as authority on the subject.

I will not attempt to give advice, but wish to recount a mistake I made with my child, in the hope that some other mother may profit by it.

My child is a healthy boy of 8, active and good natured and the school nurse pronounced him normal in every respect, but he was very disappointing in one way. He wouldn't study, kindergarten games didn't seem to interest him, and all my efforts to teach him to read met with failure. He would wrinkle his brow and seem to be making a desperate effort to remember the words, and then he'd make excuses and plead with me to let him go or maybe cry and say he didn't want to learn to read, didn't care what the story said, had a stomachache or itched all over or felt awfully tired. He would say, "Please, mother, can't I rest just a little while?" But I noticed that he didn't get tired when he was playing out of doors or going after the cows, so I finally concluded that he must be backward and it would be best to let him develop a little more before putting him to any sort of mental exertion. So I waited and watched, but time showed no improvement. He didn't care about drawing pictures or making things with his hands or even playing with his toys.

He never took them apart to see how they were made and, although delighted with them at first, he soon abandoned them and went out of doors to dig or tramp or chop wood or something of that sort. He could sing very well, but wouldn't try to play, could do sums in his head surprisingly well, but said he didn't like to do them at the board.

After watching him awhile I was convinced he was mentally capable, but merely lazy, so I sent him to school and talked to him about being industrious and honorable about doing his work well, and he seemed impressed and said he would try. But it did no good; the teacher complained of her inability to hold his attention on his books and said he seemed perfectly able to do the work, but just wouldn't.

She thought it was mostly laziness and the rest either shyness or stubbornness, so we cooperated and compelled him to work, because we thought it a bad thing to allow him to form the habit of getting out of unpleasant tasks by making excuses.

He made plenty of them and I lectured him about that, too, but one day when the excuses were more numerous even than usual and he complained of dizziness it occurred to me to wonder if his eyes could be at fault. He had always seemed to have particularly good vision and could see distant objects better than the rest of us.

I took him to a specialist that afternoon and the riddle was explained. The poor little fellow is so far-sighted that he can not see near objects clearly without great strain. The effort to do so had resulted in the "stomachache" and all the "queer feelings" he spoke of having, which I thought were excuses for laziness. Can you imagine my feelings when I thought of the injustices I had done my boy and the unintentional cruelties I had imposed upon him, in my efforts to break his fault?

Since he has his glasses there are no more excuses and he is progressing satisfactorily, not only in his studies, but in everything that requires close vision. No one would ever accuse him of laziness now.

This has taught me a lesson I hope I shall never forget and that is to be sure I am right before I go ahead. But that is a very difficult thing to be sure of always, isn't it? RUTH L. LONG.

Dear Happy Housewife of Chewelah, Wash.: I wish you had signed your name. I wish every one would. Thank you for the recipe, which will appear in the near future. Will you please write and tell me for the Circle how to make the pine needle baskets? They sound interesting and we have plenty of the material about everywhere on this coast. We are glad to know that white spots may be removed from furniture by lightly touching the spot with chloroform; do not rub the spot.

All bulbs should be taken up after blooming and carefully dried, then stored in some dry place till time to plant again. You can use the ground again as you desire.

Don't fail to tell us about the pine needle baskets. A. W. BARLAND.

Dear Mrs. Barland: Although I live in the city I am a faithful reader of THE FARMER, especially the Family Circle.

My husband and I were raised on a farm and we are very glad we were; we like farm life and hope to return to it ere long.

I want to tell the sisters how I managed to use four pairs of too short sheets which I found I had when I was first married.

I sewed together with felled seams five 100-pound floursacks, then cut this strip in two and hemmed the edges, making two strips long enough to tuck over the mattress well when put over it crosswise. This I put on under the sheet, drawing it up far enough at the top and tucking it in on each side, so the mattress is well protected. Having two of them I can change when I change the sheet. I like this much better than to piece all the sheets. MRS. GOLDINA LOFLIN,
1017 South Adams, Tacoma, Wash.

Dear Mrs. Barland: I have a few helpful hints to pass on. Many people find it hard to use up stale, left-over bread. I use one-third cup of bread crumbs to one cup of flour for hot cakes. This uses up all my stale bread.

On wash days I add two tablespoons of turpentine to the water in which I boil my towels, then with a very little rubbing they are as white as snow.

MRS. JOHN HOULE.
Toppenish, Wash.

Plant Plenty

One finds all the food charts agreeing with the Scriptures of old that peas are one of the most valuable of foods. In the protein and energy supplying group they occupy a place of honor; in the iron-supplying list they stand well toward the top; among the lime-containing group they have mention. They also furnish phosphate and iodine and increase the alkali reserve. They contribute to the supply of the anti-scorbutic vitamine in some degree. Scarcely a food, except milk and milk products, offers a more valuable contribution to the list of essential elements of nutrition.

Daniel and his strong young companions, it will be remembered, requested the privilege of a trial of strength, on their diet of peas, or pulse, with the flesh-eating young men of Egypt, and easily came out ahead.

Green-leafed foods—chard, spinach and lettuce—are as generous in the mineral elements needful to the system, but have not, in addition, the energy-supplying content. Neither group, peas nor the greens, are often found present in the diet to the extent to which it would profit by them. Most of us plant plenty of lettuce, but find our provision of the others running short, or not well distributed through the season.

With the increased popularity of vegetable-drying, with the simplifying of home canning processes and the growing knowledge of the value of these foods, little of them is in danger of going to waste when they are generously planted by the thrifty family. Peas, especially, admit of preparation and preservation in a multitude of ways. Why not plan to have them all year for the salad and the soup, serve them deliciously creamed, and have them in season with new potatoes and the other vegetables with which they combine so well?

Just Folks

Many matters of life take care of themselves. One does not have to meddle with them.

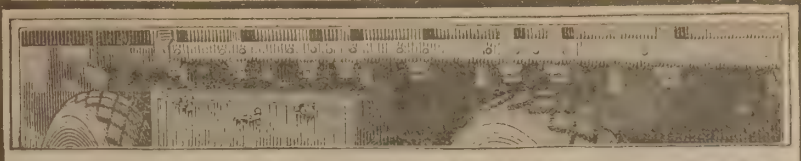
To know what to leave alone is one of the high arts of life.

Do you want to reform the world? Most of us find our hands full in reforming ourselves.

You will never get to the mountain top by trying to get all your acquaintances to climb with you.

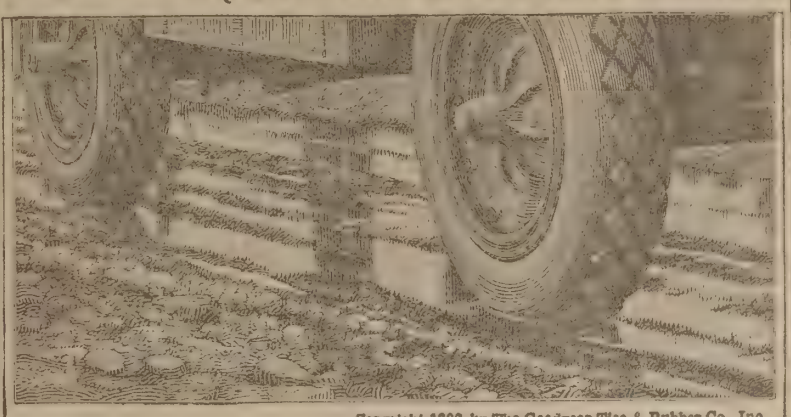
A program in life means a program for yourself, not for your neighbors.

Even leaders lead more by example than by precept.



To free oneself from unnecessary encumbrances is the work of peace as well as the work of war.

Whether horses need them or not, men certainly need blinders to shut out side attractions.



Listening unduly to wees is as bad as being captivated by sideshows.

To do is to largely forget the other fellow.

Obsession may be on the borderland of the madhouse, but you must go as near to the danger line as possible to accomplish your own supreme purpose.

THEY CONQUER THE MUDDIEST ROADS

Copyright 1922, by The Goodyear Tire & Rubber Co., Inc.

"The roads between Anoka and Minneapolis test the strength and construction of the strongest tires. After a heavy rain, the truck runs for miles at a stretch through heavy ruts. Our Goodyear Cords carry through on schedule, in all weather, saving time and money. Our Minneapolis Goodyear Dealer gives us good service on them."—SIMON KRUSE, Owner of Radisson Farm, Anoka, Minnesota, and President, Radisson Hotel, Minneapolis.

ON rain-soaked roads, Goodyear Cord Truck Tires find sure footing and make steady speed from farm to town.

The wide, thick blocks of their All-Weather Tread take hold with a tractive grip that carries the truck forward full distance with every turn of the wheel.

Their buoyant resilience protects the truck, reducing operation and repair costs; cushions the load against road shocks that injure the perishable cargo; saves the driver, and is easy on the surfaces of improved roads.

Goodyear Cord Truck Tires are strong and durable. They are designed to wear a long, long time. Detailed records of their performance in farm hauling on the road and in the fields are furnished on request to Goodyear, Akron, Ohio, or Los Angeles, California.

High Points in News of the Week

Freight rates must be revised in favor of the farmer if normalcy is to be restored. This is the outstanding feature of the report of the congressional commission appointed some time ago to investigate freight rates from the standpoint of their effects on agriculture. The report was made to congress last week by Chairman Anderson. It declared that the commission considered it necessary to readjust freight rates to the relationship existing before the important changes of 1918.

Effects of freight rates are emphasized, it was said, because on perishables "they amount normally to one-third of the selling price, and frequently two-thirds" and "purchasers and farmers are dependent in a marked degree upon transportation charges" in prices. The general result of increased railroad rates and depressed commodity prices was to bring railroad rates on farm products in October, 1921, to an index average of 169, or roughly 69 per cent above pre-war levels, while farm products stood at 102, or barely 2 per cent above prewar.

The commission advanced three specific proposals to better transportation service for farmers, the first being the enlargement of "competition avenues of distribution through which the largest number of consumers can reasonably be reached"; the second was the extension of through rates on grain "to points of consumption through two or more competitive primary markets," and the third the extension of the principle that coarse grains, such as corn, should take lower charges than breadstuffs.

Further, the commission found that "livestock shows marked fluctuations in shipment volume" and that railroads, stockyards and shippers should cooperate to even out the supply at market points, thus preventing price and charge impositions, while hay, as the bulkiest farm commodity, required "a reduction in both freight and sales margin before there can be resumption of normal shipments."

On dairy products and on cotton the commission concluded that freight charges had not had so serious an effect upon some other farm stuffs, and as to wool, Mr. Anderson remarked that its price "to the producer has been depressed somewhat by freight rates, but primarily by disorderly and unscientific marketing."

Moving to the study of indirect freight costs affecting farmers, as they enhance prices of things farmers buy, Chairman Anderson said that "fertilizer prices were found to be close to pre-war basis except for freight rates." Factory prices of farm implements, it was concluded, are now rapidly receding to a lower price level, but freight rates now accumulate to the point of being 15 per cent of the price farmers pay for machinery, while before the war the freight charge constituted but 11 per cent.

* * *

Secretary of Agriculture Wallace delivered an address last week by general wireless, reaching, it is believed, the largest number of persons who ever heard a single speech. He spoke on Arbor day, urging that the American people adopt a policy of treee protection and production.

* * *

Reports from Washington indicate that the likelihood of the soldiers' bonus bill passing within the near future is increasing. It is declared that the senate leaders and President Harding have about agreed upon ways of meeting the cost, and that the measure will be acted upon within a few weeks. The house of representatives has already passed the measure without providing any means of paying the cost, which is estimated at around $4,000,000,000.

* * *

The war department is considering the abandonment of Camp Lewis, Wash., the largest Pacific northwest army camp. If it is abandoned the soldiers now stationed there will be scattered to smaller posts.

* * *

Will H. Hays, superintendent of the American Motion Picture association, has ruled that films in which Roscoe (Fatty) Arbuckle appears shall not be shown. Arbuckle was recently acquitted of a manslaughter charge in connection with the death of Virginia Rappe, a motion picture actress, but the affair has not been blotted out as a black scandal in the moving picture business.

* * *

The house of representatives has adopted the senate amendment to the naval bill making the enlisted personnel of the navy 86,000 men instead of 67,000, as in the bill which it originally passed.

* * *

Peter Foley of Boston, aged 70 years, a former long distance runner of repute, ran 25 miles in a recent meet in 3 hours 48 minutes.

* * *

The international finance conference at Genoa, Italy, continues to struggle with world finance. The conference was startled last week when the German and Russian delegates met separately and entered into a treaty reestablishing diplomatic and industrial relations between the two countries. As a result of this action, the main conference barred German delegates from sitting in on the consideration of the Russian problems involved in the discussions.

* * *

A quarter of a million men will be in military training in camps during the coming summer, if the plans of the war department are carried out. This does not include the regular army forces, but national guard units and organizations made up of civilians who wish to avail themselves of the opportunity of a short period of military training. The camps will continue for periods of from two to six weeks.

* * *

Famine conditions are much improved in Russia through the efforts of the American relief commission, it is reported. Most districts within reach are said to be protected now until the coming harvest makes local food supplies available.

* * *

President Harding has appointed a commission of men whose duties are to devise ways and means of collecting the $11,000,000,000 owed to this country by foreign nations.

* * *

Chicago and other middle western districts were visited by a severe windstorm last week, doing some damage and taking a few lives.

* * *

Former President Wilson's physicians announced last week that his health was the best it has been since his breakdown in 1919. He is said to be able to walk about his home without the aid of a cane. He is said to be as active mentally as ever.

* * *

Governor Edwards of New Jersey has announced himself a candidate for the United States senate. He is recognized as in sympathy with the anti-prohibition movement.

* * *

The United States department of labor announces that there has been a reduction of about 20 per cent in the cost of what the farmer buys sinc eFebruary, 1921. The reductions are greatest in machinery and tools.

* * *

Spokesmen for the present administration at Washington declare that the government is now being run at a reduction of about $4,000,000 from the recent high costs. The total cost for the fiscal year ending June 30, 1922, is expected to be slightly under $4,000,000,000.

* * *

The federal comptroller of the currency urged upon American bankers recently that they exert their full influence to keep their patrons from making unwise investments. He declared that there were sufficient opportunities for investment in legitimate, safe industrial and government securities without taking chances on wildcat stocks.

* * *

The two most prominent measures now before congress are the tariff and bonus bills. President Harding has made it clear to members of congress that he considers the tariff of more importance for immediate consideration than the bonus bill. It is believed that the senate will postpone definite action on the latter, though hearings are to be in progress this week.

MIDWEST UTILITOR Dependable Power

New Price

$295

f. o. b. Factory

Standard Walking Type Now Sells For Less

Standard Walking Type Utilitor with Plow

Standard Walking Type Utilitor Equipped with 84-inch Mowers

New Riding Type, Model 501-A $340 f. o. b. Factory

YOU CAN now own one of these handy, money-making, time-saving machines for less money. The Utilitor has proved its ability on hundreds of farms to do better, faster and less expensive work than animal power.

On the belt it has no equal for its size. It moves from job to job under its own power.

All hitches have been simplified and perfected.

We are also offering the NEW RIDING TYPE Utilitor. It steers from a comfortable seat by means of a tiller control. Most of the operations are watched from the driving position.

The New Riding Type sells for $340 f. o. b. factory. Ask for Model 501-A.

With increased discount and reduced prices the Utilitor is more attractive than ever from the dealer's standpoint.

Complete description of all models on request. Please address Department 1004

MIDWEST ENGINE COMPANY, Indianapolis, U.S.A.

Your Health

By Royal S. Copeland, M. D., F. A. C. S.

A few weeks ago I prepared an article on canned goods. It excited so many questions I am convinced it will be a good thing to say a little more on the subject.

Dr. Copeland.

No one of us wishes to eat any damaged or harmful food. One of the promising signs of the time is the aparent anxiety of the public to find out all it can about foods. There is really a desire to know two things—how to avoid bad food and how to select good food.

What happens to fruit or vegetables after canning depends largely on the temperature of the storage room. Every good housewife demands a refrigerator or a cool cellar. The perfect preservation of canned goods is determined by the adequacy of the cooling system.

When good material is properly prepared and canned there is no reason why it should not keep indefinitely. When a can of well-canned fruit or vegetables is taken into the hand it is found clear. The label is unstained by fluids which have escaped under the cap or from some other leak.

On opening the can there is a sweet, fruity or vegetable odor. If there is an unnatural or offensive smell something is wrong.

The juices or fluids of the can or jar of perfectly preserved fruit or vegetables are clear and sparkling. They are not turbid and cloudy.

Food poisonings are not so common as they were five or six years ago. Demand for pure food and better knowledge of foods have improved conditions.

Nausea, vomiting and purging are indicative of food poisoning. These symptoms are nature's way of getting rid of the poison. The vomiting should be encouraged. This is the first indication for treatment.

Then the patient should be put to bed and kept warm with hot water bottles and blankets. Send for the doctor at once.

Latest High Class Patterns for the Home

Please order the patterns you desire at least two or three weeks before you wish to use them. Desiring to obtain the latest high-class patterns for its readers, THE FARMER has made arrangements to have them sent direct from the east, and under present mailing conditions it takes about that time for them to reach you.

3846-3787-3946. Lady's Sports Suit. Blouse 3787 and guimpe 3846 are cut in seven sizes: 34, 36, 38, 40, 42, 44, and 46 inches bust measure. Skirt 3946 cut in six sizes: 25, 27, 29, 31, 33, and 35 inches waist measure. The skirt requires 3 5-8 yards of 44-inch material. Its width at the foot is about 3 3-8 yards. The guimpe requires 3 1-2 yards of 27-inch material and the blouse 2 1-4 yards of 36-inch material, for a medium size. Three separate patterns, 10 cents for each pattern.

3530. Misses' Dress. Cut in three sizes: 16, 18, and 20 years. An 18-year size will require 6 1-4 yards of 40-inch material. The width of the skirt at the foot is 2 yards. Price 10 cents.

3591. Lady's Dress. Cut in seven sizes: 34, 36, 38, 40, 42, 44, and 46 inches bust measure. A 38-inch size will require 3 3-8 yards of 54-inch material. The width of the skirt at the foot is 2 yards. Price 10 cents.

3971. Lady's Apron Dress. Cut in four sizes: Small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size requires 4 yards of 36-inch material. The width at the foot is about 2 yards. Price 10 cents.

3736. Lady's House Dress. Cut in six sizes: 34, 36, 38, 40, 42, and 44 inches bust measure. A 38-inch size will require 5 1-4 yards of 38-inch material. Price 10 cents.

3532. Child's Play Suit. Cut in four sizes: 2, 4, 6, and 8 years. A 4-year size will require 2 1-4 yards of 36-inch material. Price 10 cents.

3957. Girl's Dress. Cut in four sizes: 4, 6, 8, and 10 years. A 6-year size requires 1 5-8 yards of 27-inch material for the guimpe, and 1 1-2 yards of 40-inch material for the "dress." Price 10 cents.

3436. Boy's Blouse and Trousers. Cut in five sizes: 6, 8, 10, 12, and 14 years. A 10-year size requires 1 7-8 yards of 36-inch material for the blouse and 1 3-8 yards for the knickerbockers. Price 10 cents.

3967. Lady's Night Dress. Cut in four sizes: Small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size requires 4 1-2 yards of 32-inch material. Price 10 cents.

3045. Lady's Envelope Chemise. Cut in four sizes: Small, 32-34; medium, 36-38; large, 40-42; and extra large, 44-46 inches bust measure. Size medium requires 2 5-8 yards of 36-inch material. Price 10 cents.

3781. Girl's Jumper Dress. Cut in four sizes: 8, 10, 12, and 14 years. A 12-year size will require 4 1-2 yards of 40-inch material. Price 10 cents.

3954. Child's Romper. Cut in five sizes: 1, 2, 3, 4, and 5 years. A 2-year size requires 2 3-8 yards of 27-inch material. Price 10 cents.

LOOK AT THE GOOD FARM BARGAINS THAT ARE OFFERED ON THE FARMERS' "WANT AD" PAGE THIS WEEK.

Jessie Manis, 9 years old February 15, 1922, writes: "We have a pretty place. There are many mountains all around us, a long way off, but they look close. Our house is on the left-hand side of the road." Jessie likes to turn the separator for her mother. Her home is on the boundary between Walla Walla and Columbia counties, in southeastern Washington. She says sister has a little brown colt with a white star in her forehead.

For her birthday Dilla Fisher received a white dress for summer, a school cap, $2.50, a Sunday school bag, a hair ribbon and a birthday cake. February 8, 1922, she was 10. Dilla is another Spokane county (Washington) cousin. (Aunt Nellie will be glad to receive your picture, Dilla.)

Marion Meyers of southwest Washington, Clarke county, writes that their old schoolhouse burned down and now they have a new one. They have a gymnasium class at school and on St. Patrick's day they gave a party. Marion says some of their plants at school are in bloom.

Victor Knight, southern Chelan county, Washington, writes: "I am glad that spring is coming. The robins are singing along the creek and I saw a bluebird." Victor likes to climb the hills and pick flowers. He says when spring comes there will be a weiner roast down by the creek, with somersaults and other lively sports following.

We thank Alvena Scheurman for her story entitled "Treasure Hunting." Alvena is one of our Washington cousins. Her home is in the Palouse country.

BEDTIME STORIES

By THORNTON W. BURGESS.

Copyright, 1919, T. W. B.

LONGLEGS VISITS SMILING POOL.

Longlegs the Blue Heron watched Billy Mink and Little Joe Otter disappear down the Laughing Brook. As long as they were in sight he sat without moving, his head drawn down between his shoulders just as if he had nothing more important to think about than a morning nap. But if you had been near enough to have seen his keen eyes you would never have suspected him of even thinking of a nap. Just as soon as he felt sure that the two little brown-coated scamps were out of sight he stretched his long neck up until he was almost twice as tall as he had been a minute before. He looked this way and that way to make sure that no danger was near, spread his great wings, flapped heavily up into the air, and then, with his head once more tucked back between his shoulders and his long legs straight out behind him, he flew out over the Green Meadows, and, making a big circle, headed straight for the Smiling Pool.

All this time Billy Mink and Little Joe Otter had not been so far away as Longlegs supposed. They had been hiding where they could watch him, and the instant he spread his wings they started back up the Laughing Brook toward the Smiling Pool to see what would happen there. You see, they had told Longlegs that Grandfather Frog was fast asleep on his big green lily pad and they knew perfectly well that Longlegs was flying up to the Smiling Pool in the hope that he would catch Grandfather Frog for his breakfast. They didn't really mean that any harm should come to Grandfather Frog, but they meant that he should have a great fright. You see, they were like a great many other people, so heedless and thoughtless that they thought it fun to frighten others.

"Of course, we'll waken Grandfather Frog in time for him to get away with nothing more than a great scare," said Little Joe Otter as they hurried along. "It will be such fun to see his big, goggly eyes pop out when he opens them and sees Longlegs just ready to gobble him up! And won't Longlegs be hopping mad when we cheat him out of the breakfast he will be so sure he is going to have!"

They reached the Smiling Pool before Longlegs, who had taken a roundabout way, and they hid among the bulrushes where they could see and not be seen.

"There's the old fellow just as I left him, fast asleep," whispered Billy Mink.

Sure enough, there in his big green lily pad sat Grandfather Frog with his eyes shut. At least they seemed to be shut. And over on top of his big house sat Jerry Muskrat. Jerry seemed to be too busy opening a fresh water clam to notice anything else, but the truth is he was watching all that was going on. You see, he had suspected that Billy Mink was up to some mischief that morning and he had guessed that he was going to play some trick on Grandfather Frog. So he had warned him. When he had seen Longlegs coming toward the Smiling Pool he had given Grandfather Frog another warning, and he knew that now he was only pretending to be asleep.

Straight up to the Smiling Pool came Longlegs the Blue Heron and on the very edge of it, among the bulrushes, he dropped his long legs and stood with his toes in the water, his long neck stretched up so that he could look all over the Smiling Pool. There, just as Little Joe Otter had said, sat Grandfather Frog on his big green lily pad fast asleep. At least he seemed to be fast asleep. The eyes of Longlegs sparkled with hunger and the

"There's the old fellow just as I left him, fast asleep," whispered Billy Mink.

thought of what a splendid breakfast Grandfather Frog would make. Very slowly, putting each foot down as carefully as he knew how, Longlegs began to walk along the shore so as to get opposite the big green lily pad where Grandfather Frog was sitting. And over in the bulrushes on the other side Little Joe Otter and Billy Mink nudged each other and clapped their hands over their mouths to keep from laughing aloud.

DR. HESS Instant Louse Killer Kills Lice on Poultry and Stock

Use it on your lousy hens and chicks—your lousy colts, horses and cattle. You'll get better chicks—bigger, better fowls—more eggs—better contented stock.

Chicks are apt to be lousy now. Give them a chance. Sprinkle Louse Killer into the feathers, about the coops, on roosts, in nests of laying and setting hens. Always keep Louse Killer in the dust bath. For lousy horses and cattle, colts and calves, stroke the hair the wrong way and sift in Louse Killer.

We authorize dealers to return your money if it does not do as claimed.

New York for Pure Milk

"Oiled" Milk Promoters Are Defeated in the Legislature

After a long and bitter battle with the "oiled" milk lobby, a pure milk bill was passed by the New York state legislature and became law April 1.

It amends the "farms and markets law" in relation to skimmed milk and products manufactured therefrom, so that it

a. Prohibits the sale of any milk to which strange oils or fats have been added in imitation of real milk;

b. Prohibits the sale of condensed or evaporated skim milk in small, retail packages or without its true contents being prominently described.

The measure was strongly supported by public health authorities, teachers and parents, scientific experts from the university laboratories, leaders of women's organizations and the dairymen's league.

This bill had failed to pass in one previous session of the legislature owing to the hot fight made upon it, and obstructionist tactics in this session very nearly brought about its defeat. Half a dozen different bills were proposed, all of them conflicting, all of them being introduced, and all tending towards a compromise result which would nullify the real value of the law.

The bill prohibits "oiled" milk as follows:

Section 64, paragraph 3:

"No person shall manufacture, sell or exchange, offer or expose for sale or exchange, or have in his possession with the intent to sell or exchange any condensed, evaporated, concentrated, powdered, dried or dessicated milk, cream or skimmed milk to which there has been added, or with which there has been mixed, blended or compounded any fats or oils, other than milk fat, so that the finished product shall be in imitation or semblance of condensed, evaporated, concentrated, powdered, dried or dessicated milk."

Protected Territory.

Nine states now are on the list of protected territory with regard to vitiminless milk.

New Jersey	3,155,900
Colorado	939,629
Utah	449,396
California	3,426,861
Oregon	783,389
Wisconsin	2,632,067
Ohio	5,759,394
Maryland	1,449,681
New York	10,384,829
Total population	28,981,146

Law Is Law.

In Ohio, when the state legislature prohibited the manufacture and sale of "oiled" milk, the case was taken to court, and later on to the United States supreme court, which upheld the new law by stating in its decision:

"If the character or effect of the article as intended to be used, be debatable, the legislature is entitled to its own judgment; and that judgment is not to be superseded by the verdict of a jury, or, we may add, by the personal opinion of judges upon the issue which the legislature has decided."

Can They Dodge Law?

Arguments are being advanced against the Voigt bill by one dairy journal. It argues that Voigt's bill, approved by the committee on agriculture, 14 to 4, will only prohibit interstate commerce. It claims, therefore, that the clever manufacturer can dodge the law by building himself a factory in each state and continue doing business.

This seems convincing to some minds for a little while, until they begin to ponder the cost of erecting factories for evaporating skim milk, for heating cocoanut oil, and all the complicated mixing and canning machinery, says the National Milk Producers' Federation.

As to whether this would be profitable or not, no less an authority in the business than R. R. Gockley, director of laboratories for the Dairymen's League Cooperative association at Utica, N. Y., writes:

"While this probably would be possible technically, we do not think it would be practical. We believe the condensed milk would have to be reheated in order that the vegetable oil could be properly incorporated in the condensed milk.

"This would incur not only extra labor, but would mean considerable loss of product in handling and would require additional equipment."

WILL COMPARE SOILS.

Dr. Curtis F. Marbut of the United States department of agriculture has sailed on a three-months soil-study trip to various countries of Europe. The main object of his trip is to correlate American soil work with that which has been done in European countries.

Dr. Marbut plans to meet a group of soil scientists in Prague and after that he will collect soil samples and talk with scientists in France, Germany, Szecho-Slovakia, Austria, Hungary, Rumania, Jugo-Slavia, Latvia, Spain, the British isles, Italy and Greece. In England he will visit the famous old experiment station at Rothamstead. In Italy and Greece he will study and take samples of those old soils that have been cultivated for 2000 years and that are said never to have been fertilized and never to have had the benefit of much live stock farming.

Pulled Wool

Little Journeys to the Markets

Pulled wool is wool which has been pulled from the fleeces of sheep and lambs slaughtered at the larger packing houses. The pelts are first soaked in cold water for 12 to 36 hours, depending upon whether they came direct from the killing floor or have been in salt for a time. After soaking, they are run through a scrubbing machine in which they are brushed vigorously while a stream of water is playing on them. They are then placed in centrifugal machines, the bowls of which are shaped something like a milk tester. Each bowl holds several pelts. These machines are rotated at a high rate of speed, which throws the water out quickly and the fleeces are made practically dry within a short time.

The pelts are then spread out, fleeces downward, usually on screens which permit the wool to dry out more thoroughly. Every inch of the skin side is then painted evenly with a mixture of sodium sulphide and slaked lime. This "depilatory" loosens the wool fibers so that they easily can be pulled out by hand within two to four hours after treatment.

Before pulling, the fleeces are sorted according to the kind and length of the wool on them. Lambs and sheep are slaughtered in every month of the year, so that pulled wool varies in length much more than sheared wool. In pulling, also, wool from each fleece is separated into several kinds, since the wool varies on different parts of the sheep's body. As a result, each lot of wool produced is quite uniform in character.

JACOB LANO, Wilkeson, Wash.—We must have The Washington Farmer so we can read Dr. Copeland's letters on health. These letters alone are worth the price of the paper.

Poultry Diseases

THE FARMER Gives High Class Information

The Washington Farmer is pleased to receive the following tribute to the high-class information which it seeks to give its readers. Dr. Nelson, who is at the head of the extension service of the State College of Washington, was for many years at the head of the veterinary department of the state college and knows whereof he speaks:

"To the Editor of The Washington Farmer: In your March 30 edition of The Washington Farmer on page 12 (304) I find several articles written by Dr. W. T. Johnson, veterinarian, western Washington experiment station, in reply to questions which have been asked him in regard to poultry diseases.

"I desire to call to the attention of the poultry people in the state of Washington the fact that Dr. Johnson is probably one of the three best equipped men in the western United States in the knowledge of poultry diseases. He is one of the two or three men in this entire west and northwest who give their entire time to the investigation and study of poultry diseases, and The Washington Farmer is certainly to be commended by giving, and the poultry people of Washington congratulated in having the opportunity of securing services of Dr. Johns[illegible]

JUDGE FARMER

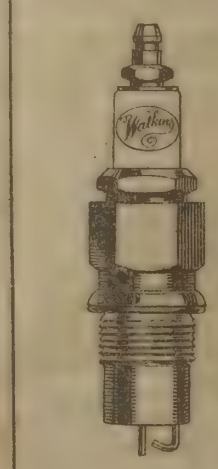
THE American farmer is the best judge of values. His dollars represent bushels of grain, hours of toil. And he has learned to spend them wisely—to secure the best of values when he buys. For over 50 years he has been buying Watkins Products because nowhere else can he get better value for his money.

Watkins tires are built for the American farmer, for long life and rough roads with hard usage. They deliver the maximum of service at the minimum of cost—the best value in the tire market. And they come to you with the *double insurance* of "Watkins Quality" and our unusual mileage guaranty.

Ask your Watkins Dealer about these tires; or send for our Tire and Auto Supply booklet.

Watkins

OVER 150 PRODUCTS



"A Store at Your Door"

Your Watkins Dealer brings you over 150 quality products. He allows you liberal credit. He saves you time and money. Hold your orders for him; it pays. Over 20 million satisfied users of Watkins Products today; more than 5500 Watkins Dealers are kept busy supplying the demand. If one has not called recently, write us; we'll see that you are supplied.

Noise of Shearing Abroad in the Land

Fleeces Are Falling From the Woolly Backs of 250,000 Sheep in the Valley of the Yakima

By GEORGE N. ANGELL

Simultaneously with the bleating of some 250,000 very new and very wobbly, wiggly, woolly lambs which have been arriving since early February, the noise of shearing is abroad in the land of the Yakima, and fleeces are falling from the backs of 250,000 patient mothers of the ovine tribe.

Almost as a corollary to the shearing, apparently, and tending to put the harassed wool grower entirely at his ease again, comes a strike of the shearers for higher wages. In spite of it the clip will come off and will go into storage or will be sold on a market far more eager, it seems to the hungry sheepman, than any he has dealt with in years. Feverish activity will prevail until lambing and shearing and docking and marking are completed; bands not already out of winter quarters or indeed well into the hills will be hustled out, the atmosphere of the permanent camp will be shaken off entirely, and the long summer season will be on when frisky lambkins have nothing more important to do than growing fat, when the sheep business means nothing to the outside world except an occasional dusty band in the road and when the lamb crop, the sheepman's life-saver, gets its real opportunity to develop. Sweet mountain grass and water form a wonderful inducement to appetites jaded by a long, hot trip by rail or a longer, hotter trip by trail, and dreamless naps on sunny hillsides are a great aid to lamb digestion. "Hothouse" lambs are ready for the market in July, and by the end of August another cycle of the business is completed.

At the Rothrock permanent camp near Sunnyside.

SHIPPED OVER 1000 CARLOADS OF LAMBS.

Yakima last year shipped 1061 carloads of lambs, of which 491 went to Chicago and 570 to Puget sound, and except that the number of breeding ewes in the valley had decreased somewhat, due to general conditions and the sheepman's inability to replenish his natural losses and those caused by muttoning old ewes, there was nothing early to indicate that the 1922 lamb crop would be less than that of a year ago. The splendid percentage of increase which prevailed in the valley all through the early season (one man lambed 1100 ewes and had 600 pairs of twins) and well into April gave ground for predicting that the shrinkage would be made up.

Early lambing, which is coming to be more and more popular in eastern Washington, begins February 1 to 15 and continues for about five weeks. Most of the early bands start after February 15 and are done by March 7, so that the business of getting 35,000 lambs into the world becomes a strenuous undertaking. Think of it! Ten thousand lambs a week, and each lamb the source of 10,000 worries for the caretaker. Well it is that not all fall on one man, though to hear the praises of some of the Scotch professionals sung by their employers would lead to the belief that any of them is equal to the task.

Early lambing means day and night work continuously for somebody, for no other domestic animal has had imposed upon it the unnatural conditions at birth which midsummer shipments demand.

In range lambing, which begins March 15 to April 1 and continues until May, scarcely any special attention is required by either ewe or lamb. By this time the weather is fairly warm and the youngsters, being able to care for themselves almost immediately upon arrival, are allowed to do so. Each morning the ewes which are expected to lamb within 24 hours are formed into a "drop" band and allowed to spend the day near camp. The caretaker has merely to see that the ewe suckles her young, or if she fails, to see that some other ewe adopts the infant, disguised under the tied-on hide and fleece of her own departed baby. The term "grafting" is applied to this and other low tricks resorted to in maintaining the balance of maturity in accordance with man-made regulations.

In the evening the band is moved slowly back to camp, the day's "drop" now gamboling unsteadily alongside. Care of the drop band often falls on the boy or girl; so also the bottle feeding of orphans for whom the cleverest artifice has failed to provide adoption—and thereby is laid the foundation of many a young sheepman's career.

EARLY LAMBING IS A DIFFERENT MATTER.

Early lambing is a different matter. Usually permanent covered sheds and open pens are provided, the sheds often being parallel, with quarters for the drop band between. The space within the enclosed sheds has been divided into many small pens, and these are occupied by mother and offspring until mutual relations are thoroughly established, usually for a day or two. From there they are moved to a slightly larger pen, and some sunshiny day the attendant emerges from the shed with a squirming lamb in each hand, held by the legs like a rooster, and an agitated ewe at each heel, to ensconce them in an open pen with others equally far along. Responsibility increases daily upon the animals and decreases daily upon the caretaker, during this series of moves covering 2 or 3 to 10 days each through a series of pens which grow larger and straggle wider with each move.

At last the band is united again in one great family and any new lamb in it can wander far from the maternal side, yet at a sign of danger, real or fancied, or at an adminishing "Baa-a-a" from the dam, can speed unerringly across the intervening space like an arrow to its mark, and register more irrepressible joy at the reunion than any other known creature except one with an identical tail.

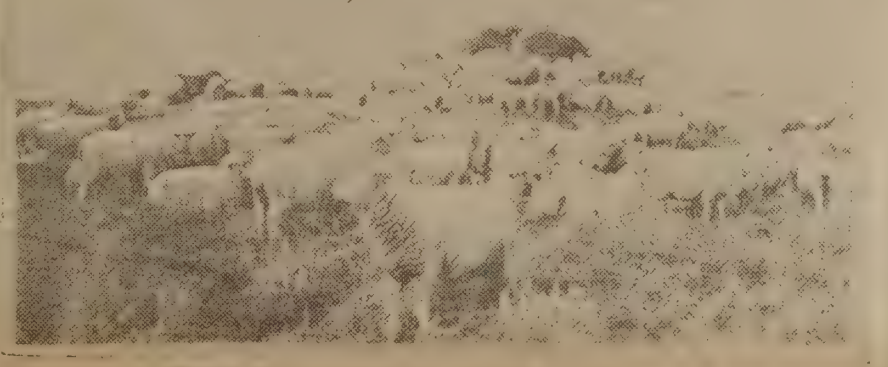
Ellis Regan was boldest of the early operators this year. He had 9000 ewes in one camp near Union Gap, beginning to lamb early in February. For the most part, however, early operations are small, though Dunn Brothers had 2500 early ones, R. A. Jackson 3000, Prior & Son, Prior & Herron and Pete Agor 3500 each and the Yakima Sheep company 5000. The latter approximated 110 per cent of lambs, and this was about the average placed on all the early work, which was expected to be profitable because of the low price of feeds and the outlook for a good market.

Both ewes and wether lambs the country over have been sold close, and good prices early in the season cleaned things up so that $7 and $8 net per head is predicted as an average for summer sales. Last year the average was around $6 and the total mutton sales were more than $2,250,000. The estimates of breeding ewes in the valley vary from 200,000 to 250,000 and the number of lambs produced annually in about the same proportion.

The job of removing 2,000,000 pounds of malodorous wool from the backs of a quarter of a million sheep is one which, left to the administration of professional sheep shearers and with an average price of 25 cents per pound awaiting its removal, is one viewed not without pleasure by sheepmen, who have been wondering for years where their next meal was coming from. Without question the strike of the ungrateful shearers previously referred to proves a fly in their ointment of pleasure, but also without question the position of the Yakima wool grower is better than it has been for years. Nothing points more definitely to this than the fact that the Washington Wool Growers' Finance corporation, which when proposed was thought to be the only thing which would save operators from disaster, first dwindled from a $100,000 undertaking to a local one for valley growers, and when interest even in that flagged, was abandoned altogether. The late G. Harold Powell, the California wizard of cooperation, said that growers would get together only under pressure of dire necessity, and the failure of the wool growers' undertaking looks very much like further proof of his statement. Probably the fact that the war finance corporation announced its readiness to assist if necessary helped to restore morale, but increasingly optimistic reports as to markets also helped. What need of organizing have wool growers who refused to sell at 12 cents in February, 1921, and a year later received 23 cents for their product? With a possible $2,000,000 in sight for their lambs, and another $250,000 almost jingling in their pockets for wool, why worry?

Secretary J. F. Sears, however, warns them that they are making a serious mistake in not handling their own product. "It is not an expensive matter; there would be no risks; it would take very little capital, and with the largest city in the northwest not only willing but anxious to assist us, it is a disappointment that it is not received with more enthusiasm."

COOPERATIVE EFFORT FACES THE SHEEPMEN.



Your eastern Washington sheepman is not a cooperator. More than any other class of producers, perhaps, he is accustomed to borrowing large sums of money from the bank, using it well while it lasts and making no complaint when it is gone, and looking forward confidently to the relining of his purse when the lambs are shipped or the wool sold. His mode of living—most of them have come up through the ranks—has made him independent, sometimes shy, and the necessity of fighting for what he got has made pulling against rather than with his fellow-growers the natural thing.

The Washington association, however, has given practical demonstration of the value of cooperation, and probably in time other benefits will be realized. The proposal referred to by the secretary was for the establishment of a bonded warehouse in Seattle, but this fell through largely because of opposition by some of the larger shippers, who preferred to continue relations with Portland. A very large proportion of the Yakima clip goes through Portland, which is now second largest, with respect to wool handling, in the country; early in April wool buyers flocked to Yakima for the opening of the shearing season, which was delayed at least two weeks by backward weather, and the steamer Harry Luckenbach, which left Portland April 18 for Atlantic coast ports, had aboard the first consignment of 1921 wool, Yakima clips totaling 160 tons.

Sheepmen had a long period of feeding last winter—as long perhaps as any in the history of the business—and the cold weather, though making for a wool of lighter shrinkage, holds back both growth and oils and will somewhat reduce the clip. A few Yakima bands are sheared from March 1 to 20, before lambing, but most start about April 1 and continue until the middle of May. Practically all of the work is done with power outfits, and 200 men find employment in the shearing camps. The price agreed upon between growers and representatives of the shearers' union was 10 cents per head, the average equivalent of about $7.50 per day. Last year 12 1-2 cents was agreed upon and there was a strike for 15 cents. Some paid it, which is one reason the association has difficulty establishing a price. Scarcely had work begun this year when demand was made for 12 1-2 cents per head, and independent crews were started. Professional shearers follow the season from south to north, and they claim that all arguments based on the large number of sheep they can render coverless in a day pale before the expense to which professional shearers are put to live.

FIRST CARLOAD OF YAKIMA WOOL.

The first carload of Yakima wool in the 1922 clip to be marketed was sold by Tom Smith, who also was reported first to finish shearing. He obtained 26 cents per pound, top price to date, from a Portland buyer, who shipped it east, but this was on a contract made several weeks previous, and contracting ceased some time before the shearing was full on. To the uncertainties of the tariff situation was ascribed the fact that shearing corral sales were few and at low prices, in spite of the large number of attendant "buyers." Few cared to operate extensively under emergency tariff schedules, with the possibility that permanent schedules will be lower. Hence there was a difference of 5 to 10 cents between the most conservative buyer and the most optimistic producer. Twenty-five cents per pound is the average around which the 1922 clip from Yakima is expected to be sold.

Eating down an old hay stack in the valley.

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter, January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible bankrupts. Complaints must be sent to us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of diseasee in stock sold through these columns.

Seek National Plan for Cooperative Marketing of Fruit

A fruit growers' committee of 21, appointed by the American Farm Bureau federation, convened at Chicago last week to begin active work on a national plan for cooperative marketing and distribution of fruit. This timely effort will be followed with keen interest and hope by the fruit growers of the Pacific northwest, particularly of the state of Washington, where a break between the private marketing agency of the Crutchfield interests and cooperative associations in or affiliated with the Skookum growers constitutes a grave menace to the important orchard industry.

The situation is especially serious in the Spokane valley, where the failure of the Spokane Fruit Growers' company has left the growers destitute of cooperative benefits, both as to production and marketing. Even the privately owned and controlled marketing agencies prefer to deal with bodies of organized growers, and as matters now stand in the Spokane valley there is no organization to finance the unorganized growers in the purchase of spray materials, boxes, paper, nails and other supplies and for picking and packing expenses, as the Spokane Fruit Growers' company had done for the last seven years.

Many growers have complained of the high cost of cooperation, but they are now faced with the danger of the still higher cost of non-cooperation.

If the American Farm Bureau federation can devise a way of strengthening cooperative fruit growers it will render a very great service to the orchard industry.

The Great Factor Is Himself

It looks as if any young man from farm or town who has a spinal column and a year of himself at his own disposal may profit by the splendid opportunities at the state college at Pullman. A recent report by the graduate manager shows the records of 1224 men students at the college a year ago last fall. Of that number, one-half had earned every cent of their college expenses before coming into the college for the year; 13 per cent were earning all their expenses while there.

Last fall scholarship standards were somewhat raised, but notwithstanding that 13 per cent were found to be earning all their way as they went; 15 per cent were earning half their way, and 20 per cent one-third.

The graduate manager's figures further show that a year ago last fall 83 per cent of the men students had earned all or some part of their funds before they entered, and this year 55 per cent are earning all or a part of their way as they go. In other words, the young man who has loafed his way up to the doors of the institution and proposes to loaf his way through it is in an unpopular minority at our state college, and we are glad to hear it.

There is scarcely a more educational privilege connected with college life than that of measuring, as one goes, the economic assets he has to offer the world.

Men have gone through Harvard university who worked eight hours in a machine shop as they went; men can go through our state college doing some few hours of salubrious work as they go, and be the better for it. The determining factor in the success of the attempt is the young man.

Pays to Give More Attention to Seed Potatoes

There is a good deal of interest in seed potatoes at this time. Men who have certified seed potatoes for sale are preparing to furnish material that should receive a premium in the market.

It is impossible to select potatoes from the bin and secure the best material. The yield is of primary importance in measuring the value of seed potatoes. The smooth, well-formed potatoes are necessary for the best of seed, although all material that has that appearance is not necessarily good for seed.

The presence of disease on the skin of the potato or in the flesh of the potato can usually be detected. There are some forms of disease or degeneration which can not be detected by any examination that can be given the material in the bin. The presence of these forms of degeneracy can be detected only in the growing plants and if they exist in the plants they are sure to exist to a much greater extent in the next crop.

The size of the potatoes selected for planting work is of importance. Potatoes weighing less than an ounce and a half will produce, usually, small plants which may gain vigor as the season advances, but are sure to be of small stature and weak early in the season and only the most fertile soil will enable them to make a good crop. Potatoes weighing more than 12 ounces are objectionable for seed purposes. The large potatoes are inclined to be over-mature and do not produce plants that have as high yielding capacity as the small potatoes which are generally somewhat immature.

Good storage is a necessity for the keeping of seed potatoes. The first sprouts produced by a potato are the strongest sprouts that it will produce. Potatoes that are withered during the storage in the winter are weakened and are not capable of producing as good plant material as those that are kept plump and fresh.

The ideal seed potato should be just starting its first sprout when cut for planting. Any loss of vitality or vigor through the producing of sprouts, unfavorable storage, or disease of any kind is sure to reduce the crop of the following season. O. M. M.

Value of County Agent's Aid

Pacific county cranberry growers have troubles of their own.

A certain fungous disease, as well as the fire worm, is seriously affecting the crop. They are also desirous of learning better cultural practices.

The cranberry growers took their troubles up to County Agent J. R. Beck, who, in turn, took the matter up with the state experiment station

Evidently County Agent Beck intends to get what he goes after. It is now announced that Dr. F. D. Heald, pathologist of the experiment station, and M. D. Armstrong, extension specialist, have been in conference and have laid plans to carry on experimental and demonstrational work during the year.

Starting in June a small cranberry experiment station will be established on the peninsula with a man direct from the state college in charge of the field details. From time to time Dr. Heald and Mr. Armstrong will visit the district and check up on the work as it progresses.

Washington Gleanings

A new fruit packing concern will operate in Puyallup this summer at the North Puyallup canning plant, according to reports from Puyallup.

Articles for incorporation have been filed at Olympia for the Puyallup Packing company, with a capital stock of $50,000. Frank Collinson and B. F. Emery of Portland are the incorporators. Both men are experienced fruit packers and canners, it is reported. R. F. Weeks of Seattle, division freight and passenger agent for the Chicago, Milwaukee & St. Paul railway, reports that the canning plant building owned by the railway company has been leased and the machinery sold to the incorporators. The North Puyallup plant operated here two years ago under the direction of the A. Robinson company of Portland. It did not operate last season. From present indications all three canning plants of the valley will operate this summer.

* * *

Two registered bred gilts were purchased during the month of March for pig club members of Benton county. Money was loaned by the Kennewick banks for the purchases. Miss Mabel Green and C. M. Hubbard, extension live stock specialist, selected the stock.

* * *

One of the most modern prune driers in Clarke county is in course of construction on the ranch of Niels Futtrup, a successful farmer and prune grower in the Felida section, near Ridgefield. It will be completed this spring and will cost between $7000 and $8000.

The drier is 63 feet in length, 32 feet in width and has an addition 16 feet by 20 feet. The kiln floor is made of concrete, reenforced. There are three kilns which hold 1000 trays. The capacity of the drier is estimated at nine tons of green fruit every 24 hours. A patent spreader will be used in its operation.

The Futtrup prune orchard is comprised of 25 acres, of which 20 acres are in bearing. The orchard is situated along the Felida-Vancouver paved highway and is one of the best in the county.

* * *

A large crew of men is relining the canals of the Franklin irrigation district. The state is assisting with an appropriation of $25,000. It is estimated that 5000 additional acres will be watered this year as a result of these improvement.

* * *

H. C. Davis of Granger eight years ago predicted that the Yakima valley would grow 20 tons of silage per acre. Now he says that more than 20 tons can be grown.

"The farmer who can not grow 20 tons per acre is fooling away his time," says Mr. Davis. "It has to be good land, however, but there is plenty of land that will grow 20 tons of silage per acre. To find land that is good enough is the easiest part. The corn of course has to be thick enough on the ground and it is not every kind that will produce that much per acre."

On looking over the corn that he selected in the fall for seed, he finds that 90 per cent of the ears have 20 rows of kernels to the ear and in the crop that he grew last year it was easy to find ears that had 24 rows.

* * *

The report of the state college extension service on agriculture shows that dairying is the leading agricultural activity in Pacific county, its value last year totaling some third of a million dollars. Berries rank second in value, amounting to a quarter million. Hay and silage crops are third in value, being $132,000.

* * *

Crops of wheat and oats will be grown this season on the 2000 acres of land that was Mud lake last year and has not been cultivated for the last 10 years. The drain put in by the Indian reclamation service is so successful that the ground has already been plowed and is now being seeded. No irrigation will be needed for the first crops grown on the lake bottom. The soil is a rich black alluvial deposit and should produce a very heavy crop, says L. M. Holt of the Indian service.

* * *

The Washington reclamation and development board has tentatively set aside $60,000 this year toward financing the diking of diking district No. 16, Cowlitz county, which lies west of Kelso, and between Coal creek slough and the Columbia river. This district contains 1000 acres of exceedingly fertile river bottom land.

* * *

The manufacture of malted milk was started at Bellingham early in April by the Royal Dairy Products' company. It has installed $50,000 worth of equipment and plans to push the product throughout the country, says President Floyd H. Dillabough. It has already made shipments to Alaska, but no announcement of its plans has hitherto been made. The local plant has a capacity of two tons per day, which requires 22,000 pounds of milk. It is the only malted milk plant west of Golden, Col.

* * *

Water is now available for all laterals along the 65 miles of the Sunnyside canal, according to J. L. Lytel, project manager of the reclamation service.

* * *

W. B. Meyers, chief deputy potato inspector, who was in Yakima recently, states that there is being put in this season a larger acreage of potatoes than ever planted in the Yakima valley before. Mr. Meyers is himself planting some seed grown by himself in the Harrah district and he is again repeating the experiment in potato seed growing

* * *

The 1921 potato crop of the Yakima valley is still turning out tonnage, breaking all records or estimates. The railroads report that 3947 cars had been shipped up till April 1 and there were 400 to 500 cars still in storage. This will bring the total to at least 4300 cars, as against 2325 last year. Some dealers insist that the cleanup will show 4500 cars.

Coming Events of Interest

May 1-6—Pierce county milk campaign.
May 4-6—Tulip festival, Bellingham.
May 5-6—Apple Blossom festival, Wenatchee.
May 6—Holstein sale, Elma.
May 12-13—Electric celebration, Ephrata.
May 20—Dairy calf club ercursion, East Stanwood.
May 24—Lewis county Holstein sale, Chehalis, Centralia.
June 3—Snohomish Guernsey picnic, Lake Stevens.
June 5—Northwest Guernsey breeders' sale, Portland.
June 7—Guernsey consignment sale, Chehalis.
June 19-24—Industrial club week, W. S. C., Pullman.
June 20—S. W. Wash. beekeepers meet, Elma.
June 20-22—Lincoln-Adams pioneer picnic, Keystone.
July 17-22—Farmers' week, experiment sta., Puyallup.
July 27-28—Whatcom co. Guernsey gallop, Bellingham.
July 27-30—Apple Shippers' association, Seattle.

FARM BUSINESS AND MARKETS OUTLOOK

Cattle Market Looks Healthy

Cattle prices have remained fairly stable for more than a month, a performance which presages a moderate upturn within the next 30 days.

The dressed beef trade has absorbed receipts in recent weeks without a decline of any consequence and has scored an advance in the last few days. Barring the coal strike, industrial conditions are improving and should broaden the outlet for beef. Passing of religious holidays has had such an effect. While beef scarcity is not probable, there is evidence of an increase in the supply of cattle.

If these signs work out as expected the trend of cattle prices in the next two or three months should be favorable to producers.

Most of the Pennsylvania fed cattle have been marketed, so that shipping orders are again in evidence at Chicago. Texas reports are unanimous that there will be no early grass beef from that state. California continues to take beef cattle from the southwest. Exporters are still buying at Chicago and Missouri river markets. The constancy of this foreign competition is not assured, however, since steers fed in eastern Canada are now becoming available for the overseas trade.

There is but little competition this spring from beef carried through the winter in the frozen state as the supply of that article on April 1 was only 50,750,000 pounds compared with a six-year average of 178,861,000 pounds.

Thousands of the light feeders which were taken to the country last fall are now returning, but many of them fell short of the requisite finish to qualify for the yearling trade, although most of them are selling at substantial margins over first cost. Such cattle should give much larger returns if put in higher flesh and sold later on.

Veal calf prices appear to have scraped bottom. Markets have been badly glutted, but the supply is beginning to let up. At this stage holding back calves which are not of excessive weight until the market can recover looks advisable. Prices on different markets have been far apart, owing to the high percentage of light calves which are unsuitable for intermarket shipment.

Country Wants Cows

Most markets report more than the usual country inquiry for cows and heifers, indicating that producers, especially in the range country, are returning to the cattle breeding game. Recruiting of herds will result in a light run of beef from the range states this year unless drought intervenes.

Interest in stocker and feeder steers is active as the grass season is right at hand. It is a period when cattle gain well, weather is improving and the country generally is longer on grass and feed than it is on cattle. The supply of suitable cattle at market centers is not large and prices remain extremely close to the level of those on killing classes.

Hog Receipts Due to Enlarge

Hog receipts at the leading markets last week were the smallest of the year with one exception, but prices made little response in spite of an increase in shipping orders from the east.

Domestic consumers are not eating pork so greedily as they were.

Export demand for hog products also has declined and weekly clearances are now falling behind those of last year. Packers report, however, that foreigners are making inquiries and these may mean increased sales before long.

Receipts of hogs usually pick up toward the latter part of April and during May, but this year wet weather and floods in some sections have retarded shipments. The backwardness of farm work also has been a factor. These hogs will swell the movement later, however, although it may not pick up much until the end of May. Unless demand broadens prices will decline as receipts increase, as big packers are still on the war path.

The reduction in the demand for hog products is indicated by large increases in storage stocks of meats and lard during March in spite of the fact that receipts of hogs were below the average. Lard in storage increased 24,000,000 pounds during March, the largest increase that has occurred in that month in six years. The six-year average increase is less than 1,000,000 pounds. In spite of the increase, however, holdings on April 1 were only 85,445,000 pounds, compared with a six-year average of 104,391,000 pounds. Furthermore, holdings of hog meats, including frozen, cured and in process of cure, increased 42,000,000 pounds, compared with a six-year average increase of 18,000,000 pounds. Nevertheless, total holdings on April 1 were only 589,830,000 pounds, compared with a six-year average on that date of 848,519,000 pounds.

The number of brood sows on farms on April 1 as reported by the department of agriculture was 11.1 per cent larger than on the same date of 1921. This is a big increase to occur in one year, but if current reports of heavy losses of spring pigs can be credited there is no danger of an excessive pig crop.

California Lambs

The first new crop California lambs of the season to be sent eastward were due to arrive at Omaha or Chicago during the present week. Some shipments in carcass form have been sent overland to eastern cities. The supply of lambs in other sections is so small that prices are practically the highest of the year. Receipts during May are quite apt to be smaller than in April and a decidedly bare spot may develop before the Tennessee and Kentucky lambs show up freely. Receipts at the leading markets last week were the smallest of the season and not far from the smallest at any time in the last decade. Dressed lamb prices displayed marked strength and shipping orders have been numerous. A shipment of nearly 20,000 carcasses of frozen Argentine lamb in the east threw a scare into the trade, but there appears to be a sufficient outlet for it.

Dull Season in Horse Market

With the passing of the farm chunk trade the horse market promises to become a sleepy affair as city buying is not sufficient to maintain much life.

Mills After Wool

Mills began to buy wool freely again last week. The American Woolen company was said to be a heavy purchaser of three-eighths and quarter blood wools at both Boston and Philadelphia and the head of this company predicts much higher prices for cloth as well as wool. Other mills also are taking more interest, indicating that manufacturers' stocks are not large. Dealers have been buying and new sales of Arizona wool were reported. Prices were steady, but the renewal of activity forecasts higher prices later on.

Foreign wool auctions are strong and yard mills in Bradford, England, refuse to sell for delivery earlier than August.

"Little Journeys to the Markets" has been an exceedingly valuable and interesting feature of the special market service in THE FARMER. "Pulled wool" is the topic this week and will be found elsewhere in this issue.

Europe Anxious for Wheat

A profound change in the attitude of foreign buyers has taken place recently and enormous sales for export from the United States, Canada, Argentina and Australia have been made recently. The quantity of wheat afloat which was burdensome a month ago has decreased about 13,000,000 bushels in two weeks, in spite of world clearances of 22,500,000 bushels in that period. In spite of an apparent absorption by importing countries of over 35,000,000 bushels in two weeks, the foreign market has remained strong.

The crop outlook abroad is not flattering, the condition of French wheat being placed at 64 per cent, with the acreage smaller than a year ago. Italy and Rumania are sending unfavorable reports. This situation, together with a prospect that the surpluses of Argentine and Australia will be near exhaustion by midsummer has led already to purchases of 20,000,000 to 30,000,000 bushels new crop hard winter in the United States for July and August shipment at prices 15 to 25 cents lower than the spot market. This buying, which gives promise of continuing right along, forecasts heavy clearances as soon as the new crop begins to move. Besides purchases of this sort, Manitobas and durum wheat are being bought nearly every day for prompt shipment. Lake navigation has been opened and the Canadian surplus is moving out.

Broomhall estimates requirements of importing countries up to August 1 at 204,000,000 bushels. He calculates that Australia and Argentina can furnish 88,000,000 bushels, Canada 60,000,000 bushels and the United States 56,000,000 bushels. Exports from the new crop may run as high as 20,000,000 bushels, leaving 36,000,000 bushels to come from the old crop. Since the report on total holdings on March 1 indicated that after allowing for average domestic consumption and an average carry-over on July 1 there was but little wheat left for export from the United States, is will require a close cleanup to furnish the amount of wheat allotted in the analysis above. Exports of wheat and flour in March were 14,371,000 bushels and have averaged close to 2,000,000 bushels weekly during April.

Up to the end of April Argentina will have shipped about 75,000,000 bushels since January 1 out of her surplus, estimated by the trade at about 115,000,000 bushels. If this estimate is correct and clearances maintain the average of the last four months the Argentine surplus will be cleaned up by the middle of July, with her next harvest five months away.

Australia is shipping steadily with around 40,000,000 bushels left, but a drought in that country is checking seeding and she may be loath to dispose of all her present surplus before the outcome of the next crop is assured. The crop in India is estimated at 356,000,000 bushels, or about 100,000,000 bushels more than last year and 23,000,000 bushels more than the average. Her home requirements are about 320,000,000 bushels.

The weakest spot in the immediate situation is the small domestic demand for flour. Mill operations have dropped to the lowest level in a long while. In spite of inactive demand from this source primary arrivals have been so small that the cash market is fairly strong. There is but little prospect that receipts will increase as stocks in all positions are light. Supplies of flour are being depleted also and increased demand from mills must appear eventually.

The new crop prospect is only fair, although reports on the whole are more favorable. The wet spring has been too much for wheat in some sections and a dry spell in May or June can do a world of damage, as the plant is watery and not deeply rooted. A lot of the wheat in the southwest which sprouted late shows low vitality and is not stooling well. Acreage abandonment in Kansas is estimated at 28 per cent. The position of the market makes it extremely sensitive to adverse crop news.

Besides these natural conditions in the market there are abnormal influences, due to the speculative situation in May wheat at Chicago, with the possibility of a "corner" in that delivery. No one knows just how the matter will work out and radical fluctuations can be expected which will affect the cash market. In the last few days there has been heavy selling by the longs, but the big lines are believed to be intact, in which case the market will tighten up again.

Corn and Oats

Demand for corn, which declined sharply after the first of March, is picking up again. Corn planting in the southern states is behind time.

Private reports point to a decrease in the acreage of oats as a result of wet weather and the fact that the crop has been highly unprofitable during the last year or two. Prices are still weighed down by the millstone of a huge visible supply. If a crop scare develops later the market may be jarred out of the rut.

Cash grain markets—The range of cash grain prices for the week ending April 26 was: Chicago—Wheat, No. 2 red, $1.42 1-2@1.47 3-4; No. 2 hard, $1.40 1-4@1.47. Corn: No. 2 mixed, 60 1-4@62 1-4c; No. 3, 58 3-4@61 1-2c; No. 4, 57 3-4@60 1-4c; No. 2 yellow, 60 1-4@62 1-2c; No. 3, 58 1-2@61 3-4c; No. 4, 57 3-4@61 3-4c; No. 2 white, 61@63 3-4c; No. 3, 59 3-4@62 1-4c. Oats: No. 2 white, 39@44c; No. 3, 37 1-2@39 3-4c; No. 4, 36 3-4@38 3-4c. Rye: $1.05 1-4@1.10. Barley: 58@67c.

Spring Decline in Clover Seed

The usual decline in clover seed prices, which marks the passing of spring seeding requirements and occurs toward the end of April or early in May, has set in. Prices on red clover seed for the new crop or for October delivery are about $3 below the cash market.

Chicago, per 100 lbs.—Clover, $13.60; timothy, $3.

Toledo, per bushel—Prime red clover, $15@22; prime alsike, $11.50; prime timothy, $4.50@6.

Feed Markets Placid

Feed markets are quiet. Flour mills are operating at only a small per cent of capacity and are behind on orders for wheat feeds, but jobbers are selling freely, although at prices about $3 higher than at the bottom of tthe break a few weeks ago. Oil meals are neglected, but prices show little change. Feeders and dairymen are buying sparingly of all feeds and export demand is dull.

Prices per ton (100-pound bags) in carlots: Chicago—Bran, $26@26.50; standard middlings, $26.50@27; flour middlings, $28@29; cottonseed meal, 36 per cent, $49.50; 43 per cent, $53.50; hominy feed, $22; gluten feed, $32.65; old process oil meal, $54.50.

Hay Markets Firm

The hay market continues firm, due to light receipts and moderate local demand, coupled with shipping orders at some points. Legume hays are slightly less active, as these are most affected by the opening of the new pasture season. Cold weather is delaying the first cutting of alfalfa. Heavy spring rains point to a rather large hay crop and good pastures.

Prices per ton in carlots: Chicago No. 1 timothy, $25@28; No. 2, $23@25; No. 3, $17@20; No. 1 light clover mixed, $24@25; No. 1 clover, $20@21; No. 1 clover mixed, $21@23; Alfalfa, $17@28; upland prairie, $17@19; midland prairie, $14@17; rye straw, $16@17; oat and wheat straw, $14@16.

Egg Prices Have Stabilized

Egg prices have been about as stable for several weeks as this market ever is. Receipts during the first and second weeks in April were of record size at the five leading cities, New York, Chicago, Philadelphia, Boston and San Francisco, but the third week in the month showed a small decline and it is probable that the high point of the spring period of heavy production has been passed. Since receipts will be large enough to furnish a surplus over immediate consumptive needs to go into cold storage for three months yet, prices will not make much headway for a while, but a slight upward trend is probable.

Receipts of dressed poultry have been falling off, but they usually begin to pick up again early in May. Cold storage holdings of frozen poultry in the United States decreased 20,000,000 pounds during March. They are still about 10 per cent larger than last year.

Broad Demand Supports Butter

Butter markets scored fractional advances again last week, due primarily to the breadth of consumptive demand. The increase in receipts over the winter level has not been as rapid as expected and trade sentiment has been affected more or less by this fact.

Production is very large, however, and receipts of butter at the leading markets for weeks have been running ahead of the supply during the corresponding weeks in each of the three preceding years. Nevertheless, withdrawals from cold storage have exceeded the average. Since January 1, for example, receipts of butter at Chicago, New York, Boston and philadelphia total 2,022,525 tubs, compared with 1,583,000 tubs in the same period of 1921, while cold storage holdings on April 25 were only 2,303,000 pounds, compared with 5,507,000 pounds on the same date last year.

Usually receipts become heavy enough by the second or third week in May to necessitate placing some butter in cold storage. If events follow the normal course a readjustment in prices to a storing basis by that time will be natural. The market is highly sensitive and dealers on distributing markets are anxious to keep the supply on the move to avoid being caught with large stocks when the expected decline in prices takes place.

Prices for 92-score fresh butter on April 26 were: Chicago, 38c; New York, 39 1-2c; Boston, 39 1-2c; Philadelphia, 40c; San Francisco exchange quotation, 36c.

Cheese Prices Still Yielding

Cheese prices at country markets were lowered again last week and prices in distributing markets are gradu-

Skookum Fruit Goes Two Ways

Some Units Cancel Contracts; Cooperatives Sell Their Own; Damage Suits Are Filed

As a result of the Skookum-Crutchfield controversy six of the original Skookum units have cancelled their contracts with the Northwestern Fruit exchange and have signed up with the North American Fruit exchange, controlled by Arthur R. Rule and W. F. Gwin. Three others have renewed their contracts with the Northwestern Fruit exchange and one unit has left it optional with its members to ship through either agency. Peshastin, Leavenworth, Entiat, Chelan, Pateros and Brewster have signed up with the North American. Wenatchee, Okanogan and Richland have renewed their contract with the Northwestern and Cashmere has signed with the North American, but left it optional with the growers to ship through the Northwestern, provided they make a decision within 10 days from May 1.

While the controversy has been raging as to the disposition of the Skookum crop between Crutchfield on the one side and Rule and Gwin on the other, the Wenatchee District Cooperative association has decided to establish its own marketing agency and sell its fruit direct to eastern wholesalers. Last year the association employed the North American to market its fruit. Both Crutchfield, representing the Northwestern Fruit exchange, and Rule and Gwin representing the North American Fruit exchange, sought to control the output of both the cooperative association and Skookum Packers' association units. As the matter now stands, both of them have lost the cooperations, while the North American has secured about two-thirds of the Skookum tonnage to one-third that has signed up with the Northwestern.

Another phase of the controversy is the institution of five damage suits in the Chelan county superior courts as follows: First, Crutchfield and the Northwestern Fruit exchange sued Gwin, Rule, J. A. Warman, A. A. Prince, D. H. White and the North American Fruit exchange jointly for $100,000 damages claimed to have been sustained through the alleged breaking of the five-year contract entered into March 8, 1921, between the Skookum Packers' association and the Northwestern Fruit exchange for the sale of the fruit grown by the association units. This contract has never been cancelled by the Skookum Packers' association, Skookum officials declare, but the various local units mentioned above have cancelled their contracts with the association, which leaves the latter without any fruit to deliver to the Northwestern exchange.

In the suit commenced by the Northwestern, the defendants were charged with conspiring to break the contract for the sale of Skookum fruit, and in answer to this suit four counter-suits have been commenced by the defendants. W. F. Gwin first sued for $100,000 damages, alleged to have been sustained by him through the publication of the complaint filed by the Northwestern in its original suit. This complaint was published in full as an advertisement in the Wenatchee Daily World, April 8. The day it was filed J. A. Warman, formerly president of the Skookum Packers' association, filed a suit for $100,000 upon the same grounds as those mentioned by Gwin, specifying the publication in the Daily World as one of the grounds for the suit asking that Crutchfield and the Northwestern Fruit exchange be adjudged to be in contempt of court for attempting to influence the decision of the jury by circulating a copy of their complaint through the press.

D. H. White, formerly treasurer of the Northwestern Fruit exchange, also has sued Crutchfield and the Northwestern for $100,000 damages alleged to have been sustained through the publication of the suit commenced by the latter. Finally the North American Fruit exchange, by A. R. Rule, sued the Northwestern Fruit exchange for $300,000 damages upon the same grounds. A letter written by H. G. Fletcher, sales manager for the Northwestern Fruit exchange, is also mentioned as one of the causes of action in all the suits.

One result of the controversy has been to convince the growers, shippers and business men of the entire district that they must get together upon some common ground for advertising and marketing the crop, and an advertising bureau is now being formed for the purpose of assessing each grower three cents per box to be expended in a national advertising campaign.

Berry Picking

Will Pay 40 Cents for Raspberries and 30 Cents for Strawberries

At a recent meeting of the trustees and members of the advisory board of the Puyallup & Sumner Fruit Growers' association plans for harvesting the crop of 1922 were made. It was decided to pay 40 cents a crate for picking red raspberries and 30 cents for strawberries, with a bonus of 10 cents a crate on raspberries for pickers remaining through the entire season, and rendering satisfactory service. No bonus is to be paid on strawberries. Prices for the picking of blackberries will be fixed later in the season.

Following a full discussion of the affairs of the association, W. H. Paulhamus was elected president; H. H. Elerding, vice president, and O. E. Shay, secretary-treasurer. The president and secretary-treasurer were instructed to furnish surety bonds of $10,000 each.

F. A. Streblow was appointed by the board to act as field inspector for the next 60 days, to call on the members and advise them of matters pertaining to the berry crop.

To Go Ahead

With Greater Wenatchee Project

The state department of conservation and development estimates that it will cost $7,137,738 or $166.77 per acre to put water upon 42,800 acres in the Greater Wenatchee irrigation project. If 50,000 acres of the Quincy land is included the cost will be $194.02 per acre and if 100,000 acres of Quincy land is irrigated Engineer Langloe of the department estimates the cost will be $179.73 per acre. While these figures are somewhat higher than the original estimate, the Greater Wenatchee committee feels that the project is entirely feasible, that it can be financed and that immediate steps should be taken to form a district and complete the project.

The preliminary survey made by Engineer Langloe contemplates the very best and most permanent construction possible, including concrete dams, steel-lined flumes, a concrete-lined canal and a steel bridge across the Columbia river which will carry two steel pipe lines supported by concrete abutments. The Columbia river crossing alone is estimated to cost $1,025,713.

Tunnel work on the project will cost $2,433,852 for the Greater Wenatchee project alone. If the Quincy acreage is included the tunnel work would cost $5,900,592.

After considering the report of Engineer Langloe for three days the Greater Wenatchee committee of 15 decided to go ahead with organization for the purpose of financing and completing the Greater Wenatchee project.

A committee of five was elected to study the survey and make recommendations regarding the time of construction and as to whether the Greater Wenatchee project or the combined project shall be adopted.

Cooperative Victory

Judge Frater of the superior court at seattle has decided all points in favor of the plaintiffs in the suit of the Washington Cooperative Egg and Poultry association against Frederick A. Taylor, a Bothell poultryman. The case charged that after agreeing to sell all his eggs, except hatching stock, through the association, the defendant had been using other agencies to market his eggs, and asked for 5c per dozen damage on all eggs so sold, as well as a restraining order preventing further sale of eggs except through the association. Judge Frater ruled that damages to the amount of $319.50 were due plaintiffs and issued an order restraining any further outside selling. It is announced that the case will be appealed to the state supreme court.

AN "ANNUAL" ANIMAL.

The hog comes on the farm in the spring and goes off in the fall, so you do not have to feed in the worst part of the year.

No Damage to Yakima Fruit Trees

The cold weather of the last winter did no damage to Yakima fruit trees; the 13,000-car apple crop of 1921 is being "cleaned up" as satisfactorily as any in its history; plantings are being increased considerably, and the prospects for 1922 are for a total of shipments just about equal to that of last season—larger if anything, for so far this spring weather conditions have been ideal. With 475 carloads rolled in March, apple shipments from the valley reached a total March 31 of 12,336 cars, and the holdings April 1 amounted to 713 cars, as compared with twice that number a year ago, according to figures furnished by the Yakima Valley Traffic & Credit association. The Yakima Herald, whose figures have been used by federal authorities, totals the value of the 1921 apple crop at $15,500,000, and of the entire fruit crop at $20,000,000.

"Under the same conditions as last year we would have practically the same crop," said District Horticultural Inspector W. L. Close to a representative of THE FARMER, "but with slightly more favorable frost conditions the cherry, pear and prune crops would increase materially, for you will recall that late April freeze in 1921. Under normal conditions, too, there will be a larger peach crop, for the wood has about recovered from the 1919 freeze. It showed great improvement in 1921 and should show still more this year. The cold weather of last winter came on too gradually and was not severe enough to do any damage. Temperatures of 10 to 20 degrees below zero are required for serious injury.

H. A. Glen, general agent of the Northern Pacific, is recognized as one of the most accurate estimators of crops in the Pacific northwest. Here is the way he sees prospects for the present year, and it is especially interesting in view of last year's production (the record up to that date) of 17,165:

Apples	13,155 cars
Cherries	154 cars
Peaches	1,533 cars
Pears	2,540 cars
Prunes, plums, etc.	334 cars
Grapes	67 cars
Melons and Cants	480 cars
Total 1922 fruit crop	18,263 cars

and 7 degrees below one night has been our lowest. The cold weather was long continued, but it came on gradually, giving the sap plenty of time to get into the roots, and there was heavy snow. This furnishes no excuse for letting down on spraying precautions, however. The growers seem to think that when we get zero weather the codling moth and the scale quit business for the season, and it so happened that after the freeze of 1919 little mildew appeared. Last year, however, it knocked down 20 per cent of the Jonathan crop.

"Planting this year seems to be stimulated somewhat. One of the big nurseries has booked by far the largest spring sale of any year in its history, and others report similar increases. The Delicious is one of the leading varieties, possibly on account of the high prices received late in the winter, and grapes are increasing remarkably. In 1920 only about 3000 plants, mostly Concords, were brought into the county. In 1921 43,125 were imported, in addition to more than 13,000 grown locally. They returned more than $400 per acre last year, and the crop can be contracted for a period of years at $50 per ton."

Inspector Close is deeply interested in the potato work of his department, and is cooperating with the county farm bureau in securing better types of seed potatoes to increase the yield. "Some exceptionally good yields prove that this can be done," said he, "and by eliminating disease and poor seed the 8 to 10 ton average of production in this valley can be raised considerably. The valley adopted the United States grade this year, and we have inspected and certified 1500 carloads—more than ever before. We have been particularly fortunate in that shipments carrying our certificate have experienced less than 1 per cent of rejections. The certificate seems to fill a long-felt want of shippers and growers, and it has a standing not attained before we cooperated with the federal bureau of markets."

The inspector estimated that the county's potato acreage last year was 20 per cent larger than any previous year since he has known of it, and it certainly will be increased in 1922. The 1921 crop totaled 4300 carloads.

The valley peach crop, which dropped from 2200 carloads in 1919 to 138 the season following the freeze, came back to 1332 in 1921 and is due to reach 1800 this year. Pears are expected to produce about the same total of 2400 cars.

The apples left in cold storage were expected to clean up quickly at good prices. Yakima and Wenatchee together had 500 cars fewer on April 1 than Yakima alone had a year ago.

Yakima Alfalfa

Large Orders From the Palouse

Notwithstanding that on February 1 only 7000 carloads of hay had been shipped out of the Yakima valley, as compared with 11,000 carloads on the same date the year before, with 4000 to 5000 carloads yet to be shipped and much of the crop spoiled by snow and rain; notwithstanding poor market, little demand and a low price at that time ($8@9, as compared with $13@14 in 1921), there is every indication today that the valley's hay crop, said to be the heaviest ever cut, will be moved out to the last ton at prices not thought possible two months ago.

The change is due to receipt of large orders for alfalfa to ship into the Palouse country, where farmers are calling for the hay to condition their work horses, which wintered on straw. One dealer early in April had orders for up to 2000 carloads of first and second class hay at $15 to $16 for one and $12.50 for the other, with good hay already getting scarce.

Thousands of tons of hay were permitted to spoil under winter snows, which discouraged farmers did not take the trouble to remove, but the shrinkage is small where stacks were covered or well built, and the general situation is most encouraging. To members of the Washington Cooperative Hay Growers' association who decided to assume their debts rather than go through bankruptcy, the upturn in the hay situation is particularly pleasing, and Receiver F. A. Schreiner is taking every advantage of it, in "saving the cooperative idea."

More Rabid Coyotes

Boundaries of the rabies quarantine district of eastern Washington have been extended by order of the state department of agriculture and the state health department to include all portions of six counties where rabid coyotes have been spreading the disease by biting dogs and other animals.

The counties now included are: Benton, Yakima, Kittitas, Klickitat, Franklin and Grant. The new quarantine order embodies a provision empowering state and federal hunters to enter upon private lands to trap and kill predatory animals.

PUREBRED HOLSTEIN CLUB.

A purebred Holstein club has been organized in the Grandview district of Yakima county by County Club Agent E. C. Scott. Five of the nine members have secured their heifers or cows. A purebred Guernsey dairy club, with 25 members, has also been organized and the Guernsey Breeders' association has completed arrangements for financing the purchase of a carload of heifers for the boys. The 25 members will be divided into four groups, and the banks of the county will furnish $10,000, charging 7 per cent interest for the money.

$600,000,000 FOR HIGHWAYS.

Expenditures for highways in the United States last year amounted to approximately $600,000,000, a sum that places road building among the big industries of the country and justifies a large expenditure for experiments to determine just how roads should be built to meet the needs of the ever-increasing traffic, according to the bureau of public roads, United States department of agriculture.

STOP THE LITTLE LEAKS.

The little losses destroy the profits.

Your Kind of Battery Needs Our Kind of Service

To get all the miles and months out of your battery it must have proper care from the very first day you put it in service.

That means having water put in at least twice a month, and seeing to it that the charge is kept up to the proper point.

Also to go straight to the nearest Battery Headquarters the minute you suspect your battery isn't up to the mark. Each one of the names listed below is Battery Headquarters in its community, equipped and organized to give battery service according to the Willard Standards.

It makes no difference what make of car you drive, or what make of battery is on it. Willard Standards of Service provide for exactly the same care and attention to all batteries regardless of make or any other consideration.

All the dealers listed below give the Willard Standard of Service on all makes of Batteries:

Stockyards Law Has Teeth

Boycott at St. Louis on Cooperative Shippers Is Broken

At the close of a recent hearing, 110 individual commission men representing 39 "old line" commission firms comprising the entire membership of the St. Louis live stock exchange pleaded guilty to the government's charge of instituting a boycott against cooperative commission firms at the St. Louis stockyards and consented to an open market.

This was the first formal complaint to be filed by the secretary of agriculture under the recently enacted packers' and stockyards' control law, and resulted in a complete victory for cooperative live stock marketing.

The principal charge in the complaint was restraint of trade through a boycott in that the 39 "old line" commission firms constituting the entire membership of the exchange, refused to do business with order buyers or traders, except the order buyers from the very large packing concerns who buy live stock from the Producers' Live Stock Commission association and the three other independent commission companies that are not members of the exchange. It was charged that at a meeting attended by some or all of the commission men who are members of the St. Louis Live Stock exchange, "it agreed upon and adopted as a policy to hamper, obstruct and prevent by coercion or intimidation" the order buyers and dealers fro making purchases from the independent commission concerns. The firms which are members of the exchange are bound by its rules which fix trading regulations. One of them is that members must not trade with nonmembers.

Handle Much Business.

The Producers' Live Stock Commission association at East St. Louis received 107 cars in one recent week, holding its lead in first place over all other commission firms.

The Central Cooperative Commission association, which is the live stock producers' commission firm established at St. Paul by the Minnesota State Farm bureau, the same week, handled 269 cars out of 1009 cars received at that market in the five market days. This was 26.8 per cent of the total commission business transacted on this market last week. The Central Cooperative Commission association did a business of $5,000,000 for its members during the first five months of its existence and saved these members $49,000 in commission charges or a saving of nearly 50 per cent of the charges made by "old line" commission firms.

Portland, Ore., is the most recent live stock market to be investigated by the National Live Stock Producers' association with a view to establishing a Producers' Live Stock Commission association there.

The Movement's History.

Live stock producers have felt for many years that they have given too little consideration to marketing their live stock. This conviction developed to a point where the president of the American Farm Bureau federation, as a result of numerous requests of live stock producers, farm and live stock organizations, called a national live stock conference in October, 1920. At that conference action crystallized in the authorization of the president of the American Farm Bureau federation to appoint a farmers' live stock marketing committee of 15. This committee was appointed in January, 1921, and submitted a report at the conference in November, 1921. The plan as submitted by the committee and adopted by the conference is built upon the cooperative marketing principle. To provide the required agencies for the effective handling of the live stock marketing problem and otherwise promote the best interests of live stock producers it is necessary for the producers themselves to have:

First: Producers' live stock commission associations established at the terminal markets to render service to individual producers and cooperative live stock shipping associations.

Second: Producers' stocker and feeder companies established in connection with terminal commission associations.

Third: A national organization of live stock producers.

Fourth: Cooperative live stock shipping associations established at shipping points where available business will justify and local sentiment approves.

Obviously no commission company, whether cooperative or otherwise, can operate successfully without giving due consideration to two things:

First: It is necessary to secure liberal patronage. If a commission company is not able to have a sufficient quantity of live stock consigned to them to sell it can not operate economically or successfully.

Second: It requires a conservative amount of money to establish an office and to furnish working capital with which to do business. This money is to be raised by memberships, fees for which are as follows:

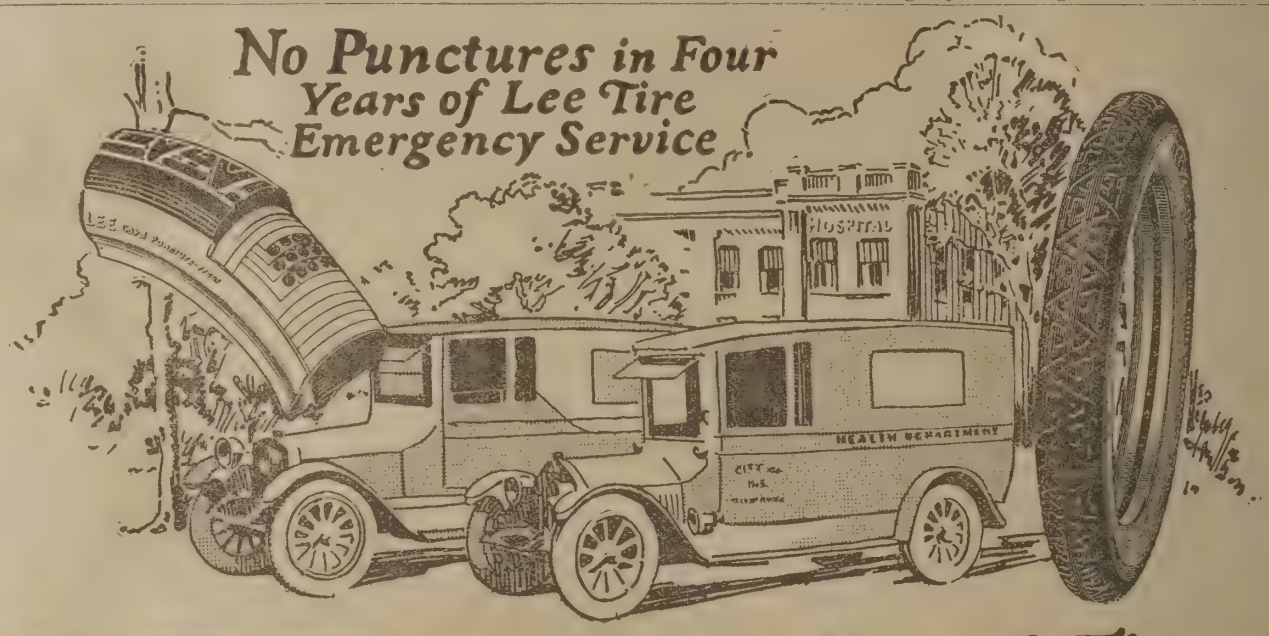
a. The minimum membership for a cooperative live stock shipping association is $50. This membership is for an association doing a business of 50 cars or less annually. An association shipping more than 50 cars annually will pay 50 cents for each car in addition to the first 50 cars. The volume of business determining membership will be reckoned on the business of 1921.

b. The membership fee for individual live stock producers not members of cooperative shipping associations or members of cooperative live stock shipping associations who ship their own stock to market, is $10.

Payment of these fees entitles the holder to life membership.

The board of directors of the National Live Stock Producers' association must know, in order to answer the questions that have been asked:

First, whether or not you or the shipping association of which you are a member will patronize a producers' live stock commission association when it is organized on the market or markets to which you consign your live stock.



And second, are you ready to take out membership in a producers' live stock commission association?

It is necessary in order to secure the establishment of producers' live stock commission associations and producers' stocker and feeder companies on the markets which you patronize to have the assurance from you and others that there is sufficient patronage and sufficient memberships to finance the proposition, and no commission association will be established until there is assurance at hand with reference to these two points.

Further information may be obtained by addressing the National Live Stock Producers' association, 608 South Dearborn street, Chicago, Ill.

YAKIMA FRUIT YIELD.

The average yield of Yakima fruit trees, with exception of cherries, last year was far above the average for the eight-year period between 1914-1921 inclusive, according to figures compiled by W. L. Close, district horticultural inspector. Apples, 3.94 boxes per tree, against 3.34 boxes; pears, 2.14 boxes, against 1.86 boxes; peaches, 7.10 boxes per tree, a figure exceeded only three times in the period covered by the statistics; prunes and plums, 138.22 pounds per tree, against 95.59 pounds for the eight-year average. Cherries, 50.66 pounds; eight-year average was 67.8 pounds.

No Punctures in Four Years of Lee Tire Emergency Service

LEE *Puncture Proof Tires*

LEE

From the Isolation Hospital, Milwaukee Board of Health, comes the following: "We have used Lee Puncture-proof tires for the past four years—used the first Puncture-proof Cords in Milwaukee. We have never been laid up on account of punctures and have always received exceptional mileage."

"EXCEPTIONAL mileage and no punctures." What a world of saving, in time, money and annoyance, Lee Puncture-proof Tires represent on the farm.

Equipped with Lee Puncture-proofs, your automotive equipment gives the maximum of non-stop service.

Nails, spikes, broken glass or metal have no menace for Lee Puncture-proof tires because into them are built three permanent layers of case-hardened steel discs that no metal can penetrate. Yet, Lee Puncture-proofs are as resilient—as easy riding—as ordinary pneumatics.

Because the Lee Puncture-proof is unlike any other tire, it is the only pneumatic carrying a cash-refund guarantee against puncture, in addition to the maker's standard guarantee covering Lee Regular Fabrics and Cords.

So, for your own protection—for safety and service and saving—let your next tires be Lee Puncture-proofs.

The Lee Line of Pneumatic Tires and Government Specification Grey Tubes is represented by responsible dealers, in every locality.

"Cow Counties" Organize a Defense League

LONG ago a city political boss referred contemptuously to rural communities as "cow counties." There must be a large number of "cow" counties in Washington, for a conference in Spokane last week of 45 legislators and other representatives voted to form the "Cow County Defense league." The following resolution was unanimously adopted.

Resolved, That the Senator Palmer reapportionment initiative measure No. 45 is inequitable and not for the best interests of the state of Washington and that the same should be defeated. That a committee of four be appointed by the chair to join with counties west of the mountains in forming a statewide cow county defense league to defeat said measure, and that the chairman of this meeting be a member of said committee.

Senator L. L. Westfall of Spokane, chairman of the meeting, will name three other members from different sections of eastern Washington. The state meeting for the enlarged organization of the defense league is to be held in Olympia in about three weeks. Nearly every county east of the Columbia river was represented at the meeting.

Ever since Senator Palmer brought forward his initiative measure widespread alarm has been growing in other parts of the state. The confessed purpose of the measure is greatly to enlarge Seattle's proportionate representation in the legislature at the expense of greatly reduced representation in many other counties of the state.

THE FARMER sounded a note of warning when this measure was first proposed. It pointed out that under its provisions the representation of many farming counties, especially in the state senate, would be very materially reduced, with the result that a well-oiled political machine from King county (of which Seattle makes up most of the population) could dictate legislation at Olympia.

The advocates of the Palmer measure have been saying that the present legislative apportionment law is in violation of the state constitution and that the legislature is directed by the constitution to reapportion the legislature after the taking of each federal census. But the supreme court of this state, in a decision reported in the 92d Washington (court decisions), page 540, decided that the present apportionment law is valid and that the provision of the constitution advising the legislature to reapportion the state after the taking of each census is advisory and not mandatory. We quote from that decision.

"It is held by all of the courts that the legislature can not be compelled to redistrict the state, as directed by the constitution, and, as a corollary thereto, it must follow that our apportionment act, lawfully enacted, will continue in force until superseded by a subsequent valid act.

"It is axiomatic also that the constitution is a limitation of power, not a grant of power, and that, save for constitutional restriction, the legislature could apportion the state in any manner it deemed best, and the courts would be powerless to inquire into the validity of the act."

Under this decision the legislature is reasonably given its own discretion to determine the time it will take to sound out public sentiment and frame a just apportionment law that will be in the public interests.

The Washington Farmer hopes that the people will refuse to sign the Palmer initiative measure, and that if the measure should go upon the ballot they will vote it down. It is manifestly against sound public policy to permit a single great city in a state like Washington to obtain such ascendency in the legislature that rural interests will be at the mercy of a group of city politicians.

Better Farm Credit

Legislation to provide six permanent remedies for defects in the agricultural credit system of the country has been recommended by President Harding by Eugene Meyer Jr., managing director of the war finance corporation, in a report based upon his survey of conditions in the west.

As remedial measures he recommended:

"Enactment of legislation specifically authorizing the organization of institutions to rediscount the paper of live stock loan companies, and the establishment of a system for the more adequate supervision and inspection of the live stock which furnishes security for the paper.

"Frank recognition of the need for the orderly marketing of agricultural products in a more gradual way and over a longer period, and the adjustment of existing banking laws and regulations with this end in view.

"Establishment of a rediscount facility to make it possible at all times for cooperative marketing organizations to obtain adequate funds for their operations.

"Extension of the powers of the federal reserve banks to include the purchase in the open market of eligible paper secured by nonperishable agricultural commodities, properly warehoused.

"Encouragement of state nonmember banks to enter the federal reserve system and reduction of the minimum capital required for admission to the system—admission in such cases to be conditioned upon an undertaking to increase the capital to the present minimum of $25,000 within a definite time.

"Amendment of the national banking act to permit a limited amount of branch banking within a limited radius of the parent institution."

Pending the providing of these improvements to the national credit machinery, Mr. Meyer suggested extension to January 1, 1923, of the period during which the war finance corporation may make loans to (1) cooperative marketing organizations and live stock loan companies where it appears that they are unable to obtain adequate financing at reasonable rates through other channels, and (2) to banking institutions on agricultural and live stock paper in exceptional cases and where it appears that the public interest will be served by such action.

To Market American Fruit

The fruit marketing committee of 21, appointed by President J. R. Howard of the American Farm Bureau Federation, met in Chicago last week and took the preliminary steps for the formation of a national marketing organization. It is proposed to complete organization of what will be known as the Federated Fruit Growers, which would act as a national sales agency for the marketing of the products of all fruit growers who affiliate with the Federated Fruit Growers.

The temporary board of directors appointed include W. B. Armstrong of Yakima, Wash., and J. S. Edwards and S. W. Baker of California. Mr. Edwards is acting general manager and vice president. Other members of the board are:

C. E. Durst, Illinois; B. F. Moomaw, Virginia; N. R. Peet, New York, and C. E. Stewart, Florida.

Wool Prospects

The effect of the new proposed permanent tariff on wool, of the world shortage, and of the increased consumption of wool throughout America and Europe, will be to increase wool prices this fall and winter, in the opinion of Manager R. A. Ward of the Pacific Cooperative Wool Growers. He believes the present dullness in the market, coupled with the strike situation, is likely to bring about a free selling of wool at shearing time, at depressed prices. "Growers who market their wool in an orderly manner this year are likely to reap a harvest. Those who are induced to sell on a glutted and depressed market at shearing time will sell at lower prices than will prevail later in the season," Mr. Ward added.

THURSTON GUERNSEY CLUB.

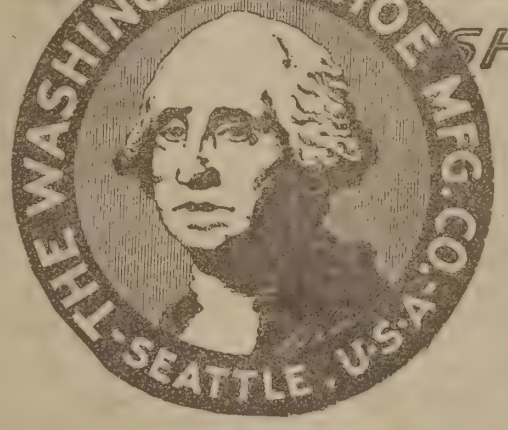
C. H. Bergstrom has been elected president of the newly formed Thurston County Guernsey Cattle club, which was organized recently at Olympia. C. C. Aspinwall was elected vice president and Emery Chaplin secretary-treasurer. Plans are being made to bring in a carload of Guernseys from Wisconsin. E. B. Stookey, county agent, assisted E. L. Westover of the American Guernsey Cattle club in the organization.

ColumbiaBasinLeague

The Columbia Basin league, consisting of representatives of the three Pacific northwestern states, was formed at Spokane last week with the election of officers and the selection of Spokane as the league's headquarters. The activities of the league in behalf of the early development of the big project will be financed by a fund of $200,000, which it is planned shall be raised in four installments of $50,000 every six months for the ensuing two years.

Charles B. Hurley, Tacoma, was elected president of the league and the vice presidents are Reginald H. Parsons, Seattle; H. D. McMillan, Ephrata; C. Detering, Portland, and Earl D. Farmin, Sandpoint, Idaho.

The trustees were optimistic throughout the meeting, which lasted all day, and the sentiment favored an immediate campaign in Washington, D. C., and other parts of the east and delegated James A. Ford, secretary of the Spokane Chamber of Commerce, who was named secretary of the league, to leave this week for Washington, D. C., to prepare for the opening of an office and the campaign to secure the appointment of a federal commission to investigate the Columbia basin project.



The educational campaign will include two reels of motion pictures, publicity in newspapers and magazines, lectures and distribution of literature. The motion pictures, which are to be taken soon, will tell the story of the Columbia basin.

A SOW ON EVERY FARM.

No farm is too small to keep at least one good brood sow.

SHOES FOR BOYS

A Mark! — *and its meaning*

When you find shoes for men or boys that yield real satisfaction in comfort, appearance and quality—that return dividends in the shape of economy, durability and health—by all means wear those shoes and continue to patronize the man who makes them and the man who sells them. Men who put their utmost into their goods put their identification mark upon them. Why? To guide you in your first purchase? Perhaps! But mainly to guide you in your SECOND and following purchases. It is the makers' and the dealers' guarantee that you will get the same satisfaction out of second and following purchases you enjoyed through the first. Hundreds of thousands have made their first purchase of Washington Shoes and now regard the maker's mark—George Washington's head encircled by the words, "Washington Shoe Mfg. Co."—as their guide to healthful, comfortable, long-wearing, dry shoes for men and boys. You have a right to obtain this shoe service if it is not yours now. There is a dealer for your community ready to deliver it to you. Ask and learn who he is. Note the trade mark on both Washington Dry Sox Shoes for men and on Billy Buster Shoes for boys. That mark will guide you to the same complete satisfaction and economy in your subsequent purchases you shall obtain in your first. NOTE: "Washington" Shoes are sold only through dealers; but, if the dealer you inquire of hasn't them, address us, and we'll see that your demands receive attention.

KLIMATICALLY KORRECT SHOES FOR MEN

LIVESTOCK AND DAIRY

Packing Butter

By A. H. RISHOR, Instructor in Dairy Manufacturers, Washington State College.

Kindly tell me how to put up butter. How much brine to use for every 10 pounds of butter and how to make the salt brine. What is the best month to put it up? MRS. M. M.

Nespelem, Wash.

In order to obtain satisfactory results from putting up butter or storing butter on the farm, as well as elsewhere, it is necessary that the entire process of manufacture and packing be performed with the utmost care. Butter made from sweet cream or from cream which is but slightly sour keeps longer and keeps better than butter made from cream which is quite sour. The first requirement then to obtain satisfactory results from putting up butter is to see to it that it is made from fresh sweet cream with a good flavor.

When you have enough cream for a churning it should be heated to 145 degrees F, and held there for 30 minutes. It is then cooled down to about 50 degrees and held at this temperature for at least three hours before it is churned. If the cream is not held this length of time, there is too much danger that the butter when it comes will be greasy and soft. The cream should probably not be over 52 degrees at the time of churning. The churning should be discontinued when the butter granules are about the size of a corn kernel. After draining off the buttermilk care should be taken in the washing of the butter, as when any buttermilk is left in the butter it does not keep well, so for this reason it might be well to wash the butter in two sets of good, pure water, which should be about the same temperature as the buttermilk.

Heavily salted butter does not keep as well as butter which is lightly salted, so for this reason care should be taken when putting up butter not to use too much salt. After thoroughly working in the salt the butter may be put up in one or two pounds prints and is then ready to be packed.

The brime is prepared by boiling the water first and then adding a sufficient amount of dairy salt to make a brine strong enough to float an egg. The brine is then put in a stone jar which is free from cracks or holes in the enamel and which has been thoroughly scalded with hot water. The butter may then be submerged in the salt solution, being careful that the brine at all times covers the butter; in order that the butter may be submerged in the brine continually it is well to place a plate or a wooden circle over the top of the butter and weight it down with a stone. The butter should then be stored at as low a temperature as you can find.

The best time to put up butter is probably during the month of May or June, as it is ordinarily considered that the butter produced during these two months is of superior quality when properly made.

VETERINARY

By DR. S. B. NELSON.

Cow Pox—If a cow has cow pox once and is cured by a doctor will it come back again? E. M.

Edmonds, Wash.

Generally it will not. Once in a while it might.

Cause of Bloat.—Will sweet clover that is now being used for pasture by many farmers bloat cattle when it is damp or wet, the same as alfalfa? O. H. V.

Thornton, Wash.

Under conditions of an animal eating more than it can digest, if hay is frosted, moldy or damp, it may result in indigestion, as evidenced by bloat. This holds true with sweet clover hay as well as any other type of hay.

Bloody Milk—I have a heifer that calved last September and commenced to give bloody milk from one teat and then it came out thick and stringy. What is the cause? N. W.

Challis, Idaho.

Give your heifer one tablespoonful of fluid extract of phytolacca in some water in the morning. Give her one teaspoonful of sodium hyposulphite in one pint of water at night. Do this for about one week or 10 days.

Sick Pigs.—I have two pigs that weigh 100 pounds each. They have been sick for three weeks. Their throats and heads swell and the eyes are inflamed. They seem to choke while drinking and have to stop and breathe through their mouths. They are losing flesh. I feed milk, ground oats, barley, wheat and cracked corn.

Yamhill, Ore. E. A. B.

Try putting a quarter of a teaspoonful of potassium iodide on the feed once daily and also painting the outside of the throat with tincture of iodine.

Hair Comes Off—One of our cows is losing her hair in spots. The skin is smooth and hard and there seems to be dandruff on some of the spots. The cow seems to be getting thin and does not enjoy her feed as before. E. McK.

Ellensburg, Wash.

There may be some slight parasitic trouble affecting the cow. I would suggest that the following treatment might be of value. Make a semi-liquid ointment of sulphur and petroleum and apply that liberally two or three times, four or five days apart.

Sore Eyes.—I have a mare that has trouble with her eyes. Her eyes water and at times she appears nearly crazy, with what appears to be intense itching. She rubs her eyes against anything within reach. A. S. F.

Ferndale, Wash.

You might try the following treatment for the eye trouble: Drop a few drops of a 2 per cent solution of argyrol in water, into the eyes night and morning. At noon also drop in a few drops of the following prescription: Zinc sulphate, one grain; boracic acid, 20 grains; water, one ounce.

Lead Poisoning—I have a cow that dropped a calf four weeks ago. She was in good shape until about 10 days ago when she got out for a short time and ate some hay from a stack that had been cut from the orchard where we sprayed last year. The hay also was mouldy. In the hour that she was out she also grazed on some green alfalfa. The next morning she would not eat and she gave less milk. For three days she breathed heavily and refused to drink and she wobbled when walking. About the third day I gave her some salts and she seemed to get some better, but still has very little appetite and still wobbles when walking. A. E. K.

Attalia, Wash.

The wobbling is a symptom of the arsenate of lead poisoning. I think you had a combination of both poisoning and indigestion due to a change of hay. At the present time it might be well for you to give the cow one ounce of compound tincture of gentian in a little water once daily. If in 10 days or two weeks, she does not quit wobbling, it might be well to give her one dram of potassium iodide in a little water once daily for seven or eight days. Three days afterward, give her one pound of epsom salts in three quarts of water.

KRESO DIP No. 2 IS SOLD IN ORIGINAL PACKAGES AT ALL DRUG STORES

Used by three generations —still 100% gun

THE sturdy Stevens shotgun made its first "kills" in the hands of our grandfathers. With it our fathers first experienced the joys of hunting.

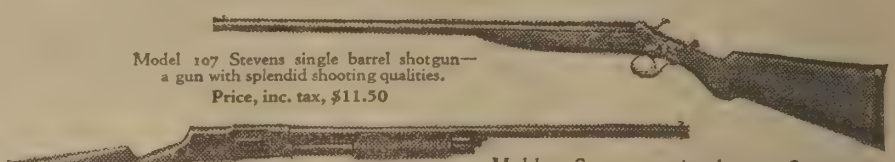
And today young men treasure it, not only for its past, but because right today, the good old Stevens still maintains its unbroken record for hard and straight shooting.

In many cases we have found that identically the same gun has been handed down from grandfather to father to son.

You can buy a more expensive gun than a Stevens; but you cannot buy better shooting qualities.

It's easy to prove the accuracy of a Stevens

Here's the test for a full choke: on a piece of paper draw a circle 30 inches in diameter; measure off 40 yards and fire into it. Your Stevens will throw an even pattern of 70% of the pellets into that circle.



A Stevens modified choke will throw an even pattern of 50%. And a Stevens cylinder bore will throw an even pattern of 40%. Try it. Only a perfectly bored gun will meet this test.

Stevens manufactures a complete line of small bore rifles and shotguns of every description. Ask at your dealer's or write for the interesting catalog describing in detail the complete Stevens line. Address:

LIFE PRESERVERS FOR LIVE STOCK

By DR. E. E. WEGNER, W. S. C.

INFECTIOUS DISEASES, ARTICLE VII.

Blackleg.

This disease is common in cattle and by no means unheard of in sheep, as in the latter it occasionally causes very considerable losses in the young animals. Other species of the domestic animals do not suffer from it, though there are other diseases that are hard to distinguish from it at times.

Blackleg is infectious, but not contagious. That is, the animals do not take it directly from one another, though after having had it and dying and lying out on the open ground, where other animals may pass over the place and lie on the ground where the one died, there is a good chance that other healthy animals may contract the disease by getting the organism into the system from the ground or feed, as the case may be. For that reason it is wise to burn or bury the carcasses of animals that have died from blackleg, and not allow them to remain on the open ground. If they are buried they should be limed well before the dirt is thrown onto the carcass, so that the whole thing will be well destroyed.

Blackleg runs a very rapidly fatal course and in many instances the owner does not know that anything is wrong until he finds an animal dead that was apparently healthy a few hours before. If, however, one should follow the cases carefully the first symptom would be seen to be a lameness in one of the limbs or a stiffness and swelling of some muscular part of the body, followed very soon by rise of temperature and general ill health. The animal refuses to feed and lie down and may be unable to get up, or only with difficulty, and then may be unable to use the diseased member. If an examination is made of the swelling it is found to be hot and painful at first, changing very soon to a cool, rounded one that crackles when the hand is passed over it. This sound is like that of crushing paper and is due to the accumulation of gasses under the skin.

Animals diseased may live for only a few hours or several days. Very few recover. The first cases are sometimes mistaken for injuries that might cause a swelling of the same proportions, but the progress of the cases distinguish it from them.

We do not know just how the infection reaches the place under the skin or between the muscles, where it starts its trouble. It may get in through the skin, though we do not ordinarily concede that disease germs get in that way. It may be absorbed from the digestive tract and be taken out with the blood, though we are not positive in either case. We do know, however, that the earth is well supplied with the organism and that there are few localities where the disease does not occur, so that the danger is a constant one in a great many places.

The danger is greatest in the spring and fall of the year and in animals that are between the ages of 3 months and 2 years. In the very young calves the danger is slight and in animals over 2 years of age that have been raised in a region where blackleg is common the disease also is uncommon. Animals, however, that have been raised in a blackleg-free region may take the disease if removd to a blackleg region, no matter what the age.

Vaccinate to Prevent.

The treatment for blackleg after the symptoms appear is quite useless. Though there are men who believe that certain procedures are of value, we have not been able to recommend any of them. The only method of combatting this disease is by vaccination as a preventive. This has been very successfully employed and has protected animals by the hundreds of thousands every year. There are several kinds of vaccines on the market, some made by private manufacturers in a powder form or in the liquid form and that prepared by the pathological department of the bureau of animal industry at Washington, D. C. This latter is distributed free of charge to stockmen for use in their herds. It is mixed according to directions supplied, with a given amount of water and a proportionate amount injected into each animal. The animals vaccinated show no ill effects as a general thing and are protected for a variable length of time. One vaccination is not sufficient for life protection as a general rule thing and we recommend that it be applied at the age of 3 months or thereabouts and again at 1 year. Some prefer to vaccinate three times between the ages of 3 months and 2 years and such a course is not ill advised.

Careful attention to vaccination will quite certainly insure against losses from blackleg and either the government vaccine or some other should be used wherever this disease has been known to exist.

Write to your state college for vaccine or information as to how to secure it.

Close Grazing by Pigs

"I learned something by experience about close grazing," said T. S. Lester of Sunnyside, Wash. "I always supposed that a sheep would eat a pasture down about as close as any animal, but some of my shoats got through the fence into a pasture with some late lambs, and presently I began wondering why the lambs were not doing well. The pigs just ate the feed away from them."

Lester was formerly well known in the Yakima valley as a breeder of Poland China hogs, but he closed out most of his animals in the sale of February, 1920, and since then has turned to dairy cattle and has been building up a herd of purebred Jerseys. "I like dairy cattle because they consume a greater amount of roughage and because they provide a steady income. If for any reason a sow fails to produce a litter she is a dead loss for the season, but a cow is producing 10 months in the year. I chose Jerseys because it is purely a butterfat proposition at Sunnyside and because I think they will produce more butterfat at a given cost than any other breed."

Here is one breeder who has been fortunate in securing heifer calves. He bought the small purebred herd (four cows and a calf) of Fred Sheaben of Mabton in March, 1920. There have been but two bull calves, and now the herd numbers 13, 11 of them females, from that beginning. His present herd sire, Gwendola Olga's Lad, a 4-year-old son of Gwendola Olga Chimes, has a double cross of Rosaire's Olga Lad, and his dam is a daughter of Silver Chimes of S. B. Both are gold medal bulls, and Gwendola Olga Chimes is in seventh place among senior 4-year-olds with 812.44 pounds of fat. At one time she held 10th place among 2-year-olds.

That Twin Calf Again

To the Editor: I noticed an article in the veterinary department of THE FARMER asking about a heifer calf that is a twin to a bull.

We raised a heifer that was a twin to a bull. She has dropped her second calf and is giving between five and six gallons of milk each day. Her test is 4.1 per cent.

Silverdale, Wash. G. H. F.

He lost enough cream every six months to pay for a DE LAVAL

"I had a cream separator that I had been using and thought was all right. I have five cows and had been selling cream and feeding skim-milk to hogs as fast as separated. A few days ago I sold the hogs and left the skimmed milk in the can. The next day I noticed cream on it. I was so surprised that I skimmed it off by hand, churned it and made one pound and six ounces of butter.

"It took little figuring to show how much cream I had been feeding my hogs each day. I figured I had paid the price of a No. 15 De Laval every six months."

This letter is typical of many letters we receive.

Perhaps this same thing is happening to you and you don't realize it. If you are using an old or partly worn-out separator, or are skimming by hand, undoubtedly you are wasting enough cream to pay for a De Laval in a short time. The waste of cream occurring every day is criminal—more than enough to pay for the entire output of the De Laval Factory.

Most any kind of cream separator will do fairly good work the first few months, when it is new. But if it is cheaply made, after the first few months your trouble will begin.

And the worst of your experience with such a machine will not be the fact that it wears out quickly or that it runs hard, or that you are piling up repair expenses, but that you are losing a lot of butter-fat.

Why take chances at all when you can get a De Laval, which has won hundreds of prizes, thousands of contests, and is used by millions. Experience has proved that it is the best cream separator that money can buy, and in the long run the cheapest.

Order your De Laval now and let it begin saving cream right away. See the local De Laval Agent, or if you don't know him, write to nearest office.

POULTRY AND RABBITS

Half the Flock

By ALFRED G. LUNN.

"The male bird represents half the breeding flock." This statement has been repeated many times and is true. Some times he represents more than half the flock by stamping certain characteristics upon the offspring.

At any rate the male bird is a big factor and if he represents half the breeding flock and is mated to 15 hens he is as valuable as those 15 hens. He should be a vigorous fellow and this will be indicated by the way he looks after his flock. A good male will be continually searching for an extra grain and will call his hens to get it. Often he becomes thin and gets out of condition in his desire to care for the hens and he should be given an extra feed occasionally.

In selecting the male little can be determined of his breeding power from general appearances. One authority says he should be built like a high-producing female; with good width between the pelvic bones and great capacity in the abdomen as shown by the distance between the pelvic arch and tip of keel bone. In other words he should be broad at the tail end of the back and he should be deep, when viewed from the side, between the upper and lower line.

Another authority, however, says this is wrong. That when applied to the female such a system will procure the best hens, but the male bird should be selected on just the opposite lines. He cites examples of the dairy herd. He says, "If we want a good dairy cow we want one which is narrow through the shoulders both ways, and widening farther back till she is wide and deep through the hips, but in selecting a male to produce high producers we select the male which has a powerful neck and shoulders, but tapers back so he is narrow through the hips.

"Pedigree breeding is the only accurate means we know of that will tell us the breeding power o feither the male or female, and as it is not practical for every one to do this work the only recourse we have is to purchase such a male from a reliable breeder. The first cost may seem large, but remember, we are on the trail of the extra egg that will mean the difference between profit and loss.

"Don't be afraid of investing a little extra in the male if you feel that he will increase the average egg production of the flock."

The Dead Fowl

One Should Know How to Examine

"Every poultryman who looks after his own flock should know how to examine the occasional dead fowl in order to ascertain what caused its death. This is by no means a difficult matter and it would save much time for the breeder as well as for us. Then he would also know better how to care for and feed his flock," began Dr. W. T. Johnson, veterinarian for the western Washington experiment station at Puyallup, Wash., who gave a series of illustrative lectures on poultry diseases recently. "By knowing how to 'post' a bird poultrymen could save many fatalities each year, checking a disease before it gets a start in the flock.

"Grasp the dead bird by both legs and pull them straight sidewise until the skin breaks on one side. Then insert the fingers and tear the skin from the body and cut away the abdominal walls with a pair of scissors. The breast bone can be broken off with this piece at a point about half way up the body.

"The entire intestinal tract is now exposed and it can easily be examined for diseases. The gizzard can be removed and the crop and windpipe cut open in order to see if there are any parasites present. The same can be done to the intestine below the gizzard, which may be diseased, or again, there may be some form of intestinal worm present. Any trouble with the egg sac can be detected by feeling, although it may also be opened. It is a very good plan to know what these organs should look like when normal, since it is then a very simple matter to detect any trouble.

"As a general rule there are two classes of trouble in the flock, divided between the old birds and the young, growing stock. The former are susceptible to organic diseases and breakdowns, while the young stock are apt to contract contagious diseases. Both, however, lead to the devitalization of the stock and should be looked after before the trouble gets any worse.

"There are cases when the feed goes down the wrong passage and reaches the lungs instead of the crop. Such a case is caused by weak muscles in the throat and usually results in the death of the bird. Impaction below the crop can often be felt from the outside before the bird dies with the trouble. The crop should be emptied by the addition of a small amount of water with a syringe and holding the head down. The impaction can then be worked out by the same manner and the patient given a light diet until she regains her former strength.

"In case there is any fiber below the gizzard it means that there is either too much fiber in the ration or that the bird is not healthy enough to make use of what she is getting. When such a case occurs it causes irritation of the intestinal tract and allows disease to enter. It is usually the latter that is the cause of death.

"Tape worms are often found in the intestines, but these can easily be detected because of their size and peculiar jointed appearance. The large, round worms are also found in the small intestine. They are from one to two inches in length. There is another type known as the small, round worm, which is found in the large intestine. This, however, is much smaller, being only about a quarter of an inch long. The eggs of all these worms are ejected by the hen and they are picked up by other birds and the trouble spread. Young stock in particular is susceptible to the worms and it is for this reason that they should be kept in sanitary pens. Plowing and sunshine will destroy the eggs as well as the worms themselves, this being another argument for an intercropped yard.

"It is not always necessary to cut a hen open to find the cause of her death. In case of a prolapse, commonly called a 'blow out,' the organ can be seen protruding from the hen. It may be pushed back and the bird removed from the flock in order that she can be given a light diet until she can be fattened and killed. It has been found to be poor economy to treat birds that are troubled with blow outs. The condition is usually because they have been pushed too fast and their egg-laying

MINERALIZED WATER ROUTS CHICKEN LICE

Tablets Dropped Into Drinking Founts Banish Vermin, Make Fowls Grow Faster and Increase Egg Yield.

Any poultry raiser can easily rid his flock of lice and mites, make chickens grow faster and increase their egg yield by simply adding minerals to the fowls' drinking water. This does away with all bother, such as dusting, greasing, dipping and spraying. The necessary minerals can now be obtained in convenient tablets, known as Paratabs. Soon after the fowls drink the mineralized water, all lice

and mites leave them. The tablets also act as a tonic conditioner. The health of the fowls quickly improves, they grow faster and the egg yield frequently is doubled. Little chicks that drink freely of the water never will be bothered by mites or lice.

The method is especially recommended for raisers of purebred stock, as there is no risk of soiling the plumage. The tablets are warranted to impart no flavor or odor to the eggs and meat. This remarkable conditioner, egg tonic and lice remedy costs only a trifle and is sold under an absolute guarantee. The tablets are scientifically prepared, perfectly safe, and dissolve readily in water.

Any reader of this paper may try them without risk. The laboratories producing Paratabs are so confident of good results that to introduce them to every poultry raiser they offer two big $1 packages for only $1. Send no money, just your name and address—a card will do—to the Paratab Laboratories, Dept. 878, 1100 Coca Cola Bldg., Kansas City, Mo., and the two $1 packages, enough for 100 gallons of water, will be mailed. Pay the postman $1 and postage on delivery, and if you are not delighted with results in 10 days—if your chickens are not healthier, laying more eggs and entirely free from lice and mites—your money will be promptly refunded. Don't hesitate to accept this trial offer as you are fully protected by this guarantee.—Adv.

At what age should you take needless risks with your health?

Is that a queer question?

Then many people are doing a queer thing—and often it turns out to be a serious thing.

The Federal Bureau of Education says in its rules for the health of school children that children should not drink coffee or tea. This rule is based on the well-known fact that the drug element in coffee and tea whips up the nerves, and that serious ills often follow.

If it's a good rule for children to keep away from the harm of nerve-stimulation, isn't it a good rule for everybody?

Think it over.

Granted that your body may *stand* more, can your judgment afford to *risk* more? Any doctor can tell you what coffee and tea often do to the health of adults as well as children.

There's no sacrifice in being safe. Postum is a delightful, satisfying mealtime beverage, wholesome and pleasant alike for adults and children. Postum has no age limits!

Your grocer has both forms of Postum: Instant Postum (in tins) made instantly in the cup by the addition of boiling water. Postum Cereal (in packages of larger bulk, for those who prefer to make the drink while the meal is being prepared) made by boiling for fully 20 minutes.

Postum *for* Health

"There's a Reason"

Wipe Out Every Rat and Gopher

Amazing New Discovery Quickly Kills Them All—Not a Poison.

Rats, Mice, Gophers—in fact all Rodents can now be wiped out easily and quickly. Imperial Virus will do it. This new discovery is a fluid, true Virus. Entirely harmless to humans, poultry, stock, pets, etc.

Infects Rodents only. Greedily eaten on bait. Sets up burning fever. The pests communicate it to others, and all die outside, hunting air and water. Imperial Virus is put up in sealed bottles, thus insuring full strength and potency. Only safe, sanitary method to overcome these pests. Protect your Poultry, especially Baby Chicks and Egg Hatches.

YOU CAN GET YOURS FREE

Here's how! Send $1.00 today (currency, M. O., Checks, etc.) and we will give you by return mail, postpaid, two regular, full sized (double strength) $1.00 bottles of Imperial Virus. Use one to rid your place of these pests, and sell the other to a neighbor, thus getting yours free. Special inducements to represent us.

If more convenient, send no money, just your name and address to Imperial Laboratories, Dept. 440, 2110 Grand Ave., Kansas City, Mo. Pay postman $1.00 and few cents postage when two bottles arrive. Guaranteed to do the work to your entire satisfaction within 30 days or your $1.00 will be cheerfully refunded.—Adv.

ORCHARD AND GARDEN

Tree Wounds

Treatment May Do Actual Damage

To the Editor of The Washington Farmer: Following the spring pruning each year many orchardists expend considerable labor and some money in treating the pruning wounds on their trees. While the orchardists' intentions are good, the amount of benefit which the trees receive from this treatment is questionable.

In the dry climate of eastern Washington, wood decaying fungi are not present to the extent that they are found in the more humid sections of the country. Furthermore, the dry atmosphere does not favor the start of these fungi on the cut tree surfaces.

Since a properly cut pruning scar starts healing itself during the next growing season following and will continue to heal each succeeding year by growing over with bark, the smaller wounds—those under approximately three inches in diameter—should heal without the need of any preservative treatment.

For the larger wounds one of several materials may be used. But it must be understood that any paint, preserving or disinfecting chemical which will preserve wood and destroy rot fungi will also kill the delicate cambium or growing tissue on which the tree is dependent for new bark growth and the permanent healing of the wound. This growing tissue is found on the wound at the line where the bark meets the sapwood.

It is in the dead or heartwood in the center of the wound that rot fungi start and where the protection is needed. Therefore, in treating the larger wounds it is recommended that the treatment be applied to the centers and not applied closer than one-half inch to the margins. In this way the growing tissue will be uninjured and may begin growing over and healing the wound.

Probably white lead paint is as good wound treatment material as anything. Its preserving and disinfecting qualities may be improved by dissolving one ounce of either cyanide of mercury or bichloride of mercury in a little turpentine and mixing thoroughly in one gallon of the paint. Coal tar and creosote, asphaltum and many other materials have merit for wound treatment, but none of them should be applied over the growing tissue. Bordeaux paste is a good treatment material, but it lacks the permanence of those named above and will require renewed applications from time to time.

Remember that the tree must heal its own wounds. No treatment by man can hasten this process, but improper treatment may permanently inhibit healing by the tree. The most any treatment can do is to prevent rot fungi entering the heartwood of the wound before the wound has time to naturally and permanently heal.

F. E. BAILEY,
District Horticultural Inspector.
Spokane, April 26.

Orchard Problems

By C. C. VINCENT.

My currant and gooseberry bushes last year had small worms on them. They ate the leaves off but did not bother the fruit. What are these worms called? Will they come back this year? MRS. C. S.H.

From your description would say that it is the imported currant worm that is doing this damage. The adult saw flies appear as soon as the gooseberries and currants leaf out in the spring. As soon as the leaves appear the females deposit their eggs in rows along the principal veins on the underside of the leaves. The eggs hatch in about a week or 10 days and the small larvae begin eating holes through the leaves, eventually consuming the entire leaf. As the worms increase in size they become more destructive and if very numerous are able to entirely strip a bush of its leaves in a few days. The worms feed upon the host plant for about three weeks. They can be very easily destroyed by spraying with arsenate of lead at about the rate of one pound to 50 gallons of water as soon as the worms begin feeding. If the fruit is nearing maturity, then fresh hellebore should be used at the rate of four ounces to two or three gallons of water.

BRIDGE GRAFTING.

What can I do for trees that the rabbits have barked? B. O.

If your trees are entirely girdled, then they can be saved by bridge grafting. Bridge grafting is a method used to save girdled trees and for the healing over of wounds that have been made by various cultivating implements. You should first clean out the wounded area and cut the bark back until it is smooth, then cut some scions wedge-shaped at both ends, which may be taken from the tops of the trees, and vary them in length according to the size to the wounded area. Ordinarily the scions are cut about an inch longer than the wound. These scions are pushed up firmly under the live bark above and below the wound. This carries the sap from the roots to the top of the tree and will keep it alive until the scions unite with the tree. The scions should be placed from about one inch to one and one-half inches apart around the wounded area. After inserting the scions cover over all of the exposed area with grafting wax, which is made by melting together four parts resin, two parts beeswax and one part beef tallow.

Control of Swarming

Honey production on an extensive scale makes it necessary sometimes to distribute the colonies of bees in several apiaries to avoid overstocking. Then comes the serious problem of controlling the swarm. Swarm control is less difficult in producing extracted honey than with comb honey. It is less troublesome in some locations than in others.

The reasons for these differences are important in devising measures for swarm prevention. These and other problems relating to swarming are discussed in farmers' bulletin 1198, issued recently by the United States department of agriculture. This bulletin may be had free upon request addressed to the division of publications.

Some strains of bees, the department of agriculture says, have a stronger tendency to swarm than others. So, to some extent, swarming may be reduced by careful selection in breeding.

Colonies having large brood chambers are less inclined to swarm than those in quarters too small. Strong colonies having good queens may need 60,000 to 70,000 cells for rearing of brood, during the period of extensive brood-rearing in the spring, in addition to the cells used for storing honey and pollen. Colonies having good combs throughout are less inclined to swarm than colonies having poor combs.

Inferior combs may greatly increase the swarming tendency, both by reducing the amount of available brood-rearing space and by acting as barriers in the way of a free expansion of the brood nest. The bulletin gives a dozen or more swarm preventive measures to be taken by bee owners

The Dead Fowl

(Continued from the preceding page)

capacity has grown so rapidly that they can not keep it up.

"Cases have come to the station where the entire oviduct has been torn out by the other hens in the flock leaving only a small part of the membrane to diagnose. If the owner knew what the normal organs should look like he could detect the trouble and feed accordingly. Broken eggs can also be detected from a close examination of the lower abdominal cavity. A case of this kind, of course, requires immediate attention if the bird is to be saved.

"It is not uncommon to find a hen that stands in an upright position and appears to be heavy in the abdomen. In such cases there is often a break in the abdominal organs. By a close examination one can tell if all the organs are in good condition, in which case she may recover. If she does not she should be killed.

"Some hens will get on the nest, but will not lay. This is often the result of the egg falling through a break in the oviduct and lodging in the lower abdominal cavity. The egg can sometimes be worked out the right passage, but when such cases are found the feed should be governed so as to regulate the functioning of these organs.

"One of the worst diseases prevalent among the young birds is white diarrhea. The life cycle of the organism which causes this disease has been traced and found to be held over in the mature hen which lays a diseased egg and produces an infected chick. One diseased chick in the flock will infect the other birds, thus causing much damage. The disease can be eliminated by clean yards and houses and by making blood tests of the breeding hens. This will locate the infection, which can be weeded out and there will then be no infected eggs hatched. This disease, however, is not troublesome in western Washington, and no poultryman should be alarmed at common diarrhea, since it is not the dangerous type.

"Mouth infection, a disease commonly known as canker, can easily be treated if the proper care is given to sanitation. Open the bird's mouth by pressure behind the ear and scrape away the yellowish substance which accumulates. The area is then touched with disinfectant. When treated in this way the bird should recover and go on producing eggs, but if let go she is apt to die.

"Any bird that can not be improved by some kind of treatment should be killed. Many poultrymen will not bother with a dopy hen, but believe their time is worth more than such a fowl.

"Chickenpox can easily be distinguished from other similar disorders by the grayish colored blisters which appear on the comb. The lesions are at first red, but soon take on a grayish-silver hue, which later turns to black. These can easily be distinguished from scabs caused by fighting by their shape, since those caused by chickenpox are always round. Chickenpox and a discharge at the mouth don't go together, although a bird with the above disease often has the yellowish substance in the mouth.

"Poultrymen are now getting good results by vaccinating for chickenpox and the station is prepared to send out the virus and the syringes at cost prices."

A WASTE OE EFFORT

It is a lot of time and work wasted to try to grow a crop from inferior seed.

ESSENTIAL TO PROSPERITY.

Optimism is necessary to good times.

SATISFACTION

BEFORE your grain can be marketed, it must be threshed, and nothing brings greater satisfaction than a threshing job well done. Good, clean, fast threshing, day after day, without loss or delay; and at low cost, requires certain important qualities in a machine. All these qualities are found in Case threshers. This is proved by their eighty year record in the hands of farmers and threshermen everywhere. Today, Case machines thresh more of the world's grain than any other make, because they excel in these qualities.

They Save The Grain—From the feeder to the windstacker all parts work as a unit in threshing and saving all the grain.

They Thresh All Grains and Seeds—There is not a seed or grain grown that cannot be threshed, cleaned and saved with a Case Thresher Everything necessary to handle any kind of grain can be furnished.

They Clean Thoroughly—The moment the grain leaves the cylinder Case separators begin the work of cleaning, and continue it until the grain is delivered in prime condition for marketing.

They Are Easy to Operate and Adjust—Changing a Case from one grain to another usually requires not more than three simple adjustments which can be made without stopping the machine.

They Are Durable—The average life of a Case Thresher is easily 20 years. Most of the first steel threshers we sold in 1904 are still in use and good for many more years. Our present machines are even more durable.

Because of these and other good qualities, Case Threshers give universal satisfaction to threshermen and farmers alike.

There are seven sizes of Case Threshers, 20x28, 22x36, 26x46, 28x50, 32x54, 36x58 and 40x62.

Interesting new booklets on the advantages and money making possibilities of Case Threshers are now ready. Write for your copy.

Ingersoll Watches

The Utmost in Value

MORE than merely low price sets Ingersoll apart from every other watch. There are other low-priced watches.

Ingersoll watches are reliable, sturdy, honestly good-looking, as well as sold for so little money. Your dealer will show you the complete line.

Announcement

By an arrangement completed on March 31st, the Ingersoll assets were purchased by the Waterbury Clock Company. Thus Ingersolls are now marketed directly by the manufacturers, who have made Ingersolls from the beginning.

INGERSOLL WATCH CO., INC.,
New York Chicago San Francisco

GENUINE GRIMM ALFALFA SEED
Certified-Guaranteed

The extensive branching root system of GENUINE GRIMM produces an abundance of nitration and humus and leaves the soil in excellent mechanical condition when plowed under.

It is unexcelled as a covering for orchards and pasturage.

A ten-year test by the Experiment Station at Guelph, Ontario, has shown that GENUINE GRIMM produces from one to two tons more hay per acre than common.

Seeding cost practically as low as common alfalfa.

Insure your crop by purchasing in the original sealed and labeled bags.

Write for information and prices.

Blackfoot, Idaho.

LOST If you can't locate a thing, it might as well be lost. Maybe the very thing you want is offered on our "Want Ad" page in this issue.

Glance over the bargains on the "Want Ad" page.

A Benefactor to the Race

An old friend of mine back in Indiana, William McCord, many years ago pointed with pride to the farm on which he had been born and raised. "The thing of which I am proudest," said he, "is the fact that today that farm produces better crops than it did 50 years ago when I was a boy. Then we often had as low as 20 bushels of wheat to the acre, and sometimes lower. Now the crop is seldom below 40 bushels."

"How do you account for the crop growing better? Doesn't the crop deplete the soil?" said I. "Yes, of course," said he. "Clover did it, that is, clover and rotation. Of course, all the manure that could be made by as many animals as the farm could carry has been used. But after all, clover and rotation and good tillage and care in seed and seeding, have made the soil better and better. We haven't used artificial fertilizers and tile drainage has not been necessary. But year in and year out this soil has grown better and better."

The old man smiled with pride and satisfaction. And well he might. To have taken off the land a good, plain farmer living; to have raised on it a good family; and then to have left it capable of producing more and better crops for future generations was an achievement which might well cause a smile of satisfaction. What a contrast to the many who exploit the soil for what they can take off, who merely speculate in it, who have no thought for the future.

A. A. Bryan

THE THING TO DO.

The way to help the world get onto its industrial feet is to put our own individual business onto an efficient basis.

FARMERS' WANT ADS

This is the farmers' "want," "sale" and "exchange" department for small advertisements of farmers, including live stock and poultry.

Advertising rates for ads running 1 to 3 times, 10c per word per insertion, with a special rate to Farmer subscribers, as follows: Ads running 4 to 12 times, 9c per word per insertion; ads running 13 times or more, 8c per word per insertion.

All commercial and land advertising 10 cents per word each insertion. Open also to non-subscribers.

In using these columns advertisers must observe: (1) No advertisements will be inserted for less than $1.00. (2) Every word, number and initial, including name and address, must be paid for. (3) New advertisements, changes of copy or cancellations must reach general office, Spokane, Wash., 10 days in advance of publication date. (4) Cash must accompany order.

Above rates include insertion in The Washington Farmer, The Idaho Farmer and The Oregon Farmer, which constitute the Pacific Northwest Farm Trio, 46 Review Building, Spokane, Wash.

136 ACRES, 70 CULTIVATED, BALANCE pasture and fine timber; 6-room house; fine barn; 25 milch cows, team horses, all farm tools; running water. Price $13,000, $5000 cash, balance easy. Wm. W. Garvin, Port Angeles, Wash.

RICH IRRIGATED AGRICULTURAL LAND, on Indian reservation, just opened up, $50 per acre, including fully paid water right. Terms. Browning Development Co., Browning, Mont., 227 Hutton bldg., Spokane, Wash.

70 ACRES, LOCATED IN THE FERTILE Nooksack river valley; all cleared; 15 minutes' walk from Lynden high school; 140 feet from the city limits, $21,000. Liberal terms. Wesley Brooks, Bellingham, Wash.

SELL YOUR PROPERTY QUICKLY FOR cash; no matter where located. Particulars free. Real Estate Salesman company, 501 Brownell, Lincoln, Neb.

46 ACRES FINE LEVEL ALL TILLABLE POtato ground, near Valleyford, Wash.; small orchard, no buildings, at $125. Terms. W. Manley, Box 2167, Spokane.

YAKIMA—40 ACRES DIVERSIFIED STOCK, implements, well improved. Snap, ask particulars. Cooper, 9½ 4th ave., Yakima, Wash.

CHICKEN RANCH SALE—5 ACRES; GOOD buildings, near pavement and car line. Flora Martin, Route 3, Box 183, Puyallup, Wash.

42 ACRES WILLAMETTE VALLEY, IMproved potato land. M. A. Goughnour, Albany, Oregon.

FARM LANDS—Wanted 654

FARMS WANTED—SELL YOURS QUICKLY for cash, no matter where. Particulars free. R. A. McNown, 319 Wilkinson block, Omaha, Neb.

IRRIGATED LANDS—For Sale 663

IRRIGATED ACRES, TWO MILES IN; DAIRY limits of Spokane; prices less than city lots. Soil especially adapted to vegetables, small fruits and poultry raising. Good graded school and college. Telephone, electric lights, domestic water and paved highway. Some beautiful homes built and others building. Locate your home where you can have city conveniences and enjoy country life. Write or call Greater City Homes Development company, Dept. T, Old National Bank bldg., Spokane, Wash.

5 TO 40 ACRE TRACTS, RIPE LEVEL, IRRIgated land, on paved highway, R. F. D., telephone and electricity available, ideal for alfalfa, fruits, grapes, garden; $50 to $150 per acre; your own terms; 10 years to pay. Dairy, stock and fruit ranches, all sizes. Mountain ranches and stock range, cheap; elevation 450 ft.; no snow. Write for list. G. E. Oaks, Redding, Shasta county, Cal.

LANDS UNDER GOVERNMENT IRRIGATION project shortened valley, modern town; 20 years to pay for water, without interest; mild climate, sandy loam soil; alfalfa yields 7 tons, early potatoes, berries, vegetables; cash egg market; good schools; farm and garden tracts, $60 acre up. Information free. Settlers Land Agency, King Hill, Idaho.

CHEAP RAW LAND AT $25 TO $35 PER acre, under irrigation system now in operation; ample water; proven suitable soil and climate for apples and small fruits; alfalfa makes 3 crops. Desirable community. A list of opportunities may be procured from secretary of Community Commercial Club, Kettle Falls, Wn.

EIGHTY ACRES FINE LAND, IRRIGATED; 4 miles from Wendell; terms; no buildings. White, Route 3, Seattle, Wash.

CITY PROPERTY FOR SALE 690

ASHLAND REALTY COMPANY HAVE RESIdences, ranches and business places for sale. Write fully what you want, your expectations and send addressed, stamped envelope. Ashland Realty Company, Ashland, Ore.

SYNOPSIS.

Shad Trowbridge, a New England lad of about 20 years, sails on a mail boat to Labrador, where he plans to spend a few weeks of summer hunting and fishing in the wilderness. Upon his arrival he meets two experienced fishermen and trappers, Dick Blake and Ed Matheson, who recommend to him a young lad of 17 known as Ungava Bob, as a guide for his hunting and fishing trip inland. Desiring to lose the least time possible in securing Ungava Bob's services and starting inland for his vacation, Shad starts across the bay in his canoe in the face of a threatening storm. In the darkness his canoe is capsized and he is plunged into the icy water. As he rises to the surface a rope is thrown to him and he hears a voice shouting to make it fast. He is soon drawn aboard a little sailboat which, unknown to him, had approached at the moment of his great need.

To his surprise, Shad discovers that his new friend, the lad with the sailboat, is none other than Ungava Bob. Together, they make their way to Bob's home, where Shad enjoys the hospitality of the northland while they consider ways and means of making inland excursions. Shad decides to remain a month or more and make the first leg of a long winter of trapping planned by Bob, returning to the settlement in time to sail back home before college opens.

They leave for the wild trapping grounds and Shad is so delighted with the wilderness that he decides to remain with Bob on the trails all winter. The other members of the party start back home, leaving the two boys alone to start their long winter of adventure. But they are not alone! Hardly has the boat carried their friends around the bend of the river before Bob and Shad see two Indians watching them from the shadows of the forest trees.

The Indians proved to be old friends of Bob, but it was not many days until enemies appeared. A group of Mingen Indians, catching Bob and Shad out in their canoe on the river above the Great Falls of Labrador, fired upon them, compelling them to remain in the current and be dragged down to the rapids and seeming certain destruction.

In the midst of their peril Bob remembers that in the rapids above the falls there is a small, rocky island, and he skillfully guides the canoe to a safe landing on it. In the meantime their friends, Ed. Matheson and Dick Blake, reach their tilts to find Bob and Shad gone. The Indian maiden, Manikawan, tells them of the supposed loss of Bob and Shad over the falls. She plans to leave at once to wreak vengeance on the enemy Indians who sent them to destruction. Cunningly she entices them onto the river above the rapids and sends them to their deaths at the foot of the falls. Bob and Shad, on their island prison, witnessed the tragic plunge. Suddenly Manikawan appears on the shore, discovers the boys on the island and tells them that she will be back when the sun is noon-high next day with help to get them off.

CHAPTER XIII.

On the Trail of the Indians.

None of the three trappers had ever penetrated the region lying between the Big Hill trail and the river. They knew that here, somewhere, Ungava Bob was to lay his new trails, but as to the route the trails were to take they had no information, for this was a circumstance that the local evidence of the existence of fur-bearing animals was to have decided for Bob when he entered the country to make his initial survey of conditions.

Among the Indians who traded at the Eskimo Bay post there was but one, an old man, who had any personal knowledge of the region. When a small boy this Indian had once traversed with his father the now long disused portage trail; and one day when Ungava Bob and Dick Blake met him at the post he had, at their earnest solicitation, described to them the country as he had seen it with the distorted vision of extreme youth, and as his memory, alloyed with the superstitious tales of nearly threescore years, recalled it.

It was, he said, a region of many lakes, over which flitted the phantom canoes of those who had perished in the near-by dwelling place of evil spirits. In the canoes were the ghostly forms of the victims, forever paddling their phantom crafts around the lakes, vainly striving to escape the torment of mocking, ghoulish spirits which pursued them. Surrounding the lakes were wild marshes and deep black forests, which were peopled by innumerable evil spirits forever searching for new victims to destroy. Their thunder voices were always to be heard, low and deep, in a terrible frenzy of unceasing anger, ever hungry for men to devour.

In analyzing this description Dick Blake eliminated the phantom canoes as the wild creation of imagination, and the thunder voices of evil spirits he set down as nothing more nor less than the roar of the great falls of whose existence the Indians had told.

With this elimination he accepted as fact the statement that the region was sprinkled with many lakes, and that without the assistance of a canoe these lakes and perhaps some wide marshes would have to be circumvented by him and his companions before they came upon the river above the falls, where it was expected the Mingen Indians would be encountered.

While Dick Blake was the first to declare that the Indians must be punished for causing the supposed death of Bob and Shad, he was no more thoroughly in earnest than were his companions.

Normally these trappers were quiet, peace-loving men, who would have shuddered at the thought of causing human bloodshed; but now, moved doubtless to a large extent by a natural desire to avenge an outrage committed upon their friends, they also felt it their plain duty to mete out punishment to the guilty ones, in order to insure themselves and other white trappers against further molestation. Unless this were done there was no guarantee against continued raids upon their tilts, and there would always be the danger, and even probability, that sooner or later they would themselves be attacked and shot from ambush by the emboldened savages.

The trail that Bob had made, leading up from the river tilt and along the creek which flowed from the first lake, was plainly marked; and they proceeded with the long, swinging stride characteristic of the woodsman, rapidly and without a halt, to the point where the trail entered the lake. Here a wide circuit around the lake shore was necessary, and it was nearly noon when they fell again into the trail at the farther end and came upon the first tilt.

"We may's well stop an' boil th' kettle," said Dick, throwing down the light pack of provisions he carried and mopping the perspiration from his forehead, for the mid-day sun was warm. "If we were only havin' a canoe, now, we'd be a rare piece farther. 'Twere a long cruise around the lake."

"Aye," agreed Ed, "a canoe'd ha' saved us a good two hours. We may's well put th' fire on outside; 'twill be warm in th' till."

"Now I'm wonderin' what th' Injun lass is up to," said Dick, as they sat down to their simple meal of fried pork and camp bread. "She's got a canoe. There's her footin' by th' lake, where she makes her landin'."

"They's no tellin' what an Injun's goin' t' do, but I'm not thinkin' 'twill be much harm t' th' Mingens with just a bow an' arrer, an' that's all she has in th' way o' weapons, so far's I makes out," declared Ed, adding: "She were a wonderful fine-lookin' lass; now, weren't she?"

"That she were," agreed Dick, "wonderful handsome—an' wonderful wild-lookin', too."

"Th' poor lad!" said Ed, after a pause. "He were buildin' th' tilt yonder, thinkin' o' th' good furrin' he were t' have th' winter, an' now he's gone. I'm not knowin', Dick, how t' tell his mother. You'll have t' tell she, Dick; I couldn't stand t' tell she."

"No," objected Dick, "you were goin' an' tellin' she th' time we thinks th' wolves gets Bob, an' you knows how. You'm a wonderful sight better breakin' bad news than me, Ed. I'd just be bawlin' with she, an' she cries; an' she sure will, for 'twill break her heart this time, an' Bob sure gone."

"Maybe none of us'll be havin' th' chanct," broke in Bill. "They may be a big passel o' Mingens, and whilst we catches some of un, th' others won't be sittin' quiet."

"Ed an' me's keepin' a watch for signs," assured Dick, as they arose to continue their journey. "They ain't been no signs so far, exceptin' signs o' th' poor lads an' th' Injun lass, an' she were passin' in th' night, by th' oldness o' her footin'."

"They ain't no danger o' findin' Injuns here, Bill," added Ed. "This is what they calls th' ha'nted country, an' they'd be too scairt o' ghosts an' th' devils they thinks is runnin' round loose here t' risk themselves."

The long detours made necessary without the assistance of a canoe so far delayed their progress that, though they had not slackened the rapid pace set in the morning, night found them upon the shores of one of the intermediate lakes, with little more than half the distance to the end of the portage trail behind them.

Here they erected a lean-to at the edge of the forest, as a reflector for their camp-fire, and as a protection against a light but chilling breeze that had sprung up with the setting sun; and, all made snug for the night, they cooked and ate their supper.

Then they lighted their pipes and lounged back upon the bed of spruce boughs under the lean-to, speculating upon the morrow, and the probability of an encounter with the Indians.

"What's that, now?" exclaimed Ed suddenly, and cautiously rising and taking a position beyond the glow of the fire, he stood for several minutes gazing intently out upon the waters of the wide lake not yet lighted by the belated moon.

"There 'tis again! Did you make un out, Dick?" he asked, as Dick and Bill, following Ed's example of cautious exit from the range of the fire's glow, joined him.

"No, I weren't makin' nothin' out," answered Dick.

"There were somethin' there on th' water," Ed stated positively, when they presently returned to the lean-to.

"What were it, now? What were it like?" asked Dick.

"I seen un twict, an' 'twere lookin' t' me like a canoe, though I'm not sayin' so for sure," explained Ed.

"I seen un," corroborated Bill, "but whether 'twere a canoe or no, I'm noways sure—'twere so far out."

"If 'twere a canoe, 'twere Injuns," declared Ed, "an' if 'twere Injuns they was seein' our fire, an' they'll be up t' some devilment, now, before day."

"Be you sartin', now, you seen something?" asked Dick, a note of skepticism in his voice.

"Sure an' sartin'," insisted Ed. 'Twere movin', an' I'm thinkin' 'twere a canoe, though I'm noways sure."

"'Twere just a loon or maybe a bunch o' geese," said Dick, still unwilling to believe.

"'Twere moyin', an' 'twere lookin' like a canoe t' me," said Bill. "'Twere certain no loon nor geese either. 'Twere too big."

"An' we better be gettin' out o' here, too," advised Ed. "If 'twere Injuns—an' I'm noways sure 'twere or 'tweren't—they seen th' fire, an' th' dirty devils'll be droppin' us off an' we stays here."

"Aye," agreed Dick, "we'll be movin' on. You an' Bill both seein' somethin', they must ha' been somethin' there, though I weren't seein' un."

Weary as they were, the three men hastily shouldered their light packs, and with rifles resting in the hollow of their arms, Ed in the lead, they stole noiselessly away into the forest.

Two hours of rapid traveling, in the light of the now rising moon brought them to the end of the lake. Here they paused to fall upon their knees and make a critical examination of the shore.

"Here's fresh footin'," Ed finally announced. "A canoe were launched here since sundown. Th' gravel's wet where th' water splashed up. They's one track o' a Injun moccasin, an' from th' smallness of un 'twere a woman."

"'Twere sure a woman," both Bill and Dick agreed.

"An' there's th' same footin' goin' t' other way, but 'tis an older track." Ed continued. "'Twere th' Injun lass we sees tonight goin' back."

"Now I'm wonderin'," said Dick, as they arose, "what she's goin' back for. Maybe now, she's lookin' t' meet us t' help her?"

"Maybe," Ed suggested, laughing, "she's finding a hull passel o' Injuns more'n she wants t' tackle wi' just her bow an' arrer. I were thinkin,' now, a bow an' arrer weren't much t' run up ag'in a band o' Injuns with, seein' they has guns."

"Whatever 'tis she's up to," suggested Bill, "'tisn't lookin' for us. She couldn't ha' missed seein' our fire back here on th' shore, an' she'd ha' known who 'twere an' come over if she's wantin' t' see us."

"You're right," agreed Dick. "She must have seen our fire, and if she'd wanted t' see us she'd ha' come over. Now I'm wonderin' why she didn't."

At mid-forenoon the following day the tilt on the last lake, where Manikawan had snatched a few hours' sleep, was reached, and mounting the ridge above, the river was discovered beyond.

At the end of the portage trail the three trappers held a hurried consultation. At length, carefully concealing their packs among the bushes, and with rifles held in position for instant use, they turned noiselessly up along the river bank, following the water closely, and taking almost exactly the course followed the previous morning by Manikawan.

They were aware that they were now beyond the bounds of the region avoided by the Indians, and they also had no doubt that the Indian camp was situated farther up the river, probably at some convenient landing place for canoes.

Finally Ed Matheson, who had the lead, halted and held up his hand.

"Smoke," he whispered, sniffing the air.

"Aye," whispered Dick, also sniffing.

Ed now sank to his hands and knees, pausing frequently in his advance to reconnoitre. Presently he ceased to move, his rifle extended before him, until Dick and Bill drew alongside.

"There's th' fire," he whispered, "an' there's where they was camped, but it's lookin' t' me as if they's gone."

The smouldering embers of a camp-fire in the center of the open spot where the wigwam had stood the previous day, lay directly in front of them. On a tree hung some unfinished snow-shoe frames, and there were many signs of a hurried departure.

"What you think?" Dick whispered.

"Th' devils may be hidin' back here," answered Ed. "You an' Bill stay now, an' watch, whilst I looks."

Very cautiously Ed stole away, and Dick Blake and Bill Campbell waited patiently for an hour, when they discovered him walking boldly down toward them.

"They's gone," he announced. "I seen their canoe makin' a landin' on th' other side where th' river widens, away up above here."

An examination of the camping ground confirmed their conclusion that the Indians had in some manner learned of their danger and had fled, evidently in great haste, leaving behind them the snow-shoe frames and some other trifles.

"That's explainin', now, what that sneakin' Injun lass was up to," declared Ed.

"What were she up to, now?" asked Dick.

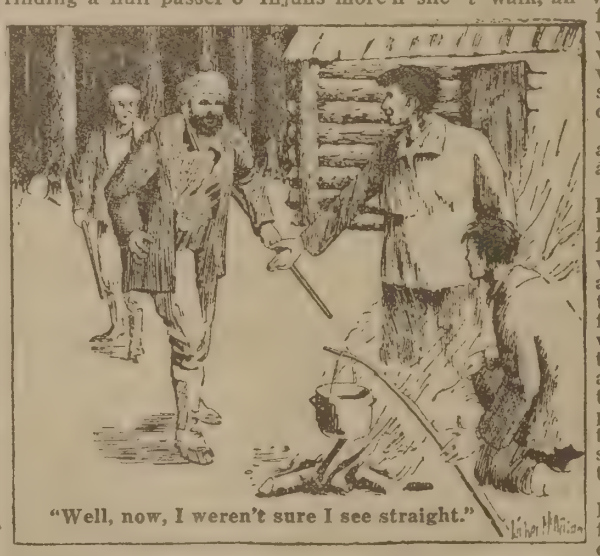
"She were up to this," said Ed: "She were watchin' at th' river tilt for our comin', an' when we comes she up an' tells th' Injuns we're on their trail, an' they gets out quick. That's why she weren't stoppin' when she sees our fire last night, an' we'll never be seein' her again. She's a Nascaupee, an' it's lookin' now as if th' Nascaupees an' Mingens'll be workin' t'gether, an' if they be, they'll be layin' for us, now, an' we got t' look out."

"Aye," agreed Dick, "that's what they'll be doin', now, an' we got t' look out."

"Well," sighed Ed, as they turned to retrace their steps to the portage trail, "we may's well get back an' lay our plans. Them Injun females is worse'n wolverines; they's no trustin' any of un."

CHAPTER XIV.

The Matchi Manitu Is Cheated.



"Well," said Shad, at length, "there's the sun about as high as it will get today, and where's your pretty Indian girl?"

"I been thinkin', now," Bob explained, "she's sure havin' a canoe, an' could make un t' th' river tilt an' back, by travelin' all night. But Dick an' Ed an' Bill ain't havin' a canoe, an' if they comes they has t' walk, an' walkin' they can't make un before some time t'morrer, whatever. 'Tis like, now, she'll wait t' show un th' way t' where we be, an' doin' that she won't be comin' till they does t'morrer."

"Your logic is sound," Shad admitted, "but it's mighty disappointing."

"There she be!" exclaimed Bob, a moment later, as Manikawan, quite alone, emerged from the forest hastening toward them, carrying on her arm two coils of rope—one the coil Bob had left in the first tilt of the new trail, and which she had observed at the time she found and carried away Bob's rifle; the other a tracking line which the trappers had used on their last trip up the river, and which she had discovered in the river tilt.

"Is it well with White Brother of the Snow and his friend?" she asked, stepping eagerly forward to the river bank.

"Well, now, I weren't sure I see straight."

"It is, and they are glad to see Manikawan," answered Bob.

"They will do now as Manikawan directs, and they will soon again be free to hunt the atuk (caribou), the amishku (beaver), and the neejuk (otter)," she promised.

With this she tied the ropes securely together, end to end, and then producing a quantity of salmon twine, which she had appropriated for the purpose from one of the tilts, tied an end of this to one end of the connected ropes. She now proceeded to coil the twine carefully upon a smooth, flat rock at her feet, after which she drew from her quiver a long, blunt-nosed arrow, and directly above the feathered end of the arrow attached the loose end of the twine.

These preliminary arrangements completed, and her plan of rescue ready for the test, Manikawan stood erect, bow and arrow in position, and a moment later the arrow flew out across the water and fell upon the gravelly point.

Ungava Bob sprang forward, seized the twine, still fast tied to the arrow, and rapidly drew it and the end of the rope attached to the twine to him, while Manikawan played out the coil.

"Now," said she, "let White Brother of the Snow make the line which he has received fast and tight to the bow thwart of his canoe.

"White Brother of the Snow and his friend will then place their canoe into the

water with its bow facing the river as it comes down to meet them. They will paddle hard against the river, for the Matchi Manitu (bad spirit) beneath the waves will draw them backward toward the place where the water is white and angry.

"They need not fear. Manikawan holds one end of the rope in her hand. The other end will be fast to the canoe. Manikawan is strong and she will not let the Matchi Manitu draw White Brother of the Snow and his friend down.

"While White Brother of the Snow and his friend paddle, their canoe will move toward the place where Manikawan stands. Near the shore the spirits are weaker than where the water is deep.

"When their canoe is near the shore Manikawan will let it go backward very slowly to the place where the bank slopes."

Bob ran the end of rope under and around the bow thwart, as Manikawan directed, knotting it securely, leaving sufficient length to extend back to the center thwart, around which he again wrapped it and finally tied the end. This he did in order that the strain upon the canoe might be more evenly distributed.

With Shad's rifle and shotgun and their few other possessions in the canoe, they immediately placed it in the water. Bob held it while Shad took a kneeling position in the stern, then himself stepped lightly to his place in the bow, and in an instant they were afloat in the rushing water, paddling fast and hard in order to relieve the stress upon the long line, and to keep the canoe head on to the current.

A few moments later they found themselves close under the mainland bank, with Manikawan letting them slip slowly down to the sloping rock.

Though the treacherous footing on the steep, slippery incline rendered it a hazardous undertaking, the landing was safely accomplished, and the canoe brought ashore.

When Manikawan saw the young adventurers standing before her, her work of rescue completed and the excitement and uncertainty of the preceding days and nights at an end, she sank upon the ground, weak, dazed and overcome with fatigue.

During 60 hours her only sleep or refreshment had been that snatched the preceding morning in the tilt, and throughout the entire period she had been bending herself to almost superhuman effort.

After all, she was but a girl. Human emotions are pretty much the same the world over, irrespective of race, and Manikawan, the Indian maiden, was very human indeed in her emotions and the limit of her physical endurance.

She looked faint and weary, indeed, as Shad and Bob bent over her solicitously, but presently she indicated her desire to rise, and slowly, for Manikawan's exhaustion was still apparent, Bob led the way while the three took a direct course to the tilt on the first lake.

It was not far, and in the course of an hour, mounting a ridge, they saw the lake shimmering below them and the little tilt nestling among the trees on the shore.

"How good it looks. Almost homelike!" said Shad.

"Aye, almost homelike," echoed Bob.

At the tilt they made a fire under the trees, and Bob quickly brewed a kettle of strong tea and prepared food, and when Manikawan had taken nourishment she was sent into the tilt for the rest she so much needed.

Bob and Shad were still lingering over their meal when they looked up to find Dick Blake, Ed Matheson and Bill Campbell staring at them from the edge of the woods.

"Hello!" cried Shad, jumping up in pleasure to greet their friends.

"Evenin," said Bob; "set in an' have a drop o' tea an' a bite."

"Well, now, I weren't sure I see straight!" exclaimed Ed, and the three strode forward.

Here we was thinkin' never t' see you lads ag'in, an' arguin' who were goin' t' break th' news o' your death t' your folks, an' there you be, eatin'! Bob, I'm never goin' t' break th' news o' your death ag'in till I sees you dead. I were doin' it once, an' now I comes pretty nigh havin' to ag'in"; and Ed nearly shook Bob's arm off in his delight.

"Aye," Dick explained, while he and Bill followed Ed in the greeting, "th' Injun lass Manikawan comes an' tells us you lads was drove over th' falls by Mingens."

"An' we goes out huntin' Mingens," went on Bill, "tryin' t' kill un, an' would ha' killed un if we'd found un."

"Now, what devilment were she up to? That's what I wants t' know, tellin' us that. They's no knowin' what a Injun'll do, leastways a female," declared Ed.

"She was about right, now," said Bob, and he proceeded to relate the experiences of the preceding days, while Shad now and again interjected dramatic color.

"Th' lass were doin' rare fine!" Rare fine!" said Ed. "An' we was thinkin' she's up t' some devilment. But why weren't you shootin' at th' Injuns from th' canoe when they opens on you? Your repeatin' rifle would ha' scattered un, Bob."

"I left un in th' tilt by th' first lake above th' river. Shad were steerin', an' he weren't thinkin' t' use his'n," Bob explained.

"In th' first tilt above th' river?" Ed repeated. "We were in th' tilt, now, Dick, when we comes through, an' there weren't any rifle there. Rope an' tent an' other outfit, but no rifle."

"No, there weren't none there," corroborated Dick and Bill.

"Now, 'tis strange," said Bob. "I left un there, didn't I, Shad?"

"Yes, you certainly left it there, on the rear bunk," Shad affirmed positively.

This puzzled them long, and they were never to learn the truth, for Manikawan, on her return journey for the ropes, had replaced the rifle exactly as she had found it, and none but herself ever knew the part she had played in the river tragedy.

While Manikawan rested in the tilt, and Bill Campbell set out to hunt ptarmigans for supper, Dick Blake and Ed Matheson in Manikawan's canoe, and Bob and Shad in Shad's canoe, left upon a reconnoitering expedition to the tilt from which the two latter were returning on the day of the Indian attack.

They had no fear now of an Indian surprise, since Ed Matheson had observed the retreat of the savages to the southern shore, and they proceeded boldly to their destination.

As anticipated, the tilt had been rifled of its contents, chiefly flour and pork. The tilt itself, however, had not been burned, and was otherwise undisturbed.

"They was thinkin', now, t' have un an' t' use un theirselves when they comes here t' hunt, th' winter," declared Ed. "They thinks Bob an' Shad's done for. Unless they gets scairt out by th' ha'nts in th' water——"

"The what?" asked Shad.

"Th' ghosts or spirits they thinks is there. They's wonderful easy scairt, Injuns is. Oh, I knows th' Injuns; I been havin' trouble with un before."

"When was you havin' trouble with Injuns, now?" asked Dick skeptically.

"More'n once," said Ed. "There were th' time, now, I comes t' my tilt an' finds a hull passel o' Mountainteers—they wan't friendly in them days, th' Bay Mountaineers wan't—so many they eats up a hull barrel o' my flour t' one meal——"

"Now, Ed," broke in Dick, in evident disgust, "you been tellin' that yarn so many times you believes un yourself. Now, don't tell un ag'in."

"'Tis gospel truth——" Ed began.

"'Tis no kind o' truth."

"Well, an' you don't want t' hear un, I won't tell un," said Ed, with an air of injured innocence.

"What was it, Ed, that happened to you?" asked Shad, laughing, for he had learned to know the peculiarities of these two friends.

"Dick's not wantin' t' hear un, Shad. He gets all ruffled up when I tells o' some happenin' I been havin' that's bigger'n any he ever has. I won't tell un now; 'twould make him feel bad, an' I don't want t' make he feel bad, nohow," said Ed, with mock magnanimity. "But there were another time—Ill tell you o' this, Shad, an' Dick don't mind?"

"Oh, go ahead an' yarn, if you wants to! But th' Lard'll strike you dead some day, Ed, for lyin," and Dick turned toward the canoes in disgust.

"Now Dick's mad," Ed laughed, "but don't mind he, Shad; he'll get over un."

"As I was sayin', now, 'twas when I was layin' my trail t' th' nu'th'ard o' Wanokapow. I gets my tilt built an' all in shape an' stocked up, an' I goes out one mornin' lookin' t' kill a bit o' fresh meat. 'Tis early, an' too soon t' set up th' traps, for th' fur ain't prime.

"I gets a porcupine, which is all I wants, an' comin' down t' my second tilt about th' middle o' th' forenoon, finds un all afire an' a band o' 12 Injuns—I counts un, an' they's just a dozen—lookin' on, an' dividin' up my things, which they takes out o' th' tilt before they fires un.

"Now I were mad—too mad t' be scairt—an' I steps right down among th' Injuns, an' when they sees me lookin' fierce an' ready t' kill un all, they's too scairt t' do a thing or t' run, an' they just stands lookin' at me.

"Well, I keeps on lookin' wonderful fierce, an' jumps about a bit an' hollers. It makes me laugh now t' think how that passel o' Injuns stared! One of un tells me a couple o' years after that they thinks I gone crazy.

"'Tisn't long till I gets un all so scairt they thinks I'm goin' t' shoot un all up, an' they's afeared t' run, thinkin' if they does I'll start right in quick.

"Then I thinks it's time t' break th' news t' un, an' I tells un if they builds th' tilt up new for me I'll let un off. An' they starts right in t' build un, an' has all done before th' sun sets. Th' same tilt's standin' there yet——"

"Ed!" called Dick, from the canoe, "if you're through yarnin', come on now an' get started back. It'll be dark now before we gets t' th' tilt."

It was dark when they reached the tilt. Bill, sitting alone by the camp fire, had seen nothing of Manikawan while they were gone, and none of them ventured to enter the tilt or to disturb her.

But, when they arose from their bed of boughs in the lee of the tent the following morning they found that the fire at their feet had been renewed while they slept. Manikawan was not in the tilt, but presently they discovered her, standing upon the pinnacle of rock near the lake

McQUAY-NORRIS
PISTON RINGS

Increase Power—Save Gas and Oil

Piston rings wear, just as tires do. Worn and leaky rings waste motor power and money. They should be replaced with McQuay-Norris equipment. It will increase power, save gas and oil, and decrease carbon troubles in any make or model of passenger car, truck, tractor or stationary engine. The McQuay-Norris line is complete for every need. Through the addition of McQuay-Norris Wainwright Pistons and Piston Pins to the McQuay-Norris Piston Ring line, you can now secure for your gas engines complete McQuay-Norris-made Pistons, Piston Pins and Piston Ring equipment.

McQUAY-NORRIS
WAINWRIGHT
PISTONS & PINS

Send for Free Booklet—a valuable explanation of the relation of piston rings to gas engine operation. Address Dept. BD.
McQUAY-NORRIS MANUFACTURING CO., St. Louis, U. S. A.
CANADIAN FACTORY: McQuay-Norris Mfg. Co., of Canada, Ltd., Toronto.

LEAK-PROOF — an exclusive two-piece design, preventing loss of gas and compression. Gives equal pressure at all points on cylinder walls. For all piston grooves except top, which should have Supercyl. Each ring packed in a parchment container. Price per ring—

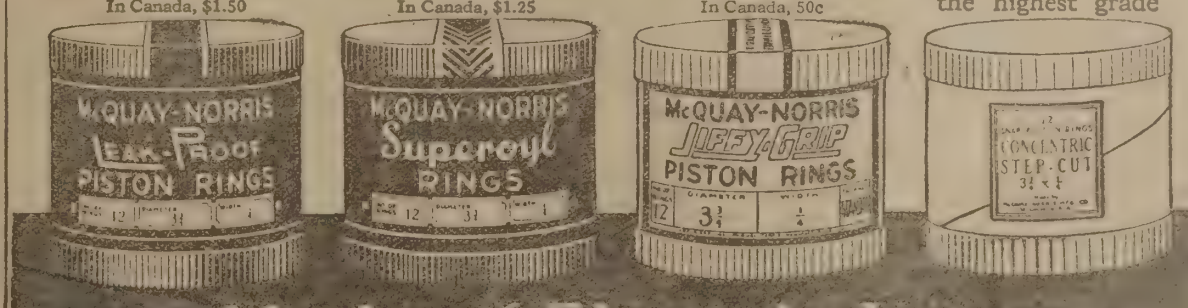
$1.25

In Canada, $1.50

Supercyl — Keeps lubricating oil out of combustion chamber. Collects excess oil on each down stroke of piston and empties on each up stroke, which ordinary grooved rings cannot do. Each ring packed in a parchment container. Price per ring—

$1.00

In Canada, $1.25



JIFFY-GRIP — a one-piece ring. Non-butting joint which can be fitted closer than ordinary step cut — velvet finish—quick seating. "Seats in a jiffy." To keep them clean and free from rust, each ring is packed in an individual glassine envelope. Price per ring—

50c

In Canada, 50c

Snap Rings—of the highest grade. Raised above the average by McQuay-Norris manufacturing methods. Their use insures all the satisfaction possible for you to get from a plain snap ring. They are packed twelve rings to the carton and rolled in waxed paper.

And Snap Rings of the highest grade

Doily, Medallions, Lace, Insertion

By JEANETTE BELL

There are many times when the crochet worker wishes to use the same motif in various ways. This article will be found most appropriate for such uses. It is advisable to keep it where it can easily be found when needed in a month, two months or maybe a year from now. The size thread used is a matter of choice, depending somewhat on the use for which it is intended. No. 50 to 80 Cordonnet crochet cotton are most popular sizes for lingerie, household linens, etc. For baby's wear No. 100 to 150 are best. The number of stitches used are the same, but the thread will make different sizes.

Make 5 ch sts, join forming a circle, 8 ch sts.

1st row: * catch back into the 4th st, forming 1 p, 1 ch st, 1 d c into circle, 5 ch sts, repeat *, 4 times, 5 ch sts, catch back into 4th st, 1 ch st, join to complete the row, 10 ch sts,

2nd row: * 1 d c into d c of previous row, 7 ch sts, repeat *, 4 times, join to complete the row.

3rd row: * 3 s c, 3 ch sts, form 1 p, repeat *, twice, 3 s c, all over loop, repeat for each loop, break thread. This motif forms the start of each piece illustrated here. On the last row of next motif, join by center p of two loops to the corresponding p of first motif, continue for the length required.

For the top edge, make a length of ch sts, the length of motifs allowing extra for taking up.

1st row: * catch back into the 4th st, forming 1 p, 9 ch sts, catch back into the 4th st, forming 1 p, 1 ch st, skip 4 sts, 1 s c, forming 1 p loop, 5 ch sts, repeat *, for this row.

2nd row: * 3 ch sts, 1 s c into center st of the 5 ch sts, repeat *, for each loop.

3rd row: * 3 s c, 1 t c into 1st p, next to connection of motif, 3 s c, all over 1st loop, 6 s c over next loop, 2 ch sts, skip 1 p, of motif, 1 s c into next p, 2 ch sts, 1 s c into s c, 6 s c over next loop, 3 s c, 1 t c into last p of this motif, repeat *, for each motif. you will observe that the t c come together at the top, but connect the first p of one motif and the last p of next motif, without any sts beween.

For the insertion, this edge is made in both sides.

For the small medallion, make the motif same as before.

1st row: Join thread between 1st and 2nd p, make 7 ch sts, * 1 d c between 2nd and 3rd p, 7 ch sts, skip 2 p, 1 d c, 3 ch sts, repeat *, for this row, join the 4th ch st, completing the row.

2nd row: * 6 s c over 3 ch sts, 13 s c over 7 ch sts, repeat *, for this row.

3rd row: * 5 ch sts, catch back into the 4th st, forming 1 p, 9 ch sts, catch back into 4th st, forming 1 p, 1 ch st, 1 s c, over d c of 1st row, repeat *, making next s c into 7th s c of long loop, repeat these p loops, for this row, turn, sl st back to center of loop.

4th row: * 5 ch sts, 1 s c into center st of loop, repeat *, for each loop.

5th row: 10 s c over each loop, break thread.

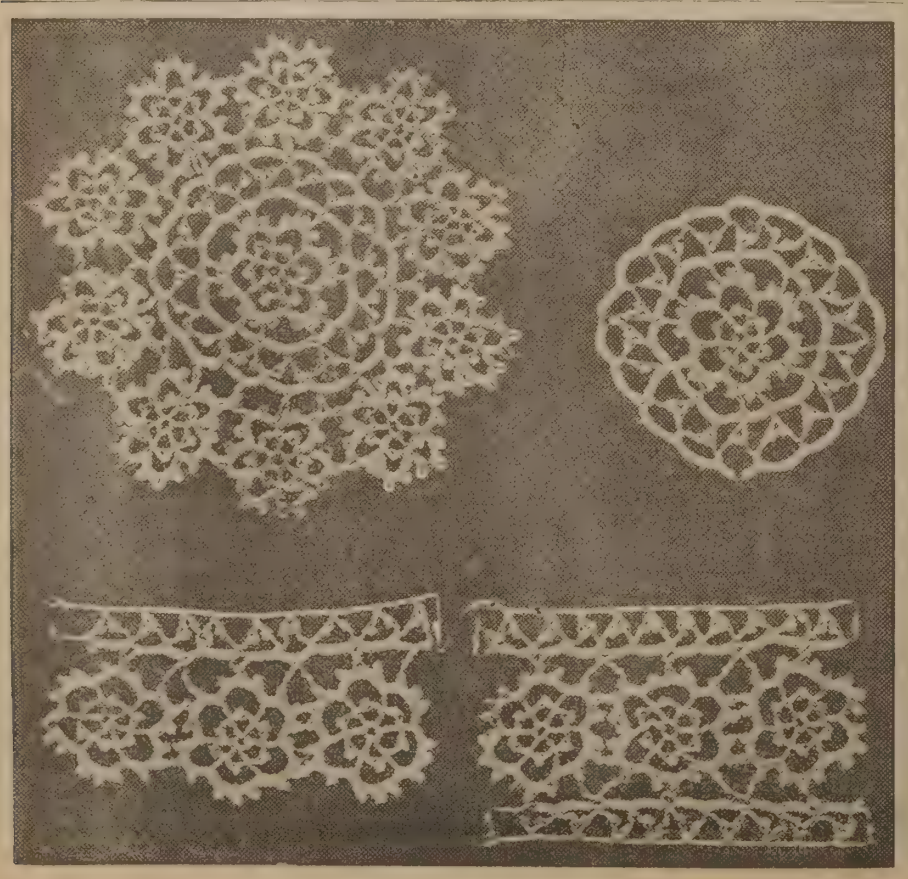
For the large size medallion, repeat small medallion, then make

6th row: Start motif, making 1st and 2nd rows, for the 3rd row: * 3 s c, 3 ch sts, form 1 p, 3 s c, 5 ch sts, 1 s c into center st of loop of medallion, 3 ch sts, 1 s c into 4th ch st, just made, 2 ch sts, 3 s c, 1 p, 3 s c, all over loop of motif, 4th sts, 1 s c between loops of medallion, 4 ch sts, forming center connection, repeat 1st connection and continue the motif. The next motif is only joined to medallion at the center, the sides being joined to first motif, repeat 1st and 2nd motifs alternately, for this medallion.

For the doily, make large medallion, then make

7th row: Join thread to 3rd p, * 1 s c into p, 3 ch sts, repeat *, twice, 1 s c into next p, 5 ch sts, skip 1 p, 1 t c, 1 ch st, 1 t c into first p of next motif, 5 ch sts, repeat for this row.

8th row: * 5 s c over each 3 ch sts, 9 s c over 5 ch sts, 2 s c over 1 ch st, 9 ch sts, repeat *, for this row.



9th row: p loops, as before.

10th row: * 5 ch sts, 1 s c into center st of loop of previous row, repeat *, for this row.

Larger doilies may be made by repeating 5th, 6th, 7th, 8th, 9th and 10th rows, once for a plate doily, 2 or 3 times for the lace centerpiece to match.

The doily illustrated may be used as the back foundation for a baby cap; for this make the size required, omitting the 10th row, or rather altering this row, as follows: spread the p loops, making 2 loops where you made 3 for the circle, when you have made all but 2 motifs (3 if the thread is very fine), turn, continue leaving this space for the center back, repeat 5th, 6th, 7th, 8th, 9th, and 10th rows. Be careful not to increase the width of your work. To do this spread the motifs, so they lay flat, instead of circling the previous row. Continue the last 10th row around the back also. Finish the cap with 5th row around the entire edge.

Terms—ch st, chain stitch.
s c, single crochet.
d c, double crochet.
t c, treble crochet.
sl st, slip stitch.
p, picot.

Experience Letters

From Our Family Circle Women

Four things a man must learn to do,
"If he would make his record true;
To think without confusion clearly,
To act from honest motives purely,
To love his fellow men sincerely,
To trust in God and heaven securely."

Dear Friends: I heard a very brainy man preach a sermon on the above lines a short time ago and I said then, "I will pass them on to my dear Circle." Every line is full of things to think about and meditate upon. Let us think about them for a little time, line by line. What is a record, anyway? The dictionary says it is "the known facts in a person's life." Who among us is there who doesn't want our record to be true? Granted then that we all do, the first direction in the couplet is "to think without confusion clearly."

About the most profitable occupation I know of is clear thinking. There would be very many less mistakes made if all of us would do very much more clear thinking, without confusion. One step to clear thinking is to regard matters under consideration as being four square and looking at them from all sides. Then we should also look at them from the standpoint of others, get their viewpoint, too. This one thing will often straighten out troubles between people. Try it.

Second direction: "To act from honest motives purely." Do you know, dear friends, it is quite a job just to be plain honest? I like the dictionary, it is a good companion and it tells me that honest means, "Fair in dealing with others." Oh, how prone we all are to be unfair in our thoughts, if not in our dealings with others! I am only touching upon these thoughts and will leave them with you.

Third direction: "To love his fellowmen sincerely."

The same man who gave the message I have spoken of set the matter of love in a general sense toward all humanity in a new light. He said what we all know, that there are many people we can not love because so many things about them are not anyways lovable. But he said, too, that in the hearts of the lowest there is concealed some good, which will respond to a like goodness in our own heart and it is our business to seek for that chord and bring out the response. That is loving our fellowmen sincerely.

And last: "To trust in God and heaven securely."

Everybody must trust in God, and the farmers, it seems to me, live closer to him than any one else. All the world looks to the farmers and couldn't exist at all without them. The farmer sows his grain and trusts to God that the sun will shine and the rain will fall.

And as to the last clause, for others I can not speak, but if I thought that "It was all of life to live and all of death to die," to me life would not be worth living.

Let us strive to think clearly, act honestly, love or regard sincerely and having done this it will be easy to trust in God and heaven securely. Your friend.

ALICE W. BARLAND.

Home Recipes

Pickling smelts: Cut off heads, fins and tails of smelts. Arrange in steamer and steam for 10 minutes; place smoothly in a crock with a layer of raw onions sliced. Mix together vinegar and oil (sister doesn't say what proportion of each), a bay leaf, stick of cinnamon, a few whole cloves, a slice of lemon, pepper, salt and mustard. The spices, bay leaf and mustard may be omitted if desired. The smelts will keep a long time if carefully pickled.

MRS. PAUL KOPCHO.

Hood River, Ore.

Pickled or mustard smelts: Cut off heads, fins and tails of smelts and carefully wash; leave them in a medium salt brine over night. In the morning drain and wipe well, pack in jars tight and taking care to lay them straight. If care is taken they will not break up when opened. To one gallon of vinegar add eight heaping tablespoons of mustard, three-fourths

(Continued on page twenty-two.)

Your Health

By Royal S. Copeland, M. D., F. A. C. S.

During the reign of Charles II., in 1670, the English parliament passed this curious act:

Dr. Copeland.

"That all women, of whatever age, rank, profession or degree, whether virgins, maids or widows, that shall, from after the passing of this act, impose upon and betray into matrimony any of his majesty's male subjects, by scents, paints, cosmetics, washes, artificial teeth, false hair, Spanish wool, iron stays, hoops, high-hecled shoes or bolstered hips, shall incur the penalty of the laws now in force against witchcraft, sorcery and such like misdemeanors, and that the marriage, upon conviction, shall stand null and void."

When we listen to the railings against the "evil practices" of modern woman, we might suppose that her beauty devices are new. As a matter of fact, they are almost as old as creation. The desire to appear well seems almost to be instinctive.

Did you ever stop to think why artificial aids to beauty are employed? Glance over King Charles' list. Every single device is intended to hide a defect or to imitate vigorous health.

In and of itself there isn't an article or a procedure mentioned that is detrimental to the physical welfare of the one using it. It isn't, then, the use of the thing, but the necessity for its use that I would criticize.

Who would paint the lily? If the checks were rosy, the lips cherry, and the skin glowing from its perfect circulation, who would be so foolish as to soil them with pigment?

One would not venture to suggest that the modern woman uses scents to disguise natural odors, but take my word for it, the woman of 1670 needed powerful perfumes. Bathtubs and bathing were in their infancy then. We are glad the perfumes of our day are delicate suggestions of sweet flowers and not the odoriferous nuisances of two centuries ago. We have learned that daily baths, lots of soap, plenty of water inside and out, good digestion and free discharge of the wastes make for sweetness of body.

We have learned the value of dental care. By watching the growing child there are given the mineral salts necessary for the development of good teeth. The tooth brush and the dentist preserve our teeth.

The modern woman cares for her hair and scalp. She is taught how to keep her natural covering, and need not trust to the wig-maker's art to make her beautiful.

Our girls are taught to stand erect, and iron stays are no more needed than are plaster casts. I regret to note the bad posture and shuffling gait of many, but it is inexcusable to be without a good figure.

Intelligent physical and breathing exercises will give chest development and fine lines to any woman. Proper diet will keep her figure youthful. Excessive weight and undrweight may be avoided, and therefore artificial devices will not be needed to hide the one or stimulate the other.

The female of the species is far sweeter and lovelier than the male, but, I beg of you, have real health! Do not camouflage your face and form, pretending to be what you are not. On the contrary, by right living and proper physical care, have the beauty and grace you properly envy.

SHOULD ROLL THE LAWN.

"The lawn roller is an implement generally not used enough," declares the Missouri state board of agriculture, and experts in various quarters come to the support of the statement, explaining how rolling benefits the lawn. The roller firms the plants into the soil and makes water available. It is the foe of ants, grubs and moles. Rolling should not be confined to the sowing time, but practiced every spring. Winter freezing and thawing crack and heave the turf away from the subsoil, it is asserted. Rolling presses back the frost-heaved and the sun-baked soils alike, protecting the roots.

SEIZE THE OPPORTUNITY.

They say that opportunity comes only once. That is not true, but one should always be looking out for opportunity and seize it when it appears. Every hour there is a new opportunity or a repetition of the old. Every morning begins a new day fraught with great possibilities for accomplishment.

THANK HEAVEN FOR NOW!

Now is the time to begin. We let our wonderful opportunity of yesterday pass by unheeded. We made a great mistake. We did a great wrong to ourselves or our friends. Now is the time to repair the mistake or the wrong. Wipe the slate clean. Begin over. Don't make the mistake or do the wrong again today.

Bits of Fun FOR Everyone

Never Start Anything, Etc.

The Dear Old Lady—My poor man, how did you ever come to be in durance vile?

Second Story Sid—Well, I guess, ma'am, it was because de cop what was chasin' me had endurance viler.—The American Legion Weekly.

Positive Identification.

He was newly arrived in this country and was none too familiar with the use of the telephone. So he took down the receiver and demanded:

"Aye vant to talk to my vife."

Central's voice came back sweetly, "Number, please?"

"Oh," he replied, perfectly willing to help out, "she bane my second vun."—American Legion Weekly.

To the Rescue.

Bill Smith, country storekeeper, went to the city to buy goods. They were sent immediately and reached home before he did. When the boxes were delivered Mrs. Smith, who was keeping the store, uttered a scream, seized at hatchet, and began to open the largest one.

"What's the matter, Mandy?" said one of the bystanders who had watched her in amazement.

Pale and faint, Mrs. Smith pointed to an inscription on the box. It read, "Bill inside."—Chicago Tribune.

Scented Trouble.

They were at dinner—the first one the bride had prepared. The bridegroom choked, then gasped—"This lettuce—it's awful—did you wash it?"

"Of course I did," was the sweet reply, "and, my dear, I used perfumed soap, too!"

Dorothy Figures It Out.

A neighbor visiting us asked little Dorothy how old she was. "Three," said the child.

"When are you going to be 4?" asked the neighbor.

"Well, as soon as I get through bein' 3," thoughtfully replied Dorothy.—Capper's Farmer.

Latest High Class Patterns for the Home

Please order the patterns you desire at least two or three weeks before you wish to use them. Desiring to obtain the latest high-class patterns for its readers, THE FARMER has made arrangements to have them sent direct from the east, and under present mailing conditions it takes about that time for them to reach you.

3963. Junior's dress. Cut in three sizes: 12, 14 and 16 years. A 14-year size requires 3 3-4 yards of 27-inch material for the dress and 1 5-8 yards for the cape. Price 10 cents.

3958. Girl's dress. Cut in four sizes: 4, 6, 8 and 10 years. A 6-year size requires three yards of 36-inch material. Price 10 cents.

3655. Ladies' dress. Cut in six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38-inch size will require 5 1-8 yards of 40-inch material. The width of the skirt at the foot is about 2 1-8 yards. Price 10 cents.

3564. Girls' dress. Cut in four sizes: 6, 8, 10 and 12 years. A 10-year size will require 4 1-4 yards of 27-inch material. Price 10 cents.

3693. Child's romper. Cut in four sizes: 2, 4, 6 and 8 years. A 4-year size requires 2 1-4 yards of 27-inch material. Price 10 cents.

3960. Girls' dress. Cut in four sizes: 8, 10, 12 and 14 years. A 12-year size requires three yards of 38-inch material. Price 10 cents.

3969. Ladies' house dress. Cut in seven sizes: 36, 38, 40, 42, 44, 46 and 48 inches bust measure. A 38-inch size requires six yards of 36-inch material. Price 10 cents.

3622. House or porch dress. Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size will require seven yards of 27-inch material. The width of the skirt at the foot is 2 1-2 yards. Price 10 cents.

3949-3947. Ladies' costume. Waist 3949, cut in six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38-inch size requires 2 3-4 yards of 36-inch material. Skirt 3947, cut in seven sizes: 25, 27, 29, 31, 33, 35 and 37 inches waist measure. The width at the foot with plaits extended is about 2 1-2 yards. A 29-inch size requires 2 3-4 yards of 54-inch material. Two separate patterns, 10 cents for each pattern.

3448. A pleasing apron. Cut in four sizes: Small, 32-34; medium, 36-38; large, 40-42; extra large, 44-46 inches bust measure. To make the design for a medium size will require 4 1-2 yards of 36-inch material. Price 10 cents.

3676. Boy's shirt. Cut in five sizes: 6, 8, 10, 12 and 14 years. A 12-year size requires 3 3-4 yards of 27-inch material. Price 10 cents.

3945. A smart top garment. Cut in six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38-inch size requires 3 1-8 yards of 44-inch material for the jacket and 7-8 yard for the cape. Price 10 cents.

CATALOGUE NOTICE.

Send 12 cents in silver or stamps for our up-to-date spring and summer 1922 catalogue, showing color plates and containing 500 designs of ladies', misses' and children's patterns, a concise and comprehensive article on dressmaking, also some points for the needle (illustrating 30 of the various, simple stitches), all valuable hints to the home dressmaker.

High Points in News of the Week

Notwithstanding the difficult situation that the international finance conference was thrown into when Germany and Russia announced their entrance into a separate treaty for diplomatic and industrial relations between Germany and the soviet government, the conference has undertaken to work out a comprehensive program for the financial restoration of all Europe, including Russia. A plan is being worked out with a view to enlisting the financial aid of all countries of Europe, and probably of the United States, in restoring Russia. This movement is prompted by a two-fold motive, that of bringing relief to stricken Russia and that of relieving Europe of the menace of the present revolutionary condition in that country.

The executive council of the league of nations will meet at Geneva, the permanent headquarters of the league, on May 11. At that time it will take up any problems referred to it by the present financial conference at Genoa.

What steps will be taken by the allies to compel Germany to pay her regular installment of war reparations due this week is a problem facing the conference at Genoa. Should Germany again become delinquent in payment it is expected that a meeting of delegates of the allies to take action will be called immediately. The president of France recenty startled the world by declaring that if the allies as a group would not compel Germany to live up to her treaty agreement France would endeavor to do so independently.

Referring to the difficulties experienced at the Genoa conference by the allies following the German-Russian treaty and the war-like utterance of the French president, Premier Lloyd George of England declared in a public address that if the Genoa conference failed in its mission of reestablishing sound financial conditions throughout Europe, European nations and probably the world at large faced another war.

* * *

Indicating returning confidence in the general industry of the country, what is believed to be the largest week's business in bond sales since the flotation of government loans during the war was reported from New York last week. More than $250,000,000 worth of bonds were offered, finding a ready market.

The demand for lumber is declared to be the best since 1920, indicating increased activity in building throughout the country, in the opinion of the Weyerhaeuser company.

* * *

A bill is expected to be introduced in congress this week or very early providing for government regulation of wireless. The measure is intended to prevent the growth of any monopoly in transmitting messages of any kind through the air. As now drawn it places the regulation of this class of service in the department of commerce now presided over by Secretary Herbert Hoover.

* * *

As a direct result of the killing of one or two persons in a mysterious raid in Los Angeles last week, a grand jury investigation of the activities of the Ku Klux Klan has been called in Los Angeles county. It is reported to be the purpose of the investigation to uncover the truth about this mysterious organization, to learn its purposes, its methods of activity and its connection, if any, with a number of events of violence that have occurred in a number of localities. It is understood that Los Angeles is the headquarters of the Pacific coast states division of the Ku Klux Klan, including all the states of the Pacific slope.

* * *

China last week demonstrated to the world that she is neither asleep nor behind the times by staging the first battle of what is reported to be a civil war. The first battle occurred in the vicinity of Peking, while a report from Shanghai on the coast to the south reported the capture of the southern naval squadron by the forces of the south Chinese government. Aeroplanes figured largely in the capture of the naval squadron.

* * *

The packers and stockyards act of 1921 was declared constitutional early this week by the supreme court.

The court, in disposing of cases brought by James E. Burton and others representing Chicago traders, and Stafford Brothers in behalf of the Chicago commission merchants, declared that commission merchants, traders and dealers who buy and sell live stock after its arrival at Chicago stockyards are engaged in interstate commerce.

Chief Justice Taft in holding federal control of the stockyards of the country as directed in the packers and stockyards act to be constitutional declared the yards constituted a channel through which interstate shipments of live stock flowed and further were great national public utilities.

* * *

Secretary Wallace of the department of agriculture last week issued a statement declaring that railroad freight rates must be reduced to about pre-war levels or the prices of agricultural products increased to correspond to the present high freight rates. He named six undesirable effects of the continuation of the present high freight rates as follows:

First—To favor the farmers of South America and Australia at the expense of our own farmers. (Substantial decrease in ocean rates emphasized the disadvantage of the American farmer, he pointed out.)

Second—To keep prices on farm products in the large surplus-producing states at figures lower than are justified by the investment in land and equipment and cost of production.

Third—Prolong the period of dissatisfaction among farmers and encourage advocates of economy fallacies of all sorts.

Fourth—Improve the position of eastern truck and fruit growers, but add considerably to the cost of milk and dairy products because of the advanced prices of hay and coarse grains necessarily shipped in from the west.

Fifth—Gradually shift industrial enterprises westward nearer the surplus food producing territory.

Sixth—Promote sectional rather than national spirit and make more and more difficult national policies with respect to international affairs.

Farm Business and Markets Outlook

(Continued from page five.)

ally declining in an orderly manner. Receipts are above the average for this season of the year and cold storage operators have not yet entered the market.

FRUITS AND VEGETABLES.

Cold storage holdings of apples in the United States on April 1 consisted of 576,940 barrels and 4,062,913 boxes, making a total equivalent to 1,931,000 barrels. On April 1 last year total holdings were equal to 2,209,000 barrels, but the five-year average is only 1,638,000 barrels. During March holdings decreased about 35 per cent. If apples disappear at the same rate in April and May the entire stock will have been disposed of. Prices have changed but little for several weeks.

The movement of potatoes from producing states is decreasing, but it still maintains a big lead over the corresponding period a year ago. Maine and Minnesota are the biggest shippers, the excess from Maine alone accounting for most of the weekly increase over last year. Wisconsin, Pennsylvania, Long Island, New Jersey and the corn belt states are falling behind last year, so that the receipts are being placed without such a drastic decline in prices as that which occurred last spring. New potatoes now compose about 15 per cent of the supply. Prices upon old stock f. o. b. northern shipping points are about $1.30 to $1.40 per 100 pounds sacked, with consuming markets quoted at $1.40 to $1.90.

Once when Bennie Greenwaldt went driving with the sled it tipped over and every one fell out. Bennie likes his teacher very much. There is something higher than a house and higher than a tree; what can it be? A star. What goes round and round and never stops? The world. Bennie lives west of Big Swamp lake, in southeastern Washington.

Lauretta Schuman says there are many birds, including bluejays, where she lives near Puget sound, in Washington. She lost her dog, Tip, last winter. Now she hasn't any dog. Lauretta has missed many days at school. Reading, spelling, arithmetic, grammar, hygiene and geography are her studies.

Eva Cade writes that there was a band concert held recently in the school auditorium. She was there. Sometimes at school they sing in the auditorium. Eva likes reading, language and spelling better than her other studies. Eva's home is in southern Chelan county, Washington. She is 11. May 5 is her birthday. She has a pet dog named Bob.

Preston Polston likes the stories in The Junior Farmer very much. He has moved, but still lives in southeastern Whitman county, Washington. He says sometimes at night his dog barks.

"This is my first letter, will you let me in?" asks Myrtle Inez Hendrickson, of Washington. Indeed we will, Myrtle. We are glad to have you with us. Myrtle's birthday comes on St. Patrick's day. She is 10 years old. Her big sister was born on St. Patrick's day, too. Myrtle has six sisters and two brothers.

A handbag, two kinds of candy, 35 cents and some scissors are what Winifred Angle received on her birthday, which is January 27. Winifred has moved into Yakima county, Washington, since she wrote to us before. She says they have had great sport sliding on the ice in a ditch near their home. Winifred has three sisters.

Another new cousin writes to the Corner from Hillcrest farm, in central Washington. She is Margaret McKenzie. Margaret was 10 January 30, 1922. She has one sister and four brothers. She hasn't far to go to school because the school building is on their own ground. We are happy to hear from Margaret, aren't we?

A little girl in eastern Washington wants to become a cousin. She is Louise Gesler and she is 7 years old. I threw something up on the house white and it came down yellow. What is it? An egg. It was snowing where Louise lives when she wrote to us.

We have another new cousin on a 240-acre farm in Grays Harbor county, Washington. She is Dorothy Peterson, 11 years old November 8, 1921, and 4 feet 11 inches tall. She is the tallest and youngest girl in her class at school. We are very glad to hear from Dorothy.

Blue-eyed Helen Miller, who lives on the boundary line between Whitman and Adams county, in eastern Washington, wants to become a Corner cousin. Her cousin, Grace Gordon, told her about The Junior Farmer. Helen has light hair and fair complexion. July 20 is her birthday. She is 10 years old.

We have another new cousin in northeastern Okanogan county, Washington. This cousin is Lloyd Patterson. April 24, 1922, he will be 7. He goes to a rural school and is in the first grade. Lloyd lives eight miles from town. (Write another letter, Lloyd.)

Myrtle Dick, southern Okanogan county, Washington, has a dear little kitty named Muff. Some time Myrtle will send us a picture of herself and Muff. (Aunt Nellie will like that, Myrtle.) Myrtle was 8 December 6, 1921. At school she is in the third grade. Kenneth and Clayton are her brothers.

"I hope all the cousins enjoy The Junior Farmer like I do," says Gertrude Owens, who was 11 years old December 21, 1921. Thirty-one children go to school where Gertrude goes. She is in the sixth grade. Her home is on the boundary line between Whitman and Adams counties, in eastern Washington.

Some time, when the weather gets nice, Alice Knapp is going to have her picture taken. She will be standing on her pet horse. She and her sister haven't been late or absent at school this year. Last year they were not late once, or absent.

Alice told us about the good time they had at a party. It was a 10-mile drive and they got there at 6 o'clock and then played games. For lunch they had jello, cake, sandwiches and a delicious salad and coco. After lunch they played games again and started home a little after 9 o'clock. It was 12 o'clock when they got home. Alice is a Washington girl and lives in Lincoln county.

February 24, 1922, Linnie Gammon was 11 years old. Linnie lives near the Blue mountains, in Columbia county, Washington. She has two brothers, Lewis and Donald, but she hasn't any sisters. This is the first letter we have had from Linnie.

John Otter, who lives near the Canadian border in northeastern Washington, is 10 years old. His birthday is March 29. John is in the fourth grade at school. Wilhelmina and Gertrude are his sisters.

Martin Cerenzia, whose home is near the Spokane river, in northern Spokane county, Washington, is learning to play the organ. There are six children in the Cerenzia family, four boys and two girls. Martin is in the second grade at school. He says he has a pet calf named Jack.

This year at school Maxine Graham is taking painting lessons. Four children go to school where she goes, three boys and one girl. Maxine has five large dolls and some paper dolls. For good spelling she has won two pictures. Maxine lives southwest of Spokane city, in eastern Washington. Here are two of the books she has read: "Elsie Dinsmore" and "Little Prudy's Sister Susie." Maxine has a baby sister named Margaret.

"My studies at school are arithmetic, reading, geography, grammar and spelling," writes Mabel Habberstadt. "My favorite studies are reading, arithmetic and spelling." Mabel was 10 May 20, 1921. Last winter she had fun coasting and skating. She is a new cousin and lives in Spokane county, Washington.

Winfield Snyder, whose home is in the poultry district in Pierce county, Wash., writes, "I live on a poultry farm where there are about 450 chickens. We have two calves that came from cows with very high records." Winfield wants to be a cousin. We are glad to have him with us, aren't we? He is 11 years old. December 5 is his birthday.

BEDTIME STORIES

By THORNTON W. BURGESS.

Copyright, 1919, T. W. B.

THE PATIENCE OF LONGLEGS.

Patience often wins the day
When overhaste has lost the way.

If there is one virture which Longlegs the Heron possesses above another it is patience. Yes, sir, Longlegs certainly has got patience. He believes that if a thing is worth having it is worth waiting for, and that if he waits long enough he is sure to get it. Perhaps that is because he has been a fisherman all his life, and his father and his grandfather were fishermen. You know a fisherman without patience rarely catches anything. Of course, Billy Mink and Little Joe Otter laugh at this and say that it isn't so, but the truth is they sometimes go hungry when they wouldn't if they had a little of the patience of Longlegs.

Now Grandfather Frog is another who is very, very patient. He can sit still the longest time waiting for something to come to him. Indeed, he can sit perfectly still so long, and Longlegs can stand perfectly still so long, that Jerry Muskrat and Billy Mink and Little Joe Otter have had many long disputes as to which of the two can keep still the longest.

Longlegs had come over to the Smilling Pool because Little Joe Otter and Billy Mink had told him that Grandfather Frog was sitting on his big green lily pad fast asleep.

"He will make a splendid breakfast," thought Longlegs as very, very carefully he walked along the edge of the Smiling Pool so as to get right opposite Grandfather Frog. There he stopped and looked very hard at Grandfather Frog. Yes, he certainly must be asleep, for his eyes were closed. Longlegs chuckled to himself right down inside without making a sound, and got ready to wade out so as to get within reach.

Now, all the time Grandfather Frog was doing some quiet chuckling himself. You see, he wasn't asleep at all, for Jerry Muskrat had warned him. He was just pretending to be asleep, and all the time he was watching Longlegs out of the corner of one of his big, goggly eyes. Very, very slowly and carefully, so as not to make the teeniest, weeniest sound, Longlegs lifted one foot to wade out in the Smiling Pool. Grandfather Frog pretended to yawn and opened his big, goggly eyes. Longlegs stood on one foot without moving so much as a feather. Grandfather Frog yawned again, nodded as if he was too sleepy to keep awake, and half closed his eyes. Longlegs waited and waited. Then, little by little, so slowly that if you had been there you would hardly have seen him move, he started again.

"I guess I must wait until he falls sound asleep again," said Longlegs to himself.

But Grandfather Frog didn't go to sleep. He would nod and nod and then, just when Longlegs would make up his mind that this time he was really asleep, open would pop Grandfather Frog's eyes. So all the long morning Longlegs stood on one foot without moving, watching and waiting and growing hungrier and hungrier, and all the long morning Grandfather Frog sat on his big, green lily pad, pretending that he was oh, so sleepy, and all the time having such a comfortable sun bath and rest, for very early he had had such a good breakfast of foolish green flies.

Over in the bulrushes on the other side of the Smiling Pool two little scamps in

"He will make a splendid breakfast," thought Longlegs.

brown bathing suits had waited and watched for the great fight they had planned for Grandfather Frog when they had sent Longlegs to try to catch him. They were Billy Mink and Little Joe Otter. At first they laughed to themselves and nudged each other at the thought of the trick they had played. Then, as nothing happened, they began to grow tired and uneasy. You see, they do not possess patience. Finally they gave up in disgust and stole away to find some more exciting sport. Grandfather Frog saw them go and chuckled harder than ever to himself.

(Copyright by J. G. Lloyd.)

Birthday Greetings

THURSDAY, May 4—Edith Aylward, 10 years old; Charlotte Miles, 11; Florena Pattinson, 8; Hazel Shinkle, 11.

FRIDAY, May 5—Hazel Hilmo, 10 years old; Donald Whalen, 10.

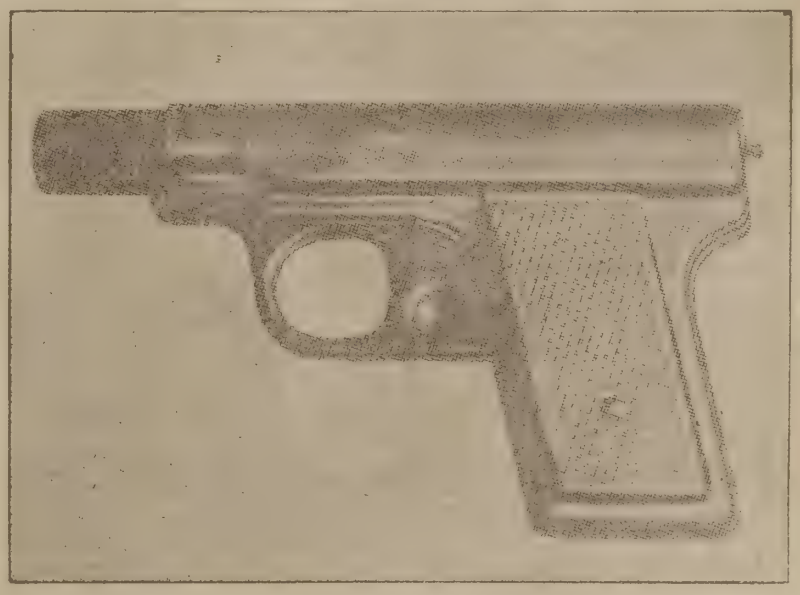
SATURDAY, May 6—Eva Cade, 11 years old; Audrey Cook, 10.

SUNDAY, May 7—Melvin Maurer, 8 years old.

MONDAY, May 8—Esther Bakke, 10 years old; Ione Crain, 9; Merle Finch, 11; Mabel Hanson, 9; Albert Harper, 9; Vernice Maurer, 9; Leda Reische, 10.

TUESDAY, May 9—Margaret Jones, 11 years old.

WEDNESDAY, May 10—Dorothy Brown, 11 years old; Irene Kranz, 11.



LETTERS WELCOMED BY AUNT NELLIE.

Among recent letters received by Aunt Nellie are those from cousins whose names follow. A few of these will be published each week in the regular edition of THE FARMER, and others will appear from time to time in The Junior Farmer:

Ethel Bowen, Inez Erickson, Esther Lobe, Karl Thomson, Frances Zumwalt, Laura Hoskin, Hjordis Fjerlie, Thelma Woodland, Marjorie Reed, Lemerl Birdsell, Itha Myrtle Bowen, Idaho and Edith Baker, Eva Paavalo, Lillian Watson, Frances Flanik, Marjorie Baker, Nora Johnson, Edric Bradbury, Mary Van Ausdale, Fannie Maricich, Loly Walker, Hugo H. Hakala, Quentin Harrington, Frances Flork, Elsie Kuest, Gladys Stone, Archie Moe, Bertha Osborn, Esther and Selma Westerback, June Johnson, Tessie Allen, Leda Ruby Harrel, Edward Manus, Nellie Ware.

Blanche Didra, Marjorie Rambo, Martina Yochum, Stella Ableman, Raymond Blankinship, Carol Wolgamott, Vera Neff, Chloe Lane, Mary Esther Williams, Inez Watson, Mildred Watson, Bertha Mae Holderby, Hubert Roloff, Helen Angevood, Grace Carlson, Selma Long, Denzel Parsons, Georgia Cram, Lois McAlvey, Delerah Buckner, Clyde Dowell, Christian Larsen, Grace Ione Mains, Myrtle Easton, Dorothy Peterson, Esta Rivers, Alice M. Rupp, Sennie Vandercreek, Marguerite Edlin, Dorothy Wagoner.

WIN A WATER PISTOL

Just the thing you have been looking for. Shoots a fine stream of water and is perfectly harmless. Every day will be a day of real sport for you if you win one of the Daisy Water Pistols.

The article described above will be awarded to you in return for your services in securing three 3-year subscription orders to your State Farm Magazine at the regular rate of 50 cents each or $1.50 for the three subscriptions. Address The Pacific Northwest Farm Trio, Inc., Spokane, Wash.

Just Folks

This morning I was in a hardware store making a purchase. I have known the firm for 25 years. Two young men started a second-hand store and have gradually built themselves into a fine first-hand business. Of recent years I have had to go out of my way to trade with them, but I have done this occasionally, as much for the sake of meeting these men personally as of trading with them. They are always glad to see you. They have always treated me fairly, and have never tried to put anything over on me in the way of buying something that I did not need or want. I like to trade with them.

This morning, when I entered the store, I was a little disappointed seeing a young man coming up to wait upon me. Soon I got over my disappointment, for he was a likely young fellow. He was courteous and direct and informative. I thought I would try him out. I casually remarked that I did not suppose it made any difference to them what they thought of the article they sold me; it was all the same to them

"Yes, it does," said he, and he went on to say that several years of experience in selling the article which I was looking at had proved it to be the most satisfactory. They had other brands and he would be glad to show them to me. I made up my mind he was a chip of the old block.

Later when I asked one of the older members of the firm if that was a son I was trading with I found out that my suspicion was correct and that both of the men had sons growing up into the same business.

In spite of all that is said about vocational guidance and the necessity of a man finding what he is specially fitted for and following that vocation, I still think there is a good deal of rot about it all.

Once in a great while a genius comes along who must follow the bent of his mind from the earliest years, but generally the circumstances and the environment are quite as likely to make for success as adherence to bent of mind.

I shall watch with interest how this hardware firm goes along in breaking in the second generation into the same business. Perhaps, if more of this were done, there would be less young people going off on a tangent.

Perhaps the old biblical admonition is not so much out of date. It is not that you do with your might what you want to do most, but to do with your might what your hands find to do. Accepting the situation is more than half the battle of life.

E.A.S.

Home Recipes

(Continued from page eighteen.)

tablespoon of cayenne pepper, one tablespoon of mace, three tablespoons of whole cloves, three tablespoons of whole allspice. Put all the spices in the vinegar, let come to a boil, then pour over smelts. Put covers and rubbers on loose and sterilize for three hours. Tighten the lids, turn upside down for two days to test them.

These are very like the mustard sardines and will keep well; I have some two years old. If the vinegar is very sour add some water and use less vinegar and it is best to use pint jars for use in an ordinary family. MRS. S. C. NIDA.

Chitwood, Ore.

Potato cake: Two cups of sugar, one cup of butter or lard, four eggs, one-half cup of sweet milk, two and one-fourth cups of flour, two teaspoons of baking powder, one cup of mashed potato, one cup of ground chocolate or cocoa, one cup of raisins, one and one-half teaspoons of cinnamon, one teaspoon of allspice, one teaspoon of cloves.

Beat sugar and butter well together, stir in milk, then the flour with the baking powder sifted with it. Next add the cold mashed potatoes, stir in the chocolate and spices, then the nuts and raisins. Stir well together, then bake in a moderate oven. MRS. W. L. SHOOK.

Weiser, Idaho, Route 4.

Devil food cake: One half cup of butter or other shortening, one and one-half cups of sugar, three eggs, two squares of melted chocolate, one cup of milk, two teaspoons of baking powder, two cups of flour, raisins or nuts if desired. Cream the butter and sugar, add the beaten yolks of eggs and the melted chocolate, then add the beaten whites of eggs. Sift baking powder into the flour, add to the mixture and then add the milk the last thing.

MRS. W. U. M'NEIL.

The Gaunt Gray Wolf

(Continued from page seventeen.)

shore, looking toward the glowing east, immovable as a statue, picturesque and beautiful in her primitive Indian costume.

As the rim of the sun appeared above the horizon and the marvelous colorings of the morning melted into the fuller light of day, Manikawan extended her arms before her for a moment, then descended from her rock, and, observing that her friends were astir, she approached them, her face glowing with the health and freshness of youth, and bearing no trace of the ordeal through which she had passed.

"White Brother of the Snow, the matchi manitu has been cheated. You have escaped from his power, and you will live loug in the beautiful world," said she, for the first time adopting a more personal and affectionate form of address. "Manikawan's heart is as the rising sun, bright and full of light. It is as the earth, when the sun shines in summer, warm and happy. It soars like the gulls, no longer weighted with trouble."

"Manikawan is my good sister, and I am glad she is happy," responded Bob. "White Brother of the Snow and his friend will never forget that she outwitted the matchi manitu. They will never forget what she did."

Ungava Bob and Bill Campbell, sharing the canoe with Manikawan, Dick Blake and Ed Matheson the canoe with Shad Trowbridge, they reached the river tilt that evening. Manikawan was radiantly happy, but Bob, uncertain as to what course she might decide upon, and well aware that any attempt to send her back to her people would prove quite fruitless if she chose to remain with them, was much disturbed in mind. He sat long by the camp fire that night, before he joined his companions in the tent, still undetermined what he should do to rid himself of her.

When morning came Manikawan gave no hint of going until breakfast was eaten. Then with her customary promptness of action, standing before Ungava Bob, she announced:

"Manikawan will now return to the lodge of Sishetakushin, her father, and wait for White Brother of the Snow. He is safe from the matchi manitu. She will wait and be contented. She will know that he is in the country of her people. She will wait for him till the sun grows timid and afraid, till the spirit of the forest grows bold and strong. Then White Brother of the Snow will come to the lodge of Sishetakushin, and there he will rest. Manikawan will prepare for him his nabwe (stew) and make for him warm garments from the skin of the atuk."

Without further preliminary or adieu, she lifted her canoe upon her head and disappeared as unexpectedly as she had appeared.

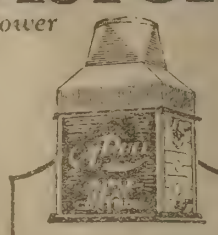
Buy the Tractor That Saves You Most Money

What you want on your farm is power that will do your work faster, better and cheaper. The form of power is not the most important question. You want the best and cheapest available.

If any one tractor produces cheapest power—if it does your work day after day, year after year, at cheapest cost—*that is the tractor you should buy.*



OILPULL TRACTOR
The Cheapest Farm Power

The cost of tractor power is determined largely by fuel cost—upkeep expense and length of tractor life.

The OilPull *saves money* on fuel. According to the results of exhaustive expert tests, the OilPull fuel bill is 39% less than the average of all other tractors.

The OilPull *saves money* on upkeep. The upkeep expense reported by owners is 50% less than the average upkeep expense reported to the Government in a recent tractor investigation in the Corn Belt.

The OilPull *saves money* on depreciation. Thousands of OilPulls are still giving faithful service after eight, nine, ten and even twelve years of use.

Triple Heat Control

A perfected system of kerosene burning has made possible the remarkable OilPull savings. Mail the coupon for a FREE copy of our new booklet on Triple Heat Control.

Let us send you more detailed information on how the OilPull will save money on your farm. In the meantime, see your local dealer.

THE AUTO-OILED AERMOTOR

A Real Self-Oiling Windmill

Oil an Aermotor once a year and it is always oiled. Every moving part is completely and fully oiled. A constant stream of oil flows on every bearing. The shafts run in oil. The double gears run in oil in a tightly enclosed gear case. Friction and wear are practically eliminated.

Any windmill which does not have the gears running in oil is only half oiled. A modern windmill, like a modern automobile, must have its gears enclosed and run in oil. Dry gears, exposed to dust, wear rapidly. Dry bearings and dry gears cause friction and loss of power. The Aermotor pumps in the lightest breeze because it is correctly designed and well oiled. To get everlasting windmill satisfaction, buy the Aermotor.

A year's supply of oil is sent with every Aermotor

Hot Shots at Scrub Sires

By C. M. HUBBARD, Extension Live Stock Specialist, State College of Washington.

Missouri experiments put 56 pounds on grade lambs in 90 days, while scrub lambs, fed and handled the same way, took 122 days to make this same weight. Also the scrubs required 40 per cent more feed per 100 pounds gain and sold for $2.85 less per hundredweight.

* * *

Wisconsin exported in one year 35,888 head of dairy breeding stock to 36 different states, at remunerative prices. Why was Wisconsin able to do this? Because the dairy breeders of that state had high-class stock for sale. How did they develop them? By using high-class purebred sires carrying milk and butterfat records.

* * *

A Waupaca county, Wisconsin, herd, consisting of 12 native cows, produced a total income of $438.88 in one year. A high-class purebred sire was then purchased. Five years later the herd, consisting of 12 high grades, produced a total income of $1000. Increased returns due to use of purebred bulls, $561.22.

* * *

Jim McCroskey, noted Shorthorn breeder of Fishtrap, Wash., relates the following incident in his experience:

"A grade cattle raiser visited my ranch and stated that, if he could purchased some high grade females he would buy a bull from me. He stated that he considered the 'breeding up' process of using good bulls on inferior grades or scrub cattle was too slow for him. He wanted good ones to start with.

"I took him over to a neighbor who had used a high-class sire on half his ordinary females for one year, having 18 heifers sired by the registered bull and he immediately picked out these 18 head, asking my neighbor what prices he had on them. The neighbor asked him to set a figure on them if he desired them, which he did, suggesting $70 per head for the 18 head. He was pleased to be able to purchase these cattle, first cross of a good registered sire, at $70, when the remainder of the heifers of the same age, by an inferior bull, were selling at $40 to $50 per head."

Only one cross of a meritorious registered bull increased the value of these 18 head $20-$30 per head and the man paid this increase after stating that the "breeding up" process was too slow for him!

* * *

Two pigs were sired by the same purebred boar and fed in the same pen, from the same trough, says the Breeders Gazette. One of the pigs was farrowed by a purebred Berkshire sow and the other by an ordinary grade sow. The purebred pig weighed 304 pounds to the grade pig's 205 pounds. There were three days difference in their ages, in favor of the grade pig.

NEW GOLD MEDAL COW.

Brown Lad's Cowslip, a Jersey cow, owned by Grant Nichols and Gus Plunket, of Ellensburg, Wash., and shown in the picture herewith, recently completed an official test with 711 pounds of fat and 15,012 pounds of milk to her credit. When she calves in May she will be a gold medal cow, having carried her calf six months of her test year.

Cowslip is a daughter of Cowslip's Oxford, a bull whose parents were both imported and who has two good Register of Merit daughters already. One of them, Cowslip's Coquette, with 607 pounds of fat to her credit, is owned by Nichols & Plunket. Cowslip's dam, Brown Lad's Lady, has a record of 419.75 pounds of fat, on a test begun when only 20 months' old. She is by the Adam Stevens bull, Gertie's Brown Lad, that has several high testing daughters. Cowslip is a beautiful show cow, just 5 years old, and will no doubt

show her ability to do still greater things. Messrs. Nichols & Plunket have just six cows in milk and all are on official test.

Golden Prince of Yakima, the present herd sire, is out of a maternal granddaughter of Imp. Golden Maid's Prince, and is a show animal of fine dairy conformation. Messrs. Nichols & Plunket recently purchased Majesty's Cowslip's Noble, a bull bred by Charles M. Talmadge. He is a son of Cowslip's Oxford, making him a half brother to the gold medal cow. The bull is now 4 years old and has a lot of wonderfully typy and good producing heifers in a grade herd in Whatcom county.

Mr. Plunket, who superintends the farm, came to the work directly from a shoetore, where he had been employed for some years. His only milking experience was with three grade cows. Mr. Nichols has long been a barber in Ellensburg, and has always been a live stock fancier, with a leaning toward Jerseys.

DAIRY COWS IN DEMAND.

Twenty-seven grade Guernsey cows valued at $130 each, or a total of more than $3500, were recently shipped by Clatsop county dairymen of Astoria and vicinity to Los Angeles, Cal., where they will become part of the Ardour farm herd. This is one of about 600 cows, which supplies a large part of the milk trade of the southern metropolis. The Clatsop County Guernsey Cattle club, of which Miss Pearl Cole is secretary, sponsored the shipment.

Forty-three per cent of the orders for grade calves from association-tested cows, which have poured in upon dairymen of Tillamook county from eastern Oregon, Washington, Montana and Utah, are for Guernsey calves. Most dairymen of this district raise only the calves from their best cows, and last fall County Agent W. D. Pine conceived the idea of marketing those which heretofore had gone for veal. Several western papers carried advertisements of grade calves sired by purebred bulls and out of cows with cow testing association records of 300 to 700 pounds, at $11.50 each f. o. b. Tillamook. To date applications for more than 300 calves have been received.

DON'T BE SATISFIED.

You are a scrub yourself if you are satisfied with a scrub cow. No one should be content to get along with a cow giving only a gallon or two of milk a day. She should give five or more gallons.

NECESSARY TO VICTORY.

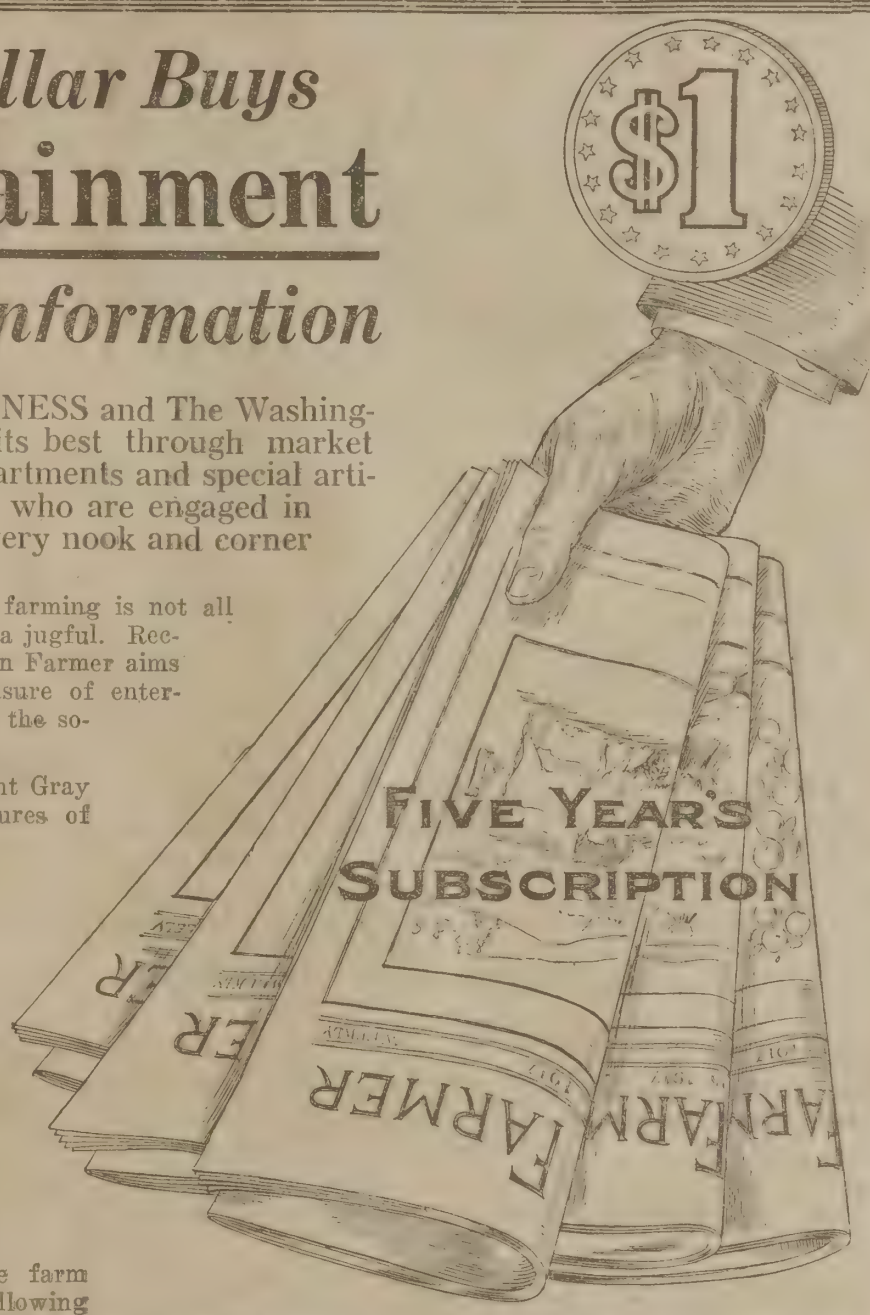
Entertainment



asWellasInformation

FARMING is a BUSINESS and The Washington Farmer does its best through market quotations, regular departments and special articles to help its readers who are engaged in this vital business in every nook and corner of Washington.

However, the business of farming is not all there is to farm life. Not by a jugful. Recognizing this, The Washington Farmer aims to give its readers full measure of entertainment, and to make even the soberest facts interesting.

Our new serial, "The Gaunt Gray Wolf," is just one of the features of an entertaining kind none the less popular because it transports the reader into an environment beyond the range of his own daily life.

This story by an able writer, Dillon Wallace, is in its early chapters. You can easily pick up the threads with the instalment in this issue. If you do so, we feel sure you will enjoy the weekly visits of your state farm magazine even more for following the exciting developments of this story. Here is a story which in book form would cost you $1 or $1.50; yet is only one among a wealth of varied features in a magazine which costs you only $1 for five years.

We say to our friends: "Send your subscription order direct. Get your neighbor to do the same. We will give you and your neighbor the benefit of every penny which would ordinarily go to the agent handling the subscription."

If you believe in cooperation, help us make our plan an even greater success during the coming year than it has been in the past. Send in your order if you have not already done so, and let as many neighbors as possible know about our money-saving plan.

Subscription Rates of The Washington Farmer.

Buhl Cans Are Better

BUHL cans outlast all others. That's because they are made right from heavy quality tinplate in the largest, most complete and most efficient milk can factory in the world.

Another reason for the popularity of Buhl cans is their smoothness and the ease with which they are washed. There are no cracks or corners in which dry particles can stick.

Buhl supplies are standard with dairymen of the Northwest. There is a large variety of styles in milk cans and milk pails from which you may choose. A full range of sizes.

Write for folder showing the complete Buhl line. Order now, when stocks are complete and before the early summer rush begins.

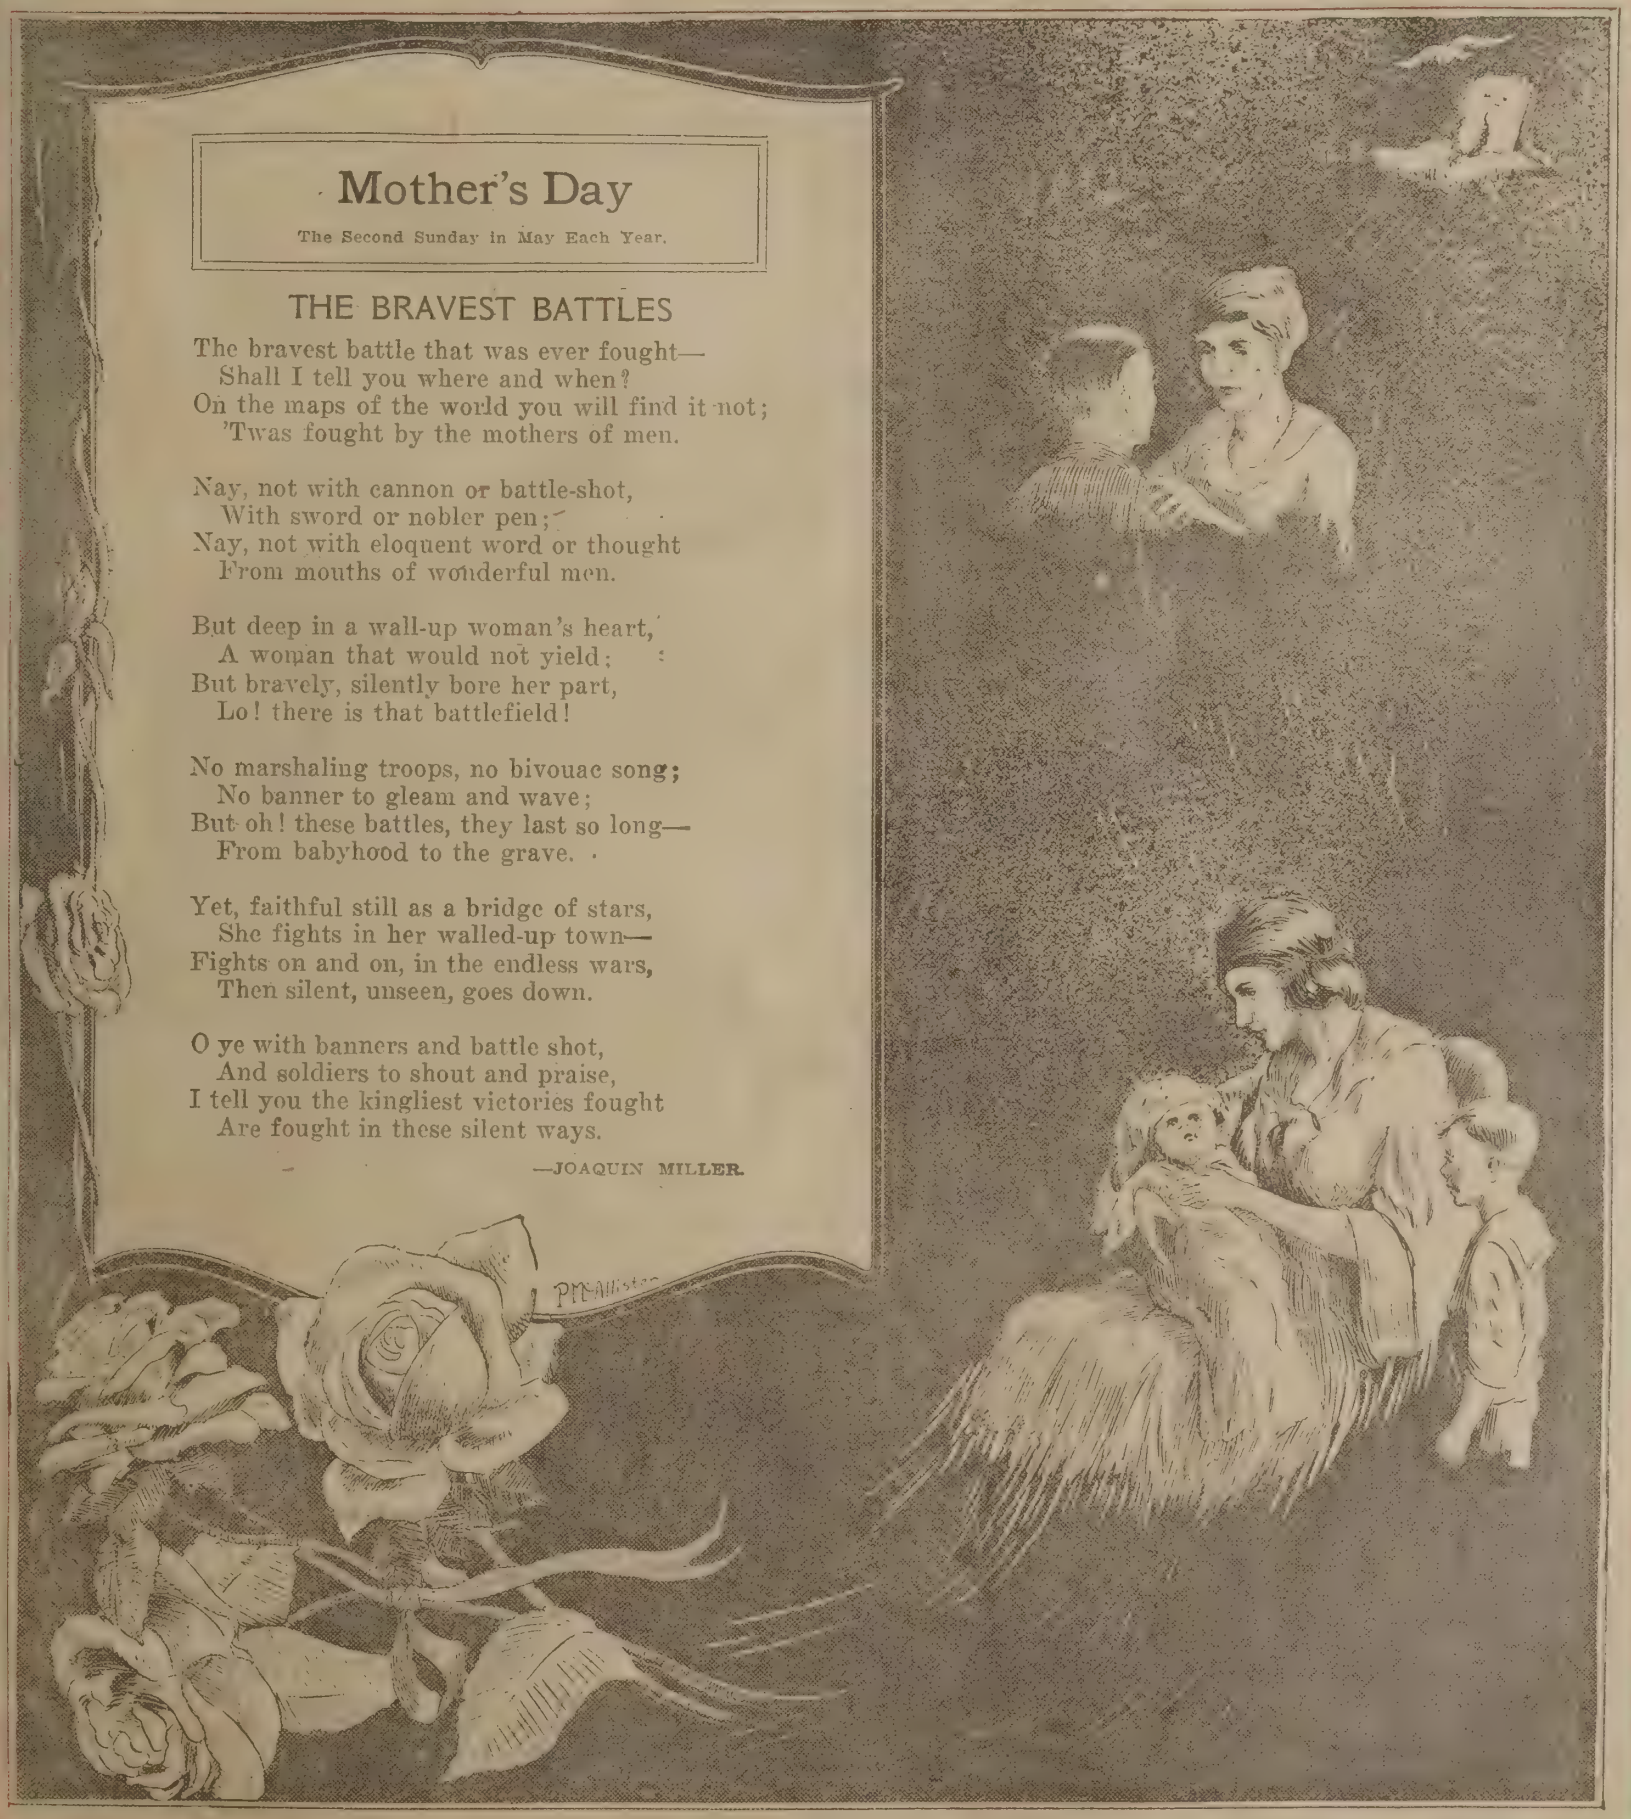
THE BRAVEST BATTLES

The bravest battle that was ever fought—
Shall I tell you where and when?
On the maps of the world you will find it not;
'Twas fought by the mothers of men.

Nay, not with cannon or battle-shot,
With sword or nobler pen;
Nay, not with eloquent word or thought
From mouths of wonderful men.

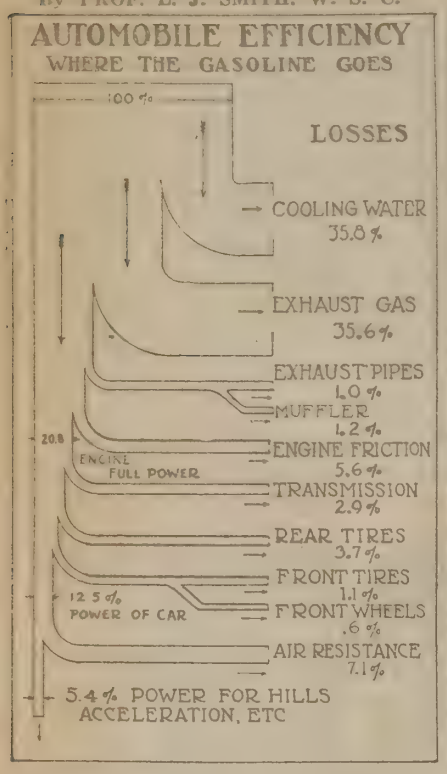


But deep in a wall-up woman's heart,
A woman that would not yield;
But bravely, silently bore her part,
Lo! there is that battlefield!

No marshaling troops, no bivouac song;
No banner to gleam and wave;
But oh! these battles, they last so long—
From babyhood to the grave.

Yet, faithful still as a bridge of stars,
She fights in her walled-up town—
Fights on and on, in the endless wars,
Then silent, unseen, goes down.

O ye with banners and battle shot,
And soldiers to shout and praise,
I tell you the kingliest victories fought
Are fought in these silent ways.



—JOAQUIN MILLER.

Follow the Trends of the Markets From Week to Week—Page 5

Efficiency of Motor

By PROF. L. J. SMITH. W. S. C.

Every one is interested in getting the most per gallon of fuel out of his car. This country loses annually enormous quantities of gasoline because of motors in poor condition and because of careless lubrication.

The accompanying figure shows where the gasoline goes in the form of heat energy. It applies to a high grade touring car moving at the rate of 40 miles per hour.

The motor, at full power, uses a little over 20 per cent of the heat of the gasoline. By the time the power gets to the rims of the rear wheels there is left but 12.5 per cent of the heat energy of the fuel.

It behooves every car user to keep his motor in good condition, and, above all, not to try to economize on lubrication.

Look over the efficiency chart carefully. It contains a lot of interesting data.

The Ship Subsidy

Favored as Emergency Measure

THE American Farm Bureau federation has adopted the following resolution in limited support of the proposed subsidy for the American merchant marine:

"While the American Farm Bureau federation is opposed to any subsidy in principle, we realize the necessity for development of the American merchant marine as a naval auxiliary and agent in development of foreign trade. We approve aid temporarily, until our flag can be established on the high seas, and no longer."

That, as we understand it, is in close accord with the policy of the administration at Washington. The American people, as we said when President Harding laid his message before congress asking for support for the merchant marine, do not take kindly to the subsidy idea. But it is a well-known axiom that "circumstances alter cases," and there is a good deal of justification in the circumstances of this case for a limited subsidy for American ships.

It has cost the American people nearly $4,000,000,000 to build and operate the wartime merchant marine. The greater part of that $4,000,000,000 is lost and never can be recovered. Government building of ships during the war was excessively costly. We were held up and plundered, on one hand by profiteering contractors and on the other by profiteering and striking labor in the shipyards. Materials of all kinds were outrageously high.

So the government suffered a heavy loss in building ships and it has been suffering a continuous loss in their upkeep and operations since the signing of the armistice. It is the declared policy of the United States shipping board to dispose of these ships as rapidly as they can be advantageously sold to private buyers. But buyers are scarce and bidding, when there is any on government ships, is disappointingly low. One purpose of the administration's subsidy measure is to encourage American shipping lines to buy these ships at better prices than can now be realized.

Another purpose, as the American Farm Bureau federation's resolution points out, is the necessity for development of the American merchant marine as an auxiliary for our fighting navy. A war navy is helpless without an auxiliary line of merchant ships, as we found to our recent heavy cost in the World war. All governments have found it necessary to encourage the building and maintenance of a privately-owned merchant marine that can be commandeered and called to the service of the nation in time of war.

For another important reason, that we have discussed from time to time, the American farmers are vitally interested in the maintenance of an American merchant marine. We must sell our surplus farm products abroad. If we should have no American ships, flying the American flag, to compete with foreign-owned ships, the foreign ship owners could charge us any outrageous prices that they might agree upon and we would be powerless to break the monopoly. With an American merchant marine competing with foreign ships, the tendency is to hold down the rates for transporting American food products to Europe and other parts of the world.

The Farm Bureau federation feels in this matter about as we have expressed ourselves. We don't like the word "subsidy," but it seems a choice of two evils, and the proposed limited subsidy is the lesser evil.

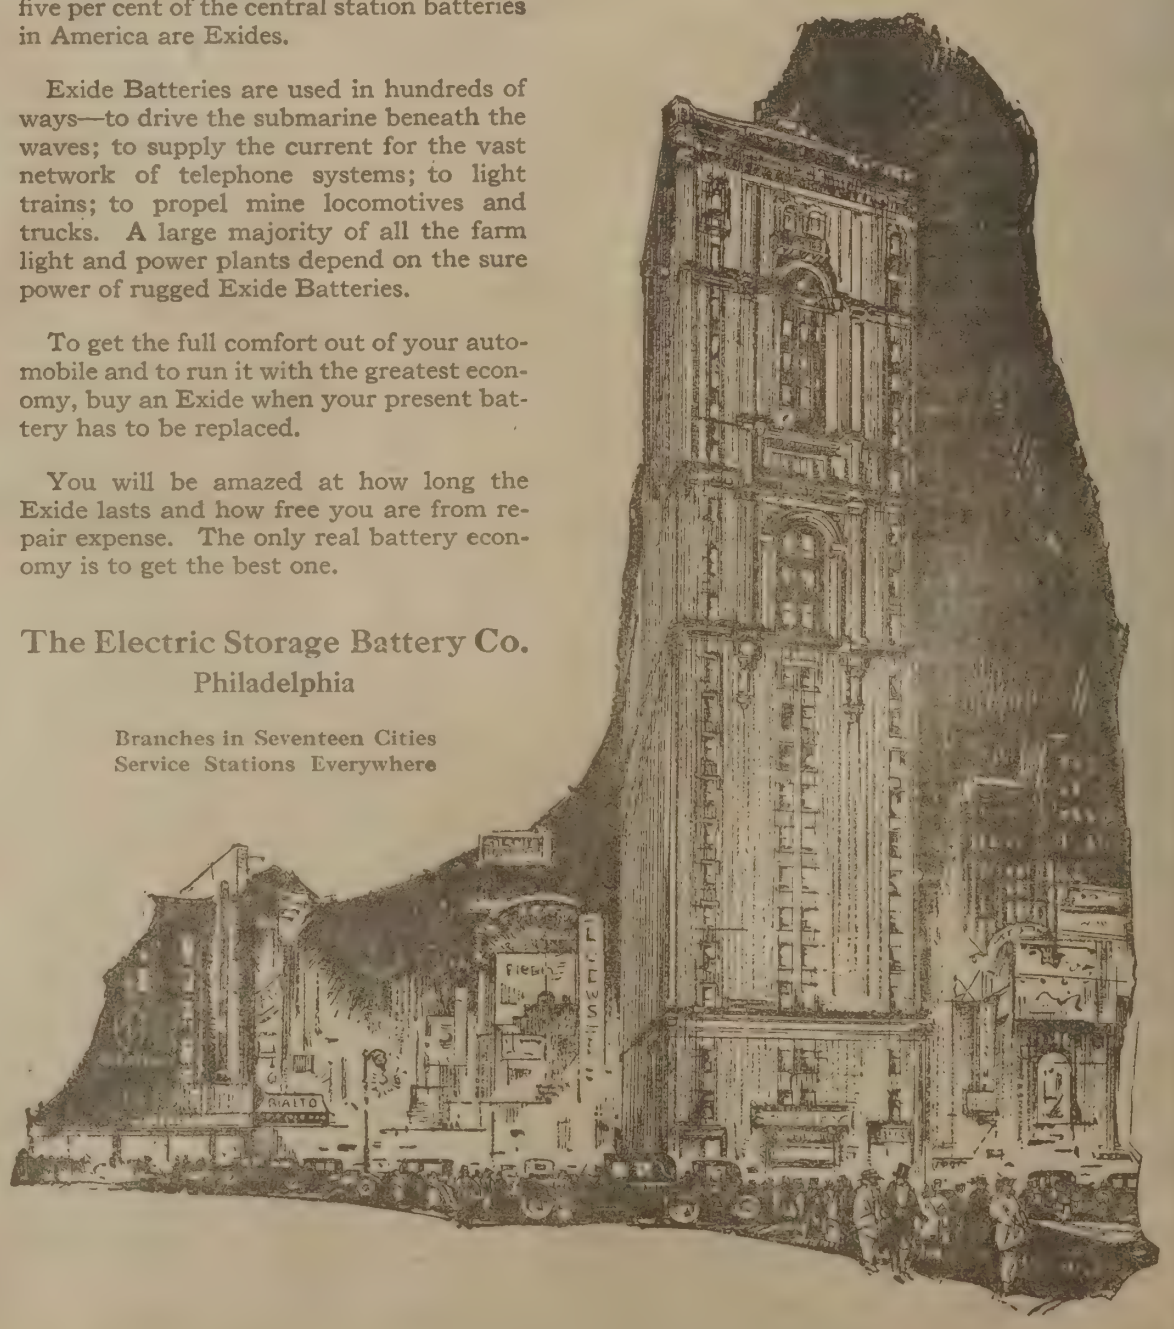
Exide
BATTERIES

The Lights of a Great City

Suddenly a black thunder-shower rolls up over the city. Although it is mid-afternoon, lights are switched on in thousands of offices until the towering city looks like an illuminated honeycomb. Huge Exide storage batteries, capable of delivering millions of candle-power, are called on to supply power through the emergency. More than ninety-five per cent of the central station batteries in America are Exides.

Exide Batteries are used in hundreds of ways—to drive the submarine beneath the waves; to supply the current for the vast network of telephone systems; to light trains; to propel mine locomotives and trucks. A large majority of all the farm light and power plants depend on the sure power of rugged Exide Batteries.

To get the full comfort out of your automobile and to run it with the greatest economy, buy an Exide when your present battery has to be replaced.



You will be amazed at how long the Exide lasts and how free you are from repair expense. The only real battery economy is to get the best one.

"Bang" Herd at Western State Hospital

Successful Management of the Highly Producing Cows at Fort Steilacoom

By RALPH ERSKINE

Only two reactors in six years' time among the offsprings of a herd of 20 cows, all of which have shown themselves to be tubercular animals, is the record of the "Bang" herd at the Western State hospital at Fort Steilacoom.

These animals are, of course, kept separate from the other cows, their milk thoroughly pasteurized and their attendants instructed to keep entirely away from the herd of nonreactors in the larger barn.

The idea of a separate herd of reactors is due to the fact that the trouble was found to be present in the herd in 1914, and since the cows were needed to furnish milk for the institution at that time they were kept and the milk pasteurized

In 1916 tuberculosis was found in the herd of Calvin Phillips of Greenbank, Wash., who offered 26 head of Holsteins to the hospital if they would repay him with a heifer calf from each cow. These cows had records of from 20 to 29 pounds of fat in seven days and with the reactors already mentioned, they made a good combination of milk and butter producers.

The results were so successful that in 1917 another bunch of reactors was secured from C. E. Peabody, owner of the Donnybrook farm at Bothel, Wash. The average production from the 12 head was from 20 to 25 pounds of butter.

In May, 1921, Governor Hart purchased seven head of tubercular cattle from William Bishop's herd at Chimacum, Wash., among which was his promising herd sire Chimacum King Korndyke Sady Vale, for which Mr. Bishop had an offer from the Canadian government for $10,000. This bull is now the senior herd sire of the Bang herd.

The dam of the bull has completed a 7-day record of 489.4 pounds milk and 29.6 of butter as a junior 4-year-old, in the Carnation herd. As a senior yearling, this heifer made a world record for age in 305 days, for combined milk and butter production, of 17,031 pounds milk and 705 of butter, and a few days later was made senior and grand champion Holstein female at the 1920 Pacific International.

S. V. H. Molly was another one of this shipment and she holds a record of 36 pounds of butter and 693.7 pounds of milk in seven days. While these two individuals were the most valuable the other five made some excellent records and the entire lot is considered one of the best purchases of reactors that has been made at the institution.

Two cows were secured last August from the Hollywood herd. Hope Dudly, who has a yearly record of 800 pounds of butter, and Hollywood Segis Lady Fayne, a daughter of Judge Segis. The latter made a record of 22 pounds as a two year old and was making a fine showing on official test when she was unfortunate enough to lose her calf.

The institution now owns 30 head of cows and heifers, all of which are daughters of the cows in the Bang herd. By keeping the premises thoroughly sanitary and feeding the calves on sterile milk the institution has for six years kept the calves healthy and there has been but one purebred calf to react to the tubercular test, a bull calf. The other reactor happened to a calf from a grade cow.

As the heifer calves reach maturity they are given a stall in the main milking barn and allowed to run with the milch cows during the day. Seven daughters of the reactors are now in the tubercular free herd and have been tested officially making very promising records. Steilacoom Prilly Pontiac, a 3-year-old, produced 410 pounds of milk and 18 pounds of butter in seven days. Steilacoom Inka Mechthilde, another one of these heifers, produced 310 pounds of milk and 16 pounds of butter as a 2-year-old. Other similar records could be mentioned to show that they are doing their part to uphold the honor of the herd. As can be seen from the above names the name "Steilacoom" has been adopted as the herd name to be used when registering each purebred calf in the future.

There are 30 purebred cows and 44 heifers in the nonreactor herd, all of which are kept in the large dairy barn. It is Governor Hart's intention to build up this herd as rapidly as possible both from calves raised at the institution and possibly a purchase now and then. This herd will be called the foundation herd for the state institutions. As cattle are needed at any of the other state schools or hospitals they can be secured from this institution. It will, however, be several years before this herd is large enough to draw upon to any great extent. At present the entire output from the 61 head of purebreds and grades, now being milked, is needed in the kitchens and wards at the hospital. As the milk supply is increased some of the grade cows can be sold to make room for the new members of the herd. These animals have been tested from time to time for butterfat and have been found to have records ranging from 7000 to 12,000 pounds of milk in the year.

"We do not hope to be able to spare any purebred cattle for several years," said B. W. Richards, live stock manager at the hospital farm. "We are adding to the herd constantly, however, and are determined to make as rapid an increase as possible. We feel that it will pay us much better to be spending our time with purebred animals than with grades. We hope to be able to fit up a show herd this fall, which will be a credit to the institution."

"We are particularly proud of our nonreactor herd," remarked Dr. William N. Keller, superintendent of the institution. "In 1918 we joined the Holstein-Friesian Association of America, and in December, 1919, we were able to have the herd placed on the accredited list, being free from tuberculosis. We are using every sanitary precaution possible, and feel sure that we will have no future trouble with a disease, even in the calf herd.

"The calves are kept in pens by themselves until six months, at which age they can be tested by the state veterinarian to ascertain if they have contracted tuberculosis. From this age on provided they are healthy, they are allowed to run with the other heifers, and later fed in the milking barn. We have a number of patients at the hospital who take a great pleasure in working with the cows, and aside from a paid herdsman and live stock manager, all work about the barns is done by "patient labor." On the entire dairy herd we were able to clear $15,000 in the past biennium, which includes the years 1919 and 1920. This figure includes all costs, such as feed, deterioration of buildings, and other details.

"When crops are taken from the farm to be used in the dairy barn their value is estimated and charged to the feed cost. The same, however, is true in all exchanges between the departments. The dairy, for instance, is credited with all milk which it furnishes to the institutions."

None of the milk from the tubercular cows is used for human consumption although there is no reason why it could not be used if it was needed. The milk from the "reactor barn" is placed in especially marked cans and taken direct to a separate milk house and pasteurized at a temperature of 170 degrees for 20 minutes, part of it is taken out for the young calves who require whole milk, and balance is separated, the cream being made into butter and the skim milk going back to the calves, poultry houses, and to the pig barns. None of the reactor cows are allowed out of their special pasture lot, which keeps them entirely away from the other cattle. The manure from this barn is used on plowed fields, which are not frequented by any of the animals.

Evidently, the "Bang" herd of dairy cattle at the Western State hospital at Fort Steilacoom was named after the Bang method of eradication of bovine tuberculosis, for Mr. Bang of Copenhagen, Denmark, made a scientific study of tuberculosis in cattle and its eradication, and was the originator of the "Bang method" of treatment. Professor Bang claims that the most essential point to keep in mind is that tuberculosis is spread only by contagion, and that the old theory that tuberculosis is hereditary is wrong. He also discards the theory that the germs of the disease are everywhere, pointing out that many whole herds are free from tuberculosis, although in a district where the disease is present.

The professor urged that susceptibility of cattle to the disease depends upon the number of tubercle bacilli present, and also on the opportunity of the cattle to take in the germs, principally through [illegible] cows is big practically [illegible] cows?"

"The immediate effects are fever, smaller quantities of milk and sometimes diarrhoea, but there are no lasting effects."

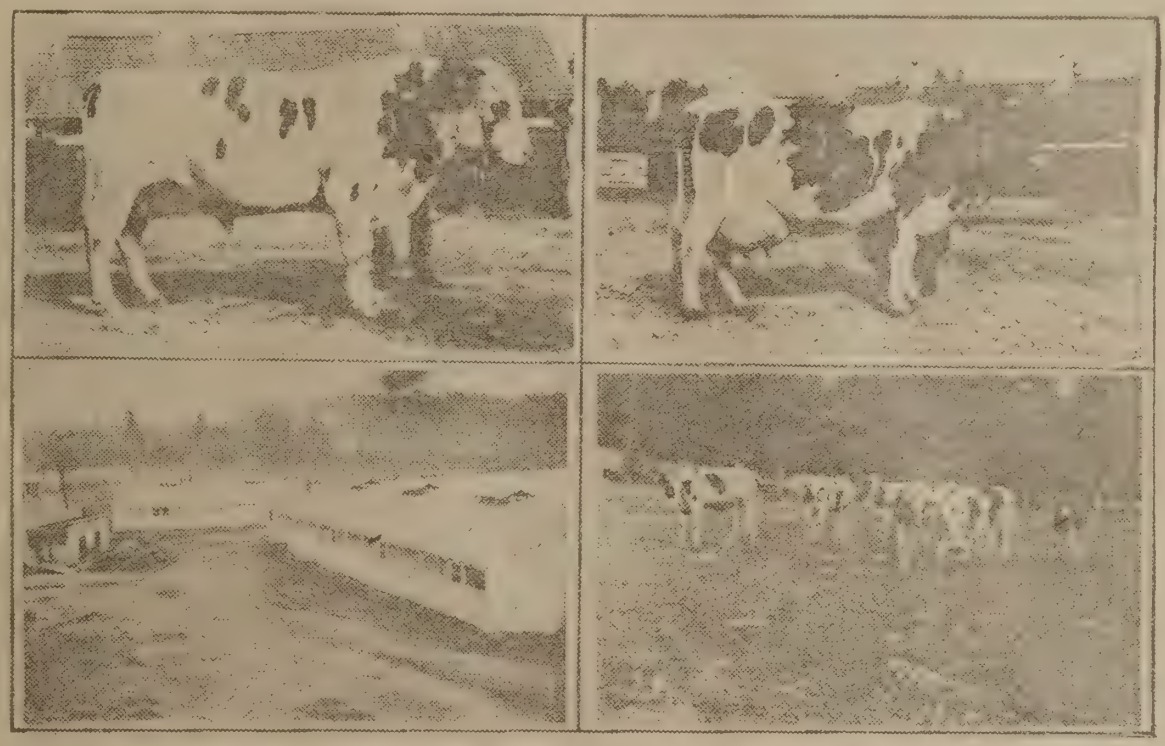
"In an incipient case will the test aggravate or make worse the disease?"

"I have thought that the disease was aggravated, but now believe that the aggravation was simply accidental, and due to other causes."

"Can the Bang method be carried out on physical examination alone?"

"I do not believe so. The disease must be highly developed in order to detect it by a physical examination. The new herd, at least, should be tested with tuberculin."

"How often should the tuberculin test be used?"



"At least wtice a year is best."

"Is the tuberculin test reliable?"

"Not absolutely; but it is very reliable."

"What would you do with reacting cows?"

"Keep them as long as apparently well and healthy and the milk is good, but keep them under supervision and away from healthy cows."

Chimacum King Korndyke Sady Vale, a son of S. V. H. Molly, is shown in the upper corner of this layout. S. V. H. Molly is at King's right, in the picture.

The lower left picture shows the tubercular barn where the "Bang" herd is kept at the hospital. The long barn in the foreground is the milking barn, while the one in the background is for housing the cows which are about to freshen and for the test cows in the herd. Healthy calves from reactor cows are shown in the lower right picture. Only one reactor has been found among the purebred calves in six years.

general ways are given by which cattle can be infected with tuberculosis—first, by living together with diseased animals, and, second, through milk. Farmers can have healthy cows and unhealthy calves. The professor found that on one farm in Denmark all the cows and calves were free from the disease, but all the 2-year-old heifers were diseased. This was laid to the milk being contaminated on which the animals were fed as calves. When milk is sent to the creamery or cheese factory, where the skimmed milk or whey is returned to the patrons, there is great danger of contagion. When the udder is affected the milk contains a great number of the bacilli.

In Denmark, all cattle affected by tuberculosis of the udder, as determined by examination of the milk, are killed and paid for by the government. Milk will not generally contain tubercle bacilli unless the udder is affected.

The principles on which the Bang method of tuberculosis eradication is founded are the tuberculin test and isolation. All the cows are tested with tuberculin and the healthy animals placed in a barn entirely separated from that in which the diseased ones are kept. All cows affected by the disease in the udder are killed, but calves from those cows that are well enough to keep may be raised. The calves are taken from the diseased cows immediately at birth and placed in the quarters with the healthy animals. They should be fed only on milk that has been [illegible].

This method has been used in Denmark and other European countries very successfully, the herd gradually becoming free from disease without the necessity of killing off all affected animals immediately.

There are those who doubht the practicability of this plan for the average dairy farm, as it requires much more labor and equipment.

A number of years ago, Professor Bangs made a visit to the United States and gave an address at a meeting of the New York State Veterinary college in Ithaca. In reply to direct questions, he answered in substance as follows:

"Do you believe that tuberculin will develop tuberculosis or any bad effects in healthy cows?"

"No. Absolutely impossible."

"Will tuberculin aggravate the disease in affected

TESTING IN [illegible] COUNTY.

The Mason County Cow Testing association has been formed by County Agent H. E. Drew, and 12 members, with 76 cows, were signed up. They agreed to eliminate all unprofitable cows at the end of the year. The organization was formed without cost to the members through the co-[illegible] of the local creamery.

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter, January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible bankrupts. Complaints must be sent to us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock except that we will not be responsible for claims for damages on account of diseases in stock sold through these columns.

Sentiment Has Changed

In a report to President Harding, Eugene Meyer Jr., managing director of the War Finance corporation, recommends six sweeping remedial measures for the benefit of American agriculture. The first aims at the provision of fuller credit for the live stock industry.

The second recognizes the reason and justice of the contention of various farm organizations that there is need for the orderly marketing of agricultural products in a more gradual way and over a longer period.

The third has for its purpose the providing of enlarged credit facilities for cooperative marketing organizations.

The fourth would extend the powers of the federal reserve banks to include the purchase in the open market of eligible paper secured by nonperishable agricultural commodities properly warehoused.

The fifth recommendation is for the extending of additional inducement and opportunities to state banks to come into the federal reserve system, and the last suggestion proposes an amendment of the national banking act to permit a limited amount of branch banking within a limited radius of the parent institution.

The Farmer would not be surprised to find President Harding's administration adopting this report in full. In his survey of American farm conditions Mr. Meyer has shown a quick grasp of problems that affect the agricultural producers, a ready and intelligent sympathy for them, and a really remarkable capacity for finding safe and sensible remedies. Mr. Meyer's recommendations, however, would not have been regarded a few years ago as safe, sound and sensible. It is significant of the changed attitude that these recommendations will be generally accepted as reasonable by bankers and business men who 10 or 20 years ago would have sputtered in indignation that they were socialistic, populistic, and that their application would send the country to rack and ruin.

Profit in Feeding "Cut-Backs"

The low price of "cut-backs" last fall appears to have made them subject to all kinds of experimentation. It was on cut-backs, culls from last season's lambs, that Superintendent Roy P. Bean of the Prosser Branch Experiment station made enough in a feeding experiment last winter to keep the station in pin-money for several years.

Feeding cut-backs taught eastern Oregon farmers some pointed lessons about the value of live stock in marketing alfalfa, and they were cut-backs that H. Stanley Coffin of Yakima shipped to North Dakota and put on feed, with enough more purchased in Montana to make 20,000 head. This spring they were sold off at a profit which Mr. Coffin himself admitted averaged $3 per head, and which envious fellow-sheepmen rated still higher. At the time of this admission another lot of 4000 head which he bought in Oregon was on its way east to be sheared and marketed as soon as fat, and his operations totaled 30,000 head. Verily, the cut-back hath charms to soothe the savage sheepman's breast!

Crop Rotation

Desiring to get some idea of the farm management practices and results on Washington farms, the Extension Service of the state college last fall sent out a questionnaire as to whether or not crop rotation, cultivated crops, etc., were looked upon with favor by the majority of farmers.

In Walla Walla county only four out of nine practiced a definite system of crop rotation, but the majority found that a cultivated crop inserted for two or three years increased the quality and yield of alfalfa sufficiently to justify breaking up the old stand. Potatoes served this purpose best because of deeper cultivation. On irrigated land, potatoes, beets, corn and vegetables proved the most profitable rotation crops, and on dry land, wheat, corn, barley and rye. Replies were about evenly divided as to whether or not a campaign for crop rotation would benefit their section.

In Benton county 13 followed a definite system of crop rotation, 10 did not, and 3 raised all fruit. Seventeen out of 26 favored a cultivated crop to increase the yield of alfalfa; berries, potatoes, vetch, rye, corn and truck crops being used for this purpose. The majority favored a campaign to increase the rotation of crops and were willing to cooperate with the farm bureau toward this end.

In Kittitas county, six replies showed that all followed a definite system of crop rotation and potatoes was the favored crop for cultivation. The most profitable rotation crops were wheat, oats, barley, potatoes and sugar beets. Only two out of six favored a campaign to increase crop rotation.

In Yakima county 21 practiced a definite system of crop rotation, 31 did not, and 25 did not reply as to this fact. Potatoes, small grain, alfalfa, vetch and corn were the crops planted most extensively. Rotation crops favored to increase yields were barley, rutabagas, beans, onions, cowpeas, potatoes, corn, rye, wheat and beets. Over half were in favor of a campaign by the farm bureau to increase the practice of crop rotation.

In all four counties some live stock was kept on the farms and all reported a few crops that had been found unprofitable because of unfavorable growing conditions, pests or low market value.

If You Are Thirsty

Men and women smack their lips over the flavor of this or that prepared drink, but when it comes right down to "brass tacks" in satisfying thirst, there is nothing that will take the place of water.

The hasty swallow from the corner drinking fountain in the crowded city; the cooling sip from hand or hat in the tumbling mountain stream; or the long draught from the tin dipper brimming with clear, cold water from the deep well; nectar of the gods every one of them, if you're thirsty—and a thirsty crowd it was that Mrs. Kolback of the Naselle river district drew water for one sunny day last summer when the South Bend Commercial club went a-touring in Pacific county. The old oaken bucket had nothing on this one, the visitors all agreed, and as for the well—well, not many of them had seen anything exactly like it, but at least it's been efficient for these 30 or 40 years that the Kolbacks have been on the Naselle, and since it is an aid to such hospitality as Mrs. Kolback dispensed that day, no apologies of any kind need be offered for it.

State Farm News

Grain shipments from the Yakima valley this year totaled 1299 carloads, as compared with 849 last year, and those in touch with the situation look for a big increase in 1922, possibly to 2000 cars. There were larger plantings last fall than usual, and more hay is being plowed out this spring. Discouragement over prices of hay is as large a factor as any in the change, but gradually increasing diversification of crops has its influence. The long winter and late spring furnished ample moisture for dry farming, and all indications point to a bumper crop of grain.

* * *

The Dodge Valley drainage project has been completed, with more than 1000 acres of farm land near LaConner, Skagit county, being benefited by the work. A dam has been constructed across the slough on the T. N. Haller place, forming an impounding basin. Protecting dikes a half mile in length also have been constructed to keep out the salt water.

* * *

A movement is under way to organize a cooperative poultry producers' association in Stevens county. About 400 poultrymen would be eligible to membership.

There are more than 100,000 chickens in the county, valued at $30,000. W. A. Whitaker and W. D. Buchanan, extension poultry specialists of Washington State college, and County Agent H. J. Plumb have been working among the growers to get this movement launched.

* * *

William Belaire of Moxee is planting nine acres of hop yard this spring and there a number of others setting out yards of a few acres each.

* * *

Small herds of cattle may take advantage of assocition cow testing at smaller cost than those which require the tester's service one day each month under a plan to be tried in the recently reorganized Thurston County Cow Testing association. Small herd owners will take their own samples of milk and submit them to the tester. T. A. Rutledge of Little Rock was reelected president of the association and Chester Eells of Olympia secretary-treasurer. Ronald Kegley succeeded L. J. Kegley on the board of directors.

* * *

W. D. Walters, who returned to Yakima after finishing pruning the C. M. Cox orchard of 60 acres near Mabton, reports that there is a bumper crop in prospect in the Mabton district, particularly in Anjou pears. Apples and peaches are not so good. However, there will be a good crop of these fruits if not caught by late frost.

* * *

George A Franklin, fruit grower of the Tieton district, is making large use of cover crops in his orchard. He has tried hairy vetch, red clover and alfalfa with the idea of determining which will give the best results under the conditions obtaining on his ranch. Two years ago he plowed up some alfalfa in his orchard and has practiced clean cultivation since then, but this year he will seed that portion of his orchard back to alfalfa.

* * *

A. Kern, who has a five-acre tract adjoining the Unit school grounds of Selah, has planted three acres of spinach this season. Mr. Kern will set out 3000 strawberry plants this spring.

* * *

Berry growing is becoming quite an industry on tracts just south of Selah. F. W. Bidwell has for several years been growing strawberries on a small plot and two years ago O. D. Webb started in with berries as a specialty. Last year Mr. Webb greatly expanded his acreage in small fruits until he has more than he cares to handle alone this year. He has therefore rented a portion of his acreage to his brother-in-law, W. E. Lewtas.

* * *

An order was placed with the Pacific Lumber agency in Aberdeen recently for 500,000 feet of silo stock and is the first of its kind received there in two years. It is from a firm in the middle west. A few years ago demand for silo lumber for middle east and eastern markets was quite brisk, but it fell off during the war.

* * *

That business men are interested in increasing agricultural production is shown again by the fact that a merchant has offered a prize of 125 to the herd making the highest record next year in the Grays Harbor County Cow Testing association.

* * *

Seven Holstein heifers from the herd of the State College of Washington dairy department have been bought by the irrigation branch experiment station at Prosser, Benton county. They will form the foundation of a pure-bred dairy herd at the branch station for extensive foster study under irrigation conditions. The irrigated sections are becoming more and more interested in dairying, says Dean E. C. Johnson of the state college.

* * *

Dairymen of the North river district in Grays Harbor county have organized an association and filed articles of incorporation for the North River Dairymen's association. The capital stock of the association is $7500. Headquarters will be at Vesta. Incorporators are J. N. Howard, McKinley Wilson, C. J. Frank, Homer Blaine and Enoch Billard.

* * *

A weight gain of 5 3-4 pounds in 30 days was the record of one little girl in the second grade of the schools, who has been taking advantage of the milk drinking campaign inaugurated by the Neighborly Neighbors' club of Pullman. The child was 10 pounds under weight when the test began.

Of 142 pupils in the four lower grades in which the milk drinking campaign was attempted 94 availed themselves of the opportunity to drink a half pint of milk daily. Of these 56 were under normal weight. The gain per child ranged from one to three pounds.

Coming Events of Interest

May 12-13—Grant county jubilee, Ephrata.
May 14—Mother's day.
May 20—Farmers' market, Bremerton.
May 24—Lewis county Holstein sale, Chehalis, Centralia.
May 30—Decoration day.
June 5—Northwest Guernsey breeders' sale, Portland.
June 5-10—National Holstein meet, Kansas City.
June 7—Guernsey consignment sale, Chehalis.
June 10—Republican state convention, Chehalis.
June 14—Flag day.
June 20-22—Lincoln-Adams pioneer picnic, Keystone.
July 26-28—International apple shippers, Seattle.
July 27-28—Whatcom Guernsey gallop, Bellingham.

FARM BUSINESS AND MARKETS OUTLOOK

Meat Prices in Sharp Upturn

All classes of dressed meats advanced sharply at eastern markets in the last 10 days and furnished the principal motive in the trend of live stock prices. The post-Lenten appetite for meat is more keen and the effect of rather light slaughter in preceding weeks also was a factor. Dressed beef advanced 50 cents to $1; pork loins, $2 to $2.50; lamb, $1 to $3, and mutton, $4 to $5 per 100 pounds. Veal ranged from steady to $3 higher at various markets. The arrival of about 300,000 pounds of chilled and frozen beef from Argentina caused only a temporary flurry. Some frozen Argentine and New Zealand lambs are being offered in the east, but they do not suit the trade and are moving slowly.

Receipts of all classes of live stock at the 10 leading markets have increased, but the evidence of a more healthy dressed meat trade caused moderate advances in values on the hoof almost all along the line.

Healthy Tone in Cattle Trade

With beef trade channels open, local slaughterers and eastern shippers have been active competitors for a moderately larger supply of cattle on middle western markets. In addition, export orders have been filled at Chicago and Missouri river points so that a decidedly healthy undertone was manifest in the trade. Top figures did not advance as the percentage of well finished beeves is comparatively high, an invariable feature of the spring market. Yearlings showed more strength than mature cattle. There is a possibility of a moderate excess in the supply of weighty steers to come forward in the next six weeks, but it will be much less marked than usual this season because most feeders took out light steers last fall.

The number of steers on feed is not above normal, but it is large enough to prevent any sign of beef scarcity. An exceptional demand for beef in the next month or two can not be counted upon with certainty. Nevertheless, an advance of 50 cents per 100 pounds in prices on the hoof is quite possible and much more probable than a decline of an equal amount.

Cows and heifers staged a runaway market at Chicago last week because of scarcity and a marked increase in the demand. The bull market has benefited from export orders as well as from the opening of the summer sausage season. Calves were less abundant than they have been for several weeks and resumption of shipping orders at Chicago assisted in an upturn of 25 to 50 cents. The calf market should do better right along.

Broader interest in stocker and feeder cattle last week again made the scarcity of desirable kinds conspicuous. Prices were at the highest level of the year and perilously close to fat steer values on the better grades. The grass season is beginning in earnest, so that purchases of stockers increased, while the robust fat cattle market gave courage to the specialists who handle fleshy feeders.

The movement from Texas to Kansas and Oklahoma pastures is officially estimated at less than last year, making the third season in succession it has decreased. About all the pastures have been leased, however. Uncertain rail rates have been a factor and had a still larger part in retarding shipment to the northwestern range states.

Cows are scarce everywhere and the desire for them is almost equally universal as cattle breeding and rearing looks attractive once more. Low priced kinds are favored.

Hog Run Increases

The usual May increase in receipts of hogs is showing up and prices have been lowered slightly. The decline was not drastic, as shipping orders are fairly numerous from eastern points. Prices on far western markets are considerably above the level in the corn belt, storage stocks are below the average and demand for pork appears to be reviving. The run may increase 10 per cent more before the middle of June, but underlying conditions are sound enough to prevent prices from declining very much below the present level.

There is the keenest of competition for the small available supply of stock pigs. The opportunity to pick up suitable offerings may be a little better when the June run is under way.

Lambs and Wool

Lamb prices developed another burst of speed last week and sold at a new high on shorn stock and equaled the former high point on wooled lambs. The higher eastern dressed lamb trade was the chief influence. This sent shipping orders into the middle west, otherwise the advance of about 60 per cent in the run at 10 leading markets could not have been readily absorbed. Even then the full advance was not retained. California spring lambs are arriving right along and have sold at irregular prices ranging from $15.50 to $17.35 at Chicago. Receipts will be rather uncertain for the next 30 days, but there are not enough fed lambs and Californias to overdo the market before Kentucky and Tennessee lambs become abundant in June.

The wool market started upward last week. Action of the larger mills in raising cloth prices recently has indicated that their stocks of raw wool needed replenishing, former sales of cloth being from wools purchased when the market was materially lower. Sellers of wool ceased making concessions in the last 10 days and the Liverpool market made a couple of jumps upward in the classes of wools which American buyers prefer.

As the market got under way fairly large sales of bonded wools were made, some Texas wools were cleared at 35 cents and the pool of 800,000 pounds at Jericho, Utah, was sold, presumably to a manufacturer, at a reported price of 40 cents, equal to a clean cost of $1.15 at Boston. At the height of the previous upturn late in the winter the high bid on the pool was 36 1-8 cents. The tariff appears to be a long way from enactment, leaving the emergency duty in effect, and since foreign wool markets are enjoying a boom, manufacturers have but little opportunity to accumulate cheap wools. The speculative activity on the part of dealers which featured the winter market has been resumed.

City Demand for Horses Improves

The farm chunk trade has waxed and waned without developing the breadth hoped for in midwinter. City demand has been a disappointment, also, but has given signs of improvement recently and heavy horses were wanted to go to the oil fields. Horse markets usually become somnolent by July and the industrial revival is the only thing that can prevent them from lapsing into that state at a still earlier date this year. A few teams of drafters were sold at Chicago last week for $500 or more for the pair. Chunks weighing 1250 to 1500 pounds brought $115 to $165.

Europe Continues to Buy Wheat

Persistent buying of wheat in North America has been the dominant feature in the grain market recently. Continental countries have bought new crop winter wheat for July, August and September shipment via Montreal and the gulf. It is estimated that these sales now total 30,000,000 bushels, with every indication that they will continue right along and may amount to 75,000,000 bushels or more by the time new wheat begins to appear on the market.

Besides these sales, large quantities of old crop durum have been sold to Italy and hard winter stored at Montreal has been disposed of. Greece recently placed her periodical order for about 1,500,000 bushels of Manitobas and other European countries have been buying from the same source. The continuation of purchases of this sort is quite significant in view of the amount on ocean passage absorbed from week to week.

The domestic demand for wheat remains a disappointment. Flour trade is said to be about as dull as it can be, with buyers waiting until the future of the wheat market is better known. But flour stocks are low, so that buyers are compelled to take small amounts rather steadily. Eventually broader scale purchases will be necessary and it is only a question of time until mills will be more eager for wheat. Receipts have increased recently, but the milling demand, dull as it is, has absorbed all the choice wheat offered at large premiums.

Deliveries on May wheat contracts on the leading exchanges were only moderate, part of the grain going into the hands of exporters. An upward trend has been shown since the first delivery day. The big lines held by specu-

lators, which have been expected to congest the market at Chicago, are still intact.

No actual scarcity of wheat has yet been detected, although the situation holds the possibility that the owners of the last 100,000,000 bushels or so needed for the world's trade will tighten their grip and not relinquish it except at a substantial advance. The world's carryover at the end of the crop year will be the smallest in three or four years. The European new crop outlook is decidedly spotted, with conditions in France especially unfavorable. The drought which checked planting in Australia has been only temporarily relieved. Even if pronounced scarcity does not become manifest before the new crop in North America begins to move freely, the world must increase its production in the next year in order to avoid a deficit a year hence. With crop conditions in this country and abroad as they are it is difficult to see where the increased production is to come from.

Crop reports from Kansas, Oklahoma and Texas are better, as rains have been heavy and enough moisture has fallen in the southwest to carry the plant well toward maturity. Conditions have favored the wheat which started late, but the outcome will be in doubt until harvest. Seeding of spring wheat is well under way, although not as near completion as it usually is. Private observations point to a small decrease in spring wheat acreage.

Winter wheat improved during April, according to unofficial observations. The May 1 condition is estimated at about 82 per cent, compared with 78.4 a month ago. Acreage abandonment is above the average, the estimates ranging from 11.6 to 15 per cent. These figures suggest a yield of 575,000,000 bushels, which is practically equal to the 10-year average.

Corn and Oats

A creeping bull movement is on in the corn market, with cash prices gaining rather steadily on the distant deliveries. Exporters are selling rather large amounts, especially to Germany, and domestic consumption appears to be heavy, although industries have not expanded operations a great deal. Receipts have enlarged moderately in the last 10 days, but a heavy run is not expected until after planting is completed. The visible supply has decreased about 30 per cent from the high point of the season.

In spite of the move to reduce corn acreage preliminary estimates indicate a slight increase in the states of large production, partly as a result of a late oats seeding season.

The visible supply of oats has decreased about 20 per cent from the high point of the season, but it is still 15 per cent larger than was ever known until the present year. Since new oats will begin to come to market within three months a rather large carry-over in commercial channels is probable. Present prices discount this situation, however, so that an advance is more probable than a decline, especially since the new crop has been reduced about 10 per cent, according to private estimates, and the unfavorable effects of late planting and excessively wet weather at planting time are apt to appear later on.

Cash Grain Markets

The range of cash grain prices for the week ending May 3 was:

CHICAGO—Wheat—No. 2 hard, $1.39 3-4@1.46. Corn—No. 2 mixed, 61@63 3-4c; No. 3, 60@63c; No. 4, 59@61 3-4c; No. 2 yellow, 61 1-4@64c; No. 3, 60 1-4@63 1-4c; No. 4, 58 1-4@61 1-4c; No. 2 white, 61 1-4@65c; No. 3, 62@63 1-2c; No. 4, 59 1-4@62 3-4c. Oats—No. 2 white, 39@44c; No. 3, 38@43c; No. 4, 36@40c. Rye—$1.08 1-2@1.09. Barley—60@72c.

Seed Markets Quiet

Clover seed markets are quieting down as the season of active demand is waning. Prices have held within a limited range recently, although a sharp advance in red clover at Toledo, due to speculative activities, was a feature last week.

Chicago, per 100 lbs.—Clover, $15@22; timothy, $4.50@6.

Toledo, per bushel—Prime red clover, $13.75; prime alfalfa, $11.50; prime timothy, $3.05.

The demand for by-product feeds of all kinds from feeders and dairymen is quite limited. Even middlings and tankage, which hog producers bought freely two months ago, have become dull. Exporters are out of the linseed and cottonseed meal markets. Production of wheat feeds is light, while production of corn feeds is up to normal.

Prices per ton (100-pound bags) in carlots—Chicago—Bran, $25.50; standard middlings, $26; flour middlings, $28.50; cottonseed meal, 36 per cent, $50; 43 per cent, $54; hominy feed, $21; gluten feed, $32.65; old process oil meal, $52; tankage, $55.

Hay markets are beginning to weaken in spite of light receipts. Demand has been limited right along and pastures are cutting more of a figure in the market. New crop alfalfa is offered for shipment from the southwest in another week or two at prices considerably lower than the spot market.

Prices per ton in carlots—Chicago—No. 1 timothy, $25@28; No. 2, $23@25; No. 3, $17@20; No. 1 light clover mixed, $24@25; No. 1 clover, $20@21; No. 1 clover mixed, $21@23; alfalfa, $17@28; upland prairie, $17@19; midland prairie, $14@17; rye straw, $16@17; oat and wheat straw, $14@16.

Egg Receipts Heavy

Receipts of eggs for three weeks have been extremely heavy, with the total at the four leading markets setting new records. Storage holdings at these points have accumulated rapidly in spite of a broad demand and are now ahead of the extremely large holdings on this date a year ago, when there was a record accumulation in the country as a whole. Prices have held well since the storing season started in earnest and they are not expected to sag much unless heavy receipts are maintained long enough to pile up larger storage stocks than operators think necessary for the winter market.

Receipts of frozen poultry at the leading cities have fallen off 50 per cent in the last three months, but they are above the average at this season of the year. Cold storage holdings are about equal to the average.

Butter Market Slumps

The butter market declined sharply in the last few days. Tension in speculative activities at Chicago was a factor in sustaining the market at that point during the last days of April. Passing of this situation allowed the market to sag. Combined receipts at the leading cities for the last two months have run heavier than in the corresponding period of any recent year, but demand is exceptionally broad, so that all fresh receipts have been absorbed and cold storage holdings have been steadily decreasing. The latter are down to less than 2,000,000 pounds at the four leading cities. Small quantities of butter showing traces of grass and weed flavors are arriving, showing that the pasture season is getting under way. Within another week or two it is probable that receipts will be large enough to take care of the demand without withdrawals from cold storage and shortly afterward the storing season will begin. On the Chicago futures market butter standards for May delivery are quoted about 5 cents below the spot market.

Prices for 92-score fresh butter on May 3 were:

Chicago, 35c; New York, 37c; Boston, 37 1-2c; Philadelphia, 37c; San Francisco exchange quotation, 35 1-2c.

Cheese Market More Stable

Although prices on some styles of cheese declined again last week, these revisions were less radical than those which have been taking place during the preceding three or four weeks. Country markets have begun to recover. Demand has improved and reports from country markets indicate that some diversion to butter production may take place as a result of high prices compared with cheese. Receipts have not increased materially for two weeks and it is possible that the slump has spent its force, although a slightly lower level may be reached when the season of heavy production arrives in June. The premiums upon held cheese and upon colored cheese continue.

Prices for No. 1 American cheese on May 3 were:

CHICAGO—Twins, 15 3-4@16 1-4c; S. Daisies, 16@16 1-2c; D. Daisies, 15 3-4@16 1-4c; Y. Americas, 17@17 1-2c; Longhorns, 16@16 1-2c; square prints, 17@17 1-2c.

Fruits and Vegetables

Potato prices have been recovering in the last few days, due largely to the fact that the remaining supply is in stronger hands. The movement of old stock is falling off, but new stock is increasing and now amounts to about 120 cars daily. Total shipments are unusually heavy for this time of the year, although they have decreased in the last few weeks. Northern sacked round whites are quoted at $1.35 to $1.50 f. o. b. northern shipping points, $1.85 to $2 in the Chicago carlot market and $1.80 to $2.10 in middle western cities.

Total shipments of apples for the season up to April 24 were 86,700 cars, compared with 106,758 cars in the same period last year. Prices have been practically

(Continued on page twenty.)

Columbia Basin Project Lands

Coming Farm Problems Are Already Being Solved at the Prosser Station

By EDWARD C. JOHNSON
Director Washington Agricultural Experiment Station, W. S. C.

Dean Johnson.

With the feasibility of irrigating the Columbia basin definitely established by the Columbia basin commission and confirmed and reenforced by General George W. Goethals, it is well to give thought now to the matter of planning how the settlers that will come when the project is in working order are to succeed. Are they to farm this valuable land under the same haphazard methods that, because of lack of information, it was necessary for the pioneers to use in former days or can they take up their work in the knowledge that there is a dependable source of information which they may use in making their farming operations a success? It is a matter of congratulation to the state of Washington that the former method is no longer necessary and that the latter may be employed.

The irrigation farmers of this and other states have had many experiences in the years in which they have practiced irrigation. Many of these have been published in bulletin form and through the farm press and are being made available through the extension service and in other ways. But more than that, the state has taken additional precautions that work shall be done in finding the solution of problems of irrigation farming that have not been solved to date and that the most up to date information may be available at all times. This has been made possible by the generosity of the state legislature and the wisdom of the administration and board of regents of the state college in establishing three years ago an irrigation experiment station at Prosser, in the Yakima valley, under conditions similar to and in many cases identical with large areas in the Columbia basin project. This station, consisting of 200 acres of sagebrush land, was cleared and put under the plow in 1919. Much of the land was in crop in 1920 and all of it in crop in 1921.

CROP PRODUCTION UNDER IRRIGATION.

Investigations already have been started on crop production under irrigation and questions such as these are being solved:

What varieties of forage, feed and grain crops should be grown and how shall they be handled under irrigation?

What should be the standard crop in a general diversified farming section under irrigation?

By what methods should the water be applied to these crops and what is the minimum as well as the maximum water requirement of the standard crops?

How can these crops best be marketed?

How can seed best be produced under irrigation conditions?

These and many other questions will be answered from year to year by the work of this station.

BEST TIME OF CUTTING ALFALFA.

Already some very interesting things have been learned. Last summer, for instance, in an experiment to determine the best time of cutting alfalfa hay it was found that alfalfa cut when three-fourths in full bloom yielded at the rate of eight tons to the acre, while alfalfa cut before one-fourth in bloom yielded six and eight-tenths tons per acre. These results are contradictory to the popular belief that alfalfa must be cut before the new growth is tall enough to be clipped by the mower and tend to show that the time of cutting should depend upon the stage of maturity at which the greatest amount of palatable hay can be obtained rather than upon the second growth. This experiment will be repeated several years in succession to see if the same results are secured year after year.

In an experiment with sunflowers to determine the distance between rows and spacing at which the greatest amount of silage can be obtained, it was found that the highest yield was obtained in the plots having the least distance between rows and plants. Thirty inches between the rows, with a spacing of 12 inches in the row, produced three and one-half tons more per acre than 36 inches between the rows and 18-inch spacing in the row.

FEEDING LAMBS IN THE VALLEY.

In experimental work to determine the best methods of feeding lambs in the valley 1627 lambs were fed at the station this winter. Comparisons were made between the feeding values of sweet clover and alfalfa hay, liberal versus limited grain ration, first, second and third cuttings of alfalfa hay, the value of beet molasses as compared with corn and the value of silage and cottonseed meal.

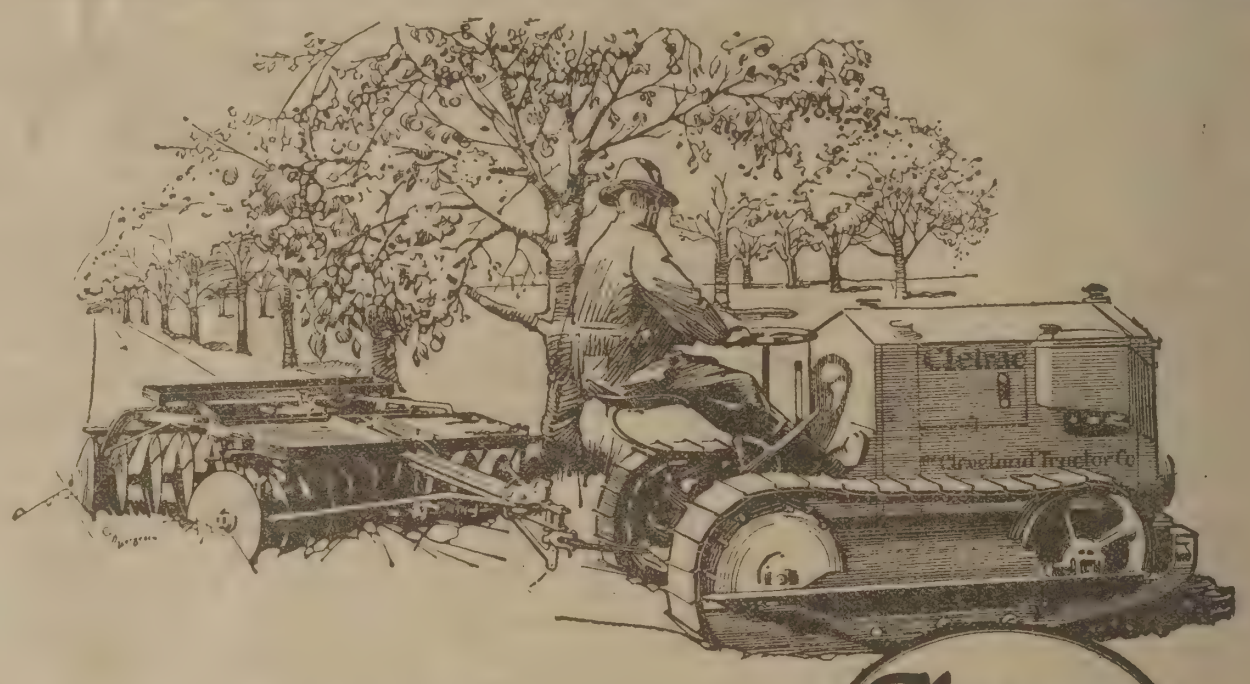
In these experiments, sweet clover gave a little better results than alfalfa, the first and third cuttings of alfalfa hay gave better results than the second cutting, the comparatively heavy grain ration was a little more profitable than the light grain ration and the ration with silage a little better than one without. It was found also that beet molasses makes a valuable feed. Some of the details of this experiment already have been reported in this paper.

Experiments of this kind with beef cattle and sheep will be continued and should be of large benefit to the settlers in a diversified section, such as the Columbia basin when irrigated.

This month the foundation for a pure-bred dairy herd was made by placing seven well bred heifers at the station. All are out of the senior herd sire Segis Pontiac Acme and five of them bred to Piebe Hero the junior herd sire. This herd will be used especially in pasture studies under irrigation. As out irrigated area develops and towns and cities increase in number, the need for dairy products increases and dairying will become one of the large industries in the irrigated sections. It is well to know how dairy products can be produced most economically by use of pasture properly handled and by proper feeding and breeding.

A demonstration poultry plant from the standpoint of determining the value of a commercial farm flock will be established on the station within the next year.

An experimental orchard of a little more than six acres has been planted this spring under the supervision of Professor O. M. Morris, head of the department of horticulture at the college, who hand-selected all the trees.



VARIOUS PROBLEMS OF WATER APPLICATION.

Irrigation studies in cooperation with the United States department of agriculture are under way and a representative of that department has been on the station for the last month and a half working with the superintendent, R. P. Bean, in placing the measuring devices and laying out the experimental areas for the irrigation work. It is expected that he will be placed permanently at the station beginning July 1 to study the various problems of water application and how it may be used economically and efficiently in growing crops. Until he arrives the irrigation experiments will be handled by Superintendent Bean.

All of the experiments at the irrigation station should be a very real help to those now farming in irrigation sections. In addition the new projects that will be developed should be helped substantially and by the time the Columbia basin project is in operation there should be an accumulation of data and information of great value to the settlers on this project.

BETTER COWS.

Fourteen good grade heifer calves were placed with dairymen in Wahkiakum county, who are either just starting in the dairy business or who have not yet graded up their herds to any great extent. These calves were all Jerseys from cows with records of at least 300 pounds of butterfat.

Cletrac works fast without injuring the trees

Cletrac
TANK-TYPE TRACTOR

Cletrac will speed up your orchard discing and harrowing. Strong, low-set and with power to spare, Cletrac cultivates under the branches and close to the trunks without harming the trees.

When the job is done, it is ready to move the sprayer about and hurry along any work you put it to. Hauling loaded fruit boxes out of the orchard during the rush of picking season is only one of the many extra jobs on which Cletrac saves time and cuts production costs.

The two wide tank-type treads get a firm grip on hilly or soft land. No power is lost through slipping or digging in, and Cletrac travels steadily along—always delivering an abundance of drawbar pull from its big motor.

Cletrac's short-turn ability makes it mighty handy among the trees. Its heavy-duty motor is unusually flexible—and the governor automatically adjusts the fuel to the load.

In the hot, horse-killing days of dust-heavy summer, the Cletrac user can push his tractor to the limit—twenty-four hours a day if necessary. Dust does not reach Cletrac's motor—the water air-washer prevents that.

Send for a copy of "Selecting Your Tractor"—it gives the whole interesting story. And talk it over with your local Cletrac dealer.

Hard this way, but—

Easy on a track The Cletrac Way

Specifications

Horsepower: 12 at drawbar, 20 at belt pulley.
Length: 96 inches.
Width: 50 inches.
Height: 52 inches.
Weight: 3455 pounds.
Turning Circle: 12 feet.
Traction Surface: About 800 square inches.
Center to Center of Tracks: 38 inches.
Belt Pulley: Dia. 8 inches; face, 6 inches.

LOS ANGELES, CAL. SAN FRANCISCO, CAL. SPOKANE, WASH.

Wool Market Shows Strength

"Buyers stand ready to take everything offered, whether shorn or on the sheep's back," reads a market report on the wool situation in the Pacific northwest. Certain it is that wool has come back with a strength that should prove highly encouraging to the sheep man. A Boston statement says:

"Manufacturers are getting anxious about supplies, not only because of the dependence upon the domestic clip owing to the tariff, but because of the outward movement of some of the foreign lots in bond. The sale of Cape wool for reshipment abroad has been followed by similar action on some lots of Australian merino in bond. The wool trade attaches considerable importance to the reports of such business. A steady accumulation of foreign wool in bond is evident, but the fear of re-exports and the necessity for these supplies are such that the opinion prevails that the bulk of the stocks will have been transferred to manufacturers' account before one permanent tariff becomes law. Naturally, it can be held in bond by the manufacturers, and taken out under any tariff conditions if warranted or absolutely essential."

One sale of significance occurred at Nyssa, Ore., last week—163,000 pounds of pooled wool belonging to five owners of Malheur county to a Boston firm f. o. b. Nyssa at 35 cents a pound. The same firm bought 70,000 pounds of coarse wool at the same point at 32 cents. One sale is reported from Shaniko, Ore., at 38 cents, and prices are ranging from 32 to 36 cents in most of the wool-producing sections of the northwest. As a natural result, higher prices for breeding sheep are expected to follow.

American Wheat

A Good Prospect Is Seen Ahead

Albert B. Dennis, former American commercial attache at Rome, who is now investigating European food conditions as special representative of the department of commerce, has arrived at Rome to attend a general meeting of the International Institute of Agriculture as American delegate.

"Despite the hard times and progressive decline in the currencies of central Europe," he said today, "there is no lessening in the purchases of overseas foodstuffs. Europe imported in eight months of the present year an excess of 40,000,000 bushels of wheat over the same period last year after an exceptionally fine native harvest. A good market for American wheat seems assured for at least a year, a cold, late spring increasing consumption and postponing maturity of the next harvest.

"Russia formerly sold abroad over 150,000,000 bushels of wheat annually, but now is an importing country. Overseas wheat will for some years continue necessary to fill this great vacuum in production.

"The subdivision of great estates among the peasants has seriously impaired the wheat exporting capacity of Rumania. Neither in acreage nor condition does the growing wheat crop promise a harvest equaling that of last year; it seems that the demand for imported wheat is bound to strengthen. Certainly there is nothing to warrant the belief that our foreign foodstuffs trade is likely to decline.

"Except for Poland, Czecho-Slovakia and Hungary, no great progress is taking place in the way of expansion of European agricultural resources. In all European countries where beet root is grown successfully, except England, Greece, Turkey and Norway, the recovery is unexpectedly slow. A year ago it was freely predicted that Germany, which before the war exported to England alone 1,000,000 tons of sugar annually, would recover during the present season almost her former export strength. It now looks as though Germany would be only able to supply her own needs.

Gunnysacks of Lady Bugs

District Horticulturist John B. Wuley and his assistant, W. P. Brown of Prosser have just returned from a trip into the wilds of Garfield and Columbia counties, on the Tucannon river with 1,500,000 ladybugs in gunnysacks to start a scientific fight against the aphis, which infests the fruit districts in Walla Walla and surrounding counties.

The Ladybug enlarged.

Wuley made his capture as result of report that more than a trillion of these were hibernating on the Wenaha national forest to the east of Walla Walla. He immediately contrived to capture a quantity of them to plant in the orchards of this section, the ladybug being a natural enemy of the aphis and San Jose scale pests.

The lady bird beetle or the ladybug is the common name for one of a group of small beetles. They are rounded on the back and flat below, and when young they are usually marked with spots. They are generally red or yellow, with black spots; or black with white, red or yellow spots. The eggs are yellow, often deposited in a colony of plant lice, upon which the larvae begin to feed as soon as hatched. Under favorable circumstances the beetle is developed from the egg in about a month. Ladybugs that feed upon scales are smaller than the other ladybugs, black in color and sometimes spotted with orange and red..

Shorthorn Men Organize

The Lincoln County Shorthorn Breeders' association was formed at a meeting of Shorthorn men at Davenport last week. Plans were laid for making a tour of the Shorthorn farms of the county some time in June and preliminary steps were taken for the organization of a Shorthorn baby beef club. The plans for this club will be worked out by a committee composed of F. W. Moe, Conrad Heid and N. Russell Hill. Arrangements for the excursion to Shorthorn farms will be in charge of D. C. Keith of Davenport. A. E. Lawson, representative of the American Shorthorn Breeders' association, was present and assisted in the formation of the Lincoln county association.

Officers elected were as follows: President, L. A. Cathcart, Davenport; vice president; C. A. Level, Davenport; secretary-treasurer, Conrad Heid, Davenport; additional directors, W. E. Shrader, Harrington, and Joseph McCroskey, Sprague.

Farm Products' Valuation

Figures of the census bureau give the total value of all farm products in Washington for the year 1919 as about $301,271,000. The various crops of the state made up about $227,000,000 of this amount, with live stock and live stock products making the balance. Oregon and Idaho farm products together totaled about $390,000,000, Oregon's products totaling about $209,000,000 and those of Idaho about $181,000,000.

The total farm products valuation for the entire United States during 1919 is given as $21,425,623,000. The state of Iowa led in crop valuation, with a total of $1,447,938,000, while Texas and Illinois followed closely for second and third places.

MAKE THE COLLAR FIT.

Unless you wear shoes that don't fit your feet, don't make your horses wear collars that don't fit their shoulders.

Freight on Fruit

Adds $160 an Acre to Apples

The increase in freight rates in the last four years has imposed an additional charge of $160.87 an acre on apples on the Pacific coast, and this capitalized at 7 per cent amounts to $2298.14, according to figures of Henry C. Wallace, secretary of agriculture, in a speech before the New York Academy of Political Science.

"This nation has been built up by a system of low railroad rates," he said, "designed to encourage the movement of our surplus agricultural crops long distances to manufacturing, industrial and business centers, with a corresponding return haul of manufactured products; and a sudden reversal of this theory of rate making results in great economic injustice and if persisted in will keen us in a state of confusion and agricultural and business uncertainty for a prolonged period."

SPRING WATER SUPPLY.

To be sure of an all summer supply of water from the spring, build a basin to a level higher than that of the spring in the driest weather. Find out that level and put the outlet pipe about one-half inch below it.

Visit Your Neighbor Who Has Electric Light and Power

SOMEWHERE, close to your home, there is a farm equipped with Delco-Light, and there you can find what electric light and power would do for you. Your neighbor's chores are done in half the time. His work is easier. His home is bright and cheerful, for the house, the barn and the farmyard are all brightly lighted with brilliant, safe electric light.

Your neighbor's wife goes happily about her work, for she has electric power to do the wearisome, tiresome tasks that other women still have to do themselves.

Your neighbor's home, where Delco-Light is used, is a home of happiness and contentment—where there is time for reading, study, play—and a joy in living that makes farm life the best of all.

Do you realize that your home, your farm, your family, can now have all the benefits of Delco-Light—the same benefits that are enjoyed by your neighbor—at very little cost? You can have power to pump the water—to run the separator and the churn, to do the milking, the washing, the ironing—all this in addition to the finest and most economical light in the world.

Delco-Light prices have been reduced. It will probably surprise you to find how little a plant will now cost you and on what easy terms you can now buy it.

If you will mail the coupon we will gladly send you, without obligation, a copy of the Delco-Light catalog and full details of our easy-payment plan.

How to Judge An Electric Light and Power Plant

Is it self-starting?

Has it a simple, efficient oiling system?

Has it a 4-cycle, valve-in-head, air-cooled motor?

Is it free from troublesome oil cups, oil pump, water reservoir, carburetor, rheostat and belts?

Has it good bearings?

Does it run on either gasoline or kerosene?

Has it long-lived, thick-plate batteries, with both wood and rubber separators?

Is it economical?

Is it durable?

Are owners satisfied?

Is there an organization back of it to see that you get prompt, efficient service?

All of these and other features are combined in dependable Delco-Light.

The Possibilities of Wireless

Its Development Holds Much for the Family on the Farm

Wireless telephony, more commonly known as radio, has come into prominence with amazing speed in the last few months, though the development apparently is in its earliest stages. Its use, still under great limitations, seems destined to become of much importance to farmers. Over a million sets of instruments for receiving messages are already in use in the United States, the greater number of them, of course, being in towns and cities, though their use in the rural districts is rapidly increasing.

The information department of the American Farm Bureau federation is now supplying news to be sent out regularly from the Westinghouse broadcasting station in Chicago. It is the hope of the federation to have a central sending station of its own, with branch stations all over the country, from which news and information of special value to farmers may be sent broadcast.

Needs Strong Organization.

With a well-developed radio service as its aid, a national agricultural body, with the cooperation and confidence of producers, could direct the marketing of farm products in a way that would make decidedly for orderly marketing. For many years the marketing of citrus fruits has been directed by wire. Cars of fruit are sent out and, as the market changes, the destinations of the cars are changed. For instance, the cars leave the Pacific coast headed for Chicago. Careful trace of them is kept so that their position is known at all times. If, when the cars have reached a certain point, the offie htcat is directing the movement has word that the Chicago market has become glutted, but that St. Louis is low on the particular product, word is sent by wire for the fruit to go to St. Louis. In this way the fruit is put on the market where it is needed and where more advantageous prices may be obtained. In time the radio will probably be used instead of the telegraph for this class of work.

The same practice can be used in marketing perishable fruits and vegetables, grain and live stock. With a capable directive agency, an extensive radio system and growers who were willing to follow directions, produce could be put on the markets so that heavy receipts at any one terminal and dearth of receipts at others would be a thing of the past and more uniform prices would be inevitable.

In general, the value of a radio system of broadcasting market news will depend largely upon who sends it out and upon what use the farmers attempt to make of it. Any system, radio or otherwise, which hastens the accurate distribution of accurate, unbiased news of the world's agricultural markets is highly beneficial. Through the radio the sale of farm products can be put on the same basis as commercial business. What the farmer could get from his well-managed and honestly-controlled radio system would correspond quite accurately to the information the business man gets from his "ticker."

For instance, a farmer may have ordered a car for loading his hogs at the siding to be shipped on the following morning. The noon radio market reports bring news of an unpected down-turn in hog prices at the market for which his load was slated. If the farmer has been following the market news regularly and intelligently he can decide in his own mind whether the break is a temporary one due to heavy receipts, which will not last, or whether it is the beginning of a persistent price decline, and act accordingly. Without the radio service the news of the unexpected lower prices would not have reached the farmer until after his load had been shipped. This is but one example of how the radio would save money for the man out on the land who is not directly connected with the telegraph.

With the radio in general use it would no longer be possible for a buyer to slip into the country after the market has gone up and buy live stock or grain on the basis of old quotations.

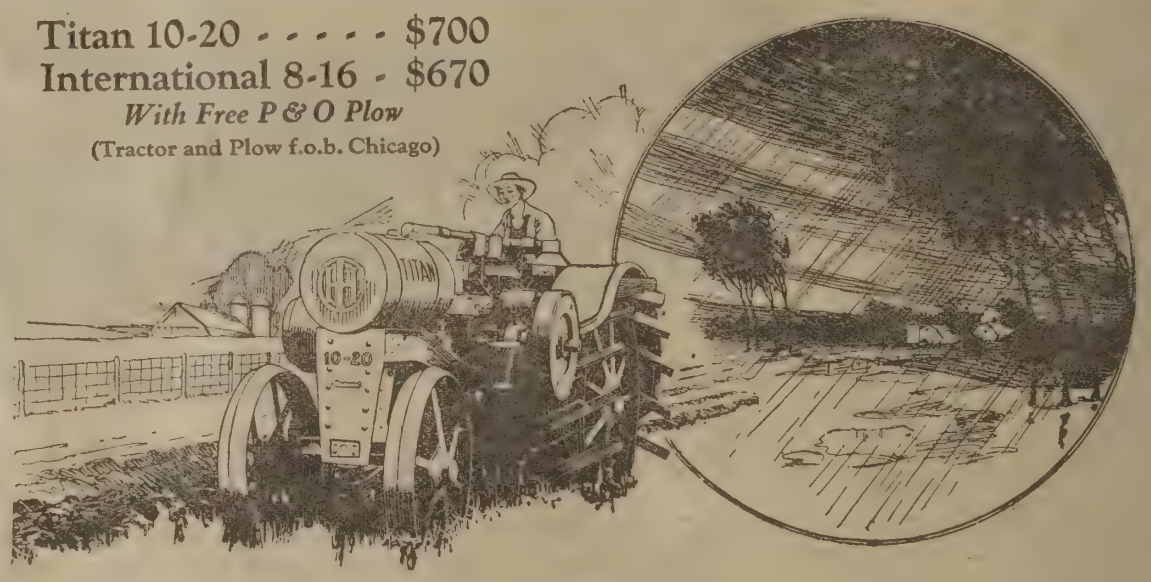
Weather Reports by Radio.

Weather reports are now being broadcasted to farmers in many sections. The immediate receipt of such material is of immense value in the production and harvesting of crops when an hour's delay in the cutting of hay or the harvesting of grain may mean the loss of many dollars.

One of the big handicaps which the radio is now laboring under as an aid to better farm marketing is the continued broadcasting of board of trade quotations upon grains for future delivery. Members of the Chicago Board of Trade are sending out such speculative market quotations at intervals of 30 minutes.

The continued broadcasting of quotations upon grain futures at frequent intervals by wireless telephone will do much to stimulate the gambling spirit among people getting those reports and consequently tends to direct them to the wire houses where they can speculate on the market. It will also facilitate the establishment of "bucket shops" in all parts of the country. Reports of grain futures at intervals of 30 minutes are of absolutely no value to the farmer or any one else except as a basis for speculation.

The field of radio telephony is new and there are many of its problems still to be solved, though they certainly will be as time goes on. One of the first to be considered is whether or not the dissemination of news by wireless is to remain in the hands of the few large agencies who are at present practically able to dictate what news can be used. Until information can be sent out unrestrictedly by those who are interested in aiding the producer and in making him acquainted with the news of his trade, the farmer will not be served by the radio as advantageously as it is possible for him to be.



It is not expected that the radio will ever entirely supplant wire communication. But it will develop into an important supplementary service to the telegraph and telephone lines. Radio, unlike the telephone and telegraph, which afford immediate but personal contact generally only between individuals, covers an area. In radio, broadcasting is the means of immediate contact between numerous individuals. It will bring to the farmer out in the country news in a flash that up to this time has never been disseminated soon enough to escape being history instead of news.

The general use of the radio will do as much to relieve rural isolation as has the increasing use of the automobile and telephone. The city will no longer have a monopoly of comforts, luxuries and recreation. The radio will bring educational lectures, entertainments and the news of the world to the farmer and his family as they sit in their own living room. No matter where he lives, how far he is from town, how bad the roads are or how limited his immediate resources for pleasure, when radio is fully developed the farmer can adjust the receivers of his instrument and bring to himself many advantages of the city.

When wireless is developed a little further the farmer 5 or 25 miles from town need not be isolated.

Titan 10-20 - - - - - $700
International 8-16 - $670
With Free P & O Plow
(Tractor and Plow f.o.b. Chicago)

Free Plow Offer Good 20 Days Longer
to Offset Late Spring Season

In many sections heavy rains and a tardy spring have delayed tillage and planting beyond the point of safety. *Now* extra power and help must be put to work to make up for lost time. Hundreds of farmers who did not intend buying a tractor this spring will find in the Titan or International tractor plowing outfit the answer to their big problem.

Our original Free Plow Offer was advertised to close on May 1, as that is ordinarily the end of the heavy tillage season. But after weeks of delay thousands of acres remain untilled, and an unexpected need has developed for Titan and International tractor power.

To keep in line with the unusual season we have instructed the McCormick-Deering Dealer in your locality to extend our Free Plow Offer for 20 days. Until May 20 you can buy a Titan or International tractor at the present low prices, and receive a free plow or tractor disk harrow as outlined in our original Free Plow Offer announced February 3, 1922.

Unseasonable weather has created a real emergency that can best be met with good tractor power. Every hour saved now means dollars at harvest time. See the McCormick-Deering Dealer today.

Facts About Contagious Abortion

By A. B. NYSTROM

Of all the abortions that occur in dairy herds it is safe to say that fully 75 per cent are caused by the organism known as bacillus abortus, discovered by Bang in 1897. This means that 75 per cent are contagious abortions. If the truth were known it is likely that the percentage is even higher than this.

Mode of Infection.

The fact that the disease is contagious and infectious, and at the same time slow to develop, makes it extremely difficult to eradicate from a herd. The bacilli causing the disease have been found in the following places: The uteruses of cows that have aborted; in the uterus and in the milk of some cows that have not aborted, but react to the abortion tests; also in the seminal fluid of bulls that are diseased.

Infection is mainly through the mouth. The discharges from any of the sources mentioned may fall on feed either in the barn or on pasture, and when this feed is eaten by a healthy cow she contracts the disease.

Dr. E. C. Schroeder of the bureau of animal industry, U. S. D. A., recently reported interesting results of the investigations on abortion. Some state experiment stations, notably Oregon, have done some excellent work along this line. These investigations have brought out some facts that are of considerable importance to the dairyman.

Not Spread by the Bull.

The supposition that the bull was a carrier of abortion from a diseased cow to a healthy one at the time of service has had the effect of preventing the widest use of good bulls. The investigations now show that the disease is not spread in this way. A clean bull was used on a cow that was known to have the disease and then subsequently used on a clean cow. In a large number of such trials the clean cow failed to get the disease. It is true that bulls that have the disease in their sexual organs can transmit it to healthy cows, but it has been proved without a doubt that healthy bulls will not transmit the disease from an unclean cow to a healthy one in the process of serving the cow.

Since bulls get the disease by eating contaminated feed, the same as the cows, it is important that bulls do not run with the herd. It is also important to isolate any cow that is known to have the disease. When a cow is to be served it should be done on ground that neither the bull nor the cows have access to.

Dr. Schroeder says: "The community or association bull evidently is harmless so far as infectious abortion is concerned, and he is so without elaborate and troublesome disinfection of the genital organs, provided the precautions already suggested, a bull pen, service on neutral ground, etc., are observed."

The test most commonly used by veterinarians is what is known as the agglutination test. By this test it is possible to determine with surprising accuracy whether or not a cow has the disease.

Dr. J. W. Kalkus of the veterinary department, State College of Washington, states in his recent bulletin, "Abortion Diseases of Cattle," that "The state college is now prepared to make blood tests for abortion disease. Full directions for obtaining the blood and shipping the samples for examination may be had by applying to the college of veterinary science, Pullman, Wash."

Treatment and Prevention.

Knowing that the disease is spread mainly through having healthy cows eat infected feed, it is fairly easy to prevent contamination, provided it is known which cows are healthy and which diseased. The following precautions should be observed in preventing the spread of the disease:

1. Keep the premises clean and free from rubbish at all times.
2. Isolate all animals known to harbor the disease.
3. Burn or bury deeply the aborted foetus and membrances.
4. Disinfect thoroughly the premises where the cow has aborted.
5. Disinfect thoroughly the barn tools used by the attendant in caring for the aborted cow.

The common practice of washing out the uterus with strong disinfectants after a cow has aborted is not a wise practice. The irritation caused by such irrigations tend to retard rather than hasten the healing of the wounds in the uterus. Cows that abort should be properly cleaned and the uterus then treated as any wound.

One might ask, "What effect has good feeding and care on the prevention of abortion?" There is no scientific data available to prove any contention along this line. However, the writer has noticed that the abortion disease is not so common in herds properly housed and fed. Cows are surely able to ward off disease the same as other animals and as man. It would not be reasonable to think that poor feeding would cause the disease, but it is reasonable to think that a well-nourished cow can ward off the attack of the organisms after infection occurs, much better than a cow poorly fed.

In summing up the points to be considered we have the following:

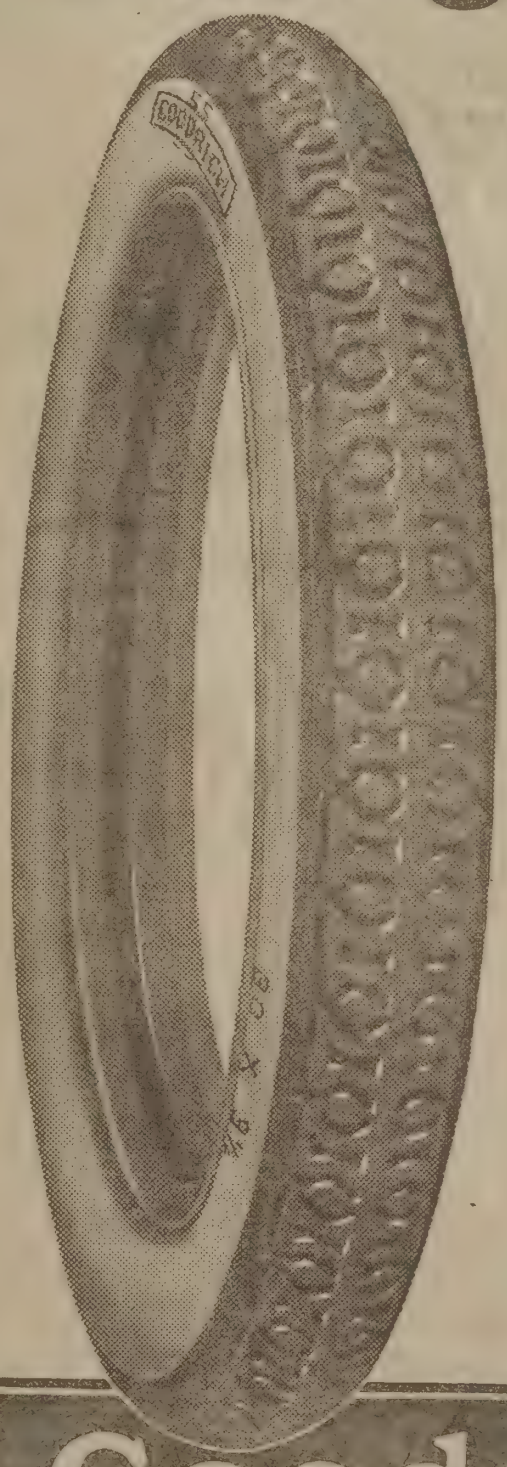
1. Nearly all abortions are of the contagious kind.
2. Infection is through the mouth.
3. The disease is not spread by a healthy bull.
4. Disinfecting the sheath of the bull after he serves a diseased cow is not necessary.
5. Cows should be bred on neutral ground.
6. The agglutination test is fairly accurate in determinating whether or not an animal has the disease.
7. Cleanliness is the best prevention.
8. Good feed and care will lessen the number of abortions.

May Wheat

Little Journeys to the Markets

May wheat refers to wheat for delivery in the month of May as traded in on such grain exchanges as Chicago, Minneapolis, Kansas City, St. Louis, Toledo, Winnipeg and Liverpool. Besides May wheat, contracts are made for delivery in July, September and December and occasionally for other months. Similar contracts are made for the other grains.

The practice of selling for future delivery was in use in a limited way more than a century ago, but it received its greatest impetus with the expansion of the grain belt in the middle west at a time when water was the main reliance for transportation. Chicago, then as now, was the leading market. Dealers would store wheat along the Illinois river or the canal and sell it to arrive in Chicago by a certain date. Much of the grain which accumulated at country points or at the Chicago terminal was sold for May delivery since it could be transported by water after lake navigation opened in the spring to the milling centers in the east in time to apply on these contracts. As a result the May "option" became extremely important.



By this means dealers could "hedge" or protect themselves against risk of a decline in price during the winter when the grain could not be moved. Likewise, flour millers and exporters who needed wheat could protect themselves against an advance in price during the winter by buying these contracts for future delivery. Sometimes they were bought in the hope of realizing a speculative profit. Similar contracts for other months came into use at an early date.

At first these contracts were made only by those who had grain in their possession and expected to deliver it to the buyer, but later the trade developed the practice of selling "short," or selling grain which the seller did not possess, but expected to be able to buy later on at a lower price in time to apply on the contract.

Other refinements from the speculator's standpoint followed from time to time until today most of the sales are made by persons who have no grain to deliver and most purchases are made by those who would have no use for grain if it were to be delivered by them. The contracts are closed before delivery day arrives by making a purchase or sale of the amount originally sold or bought. While a certain percentage of actual grain business is carried on through the medium of these contracts, they are chiefly the diversion of doctors, lawyers, beggarmen and probably a few thieves and others who have a speculative itch, but who have no direct interest whatever in the production or merchandising of grain.

Of those who follow this form of indoor sport about 999 out of every 1000 lose money in the long run. A few large operators who make speculation their business and study underlying conditions which govern prices and have plenty of funds to back up their judgment are able to make money by it.

The Newest Goodrich Tire

30x3½ Clincher Fabric

$10.90

also made in 30x3 size

The latest addition to the Goodrich list of tires. It completes the line. It enables your dealer to give you full service under the Goodrich name and trademark.

It is great news for every user of 30x 3½ clincher fabric tires. It is an opportunity to secure Goodrich quality — with the advantage of a price which speaks for itself.

$10.90 will buy this Goodrich "55" — the new tire for the popular light cars. The splendid construction is made better yet by the thick anti-skid tread of scientific design, made of specially toughened rubber.

Your dealer is ready to supply you.

LIVESTOCK AND DAIRY

Student Bidders Are Cautious

Mock Sale at State College Brings Out Vital Lessons

Students at the State College of Washington who are studying some phase of agriculture have banded themselves together in what they call, in college lingo, "the All-Ag club," the short abbreviation standing for agriculture. One of the club's annual star performances is a live stock show and sale, held this year April 22.

They call this a "mock" sale, but there is no mockery about it. It is an honest-to-goodness, serious event, except that the bidders pay no money and take home no newly purchased stock. They bid just as they would, however, if they were actually desirous of leaving their money and taking the animals, the sale being a contest in the art of judging of animal values. Prior to the sale a committee of expert stockmen appraise the animals that are to be "sold," and the student the total of whose bids most nearly coincides with the total valuation as estimated by the appraisers is declared winner. Hats off to C. L. Walmark of Spokane, this year's winner of the sweepstakes!

Miss Adah Proctor of Seattle, expert fitter of Jersey cattle and of hogs and good judge of sheep values.

The picture herewith is that of another prominent winner in a second division of the Ag day contest. In order to sell well, animals must be properly fitted for the ring that they may look their best. It takes an artistic eye and hand to do this, which probably accounts in part for the fact that Miss Adah Proctor of Seattle won first in fitting Jerseys and first in fitting hogs. That she had good judgment in the matter of values is indicated by the fact that she was adjudged the best bidder in the sheep division. For her Jersey fitting she was awarded the $25 silver cup given by Waikiki farm, Spokane, while for her art work on the hogs she now has on her mantlepiece the trophy offered by G. O. Swales, Duroc breeder of Johnson.

Bidders Are Cautious.

Conservative bidding, with few exceptions, characterized the mock sale. Remembering last year's mistakes, the bidders proceeded cautiously and only in a few instances did the sale price of the animal greatly exceed the appraised valuation. One animal even sold for less.

Among other winners than those above mentioned were the following in the bidding: D. J. Calhoun of Rosalia and L. G. Le Grant of Spokane won second and third and Oscar Mock of Yakima and E. L. Dennis of Rosalia took first places in the beef and dairy cattle, respectively.

Mr. Le Grant won the cup donated by H. C. Cranke, auctioneer, of Moscow, Idaho, for fitting beef cattle; J. A. Johnson of Illwaco won the trophy given by William

LIFE PRESERVERS FOR LIVE STOCK

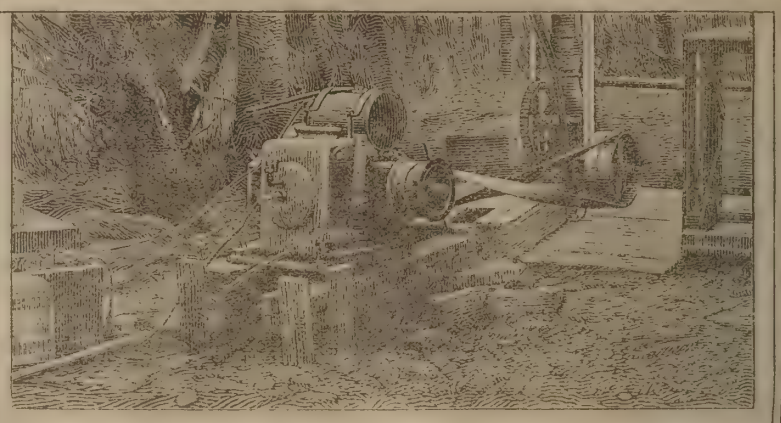
By DR. E. E. WEGNER, W. S. C.

CONTAGIOUS DISEASES, ARTICLE 8.

Foot Rot

This disease is most common in cattle and sheep as it is quite impossible for the horse to suffer since the entire lower part of his limb is enclosed within the strong horny box known as the hoof. In order for the infection to enter it is essential for the skin or soft tissues to be injured in some way, as infections probably never enter through the unbroken skin. The injuries may be very slight, however, and still be sufficiently large to admit infection.

Predisposing factors include any factors that injure the soft skin between the toes or about the feet. Cattle frequently so injure themselves when their lots are filled with cinders or other material that is rough and liable to get lodged between the toes, where it creates an irritation that harms the skin. Sheep that are carelessly herded on short, stiff stubble pastures are liable to have the feet injured.



The organism that causes this trouble may also enter and cause sores about the mouth when the membrane has been injured by eating sharp or coarse feeds. This is especially dangerous to the tender mouths of young lambs. Dry barley pasture has been known to do such harm, as would any of the bearded grains.

The Way It Develops.

The trouble first shows itself as an inflammatory area about the injured part. Swelling begins and the injured area spreads and becomes larger, takes on a scab and continues to become more severe. If examined at this time and the scab removed the tissue beneath is seen to be very red like proud flesh. If it is allowed to continue the tissue beneath the scab starts to soften and ulcerate and the scab then loosens and drops off, this process of ulceration continues and the lesion becomes deeper and deeper until it involves the tissue high up between the toes. In other cases it works downward under the horn of the wall of the claw and loosens that part. The infection works slowly, but surely, and the animals become lame, gradually getting worse until they may be quite unable to place weight on the foot. In bad cases the horn of the claws may be entirely loosened or the infection may extend upward and open the joints of the toe above the claw, or still farther upward and open the higher joint or involve the cords at the back of the foot and weaken them so that they break and let the toes

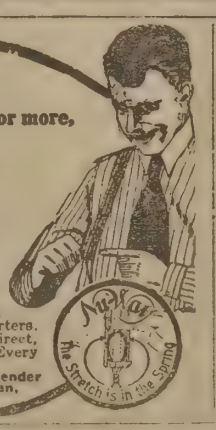
SURE POWER—AND GOODYEAR BELTS

"My Goodyear Klingtite Belt operates smoothly and powerfully, under all weather conditions. A belt of another material that I had on the same pump jack was as useless as a piece of rope. This one is strong and close-gripping."
—ELMER THOMPSON, Farmer, Little Sauk, Minnesota

You can leave it out there alone, without a man to watch or tend it, and be sure your Goodyear Klingtite Belt is holding steadily to the pulleys and delivering full power every time the engine turns.

It goes right on working through winter snows, spring rains, and summer heat. Atmospheric changes do not affect it. It keeps a slipless grip on the pulleys.

For every farm power duty, there is a Goodyear Klingtite Belt, designed, built and tested specifically for farm service.



Your local dealer in hardware or implements has Goodyear Klingtite Belts for sale. For further information about their economical and trouble-free performance in farm service, write to Goodyear, Akron, Ohio, or Los Angeles, Calif.

DR. HESS DIP *and* DISINFECTANT

Use the sprinkling can about your premises—the dipping tank where the occasion demands. For your hogs, a wallow is the most convenient, and quite effective. To every 70 to 100 gallons of water add one gallon of Dr. Hess Dip and Disinfectant. Then your premises—the cow barn, the stables, the pig pen, the poultry house, the sink, drains, closets, cesspools—everything, everywhere, will be pure and healthful.

You can dip, or you can spray or sprinkle, or apply with a sponge or brush, Dr. Hess Dip and Disinfectant to the animal body. There's scarcely an animal parasite, skin disease, or infection that Dr. Hess D. and D. will not remedy. *Guaranteed.*

DR. HESS & CLARK Ashland, Ohio

Glance over the bargains on the "Want Ad" page.

turn up in front when weight is placed upon the foot. Any and all of these difficulties are commonly encountered when the disease is allowed to run an unmolested course.

Prevention Is Best Policy.

In any disease a course that prevents is more valuable than one that cures and for that reason care should be taken to protect the feet of the two-toed animals. If they can be kept upon clean ground that is as free as possible from sharp objects that injure the feet the trouble will be greatly lessened. The danger is increased by having the animals in a muddy place, as the constant moisture softens the skin between the toes or causes chafing and irritation which is sufficient to admit the infection.

It is necessary in all such infections to use antiseptics liberally and to provide a way for them to reach the deepest parts of the diseased area. Antiseptics applied to the surface are of very little value after the infection has become deeply imbedded in the tissues, and in such cases to be of value the diseased parts must be exposed and the dressing applied directly to the deepest parts. The organism is not difficult to kill if antiseptics are applied directly to it, but it has a way of protecting itself by burying deeply in the tissues where it escapes the antiseptic altogether. Of course, when treatment has been started after severe damage has already been done there may be no chance of getting a recovery. Certainly not if the joints have been opened or the cords severed, but when treatment has been applied in time it usually meets with success.

The treatment may be best applied after the liberal surgical removal of the diseased tissue and this, especially in severe cases, should be left for the veterinarian who knows the location of the important nerves and blood vessels. In mild cases scraping and antiseptic dressings very frequently succeed.

VETERINARY

By DR. S. B. NELSON.

Dislocated Hip.—We have a young cow that is to freshen this month. About a month ago a train struck her and dislocated her left hip. Could it be put back in place? F. A. G.

Locke, Wash.

If it is at all possible to reduce a dislocation of the hip in the cow it would have to be done under choloroform, but you will find, I think, that the best thing to do is to let her go. She will always be lame, but nature will throw a healing pad around to somewhat protect her.

Paint Udder.—About two weeks before my cow freshened her bag was so full and hard that I milked it out every morning and evening and rubbed it with warm water and salt. Now the left side does not give more than a cupful at a milking and the right side is giving about a gallon at a milking, but the back teat on the left side gives lumpy milk. Before she was dried up she gave as much milk from one teat as from the others. J. M. B.

Orting, Wash.

Paint the affected parts of the udder with the following liniment: Tincture of iodine three ounces and soap liniment five ounces. Apply this after each milking.

Wash Out Cavity.—I have a cow that was dehorned early in October. One horn cured over, but left one still extends the white gelatine-looking substance.

Centralia, Wash. W. L. M'K.

There is probably a splintered piece of bone on the one side or an infection of the membrane. The cavity of the head should be washed out with a 2 per cent solution of lysol or a solution of potassium permanganate. You might use the latter first because you can wash it out, using a larger quantity of the solution. It should be just a fairly good purple and not too deep. The above treatment I think should be of value in this case.

Red Water.—I have a cow that passes bloody urine. She has been this way for nine months and seems to be getting worse. She seems to feel good and eats well. Can I do anything for her? L. S.

Vancouver, Wash.

Red water in cattle is a specified disease which affects animals particularly in the costal regions of this state and British Columbia. This disease is strictly a local affection of the bladder, not affecting the kidneys or any other organ in the body and as far as we know is not infectious and not hereditary. For this reason, as long as an animal affected with the disease is in good physical condition we consider the milk perfectly wholesome and also consider that such animals can be disposed of for beef. Frequently when an animal is bleeding very profusely a dose of epsom salts, about one pound, dissolved in a quart of warm water as a drench, will cause a temporary subsidence of the symptoms. It is also well to lessen the amount of drinking water the animal gets and feed dry feed for a few days instead of succulent feed. There is nothing I can recommend as a specific cure for this condition.

You'll Enjoy Working These Little Wonders In Your Home

IT'S surprising how much you can accomplish in beautifying your home with a little paint and work "that is really fun."

Floors, woodwork, furniture, bric-a-brac and other home things are very easy to do over when you know how. The reward in improved appearance is worth many times the cost and effort required.

We have a special "Home Service Paint Department" which devotes its time to telling women just how to refinish home things successfully.

Just write this department, describing what you want to paint, enamel, or varnish and how you want it to look and our experts will tell you exactly how to do it.

We make special paints, varnishes, enamels, wall finishes and stains for you to use. They are the finest materials of their kind that we know. We have been making these products for 73 years.

Fuller's Free Advice and Fuller's Products will be very helpful to you in beautifying your home. Take advantage of them now.

Free Advice

Write us now—a postcard—for Fuller's "Home Service" Paint Book, which tells you just what to buy for every kind of painting. Send full description and get our free advice on any kind of painting you want to do.

Decoret Varnish Stains for refinishing furniture and interior woodwork. They stain and varnish in one operation. Match the color of any natural wood. 8 colors.

Silkenwhite Enamel produces a rich, beautiful finish on woodwork and furniture. Flows out smoothly and does not show brush marks. Produces a mirror-smooth surface. Stays white and wears long. Gloss white, semi-gloss white and 8 colors.

Rubber Cement Floor Paint: A durable, sanitary, waterproof paint for floors of kitchens, closets, etc. Spreads easily, covers well. Dries hard over night. 12 colors.

Fullerwear: An all-purpose spar varnish which is unexcelled for all interior and exterior surfaces. Fine for linoleums, floors, woodwork, furniture, front doors and vestibules. Dries hard and glossy. Very durable.

Also makers of House Paint, Fifteen-for-Floors Varnish, Washable Wall Finish, Auto Enamel, Porch and Step Paint, PIONEER WHITE LEAD, Fuller's Hot Water Wall Finish (kalsomine), Silo Paint, Tractor Paint, Milk Can Enamel, Fuller's Oil Stain, Implement Paints, Barn and Roof Paint.

POULTRY AND RABBITS

Leg Weakness

By W. D. BUCHANAN, Poultry Extension Specialist, Washington State College.

Leg weakness is not a disease. It is usually the result of feeding too rich feed under too close confinement. Protein, which is usually fed in milk, eggs or mash, and sometimes in all three at the same time, can be utilized by the chick only when it has a change to exercise. If the exercise is limited, the protein must be limited. Under these conditions the chick will not grow so rapidly, but it is better to have slow, steady growth than rapid growth that ends in leg weakness.

In case your chicks have already developed leg weakness, I would suggest that you get them out of doors at once. Put one teaspoon of baking soda in each quart of drinking water for half a day. Give plenty of charcoal, grit and green feed, and slow up on grain and mash. If you are feeding a rich mash, cut it down by mixing in an equal portion of bran. Clean the house and feed the grain in a clean, fluffy litter. In extreme cases it is sometimes necessary to follow the soda and salts with one feed of a ration composed of two parts chick mash and one part charcoal, wet with sour milk.

Poultry Problems

By W. D. BUCHANAN, Poultry Extension Specialist, Washington State College.

Will you kindly give me a feeding schedule for turkeys during the laying and nesting period. I have 35 hens running together and there is no forage yet except grass and gravel. I am feeding wheat and fresh horse meat and would like to know the amount to feed daily and if there is danger of overfeeding or underfeeding. I would also like to know about Egyptian corn as to its feeding value for poultry. S. P.
Plum, Wash

Give your turkeys free range. Feed lightly twice a day equal parts of oats, wheat and corn. If hulled oats are used, I would recommend a mixture of one part wheat, one part corn and two parts oats. There is great danger of overfeeding, especially of the horse meat. Egyptian corn has almost the same feed value as our Indian corn, but is not so palatable. Turkeys should have plenty of green feed, mangles, beets, cabbage or growing grain, etc. If you have 35 hens you will need two good, vigorous toms, used on alternate days.

SCALEY LEGS.

I have some hens that have scabs on their feet and legs and some of them have swellings on their feet, usually accompanied by a swelling about the head.
Plum, Wash. S. P.

The scabs on the legs are probably due to "scaley legs," a condition produced by a small mite that works under the scales of the legs. To cure keep everything clean and bathe the legs in a solution of coaloil and lard or oil—about two-thirds coaloil. Do not get any in the feathers. The swelling on the head, if accompanied by a discharge at the nostril, is probably roup or an advanced stage of colds. Improve your ventilation.

LEE'S LICE KILLER

Kills lice, mites, bed bugs, etc., affecting poultry. Spray or paint on roosts, etc. Gets body lice on chickens, too. Works while they sleep. No dusting, dipping, greasing or handling. Saves lot of unpleasant work. At most towns, stores handling Lee Poultry Supplies. Write for information and FREE Book.

CAN'T TELL.

I have some hens that want to set. I would like to know if there is any way to tell before the eggs are hatched whether they will be hens or roosters. C. E. R.
Buena, Wash.

There are many plans offered, but I have never found any of them reliable.

HOME MADE BROODER.

Is a home-made brooder practical and is it necessary to have it heated? E. O. J.

A home-made brooder is practical if well made. A brooder for 100 chicks might be made of double wall construction, 30x30 inches, and eight inches high, ventilated and adjusted so that the hover could be raised as the chicks grow. This is the old fireless brooder. A heated brooder is better.

BROODY HENS.

What can I do to break up hens that want to set? C. W. M'C.
Oakesdale, Wash.

Make a wire cage with slatted or wire bottom. Set this cage up or hang it up where the broody hens can see the rest of the flock. Then give plenty of feed and water.

RAISING TURKEYS.

I would like to know something about raising turkeys. A. G. L.
Everett, Wash.

If you want valuable information on raising turkeys, write to the United States department of agriculture, Washington, D. C., for farmers' bulletin No. 791.

MATING GEESE.

I hatched some geese two years ago, a gander and two hens, from neighbor's eggs. They hatched well, getting four out of five eggs, but last year the eggs I set did not hatch or this year so far. What can be the cause? Should I change the ganders another year. They are in pretty good pasture and fed grain once a day and a mash of millrun and milk with a little salt and fine sand. I keep oyster shell and grit before them and plenty of water. J. I.
Napavine, Wash.

Your geese last year were too young to breed well, and they were and are too closely related to give you good hatching eggs. Are you sure that one of them is a gander? If so, it would be well to trade him for one not related to your geese.

Rabbit Income

Inquiries have come to the attention of A. D. Norris, in charge of the rabbitry at the experiment station at Puyallup, Wash., regarding the amount of money that can be made from one doe in a year's time. Mr. Norris quotes the following figures from records which have been kept at the station rabbitry during the last year.

From 28 does fed from May 1, 1921, to February 1, 1922, an average of $5.64 was cleared after paying for all feed. This, of course, was from the sale of dressed rabbits alone, since there were none of the animals sold as breeding stock.

Mr. Norris points out the fact that the local markets demand but a comparatively small amount of rabbit meat in the summer, due to the large amount of spring chickens which are thrown on the market at this time. In the winter, however, there is a greater demand for rabbits, since they can be produced in a uniform quality.

"This slump could be overcome by working up a special trade, such as many of the rabbitries do," said Mr. Norris. "And it seems to me that, although in some cases the production of one doe might exceed the above amount, it seems only fair to place her production at $5 per year as a general rule. This is based on a production of four litters a year, with five to the litter. More rabbits in the litter will result in smaller rabbits at the end of fattening period, and more litters to the year is apt to dividualize the doe."

FEED THE CHICK MILK.

Skimmed milk, buttermilk or sour milk should be before the little chick at all times, after he is 2 or 3 days old. Sweet milk may be fed if it is kept sweet, but it is not well to change from one to the other with them. Grit should be provided. Ground bone, if not fed in the mash, should be given twice a week in limited amounts, or cut bone if it is kept fresh and not overfed.

LET THEM ROOST HIGH.

A high roost in a shed open on the south side is desirable for the grown turkey.

The Thrifty Citizen Who Caught the Plugged Nickel

Mr. Brown had swallowed his lunch and had paid his bill. Cautiously he counted his change. "Here!" he said, sharply, "Take back this plugged nickel and give me a good one!"

Mr. Brown walked proudly out. They couldn't fool old Brown.

But old Brown had fooled himself.

Brown's day was heavy and dull. He lacked "pep." There was a mid-afternoon drowsy spell when he needed to be awake—the direct and natural result of heavy, starchy breakfasts and lunches, taken on faith and without question as to value—just because the food looked and tasted like food.

Thousands of shrewd business men who count their change, take their food for granted.

That's what builds up the sanitarium business, and puts the tired "all-done" feeling into the mid-afternoon of a business day.

Grape-Nuts is a scientific food whose delicious, appetizing flavor and crispness are an introduction to well-balanced nourishment—a nourishment easily and quickly assimilated, so that body, brain and nerves are well fed and kept free of the stored-up poisons left by so many ill-selected foods.

Served with cream or good milk, Grape-Nuts is a complete food, always ready, always a delight to the taste—and always a safe selection for the man who thinks his stomach is entitled to some of the same protection he gives to his pocket.

Grape-Nuts—the Body Builder

Sure Quick Death for Rats and Mice

Remarkable Triple Strength Virus Kills Every One—Not a Poison

You can now easily and quickly kill all rats, mice and gophers with Triple Strength Virus—the most powerful concentrated virus known—the sure, safe way to destroy rodents. Positively not a poison. Harmless to humans, pets, poultry, stock, etc.—affects only rodents.

RATS DIE OUTSIDE

Rats flee because they become infected with a plague that affects the heart, blood vessels and lungs, destroying the blood corpuscles and causing suffocation. Rats rush outside to get fresh air and water. When the diseased rats get outside, they never get back for the disease is then so far gone it kills them. No odor, no dead rats to handle, no live rats to kill.

SPECIAL INTRODUCTORY OFFER

To introduce this powerful Triple Strength Rat Virus, we will make every reader of this paper—for short time only—a special offer of a regular $2.50 bottle for only $1 postpaid. This $2.50 bottle Triple Strength Rat Virus is enough to clear a big poultry house, home, barn or yard of rats and mice. Send order today, sure. Give it according to directions—if after 30 days' trial you find any rats or mice—we will refund your money without question.

If not convenient to send money today—just send your name and address, a postal will do—pay postman on arrival. Remember, it costs you nothing if it does not do all we claim.

Wipe Out Every Rat and Gopher

Amazing New Discovery Quickly Kills Them All—Not a Poison.

Rats, Mice, Gophers—in fact all Rodents can now be wiped out easily and quickly. Imperial Virus will do it. This new discovery is a fluid, true Virus. Entirely harmless to humans, poultry, stock, pets, etc.

Infects Rodents only.. Greedily eaten on bait. Sets up burning fever. The pests communicate it to others, and all die outside, hunting air and water. Imperial Virus is put up in sealed bottles, thus insuring full strength and potency. Only safe, sanitary method to overcome these pests. Protect your Poultry, especially Baby Chicks and Egg Hatches.

YOU CAN GET YOURS FREE

Here's how! Send $1.00 today (currency, M. O., Checks, etc.) and we will give you by return mail, postpaid, two regular, full sized (double strength) $1.00 bottles of Imperial Virus. Use one to rid your place of these pests, and sell the other to a neighbor, thus getting yours free. Special inducements to represent us.

If more convenient, send no money, just your name and address to Imperial Laboratories, Dept. 440, 2110 Grand Ave., Kansas City, Mo. Pay postman $1.00 and few cents postage when two bottles arrive. Guaranteed to do the work to your entire satisfaction within 30 days or your $1.00 will be cheerfully refunded.—Adv.

Why pay cash for something when you can trade for it? See the "Want" ads this issue.

ORCHARD AND GARDEN

1921-22 Apples

Barrel Scarcity Is Offset by Larger Box Production

The main features of the 1921-22 apple season were the serious shortage in the barrel apple areas, the extremely active movement from the box apple states, chiefly Washington, and the steadiness of the markets.

The barrel apple territory comprises that part of the United States north of the Ohio river and east of the Mississippi, together with the northern half of Virginia and Maryland, and the mountain sections of Missouri and Arkansas. The leading section of this territory is western New York.

From October to December, 1921, shipments of boxed apples were 66 per cent greater than for the corresponding period in 1920, and shipments of barreled apples were 56 per cent less. This shift in source of supply resulted in a net decrease in total shipments because of the fact that normally the supply of barreled apples is much greater than that of boxed stock. From January 1 to March 25 the box apple movement was 24 per cent above that of the same period in 1921, whereas shipments of barrel stock were 66 per cent less.

This season to March 25 the shipments from box apple areas filled 53,981 cars, compared with 33,896 cars to the same date last season. Shipments from barrel areas were 29,518 cars, compared with 69,934. From the end of March until June only a few thousand carloads are usually shipped.

Heavy shipments from Washington, Oregon, and Idaho had a natural tendency to lower the price levels of boxed apples in consuming centers, but at shipping points sales have been made at prices almost the same as last season's. In the producing sections of Washington the range was $2 to $2.25 f. o. b. until March, when the average rose to $2.50 per box for extra fancy Winesaps, medium to large sizes.

There has been a tendency this year to ship more apples in bushel baskets. Many carloads, principally from New York state and Idaho, were packed in that kind of container, which is generally cheaper than the standard barrel or standard box.

The principal source of imported apples is Canada. British Columbia in the west and Nova Scotia in the east shipped many boxed and barreled apples, respectively, into this country during the past season. The total imports from September, 1921, to January, 1922, including boat shipments, from the eastern provinces, equalled at least 1500 carloads. This movement was caused partly by the shortage of apples in the eastern producing states and partly by the fact that exchange rates were unusually favorable to Canadian shippers.

Although the exports for the calendar year 1921 exceeded those for 1920 by 139,013 barrels, the exports for the present apple season have not been half so great as during the 1920-21 season. From September to January, inclusive, last season, total apple exports were 1,850,757 barrels, whereas during the same period this season the total was 705,046 barrels.

Soil Fertility in Orchards

"The problem of soil fertility is the most outstanding one in fruit production," said Clayton L. Long, horticultural extension specialist, in a recent talk on the subject. "There are four important steps in orchard management: Soil building and handling, pruning, pest control and thinning, and that which has to do with soils is the most fundamental and important of all."

"The orchard tree takes up from the soil seven elements without which no tree could thrive. Calcium, magnesium, iron and sulphur are there in abundance for years. Potash is abundant also, and phosphorus. But nitrogen, the one element that is lowest in all our soils, is a truly limiting factor. It comes from organic matter, the other six from mineral matter.

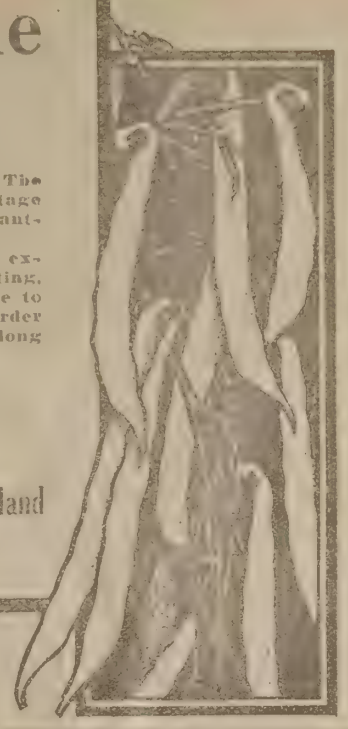
"Three other elements are just as important as these. They are carbon and oxygen, which the tree takes from the air, and hydrogen, which it obtains from moisture in the soil. Ninety-five per cent of all the tree's food materials come from the air, and only five per cent from the soil. The former are taken care of by proper thinning, while the latter are the ones which furnish our problem of soil fertility. The problem is how to produce materials in the quantities needed, and the ideal is to produce them in just the proportion that they are used up.

"On ordinary soils and under ordinary farm conditions from three to five times as much nitrogen as the crop uses is lost from the soil by leaching (principally) and oxydation. Through these losses, and with what the trees use, we can estimate the requirements per acre at 200 pounds of nitrogen, 20 pounds of phosphate and 75 of potash. These can be supplied, respectively, by applying 1250 pounds of nitrate of soda, 125 pounds of superphosphate and 150 pounds of sulphate, but growing an annual cover crop of vetch and plowing it under when a foot high will supply 120 to 250 pounds of nitrogen per acre, and one-third to two-thirds of it will be taken right out of the unlimited supply in the air. A cover crop not only supplies all the nitrogen required, but also prevents leaching and ozydation. Saving the leaves that blow from the orchard trees provides more than half of the 50 pounds of nitrogen required for tree food, and nothing is better than stable manure if it can be obtained, but the one thing we can all do to maintain soil fertility indefinitely is to grow an annual cover crop. It is about our only chance to keep our farms producing."

50,000 REFRIGERATOR CARS.

Fifty thousand refrigerator cars will be needed this year to transport the deciduous fruit crop of northern California to markets in the east and middle west, or about 10,000 cars more than were used last year.

J. B. HART, Walla Walla, Wash.—The Washington Farmer is a fine paper. I like it fine. Will show it to the neighbors. I get lots of good things out of it and am always glad when it comes.



How late is the Season?

A good three weeks we should say. The experienced grower will take full advantage of conditions by getting more ground planted to late crops such as beans and corn.

Lilly's big 1922 catalog shows many excellent varieties good for extra late planting. Your dealer can supply you; if not, write to our nearest office and we'll give your order immediate attention. Our seeds have long since proved "Best for the West."

Seattle LILLY'S Portland

Read the "Want Ad" page this week for good offers of all kinds.

SO much has been written concerning tire construction and materials, that it *is* difficult for the car owner to determine values by any other method than that of actual performance.

But this is a long and costly procedure. There are more makes of tires than there are years in a man's life. A lifetime cannot be spent in experiment. The wise buyer quickly appreciates that he must limit experimentation, and advisedly turns to reputation as his guide.

This is exactly the route we hope you will take with Hoods. From the first, Hoods have maintained an enviable reputation, often to the point where this reputation has led to the belief that Hoods are higher in price. You can depend upon the Hood reputation for quality, and it is a simple matter to prove that Hoods are not higher in price.

Attention, Farmers!

Here Is Positive Proof of the Quality of Inland Seeds

The following tests of the purity of Inland Seeds have recently been received from reliable and disinterested sources:

	Pct. Pure
Alfalfa	99.86
Med. Red Clover	99.60
Mam. Red Clover	99.72
Alsike	99.60
Yellow Blossom Sweet Clover	99.38
Wheat	98.70
Timothy	99.20
Red Top	96.53
Kentucky Blue Grass	93.65
Orchard Grass	97.06

Samples were taken at random from our stock. These percentages are not guaranteed, as no two analysts give exactly the same reports.

Ask for Inland Seeds. Their quality is unquestioned.

LOST If you can't locate a thing, it might as well be lost. Maybe the very thing you want is offered on our "Want Ad" page in this issue.

Decentralization of Population

Howard Elliott, the widely known president of the Northern Pacific system, who always speaks with words of wisdom, recently made an address to his classmates of the class of 1881, Harvard university, in which he quaintly describes his class as "train 1881." In a list of things to do to keep the Harvard train number 1881 and all trains on the right track, he gives as one of a half-dozen rules to follow, "decentralization of population."

China is always thought of as having an overcrowded population—overcrowded to its own ruination. Yet that vast country has vast, boundless, unsettled and undeveloped tracts of land. Every great city has its congested quarters where human beings are crowded like rats in rat holes. The force of cohesion becomes so strong in such cases that once within its grasp the human being can not break away from it, but degenerates until he becomes "the man lowest down."

It is good that Mr. Elliott sees these tendencies in America afar off, and urges his classmates to combat them. It is another illustration of the decline of agriculture, the disturbance of the equilibrium of industry, and the national character of the problem which our statesmen, awakening slowly, look upon as exclusively a farmer problem. It is a farmer problem, but far more also is it a problem of the laborer, the city dweller, the "business man" in fact, the problem of all.

It is not a "class" problem. Remedial legislation will not be "class" legislation. "Doing for the farmer," "charity to the farmer," and such phrases creeping into the press, the utterances of those who have grown fat on an artificial system of industry, do not truly or rightly describe farm loans and remedial legislation, such as agricultural tariffs and freight reductions on farm products.

You can decentralize population by making farming on the whole profitable, and in no other way.

Taxing systems and tariff discriminations more and more make farming the victim of artificial and unfair discrimination. By all means, speed the cry "decentralize population."

W. J. Bryan

THIS YEAR'S WOOL CLIP.

The first consignment of the 1922 wool clip, totaling 160 tons, went east aboard the steamship Harry Luckenbach, which left Portland harbor April 18. The clip from the three northwestern states probably will total 50,000,000 pounds, and a good share of it will go through Portland to the eastern seaboard.

SEIZURE OF NARCOTIC DRUGS.

During the last six months federal and police narcotic agents have seized drugs valued at $144,000 at drug peddlers' prices. According to the report from Seattle, these drugs have been shipped to headquarters in San Francisco.

SUGAR MADE FROM BEETS.

Sugar from white beets was first produced in 1747. One-half of the sugar now consumed in France is made from beets.

FARMERS' WANT ADS

This is the farmers' "want," "sale" and "exchange" department for small advertisements of farmers, including live stock and poultry.

Advertising rates for ads running 1 to 3 times, 10c per word per insertion, with a special rate to Farmer subscribers, as follows: Ads running 4 to 12 times, 9c per word per insertion; ads running 13 times or more, 8c per word per insertion.

All commercial and land advertising 10 cents per word each insertion. Open also to nonsubscribers.

In using these columns advertisers must observe: (1) No advertisements will be inserted for less than $1.00. (2) Every word, number and initial, including name and address, must be paid for. (3) New advertisements, changes of copy or cancellations must reach general office, Spokane, Wash., 10 days in advance of publication date. (4) Cash must accompany order.

Above rates include insertion in The Washington Farmer, The Idaho Farmer and The Oregon Farmer, which constitute the Pacific Northwest Farm Trio, 46 Review Building, Spokane, Wash.

POULTRY—Baby Chicks (Continued) 174

THE LARGEST LEGHORN BREEDING ESTablishment and hatchery in the northwest, and on the Pacific coast, has a housing capacity of 12,000 breeders; brooding capacity for 15,000 chicks; incubator capacity for 142,200 chicks at one time. It was started 16 years ago, by its present owner, without capital or poultry experience, on a barren ten-acre tract of land. The White Leghorns produced there have made possible its growth. It is the Oak Heights Poultry Farm, Capt. A. Waldwick, proprietor, Route 3, Box T67, Tacoma, Wash. This is the place where real good baby chicks come from. They are bred for eggs, vigor, size. The price is low. No order too large or too small. Prompt delivery and safe arrival guaranteed. Free book on "Raising the Chicks." Write us now.

30,000 HENACRES LEGHORN JUNE CHICKS. Our Leghorns mature quickly and these chicks should be laying in November and December. It pays to buy good stock and especially so in June. We furnish special instructions for feed and care with every June order. Safe delivery guaranteed by mail or express. Special price, $16 per 100; $140 per 1000. Eight weeks old pullets, $1.50 each; 500 for $700. Our free illustrated catalog describes our farm, gives feeding methods, formulas, etc. Henacres, Box A, Prosser, Wash.

FRESHLAID WHITE LEGHORN CHICKS have the qualities you want; vigor and scientific breeding for the heaviest egg production; every Freshlaid male is from a high record hen. Freshlaid Farm is one of the largest and oldest chick plants in the Inland Empire. There is a real demand for Freshlaid chicks, especially from our old customers. We are sold out until June. Freshlaid June chicks have been making good as winter layers for ten years. Free catalog. Freshlaid Farm, Colfax, Wash.

400,000 BABY CHICKS—OUR WHITE LEGhorns are bred to lay; priced at $15 per 100. We hatch from some of the best flocks of R. I. Reds, Barred Rocks, Anconas and Minorcas to be found in the northwest. Chicks are priced at $22.50 per 100. Send $1 deposit per 100 with your order, paying the balance on inspection of chicks. Safe arrival guaranteed. We have a few standard makes of incubators and brooders at greatly reduced prices. Send for our circular offer. Seattle Hatchery, 1906 Pike place, Seattle.

SINGLE COMB WHITE LEGHORN CHIX—You are not too late to get May chix. A very few yet for last of April. Get yours at once, others will charge you from 25 to 50 cents per chick for no better. Chicks from hens with trap records of 200 to 290 eggs for eleven months, mated to cockerels in the 300-egg class. Capacity all sold so far without a line of advertising. June chicks go this year at $14. $7.50 for 50 chicks. 3-C Egg Ranch, either Kennewick or Hover, Wash.

CERTIFIED S. C. WHITE LEGHORN BABY chicks from heaviest laying stock; safe delivery; live, vigorous chicks guaranteed. No money in advance; pay on delivery. Prices for May and June $3.50 per 25; $6.50 per 50; $12 per 100. Special prices 500 and 1000 lots. Largest electric hatchery in the world. Established 1898. FOR SALE OR TRADE—ONE OF THE BEST stock ranches in eastern Washington; modern, up to date buildings; unlimited range; an ideal dairy ranch, as it is close to a railroad station. Price reasonable. Will sell on terms or trade. McCrea & Merryweather, Box 184, Spokane.

FOR SALE OR TRADE—240 ACRES, IN JOsephine county, Ore.; 100 acres cleared. Box 34, Holland, Ore.

SYNOPSIS.

Shad Trowbridge, a New England lad of about 20 years, sails on a mail boat to Labrador, where he plans to spend a few weeks of summer hunting and fishing in the wilderness. Upon his arrival he meets two experienced fishermen and trappers, Dick Blake and Ed Matheson, who recommend to him a young lad of 17 known as Ungava Bob, as a guide for his hunting and fishing trip inland. Desiring to lose the least time possible in securing Ungava Bob's services and starting inland for his vacation, Shad starts across the bay in his canoe in the face of a threatening storm. In the darkness his canoe is capsized and he is plunged into the icy water. As he rises to the surface a rope is thrown to him and he hears a voice shouting to make it fast. He is soon drawn aboard a little sailboat which, unknown to him had approached at the moment of his great need.

To his surprise, Shad discovers that his new friend, the lad with the sailboat, is none other than Ungava Bob. Together, they make their way to Bob's home, where Shad enjoys the hospitality of the northland while they consider ways and means of making inland excursions. Shad decides to remain a month or more and make the first leg of a long winter of trapping planned by Bob, returning to the settlement in time to sail back home before college opens.

They leave for the wild trapping grounds and Shad is so delighted with the wilderness that he decides to remain with Bob on the trails all winter. The other members of the party start back home, leaving the two boys alone to start their long winter of adventure. But they are not alone! Hardly has the boat carried their friends around the bend of the river before Bob and Shad see two Indians watching them from the shadows of the forest trees.

The Indians proved to be old friends of Bob, but it was not many days until enemies appeared. A group of Mingen Indians, catching Bob and Shad out in their canoe on the river above the Great Falls of Labrador, fired upon them, compelling them to remain in the current and be dragged down to the rapids and seeming certain destruction.

In the midst of their peril Bob remembers that in the rapids above the falls there is a small, rocky island, and he skillfully guides the canoe to a safe landing on it. In the meantime their friends, Ed. Matheson and Dick Blake, reach their tilts to find Bob and Shad gone. The Indian maiden, Manikawan, tells them of the supposed loss of Bob and Shad over the falls. She plans to leave at once to wreak vengeance on the enemy Indians who sent them to destruction. Cunningly she entices them onto the river above the rapids and sends them to their deaths at the foot of the falls. Bob and Shad, on their island prison, witnessed the tragic plunge. Suddenly Manikawan appears on the shore, discovers the boys on the island and tells them that she will be back when the sun is noon-high next day with help to get them off, which she does successfully.

CHAPTER XV.

The Passing of the Wild Things.

It was already too late in the season to attempt further distribution of supplies with the canoe. Therefore, the boat and canoe were carried to a safe distance above the river, and a shelter of logs erected over them, that they might not be crushed under the weight of snow presently to come.

Two days later the lakes were clogged with ice, and a week later the first fall of snow that was to remain throughout the winter fell to a depth of several inches.

Then came an interval of waiting, but not of idleness, for Ungava Bob or Ed Matheson. Their new tilts were unsupplied with stretching boards for furs and many other necessities, in the preparation of which they occupied themselves at the river tilt, while the others lent a hand; though nearly every day Dick Blake or Bill Campbell accompanied Shad on hunting expeditions which resulted in keeping the larder well supplied with geese, ducks —now in their southward flight—ptarmigans and an occasional porcupine.

The birds were all fat and in splendid condition. The ptarmigans, now changing their mottled brown-and-white coat for the pure white plumage of winter, were gathered into large flocks, and easily had. A considerable number were killed with the first blast of frosty weather, and, together with a few ducks and geese, stored where they would freeze and keep sweet for future use.

With the last week of October active trapping began, when fur, though not yet at its best, was in excellent condition.

With November winter fell upon the land in all its subarctic rigor. For a day and a night a blizzard raged, so terrific, and with the temperature so low that none dared venture out, and when the weather cleared, the snow, grown so deep that snowshoes were essential in travel, no longer melted under the midday sun.

Socks of heavy woolen duffel were now necessary to protect the feet, and buckskin moccasins, with knee-high leggings, took the place of sealskin boots.

In the final distribution of supplies among the titlts long, narrow Indian toboggans were brought into service, and the loads hauled upon the toboggans.

Martens and foxes were the animals chiefly sought at this season. There were two methods followed in setting the marten traps. Where a tree of sufficient diameter was available it was cut off as high as the trapper could wield his axe above the snow, and a notch about four inches deep and 14 inches high cut some distance below the top of the stump and several feet above the snow. The bottom of this notch was given a level surface with the axe, the trap set upon it, and the bait hung in the side of the notch a foot above the trap. At other times an enclosure was made with spruce boughs, and in a narrow opening the trap was set, with the bait within the enclosure.

Fox traps were set upon the marshes and baited with rabbits which had been hung in the tilt until they began to smell badly, or with other scraps of flesh. The trap securely fastened by its chain to a block of wood or the base of willow brush, was carefully concealed under a thin crust of snow.

The usual routine followed by Ungava Bob, after his trail was once in order and his traps set, was to leave the river tilt on Monday morning, and by a wide circuit around lake shores and marshes, embracing a distance of some 15 miles, reach his tilt at the far end of the first lake at night. On Tuesday another wide circle of traps around contiguous lakes brought him back again at night to the same title. On Wednesday his trail led him to the tilt on the last lake of the old Portage trail.

His original intention had been to continue from this tilt to the tilt which the Indians had robbed, and thence to the last tilt on Ed Matheson's trail, some 15 miles to the northeast. But after the appearance of the Indians it had been deemed unsafe and inadvisable to do this, and the tilt on the river above the portage trail was, therefore, temporarily abandoned.

With this modification, his Thursday circuit of traps was so arranged that it brought him back at night to the tilt on the last lake, and on Friday he proceeded to Ed Matheson's last tilt. This arrangement carried him during the five days over 75 miles of trail along which his traps were distributed.

Ed Matheson's trail was so arranged that he also arrived at his last tilt on Friday evening, and he and Bob thus shared the tilt each fortnight from Friday until Monday.

Saturdays were occupied in making repairs and in doing the thousand and one odd jobs always at hand, Sunday in rest, and on Monday the return journey began which brought them to the river tilt on the following Friday, unless by chance they were delayed by storms.

This was the point of fortnightly rendezvous for the four trappers—the junction point of all their trails. Dick Blake's and Bill Campbell's trails took them in opposite directions, and during their period of absence from the river tilt neither saw any of his companions.

The fortnightly reunion at the river tilt was naturally an occasion they all looked forward to. It gave an opportunity to compare notes upon their success, to recount experiences and to satisfy for a time the human craving for companionship.

Shad made the first outward journey with Bob, and returned with Ed Matheson. Then he made a round with Dick Blake, and finally a round with Bill Campbell.

Every feature of the work was new and interesting to Shad Trowbridge, and for a time he enjoyed it hugely. But presently it dropped into a dreary, monotonous routine. The vast, unbroken solitude, the endless tramping over endless snow, day after day, and the lack of adventure to which he had looked forward, served presently to make him moody and irritable.

Shad had hoped for sport with his rifle, but no big game had been seen—not so much as the track of a caribou. Long before this the last goose and duck had passed southward. Not a bird save the ever-present jay had been encountered in upward of three weeks. Even the rabbits, whose tracks had criss-crossed the early snow in every direction and packed it down along the willow brush, had unaccountably disappeared. The stock of fresh meat, save a pair of geese and three pairs of ptarmigans reserved for a Christmas feast, was exhausted.

These were extraordinary conditions. The men declared that never before in their experience had they observed so complete a disappearance of game. Caribou were usually rather numerous in November. In previous years ptarmigans and spruce grouse had been so plentiful that they were easily killed when needed. One year in every nine rabbits were said to vanish, but otherwise the total absence of game was inexplicable.

It was a condition, too, that caused uneasiness. The flour and pork brought into the country by the trappers was far from adequate to supply their needs. Sufficient wild game to at least double their provision supply was an absolute essential if they were to continue on the trails. Thus far the early game had supplied their requirements, but the prospects for the future were disquieting.

At the end of the first week in December Bill Campbell and Shad returned from their fortnight on the trail to find their friends already at the river tilt and discussing the situation.

"What you havin', this cruise, Bill?" asked Dick, when the greetings were over.

"Th' worst cruise I ever has," Bill replied, as he drew off his adicky. "One white fox—nothin' else, an' no footin' t' now t' speak of. Shad an' me never see a hair or feather barrin' th' fox I catches, an' he were a poor un."

"I gets one marten an' a red, up an' back," said Dick. "Ed gets nothin' an' Bob gets one marten. 'This a wonderful bad showin'."

"Aye, a wonderful bad showin', gettin' never a hair, an' that's what I gets," declared Ed, in disgust. "If th' next cruise don't show a wonderful lot better, I starts for th' bay th' mornin' after Christmas, an' I'll not be comin' back till th' middle o' February, whatever."

The dough bread, fried pork and tea, which Ed and Bob had been preparing, were ready, and, the meal disposed of, pipes lighted and the discussion of the all-important question was resumed.

"'Tisn't th' havin' a poor cruise now an' again's what's botherin' me," began Ed, "but they ain't no footin', and where they ain't no footin' they ain't nothin', an' where they ain't nothin, they ain't no use huntin' it."

"They ain't even a pa'tridge t' be killed for th' pot," complained Bill.

"No, an' we'll be seein' th' end of our grub, with nothin' t' help out, by th' end o' February, whatever," Ed dolefully prophesied.

"Isn't there danger of scurvy if we have nothing but salt pork to eat?" asked Shad.

"That they is, sure as shootin'," agreed Ed.

"If you'd like to go along with me, Shad," suggested Bob, who up to this time had said little, "we'll take a flat-sled with your tent an' a tent stove an' a couple weeks' grub, an' go down t' th' nu'th'ard an' see if we can't run onto some deer. Th' deer's somewheres, an' if they ain't here they must be t' th' nu'th'ard."

"Of course I'll go with you, Bob," said Shad, delighted with the prospect of individual action and new experiences.

"An' you may be runnin' into some o' th' mountaineers an' Nascaupees down north, an' let un know about th' tradin' next year," suggested Dick. "If you tells one Injun, th' hull passel o' tribes'll know about un. Things travels wonderful fast among th' Injuns."

The following day two toboggans were packed with the provisions and equipment sufficient for a two weeks' absence, together with a considerable quantity of tea in addition to their probable requirements, and some plug tobacco, designed as gifts for the Indians.

Long before daylight on Monday morning adieus were said and the two young adventurers turned into the frozen, silent wastes to the northward, Bob in the lead making a rapid pace, Shad following, and each hauling his toboggan.

CHAPTER XVI.

Alone With the Indians.

At the edge of every frozen marsh and lake Ungava Bob paused to reconnoitre for caribou, but always to be disappointed, and when he and Shad halted at sundown to pitch their night camp no living thing had they seen.

Shad's small wedge tent was stretched

The days that followed were equally disappointing.

between two trees, snow was banked around it on the outside, and a thick bed of boughs spread upon the snow within. Two short butts of logs were placed at proper distance apart near the entrance and inside the tent, the tent stove set upon them, and with an ample supply of wood cut and split, their night shelter, with a roaring fire in the stove, was warm and cozy.

The days that followed were equally as disappointing. The smooth, white surface of the snow was unmarred by track of beast or bird. No living creature stirred. No sound broke the silence. The frozen world was dead, and the silence was the silence of the sepulchre.

"It's so quiet you can hear it," Shad remarked once when they halted to make tea.

"Aye," said Bob, "'tis that, and they's no footin' of even rabbits. I can't make un out."

On the afternoon of the third day after leaving the river tilt they came upon the southern shore of the Great Lake of the Indians, and turning westward presently discovered Sishetakushin's wigwam.

The travelers received a warm welcome from the Indians. Sishetakushin and Mookoomahn were indeed noisy and effusive in their greeting. Manikawan radiated pleasure, but she and her mother, a large, fat woman, as became their status as women, remained in the background.

The Indians had killed some caribou early in the season, and jerked the meat. They had just killed a bear whose winter den they had discovered, and over the fire was a kettle of stewing beaver meat upon which they feasted their visitors.

At the proper time Bob presented them with tea, Shad gave them each some tobacco, and then Bob told them of his proposed trading project.

"My people will be glad," said Sishetakushin, "and you will have much trade."

It developed in the course of conversation that the Indians were preparing to move at once to the Lake of Willows (Petitsikapau), to the northwest, in the hope of meeting caribou, for none had been seen by them since those they had killed in early fall.

They were to cache some of their provisions near the Great lake, and when they had made a sufficient kill in the north to supply them with food, were to return to their cache near the Great lake to trap martens, for in the more northerly country, where wide barrens take the place of forests, martens are rarely to be found.

"Bob, here's a chance I've been hoping for," said Shad, when Bob interpreted to him the Indians' plan. "Do you think they would be willing to let me go with them until their return here, if I gave them some tobacco?"

"They's no tellin', Shad, how long they'll be away," suggested Bob.

"But I want to go if they'll let me go. Please ask them," insisted Shad.

"But they may not be findin' deer, an' if they don't find un they won't be comin' back here till th' end o' winter. You don't want t' be with un th' rest o' th' winter, Shad; 'twill be rougher cruisin' than with us," Bob warned.

"Ask them. I'm going if they'll have me along," and Shad displayed in his tone a suggestion of resentment that Bob should question the advisability of anything upon which he had determined.

The Indians discussed the matter at some length before finally giving Bob an affirmative decision.

"They says you can go, Shad, but they'll not promise t' be back here for two months, whatever, an' when they does they'll come t' th' river tilt with you," said Bob.

Good! It'll give me some change of experience and the chance to study their life and customs that I've wanted," and Shad was elated with the prospect.

Partly because of the earnest solicitation of his Indian friends, but chiefly in the hope of dissuading Shad from his determination, Bob remained in the Indian camp the remainder of the week. While they still maintained a degree of reserve toward Shad, Bob was treated in every respect as one of them.

Manikawan made him the object of her particular attention. She waited upon him as the Indian women wait upon their lords, anticipating his needs.

In expectation of his coming she had, after her return from the river tilt, made for him a beautiful coat of caribou skins. The hair, left on the skins, made a warm lining, while the outside of the coat, tanned as soft and white as chamois, was decorated with designs painted in colors. Attached to it was a hood of wolfskin.

Accompanying the coat was a pair of long, close-fitting buckskin leggings and a pair of buckskin moccasins, both decorated, and the whole comprising the typical winter suit of a Nascaupee hunter.

Manikawan's attentions were extremely irritating to Bob, but he could not well avoid them, and to have declined to accept the gift which she had made especially for him in anticipation of his coming, would have caused her keen disappointment. So he accepted them and donned them, to her evident delight.

"Shad," said Bob, on the Sunday evening after their arrival, "I has t' start back in th' mornin', an' you better be goin' with me."

"No," insisted Shad, "I'll stick to the Indians for a while."

The following morning Bob bade them adieu.

"Take care of yourself, old man," said Shad. "I'll see you in a month or so."

"I hopes so, Shad, an' you take care o' yourself, now. I'm fearin' t' leave you, Shad."

"Oh, I know how to look out for myself,"

declared Shad. "Don't worry about me."

Turning to Manikawan, who stood mutely waiting for the word of farewell that she hoped Bob would bestow upon her, he said, in the Indian tongue:

"White Brother of the Snow must go to his hunting grounds. He is leaving behind him his friend. Will Manikawan minister to his friend as she would to him? Will she see that no harm comes to him?"

"Manikawan will do as White Brother of the Snow directs," she answered. "She will minister to his friend's needs. She will make for his friend the nabwe. His friend will not be hungry. Manikawan will care for him until White Brother of the Snow is weary of hunting and comes again to Sishetakushin's lodge. She will do this because he is the friend of White Brother of the Snow."

Then Bob turned into the white, frigid waste to the southward, and Shad was alone with the Indians.

(To be continued.)

Your Health

By Royal S. Copeland, M. D., F. A. C. S.

Here is a sentence from one of the thousands of letters of inquiry that come to me each month. It requests me to write an article in reference to carbuncles. The writer asks:

"Is it possible to be afflicted with more than two carbuncles and live?"

Dr. Copeland.

Before saying anything about carbuncles it is necessary to speak about boils, because, in a sense, a carbuncle is simply a collection of boils. This statement is not entirely scientific, but it will serve for the present.

A boil is a localized inflammation of the skin, developing pus and a "core" or slough. It is due to a germ called the "staphylococcus."

In order for this germ to get a chance to do its work it must penetrate the tissues. For it simply to alight on the skin is not enough. It must be rubbed in, or otherwise thrust into the substance of the skin. For this reason boils are found in those parts which are played upon by the clothing. The rubbing of the collar upon the neck, or of the garments upon the buttocks, may give the staphylococcus just the right conditions to force it into the tissues.

The habit of scratching the ear canal with a hairpin or a toothpick may cause the entrance of the germ into the skin and result in one of those painful things, an aural boil.

A carbuncle is like a group of boils. Instead of discharging its contents through one opening as a boil does, it has several, perhaps many openings.

The skin becomes dark red, hard and it looks as if it had been varnished. In a week or 10 days the pus appears at the surface and breaks through the skin at several points.

The seriousness of a carbuncle depends on the age and the general condition of the victim. If he is young and vigorous he will come through without danger to his life. Old persons and rundown or ill persons may have serious results from carbuncles.

There are certain diseases, particularly diabetes, in which a carbuncle is a rather common complication. On this account every person who has a carbuncle or repeated boil formation should have the urine examined to make sure there is absence of sugar.

A bad carbuncle will last from four to six weeks and is, of course, very debilitating. A single carbuncle is bad enough, a second one is worse, but a strong person could weather several. Certainly there is no rule of nature saying that a pair is the limit.

Let me say this for your comfort:

There is almost no kind of suffering which can not be endured and successfully overcome. There are no stated rules which govern the outcome of any ailment. The natural tendency of disease is toward recovery. If it were not so almost the first sickness one had would have a fatal result. Serious as a carbuncle is, and terrible as might be the suffering caused by two or three, yet your body can resist such an assault if it is in reasonable repair at the start.

The surest guarantee against boils and carbuncles is likewise the surest of guarantee against every disease. Right living and eating and sleeping and breathing and right thinking will keep you well, and when you are well you are able to resist every germ.

PREPARING PEACHES FOR MARKET.

In a new publication, Farmers' Bulletin 1266, entitled "Preparation of Peaches for Market," just issued by the United States department of agriculture, H. W. Samson, specialist in standardiztion, describes the methods of preparing the peach crop for market which have been used successfully under various conditions.

Just Folks

Chauncey M. Depew recently celebrated his 88th birthday. He is in good health and attending to business as usual.

Mr. Depew attributes his long life in eliminating the things that he likes. In other words, a score or more years ago he found that smoking affected his heart. He liked smoking, but he quit it. He found that certain articles of food which he enjoyed extremely were not good for him. He eliminated those articles in his diet.

Mr. Depew has been one of the most noted of after-dinner speakers, but it is said of him that he never ate anything at a banquet which he attended.

It is a poor rule of life to do the things which we like to do just becouse we like to do them.

It is all right to do the things we like to do after we have learned to like the things which are good for us to do.

The satisfactions of life come largely from doing the things which you do not care to do at first.

At first hard work and attention to details are not exactly pleasurable occupations and yet out of this hard work and attention to details come the larger part of the satisfactions of life.

The joy of work is one of the best attainments in life, as achievement is of the highest satisfaction.

The joy of work means the cultivation of a habit for work that becomes enjoyable. Modern conveniences and modern machinery do not in and of themselves put joy into work.

REFRIGERATOR CARS.

Nearly 100,000 refrigerator cars are owned by carriers and carriers' car lines, an increase of over 8000 during the past year.

Western Canada Offers Health and Wealth

and has brought contentment and happiness to thousands of home seekers and their families who have settled on her FREE homesteads or bought land at attractive prices. They have established their own homes and secured prosperity and independence.

In the great grain-growing sections of the prairie provinces there is still to be had on easy terms

Fertile Land at $15 to $30 an Acre

—land similar to that which through many years has yielded from 20 to 45 bushels of wheat to the acre—oats, barley and flax also in great abundance, while raising horses, cattle, sheep and hogs is equally profitable. Hundreds of farmers in Western Canada have raised crops in a single season worth more than the whole cost of their land. Healthful climate, good neighbors, churches, schools, rural telephone, excellent markets and shipping facilities. The climate and soil offer inducements for almost every branch of agriculture. The advantages for

Dairying, Mixed Farming and Stock Raising

make a tremendous appeal to industrious settlers wishing to improve their circumstances.

Don't Let Faulty Lubrication Steal Your Tractor's Power

Faulty lubrication wastes from 10 to 50 per cent of the average tractor's power—a tremendous and needless loss of tractor efficiency.

And it's the chief cause of engine troubles, costly breakdowns, heavy repair bills and shortened tractor life.

Lubrication too vitally affects the service-value and upkeep cost of your tractor to be overlooked. *You must use a good oil of the right type.*

Poor oils break down quickly—can't stand the gaff. Cylinders are carbon clogged, spark plugs fouled, valves gummed, and bearings worn by friction.

Good oils of the wrong type (body) fail to maintain a proper piston-ring seal. Compression escapes, power is lost and raw fuel leaks into the crankcase.

It PAYS to use SUNOCO Motor Oil *exclusively* for your tractor, truck, car and all your power machinery.

SUNOCO is not only different from but vastly superior to ordinary oil. It eliminates carbon troubles, insures maximum engine power, cuts fuel and oil costs and reduces repairs.

Buy SUNOCO in 30 or 50-gallon faucet-equipped drums. Any SUNOCO dealer will tell you the right types for your particular equipment.

Ask your dealer for our booklet, "Lubrication or Just Oil," or write us.

FAMILY CIRCLE

ALICE BARLAND
EDITORIAL CONTRIBUTOR

Experience Letters

From Our Family Circle Women

Dear Mrs. Barland: I just love these hard times; they surely put one on his mettle, and it keeps one's brain working to save the pennies, not only one's brain, but fingers as well.

My fancy work these days is placing patches and they are certainly a badge of honor around my neighborhood. It's a case of the more the merrier. One woman proudly proclaimed that she had mended her husband's gloves nine times and was not through yet.

I used to think floursacks were only good for dishtowels and now I never have enough of them to use for aprons, tablecloths and all sorts of things.

I don't know much about child training, as my little girl is only a few months old, but by the time I have put into practice all the theories advanced on the subject she will be either a perfect child or a nervous wreck.

I have two pairs of socks, a pair of overalls, one coat, four shirts and a suit of underwear to mend before supper and I must get at them. This may seem a queer letter, but I was lonesome and wanted to talk to some one.

"A PATCHES WIFE."
A. W. B.

Dear Mrs. Barland: Colored tafeta silk may be easily cleaned with mustard water. Use two tablespoons of mustard in one-half bucket of water and wash the silk by gently squeezing it till all spots and dirt are removed. Rinse in clear water and shake often while drying and press with a moderately hot iron before it is quite dry. Never put the iron directly on the silk, but use a cloth. This method of washing doesn't fade or shrink the goods.

In darning men's socks I use yarn one way and common sewing thread the other. I put in the yarn with a needle one way, then across and back with sewing thread. It is easier and wears longer than when yarn is used both ways.

One can make a cake without eggs by using one-half cup of mashed potato and adding one-half teaspoon more of baking powder than usually called for.

MRS. M. S. S.

Dear Mrs. Barland: I am sending a few helps to the Circle:

For keeping black flea beetles off young tomato plants, make little boxes about 6 inches square out of thin boards, tack house lining over the top, having the boxes about 5 inches high. Place these over the plant and brush up a little soil against the bottom.

Plants can be set out two weeks earlier in a normal season as these boxes will protect from frost. When the plants begin to grow so they push against the cloth, place a box without a cloth over the plant and replace the old box making it fast from blowing off with a couple of sticks at the side. These boxes can be used for covering late cabbage plants as well.

When the rubber soles of your shoes break a little, cut out a half sole from the inner tube of an automobile, have the soles of your shoe dry and clean, wash both parts to be mended in gasoline, apply rubber glue, hold a moment till the rubber begins to get sticky, then put both parts together and weight with a flat-iron. If any part doesn't stick well rough with a knife and apply more cement and place under the weight. Do not wear the shoes for several days. Hot water bags can be mended the same way, using the inner tube of a bicycle.

Keep a book for the addresses of your friends and those of certain advertisements you may wish to answer, the names of the magazines you take and when they will expire. MRS. EUGENIE TENNEY.

Dear Mrs. Barland: I want to tell the Family Circle about the pleasure derived from kindergarten at home. Course for the child under school age.

I am one of the busy ones doing much outdoor work as well as the housework, but am finding time to teach my little Don one hour a day and to lay the foundation for better work in school. Only in cities is it usual for children to receive this training, but when a mother can provide this at home it pays in the better understanding of the child's capacity to learn, and is a great pleasure both to the child and parent. Our boy begs for his lessons and will be ready for first year school work at 5 years of age.

We are too apt to neglect the little folks and leave all for the teachers, many of whom are poorly equipped to train those entrusted to their care.

Mothers living some distance from schools can provide the very best training for the little ones in this way. We take much pride in stock of various kinds as a nation, but we start our best farm "crop" to school without any preparation at all and often wonder why children don't make satisfactory progress. We owe more to our children than just feeding and clothing them.

I did quite a little in poultry last summer having raised 115 turkeys and over 300 chickens. I also cared for a garden and assisted with dairy work. I mention this so you may know I do not spend all my time teaching the child.

Should any mother be interested in the kindergarten work at home I shall be glad to help her. Mrs. Barland has my address.

MRS. G. B.

Dear Mrs. Barland: We are not old subscribers of THE FARMER, but we all enjoy it very much. We have lived in Washington about two years and are located on a stump farm, or it will be a farm some day.

I want to tell the Circle how I fixed my dining room walls. They were foot-wide boards and rough, so I got a roll of building paper and tacked it on in strips overhead and on the sides to 3 1-2 feet from the floor. I covered the tacks by pasting strips of the same paper over them. Next I ripped open gunny sacks and colored them and sewed them together on the machine and tacked them on the wall same as wainscoting, letting the sacking run up as high as the back of a chair. I finished at the top with a half-round molding and at the bottom with a mop board. The room looks very pretty and is durable as the sacking will not tear when anything is pushed against it. MRS. W. D. R.

Chilli con carni No. 2: Mince three onions and put with three or four tablespoons of olive oil smoking hot in a frying pan and to this add three red peppers minced fine. Have about one and one-half pounds of lean beef, the bottom of a round will do, cut in dices and when the onions turn yellow add the meat gradually, stirring occasionally, so as to sear it. After cooking this way 5 to 10 minutes add a cup of hot water and cover and let simmer about two hours. In a separate kettle heat one or two cans of kidney beans, mix a tablespoon of flour with water for thickening and before adding pour a large tablespoon of table sauce over the meat; be sure to keep enough water in the mixture to prevent burning and cook 10 minutes; drain the beans and add and serve very hot. It should be very peppery.

This recipe was given by a chef who is famous for this dish. MRS. E. S. W.

Boiled spice cake: One cup of sugar, one-half package of raisins, one tablespoon of lard, pinch of salt, one teaspoon each of cinnamon, cloves and allspice and a sprinkle of nutmeg, one and one-half cups of coffee. Boil all this together and let get cold, then add one teaspoon of soda in a little water and enough flour to make stiff. Bake in a slow oven about one hour.

MRS. E. W. V.

Vinegar pie: In one pint of boiling water put enough vinegar to make it tart as one likes. Add two tablespoons of flour to one cup of sugar and stir well together, moisten with warm water, not hot, beat the yolks of two eggs very light and mix with the flour and sugar, then stir all into the boiling water and vinegar; let cook until thick, then put in a baked crust and use the beaten whites of two eggs for meringue made by being beaten stiff and adding a little sugar, place in the oven a moment or two till brown.

MRS. S. A. L.

Plain fritter batter: One cup of flour, two teaspoons of baking powder, one egg, one-half cup of milk, one-fourth teaspoon of salt. Add two tablespoons of sugar if sweet fritters are desired. Sift dry ingredients together, add beaten egg and milk, beat until smooth. To this batter add corn for corn fritters and drop from a spoon into deep, hot fat.

Peal, quarter and core apples, dip each quarter into the batter, then fry in the deep, hot fat, and you have apple fritters.

MRS. C. F. L.

Little Mother

By SHERIDAN MAX.

Very bright were Little Mother's eyes,
Very fair was Little Mother's brow,
As, long ago, her gaze was wont to ponder
The happy road that lay from Then to Now.

Little Mother's journey led her on,
On, through tangled woods of lofty grace.
Ah, the cruel undergrowth of briar,
How it scars a sweet, uplifted face!

Tender still, but not so bright, the eyes,
Braver, not so beautiful, the brow,
When my Little Mother's glances wander
Back along the road from Then to Now.

Bits of Fun FOR Everyone

How the Row Began.

She (sentimentally)—What would you do, darling, if I were to die?

He (matter-of-fact)—I'm afraid I should have to bury you, darling.—Union Pacific Magazine.

Goodness, Is That All?

Jimmy (tearfully)—Father, the d-donkey kicked me!

Father—Have you been annoying it?

Jimmy—No, I was only t-trying to c-carve my name on it!

They're Bad 'Nuf Now.

"Do you ever oil your hogs?" asked a tourist.

"Oil 'em? Heck, no!" replied Gap Johnson of Rumpus Ridge. "It's hard enough to ketch 'em and hold 'em now, without slicking 'em up any."—Country Gentleman.

Playing "Put and Take."

Mrs. Worth had just learned that her colored workwoman, Aunt Dinah, had at the age of 70, married for the fourth time.

"Why, Aunt Dinah," she exclaimed, "you surely haven't married again!"

"Yassum, honey, I has," was Aunt Dinah's smiling reply. "Jes' as of'en as de Lawd takes 'em, so will I."—Ladies' Home Journal.

At Sea.

Neverwed—I hear you've signed up as skipper of the good ship Matrimony.

Just wed—No, my wife's the skipper. I married a widow. I'm her second mate.—Cleveland News.

We Hope So, Too.

Lament of an office boy in division commercial superintendent's office:

"The things that I should remember are
the things that I forget,
And the things that I have forgotten always cause me vain regret,
But by forgetting to remember, and remembering to forget,
I hope that there will come a time when I'll be happy yet."

—Pacific Telephone Mag.

Latest High Class Patterns for the Home

Please order the patterns you desire at least two or three weeks before you wish to use them. Desiring to obtain the latest high-class patterns for its readers, THE FARMER has made arrangements to have them sent direct from the east, and under present mailing conditions it takes about that time for them to reach you.

3970. Ladies' house dress. Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size requires 4 3-8 yards of 40-inch material. The width at the foot is about two yards. Price 10 cents.

3753. Junior's dress. Cut in three sizes: 12, 14 and 16 years. A 14-year size requires 2 3-4 yards of 36-inch material for the dress, and 2 1-4 yards of 32-inch material for the guimpe. Price 10 cents.

3624. Ladies' dress. Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size requires 5 3-4 yards of 44-inch material. The width of the skirt at the foot is two yards. Price 10 cents.

3965. Misses' dress. Cut in three sizes: 16, 18 and 20 years. An 18-year size requires 7 7-8 yards of 36-inch material. The width at the foot is about two yards. Price 10 cents.

Shall They Suffer

as you did from film on teeth

Pepsodent is largely for the coming generation. It brings to adults whiter teeth, new protection. But to children it means a new dental era.

Your teeth, perhaps, have always been film-coated, save right after dental cleaning. The luster has been dimmed by film. Film has caused decay, no doubt, despite your daily brushing.

Now dental authorities urge you to fight film. Above all, have your children fight it daily in this scientific way.

Makes teeth dingy

Modern science traces most tooth troubles to a film—to that viscous film you feel. It clings to teeth, enters crevices and stays.

It absorbs stains, making the teeth look dingy. Film is the basis of tartar. It holds food substance which ferments and forms acid. It holds the acid in contact with the teeth to cause decay.

Germs breed by millions in it. Pyorrhea, and many other serious troubles, are chiefly caused by those germs and by tartar.

Dental science has for years been seeking a way to daily combat that film. It is the teeth's great enemy.

Two ways now found

Two effective film combatants have been found. Able authorities have subjected them to many careful tests. Dental science now approves them, and leading dentists, here and abroad, urge their daily use.

A new-day tooth paste has been perfected, complying with modern requirements. It is called Pepsodent. And these two film-combating methods are embodied in it.

Also starch deposits

Starch deposits also attack teeth. In fermenting they form acids.

Nature puts a starch digestant in the saliva. It puts alkalis there to neutralize the acids.

Pepsodent multiplies that starch digestant, also the alkalinity. Thus Nature's teeth-protecting forces are multiplied.

Thus twice a day, in all these ways, Pepsodent combats the enemies of teeth.

Watch the added beauty

Send the coupon for a ten-day test. Note how clean the teeth feel after using. Mark the absence of the viscous film. See how teeth whiten as the film-coats disappear.

The lasting benefits appear more slowly. But all who love clean, glistening teeth will see effects at once. And the book we send explains the reasons for them. Cut out the coupon now.

Pepsodent PAT. OFF. REG. U.S.

The New-Day Dentifrice

The scientific film combatant, approved by modern authorities and now advised by leading dentists everywhere. Each use brings five desired effects. All druggists supply the large tubes.

High Points in News of the Week

Indications in financial and industrial centers are that a considerable improvement is going on in the general business of the country. At a recent meeting of the bank examiners of the 12 federal reserve districts the examiners reported to the federal authorities a general improvement in nearly all sections of the country. The degree of depression that still exists is due, in the opinion of one of these examiners, "to our western and southern agricultural situation, to taxation, to the still too high living cost and to labor cost."

The examiner for the St. Louis district is quoted as saying: "The morale of the farmer is slowly returning. The increase in prices of grain and live stock has renewed his hope. It is true that the grain reserves on the farm are relatively small and that the farmer has not received the full benefit of enhanced value. The increase, however, has given him courage. With the present prices for farm products, and the present prospects for crops, it would seem that the purchasing power of the farmer is in a fair way to be restored. When that is accomplished great momentum will be given the onward movement of business that is already beginning."

Secretary of Labor Davis declared last week that, taking the country as a whole, the employment situation was much improved. Greater demand for labor, he said, indicated that there is "a widespread industrial awakening extending from coast to coast." Even more optimistic than the reserve bank examiners, Mr. Davis said that "the entire country can be said to have come out of the depression."

* * *

Indications are that the civil war in a limited section of China is soon to be brought to an end by the victory of General Wu Pei Fu over the forces of General Chang Tso Lin.

The issues involved in the controversy are not well known by the outside public. General Wu declared last week that he was not seeking to place himself at the head of the government, but that he simply desired to devote his energies to the unification of China, creating political harmony in the north and south, abolishing militarism, reviving industry and winning the respect of foreign nations for his country. He said that he agreed with the opinion of the various nations at the recent conference at Washington on armament limitation when the conference declared that China must put her house in order, free herself from vast armies, apply her revenues to pay her debts and build railroads. It is reported also that the victory of General Wu would be a blow to further Japanese control in China.

* * *

There is little or no apparent change in the situation with reference to the nation-wide coal strike. The strike is unique in that after nearly two months' duration private and industrial needs have been so little affected that the general public is hardly aware of the fact that a strike of such proportions is on. About 600,000 miners are on strike, including practically all organized miners and a large percentage of the nonunion workers. The government has reiterated its intention of taking no action in the matter, preferring to let the coal mine owners and the workers reach an agreement if possible. Should the situation develop into a menacing one toward industry or the general public welfare the government will probably take immediate action. Both Secretary Hoover of the department of commerce and Secretary Davis of the department of labor are working upon the problems involved with a view to being ready for adequate and equitable action by the government should action be necessary.

* * *

William G. Eckhardt of Illinois, former treasurer of the United States Grain Growers, Inc., has filed in the Nebraska district federal court a libel suit for $70,000 against H. C. Filley of the Nebraska Agricultural college and the Nebraska Farm Bureau federation. The suit is brought on the ground of alleged libel in an article published in the weekly news letter of the Nebraska farm bureau and signed by Mr. Filley. The article was a report and discussion of the recent annual convention of the United States Grain Growers in Chicago, at which time a strong minority, of which Mr. Eckhardt was a member, was defeated for representation on the board of directors by the majority, supporting C. H. Gustafson, president of the organization. Mr. Eckhardt charges that the published statement was so written as to tend to bring him into disrepute and destroy his reputation and standing as an agricultural expert and a leader in cooperative marketing.

* * *

Whether Germany will be able to pay the reparation installment due to the allies May 31 is a question that is causing considerable concern in European diplomatic and financial circles. German statesmen are understood to have gone on record to the effect that their country could not meet the requirements. The French leaders have gone on record as determined that they shall meet the May 31 payment, or that the French army, alone if necessary, will occupy more German territory. Other nations of the allied group appear to be more lenient with Germany than is France.

* * *

With a view to the vigorous prosecution of wartime fraud cases, either civil or criminal, President Harding has requested congress to appropriate $500,000 to be used by the department of justice in investigating such cases and conducting prosecutions against alleged offenders. Attorney General Daugherty has appointed Representative Roscoe C. McCullouch of Ohio as special assistant attorney general to take charge of the government's investigation and subsequent prosecutions.

* * *

A report from the national capital indicates that the military affairs committee of the house of representatives, which has been considering the various bids for lease of the Muscle Shoals nitrate plants from the government, will recommend that none of the bids be accepted in their present condition. This includes the bid of Henry Ford.

* * *

Conforming to a custom of long standing, the second Sunday in May, falling this year on May 14, will be observed throughout the United States as Mothers' day.

* * *

Samuel Gompers, president of the American Federation of Labor, declared in a public address in New York last week that he and the federation that he represents "are in favor of beer and light wines and against any attempt to enforce sumptuary laws aimed at the personal liberties of our people." He denounced prohibition in vigorous terms.

* * *

Adopting a recommendation made by Eugene Meyer Jr. of the war finance corporation, the United States senate has passed a bill extending the war finance corporation's operations until July 1, 1923.

* * *

During the month of March exports from this country to Europe had a total valuation of $180,000,000, or about $19,000,000 less than in March a year ago. Imports from Europe during the month totaled $86,000,000, or about $9,000,000 more than in March a year ago.

* * *

Henry P. Davison, head of the financial work of the Red Cross during the war and one of New York's prominent financiers, died last week.

LIVE STOCK VALUATIONS.

The total valuation of live stock sold or slaughtered in the state of Washington in the year 1919 was $23,900,000, according to the census bureau. The value of live stock products for 1919 exceeded that of the stock itself, being about $44,000,000. This latter figure includes milk, butter, wool, hides and so on.

FOR THE BALANCED RATION.

Kindness to the pig is one of the greatest pork producers in his rations.

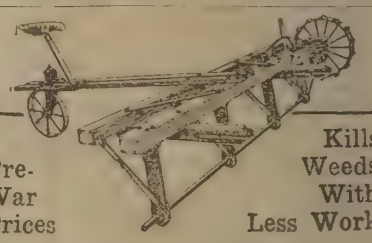
New 1½ H.P. CUSHMAN

For Light Jobs

A little wonder—regular Cushman quality. Different, better, fewer moving parts. A real no-trouble engine for pumping, etc. Investigate.

LIGHT WEIGHT 4 H.P.

For all power jobs up to 5 H. P. Improved Throttling Governor insures very steady running and less gasoline used.



Saves a Team on the Binder

Besides doing all regular jobs, this 4 H. P. may be mounted on rear of binder to save a team, and in a wet season to save the crop. We supply attachments. This engine is a necessity on every farm.

Ask for book on Light Weight Engines. If interested in Electric Lighting Plants, write for free book. (12)

BETTER GARDENS EASY TO KILL WEEDS AND MULCH THE SOIL

Don't do garden work the slow, backbreaking way. The BARKER makes the finest gardens possible—quickly, easily. Simply push along rows (like lawn mower)—8 blades revolving against underground knife destroy the weeds and in same operation break the crust into a level, porous, moisture-retaining mulch. Aerate soil. "Best Weed Killer Ever Used." Has leaf guards, also shovels for deeper cultivation. A boy can run it—do more and better work than 10 men with hoes.

Write for FREE BOOK

Illustrated book, postpaid, gives prices delivered to your station, contains valuable information on gardening, letters from users, etc. A card brings it. Write today.

BARKER MFG. CO.

Box 46 David City, Neb.

Land Clearing Book FREE

Most valuable Book ever published on land clearing. 80 pages, illustrated in colors, written by men who have made land clearing profitable. Don't pay taxes on idle land. LAND CLEARER'S GUIDE tells how to clear easy—cheap—fast—and which method to use. Free to you.

Kirstin One-Man STUMP PULLER

has proved best on thousands of acres. Works on wonderful leverage principle—gives you pulling strength of 992 men. You, alone, without extra help, can pull big tough stumps—quick, easy, and cheap. New models have latest improvements. Prices reduced. Easy terms—big discount to demonstrators during next 30 days. Write for our offer and FREE book—TODAY.

4267 Lud St.

A. J. Kirstin Co. Escanaba, Mich.

July 6, 1922, Olive Peterson will be 7 years old. She is in the first grade at school and says she likes to go to school. Olive's home is near the Columbia river, in northern Stevens county, Wash. She has never written to the Corner before.

Another Washington girl writes her first letter to the Corner. She is Matilda French of Yakima valley. Matilda is 10. August 5 is her birthday. She has five sisters and a brother. Nigger is her pony. Matilda has a dog and a cat, too.

For pets Kenneth Farmsworth has a horse named Tony, a dog named Jocky, a cow named Pansy and some chickens. One morning Kenneth decided to put out a trap. When he looked at his trap there was a squirrel in it. Kenneth's home is in southeastern Washington, in the Palouse country. October 17, 1921, he was 10 years old. He hasn't been tardy or absent this term.

Lois Turner, who is a brand new cousin, is 7 years old. May 25 is her birthday. She lives near Rock Creek, in southeastern Spokane county, Wash. Aunt Nellie was glad to hear from Lois.

Edna Peper and her brothers, Rudolph and Theodore, have ridden to school all winter in a cutter drawn by Bob and Shorty, two white horses. Twenty-three other children go to the same school. Edna has a baby sister 4 months old, named Wilma Dorothy. There are 23 head of horses, 18 Herefords and other stock at the Peper farm, near Clear lake, in Lincoln county, Wash. Edna was 10 June 6, 1921.

We have another letter from the Peper home, in Lincoln county, Wash. It is from Theodore, who is 8 years old. July 2, 1922, he will be 9. Theodore is in the second grade at school. He has a pet cat, an old mother rabbit and three little ones and a Shetland pony named Midget. He says baby sister is the dearest little girl he ever knew.

"I am going to make a riddle book," says May Dickenson, who lives near the Columbia river, in Klickitat county, Wash. May has two little lambs of her own, about two weeks old. There are 60 little lambs at her home, nine little chickens and 60 little pigs. May is in the sixth grade at school and is 11 years old. August 20 is her birthday.

Owen Ware, who lives in the Big Bend country, eastern Washington, says: "The bluebirds and meadow larks are back again." Owen likes to watch the bluebirds build their nests. He sends love to the cousins.

There was plenty of snow and water in eastern Washington, Spokane county, where Margaret Cerenzia lives. Margaret was 10 years old October 18, 1921. She is a fourth grade student and there are five pupils in her class. St. Patrick's day they celebrated. Bessie and Jack are the names of two little calves at the Cerenzia home.

Thelma Ensley says she likes the letters in The Junior Farmer best of all. September 10, 1921, she was 10 years old. Her home is on the Snake river, in southeastern Washington.

November 14 is Martha Keelmer's birthday. She is 10. Martha has two brothers, but no sisters and they live in northwestern Whitman county, Wash. Martha says her mother has about 200 chickens. Fannie is her brother's dog.

We were very glad to hear from a little cousin who lives near White river, in western Washington. Her name is Alvira Case.

Glen Hay writes to us from southeastern Mason county, Wash. He was 10 years old February 21, 1922. (Write another letter, Glen.)

Sport is a dog belonging to Nettie Knox. She has two cats, but her cats are not named. Nettie says she rides two miles to school every day and she likes to ride. June 5 is her birthday. She is 11 years old. Her home is near the Colville Indian reservation, in northern Washington.

"Little Women," "The Little Girl of Old New York" and "Pollyanna" are some of the books that Helen Grube has read. Helen's home is in Spokane valley, eastern Washington. She was 11 July 11, 1921. For Christmas she received a nice work basket, some crochet thread and a needle and now she is learning to crochet. She has made a cap with a tassel on it for her doll.

Joy Caldwell, who has lived in the city four years, says she likes country life much better than living in town. Joy has blue eyes, brown hair and is five feet five inches tall. Her home is not far from British Columbia, in northeastern Washington. She is a sixth grade student.

Ten-year-old Dorothy Hart, who lives near the Stilaguamish river, in northwestern Washington, becomes a Corner cousin. Dorothy's birthday is February 11. She has one sister and three brothers. She says they have a cat and some chickens.

We are glad to hear from Helen Brooking, a new cousin who lives in Okanogan county, Wash., near the Okanogan river. Several of Helen's friends get The Junior Farmer and she thinks she would like it, too.

Elizabeth Coby, a northern Pierce county (Wash.), cousin, has blue eyes and light brown hair. July 23, 1921, she was 9 years old. This is her first letter to Aunt Nellie.

Clarence Brittian writes that his dog, Prince, got kicked and he thinks Prince has a broken rib. At school on Valentine's day Clarence took part in a program and was in three dialogues and spoke a piece. December 11 he was 11 years old. His home is near the Humptulips river, in Grays Harbor county, Wash.

What makes more noise than a pig under a gate? Two pigs. Martha Deife, who will be 12 May 16, 1922, lives west of Crab lake, in eastern Washington. Teacher—If a farmer sells 350 bushels of wheat at 30 cents a bushel, what will he get? Willie—An automobile.

Maxine Chiles, one of our newest cousins, lives on a 200-acre farm in Okanogan county, Washington. She has one sister and three brothers. Maxine's birthday is August 30. She is 10. She says they own several head of horses and cattle, eight calves, some pigs, sheep and chickens. She is in the sixth grade at school. (We shall be glad to hear from Maxine again.)

We have another letter from Elmi Jackson, who is a northwestern Washington girl, 11 years old. October 7, 1922, she will be 12. Elmi wrote her letter in school. She is in the sixth grade and says she has a very nice teacher.

Birthday Greetings

THURSDAY, May 11—Frances Fox, 7 years old; Theron McGrew, 10; Donald Ritzschke, 10.

FRIDAY, May 12—William Heaton, 10 years old; Jeanette Kragt, 11; Eva Lee, 9; Margaret Morasch, 11.

SATURDAY, May 13—Kenneth Montaney, 11 years old; Helen Olds, 9.

SUNDAY, May 14.—Nina Downing, 11 years old; Agnes Sjodin, 10; Inez Watson, 10; Velzia Stevens, 11; Agatha Stuhr, 11; Cecila Stuhr, 11.

MONDAY, May 15—Elva Dyer, 11 years old; Hazel Enzler, 11; Helen Enzler, 11; Rosa Schlien, 10.

WEDNESDAY, May 17—Nelle Hill, 11 years old; Thelma Peterson, 11; Frank Yuskof, 8; Edith McIlroy, 11.

LETTERS WELCOMED BY AUNT NELLIE.

Among recent letters received by Aunt Nellie are those from cousins whose names follow. A few of these will be published each week in the regular edition of THE FARMER, and others will appear from time to time in The Junior Farmer:

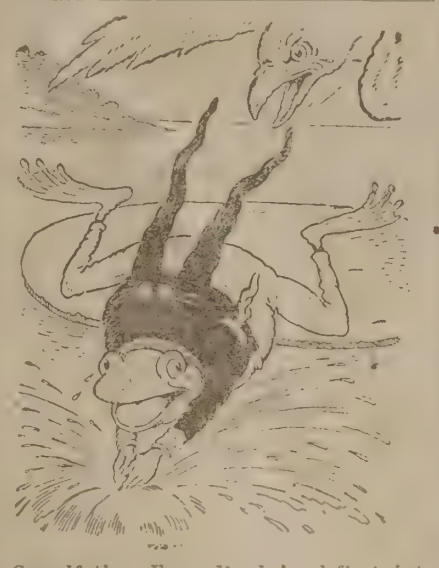
Blanche Uribe, Pearl McHargue, Walter Guiberson, Ruth M. Carlin, Albert V. Ginnette, Dorothy Wagner, May Tamley, Alice Jane Herndon, Grace Jewell, Carrie Mildred Lattimer, Fern Stalcop, Marie Tamley, Ida Rompel, Hannah Wells, Impie Wilson, Robert Osborn, Jewel Field, Dorothy Timm, Clara Bernice Smith, Ivan Schafer, Olive M. Willard, Bruno Hannus, Gladys Main, Mayme Kynse, Dorothy Kimmel, Emory Kruchek, Sylvia Lampi, Sylvia M. Leikas, Della Bromley, Thelma McTavish.

Delma Hedington, Addie Moore, Verlan Osburn, Charlotte Moore, Hilma Hannus, Flossie Slemp, Ida May McAuley, Lucile Martha Hardung, Constance Washburn, Ida Long, James Joyce, Dorothy Wagoner, Ruby Brown, Edna Hepler, Emilie Ruth and William Albert Bennett, Helen Moilanen, Astrid Larsen, Florence Martin, Pauline Ottmar, Laila Anderson, Grace Anderson, Maurice Hershey, Phyllis Van Dyke, Bernice Ruth Bramlet, Albert Harper, Melva Underwood, Catherine Toycen, Anna Mae Tarter, Goldie May Johnson, David Slemp, Clarence Case, May Ahola.

BEDTIME STORIES

By THORNTON W. BURGESS.

Copyright, 1919, T. W. B.



WHITETAIL IS HUNGRY, TOO.

Back and forth over the Green Meadows sailed Whitetail the Marshhawk. Like Longlegs the Blue Heron, he was hungry. His sharp eyes peered down among the grasses looking for something to eat. But some good fairy seemed to have warned the very little people who lived there that Whitetail was out hunting. Perhaps it was one of Old Mother West Wind's children, the Merry Little Breezes. You know, they are always flitting about trying to do some one a good turn.

They love to dance and romp and play
From dawn to dusk the livelong day,
But more than this they love to find
A chance to do some favor kind.

Aanyway, little Mr. Green Snake seemed to know that Whitetail was out hunting and managed to keep out of sight. Danny Meadow Mouse was not to be found. Only a few foolish grasshoppers rewarded his patient search, and these only served to make him feel hungrier than ever. But old Whitetail has a great deal of persistence, and in spite of his bad luck he kept at his hunting, back and forth, back and forth, until he had been all over the Green Meadows. At last he made up his mind that he was wasting time there.

"I'll just have a look over at the Smiling Pool and if there is nothing there I'll take a turn or two along the Big River," thought he, and straightway started for the Smiling Pool. Long before he reached it his keen eyes saw Longlegs the Blue Heron standing motionless on the edge of it, and he knew by the looks of Longlegs that he was watching something which he hoped to catch.

Grandfather Frog dived head-first into the Smiling Pool.

"If it's a fish," thought Whitetail, "it will do me no good, for I am no fisherman. But if it's a frog—well, frogs are not as good eating as fat meadow mice, but they are very filling."

With that he hurried a little faster, and then he saw what Longlegs was watching so intently. It was Grandfather Frog sitting on his big green lily pad. Old Whitetail gave a great sigh of satisfaction. Grandfather Frog certainly would be very filling, very filling, indeed.

Now, Longlegs the Blue Heron was so intently watching Grandfather Frog that he saw nothing else, and Grandfather Frog was so busy watching Longlegs that he quite forgot that there might be other dangers. Besides his back was to old Whitetail. Of course, Whitetail saw this, and it made him almost chuckle aloud. Ever so many times he had tried to catch Grandfather Frog, but always Grandfather Frog had seen him long before he could get near him.

Now, with all his keen sight old Whitetail had failed to see some one else who was sitting right in plain sight. He had failed because his mind was so full of Grandfather Frog and Longlegs that he forgot to look around, as he usually does. Just skimming the tops of the bulrushes he sailed swiftly out over the Smiling Pool and reached down with his great cruel claws to clutch Grandfather Frog. There he sat pretending to be asleep, but all the time watching Longlegs and all ready to jump the minute Longlegs tried to get nearer. Just a teeny, weeny second more and the Smiling Pool would never again see Grandfather Frog.

Slap. That was the tail of Jerry Muskrat hitting the water. Grandfather Frog knew what that meant—danger. He didn't wait to find out. There would be time enough for that later. When Jerry Muskrat slapped the water with his tail that way danger was very near, indeed. With a frightened "chugarum'" Grandfather Frog dived head-first into the Smiling Pool, and so close was old Whitetail that the water was splashed right in his face. He clutched frantically with his great claws, but all he got was a piece of the big green lily pad on which Grandfather Frog had been sitting, and, of course, this was of no use for an empty stomach.

With a scream of disappointment and anger he whirled in the air and made straight for Jerry Muskrat. But Jerry just laughed in the most provoking way and ducked under water.

Advertisements Bring You Information Regarding New Inventions

IT was only seventy-five years ago that a woman of the middle west wrote to her cousin in New York:

> "Last winter I was told of a curious new device for making fire. It consisted of small splinters of wood with tips of some substance that bursts into flame when rubbed on a rough surface. If you can procure some of them for me I shall be grateful."

Matches were in general use in Europe for years before they were seen in this country. There was no means for spreading such news rapidly. Today, the new invention that contributes to comfort or convenience is quickly known the country over. Advertising conveys the information. The farmer's wife in Texas or Idaho is as well posted on these things as the city woman of the east.

Don't overlook the advertisements. They are heralds of progress, with real news for you and your family. They save your time, lighten your work and enable you to obtain the utmost in value for the money you spend.

Time given to reading the advertisements is well spent.

To Eradicate Ants

By A. L. MELANDER, Entomologist, Washington Agricultural Experiment Station.

The ants destroyed the tender plants in my hotbed as fast as they came up, although I moved the beds to a different location. Could you give me a remedy to kill the ants and still not destroy the plants? J. L. P.
Harvey, Wash.

The first principle in fighting ants is to locate the nest, if possible, because the destruction of a few wandering ants will not greatly check such prolific insects as these.

We have had very good success in exterminating ants merely by pouring a weak (about 1 per cent) solution of sodium cyanide into holes punched in their nests, about a tablespoonful to a hole. This solution is extremely poisonous and generates a suffocating gas which almost instantly will kill the ants within reach. Inasmuch as the fumes must penetrate through the burrows and tunnels of the ant colony, the liquid should be distributed to best advantage. The holes may be punched by inserting a cane or a broom stick into the soil over the nest, at intervals of about two feet, then pouring in the poison liquid and immediately covering the opening, which may be done by kicking in some soil with the foot. Such fumigation has the advantage of reaching the queen mother in the center of the colony, whose destruction is necessary for the ultimate extermination of the pest. It is well also to carry on the fumigation on a cool morning when most of the ants are home. Such methods as using sweetened poisons placed near the nest will get rid of the foraging ants, and the queen mother will continue to reproduce the colony, so that the effect of the poisoning is thereby undone. After a few days sodium cyanide in the soil will have completely spent itself, when it is no longer dangerous.

Another common treatment for ants is to pour about one-half to three-fourths of an ounce of carbon disulphid into similar holes punched in the nest. The fumes from the carbon disulphid are much heavier than air and will sink down into the burrows; the fumes from the cyanide, however, are light, and while they diffuse horizontally they do not settle so quickly. For this reason the holes for the carbon disulphid treatment need by only a few inches deep. The disulphid liquid is extremely inflammable and the greatest care must be taken not to cause an explosion by having any lighted flame or spark nearby. The cyanide smell is fatally poisonous, and every care must be taken not to inhale it.

Fumigation, like either of the above, is preferable to using ashes, boiling water, salt, ill-smelling creosote compounds or baits poisoned by arsenicals.

Ants in houses can be trapped to a sponge moistened with sweetened water. When many ants congregate on the sponge they can be destroyed by a little boiling water from the teakettle. Another recommendation is to distribute, so that the ants can feed on it, a mixture of equal parts of dry plaster of paris and powdered sugar. When this is eaten the plaster sets and the ants die of acute constipation.

If ants crawl up fruit trees and destroy the blossoms of young shoots they can be prevented from such harm by fastening a band of fluffy cotton around the trunks. Ants will not walk over fluffy cotton unless they are very much excited. This is less harmful to the trees than smearing a ring of tanglefoot on the bark.

Changes in Wheat Grades

Various changes in wheat grades are announced by Secretary of Agriculture Wallace, as well as certain changes in the inspection rules.

Changes in the standards for white wheat will be made effective July 17, the classes "common white" and "white club" being combined into one class designated "white wheat," this new class to be subdivided into three subclasses—"hard white," "soft white" and "western white"—making the same application of the hard white and soft white subclasses as at present and designating as western wheat all white wheats or mixtures of white wheats containing more than 10 per cent Clubs or Sonora.

Soft red winter wheat, known by the subclass designation red Walla, will be designated by the term "western red."

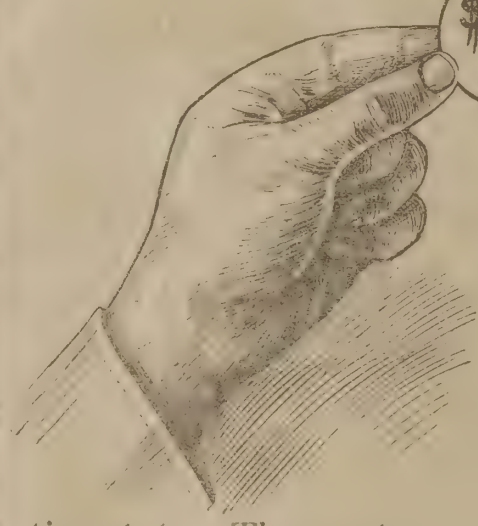
Roads Big Problem to Settlers

To the Editor of The Washington Farmer: I would like to give you a little sidelight on the subject of home builders in western Washington. I came here 10 years ago with $1000 and bought 40 acres. My first tax was $4 and the statement I just received calls for $18.50. The tax man at least thinks I am a success.

I am sure the worst difficulty the home builder has is roads. I live three miles out of town. The county has not spent to exceed $300 on the road in the 10 years, while the people and the merchants in town have donated $400 at one time. Settlers on byroads (they should be called market roads and be built first) must build their own roads or travel a cow trail. There is an eighty adjoining me, all in brush, owned by a Seattle man. He bought this place when I came here for $800 and now that we have a road built by the side of it he wants to sell it for $2000. His tax this year is $14. A petition has been signed here by 25 settlers to open a road, but there are two damage claims of $200 each against the road and the county will not establish a road unless the right-of-way is clear. We can not raise the money to pay these damage claims. One of the men asking damages has an eighty a quarter of a mile from any trail, all in brush, and he could not find it without a surveyor, yet he wants $200 because it takes an acre of land and would give him a road to both forties. He lives in Portland.

What we want is a new road law to the effect that owners of all unimproved or vacant land, not occupied by actual settlers, within a half mile of any road to be opened up or improved by gravel or crushed rock, shall pay a special tax of from 50 cents to $1 per acre; if not paid, the state to furnish the funds, take over the land and open it for homesteads under a state homestead law similar to the Michigan law. MARTIN RICKETS.
Winlock, Wash.

Alfalfa Cultivation



By E. G. SCHAFER, Head Farm Crops Department, Washington State College.

Should alfalfa be cultivated in the spring? Some claim that it is injurious to cultivate. Our soil is volcanic ash with some sand. Could we sow a cover crop with the alfalfa? We have plenty of water to irrigate with. S. G.
Nespelem, Wash.

The value of cultivating alfalfa depends in part upon the condition of the soil and the need of cultivation for wood destruction. If the soil is packed and crusted in the spring, cultivation at the proper time will serve to put it in better tilth. If the soil is too wet or too dry, cultivation may actually be a detriment. Often small weeds, especially certain kinds of winter annuals, may be destroyed by cultivation. This would be helpful to the alfalfa, since there would be less competition from weed growth and the crop would be of better quality. Unless the cultivation is very severe, little injury is likely to result from cultivation if it is conducted at the proper time, which is usually before much growth has been made. In a large manner the question of cultivation should be decided by the operator upon observing the character of work being done.

If by cover crop you mean a nurse crop or companion crop, its effect depends largely upon such factors as moisture supply. When there is plenty of moisture present there is much less danger from such a crop. Even in such cases, however, the nurse crop should be planted at considerable less than the usual rate. We suggest not over one-half the regular rate for the nurse crop that would be used if it were seeded alone.

For $1 You Employ the Services of Scores of Workers for 5 Years

$1. Rock Bottom Subscription Price Due to Cooperation

When you subscribe to The Washington Farmer you employ the services of a big, hard-working organization devoted to your interests alone.

You hire these people to put in their best licks for you. They cover the entire state. They get accurate, up-to-date market quotations from the principal centers. They prepare careful crop and weather reports. They glean the news and views expressed at conventions, shows and farm gatherings of every sort.

Others in the organization conduct the departments. They comb the state for information of value to you. They answer your questions. They find out and report the experiences of hundreds of practical farmers whose problems are not those of some distant field, but of the same state in which you live. Then there are those whose pleasant task it is to find the stories which will give you the greatest enjoyment, to collect the household hints and helps which will prove most worth while, or to discuss for our great circle of thoughtful readers the many topics and issues of especial interest to Washington people.

For the expenditure of a dollar you secure the services of this great organization for five full years. This low price is made possible by the cooperation of our readers in sending in their subscription orders direct. Agents are expensive. Save their cost by sending in your subscription renewal at least sixty days in advance of the expiration date stamped on the wrapper of your paper and by including the orders of your friends and neighbors with your own.

Subscription Rates of The Washington Farmer:

$1.00 for Five Years

25 Cents for 1 Year.
50 Cents for 3 Years.
In Canada add 1 cent a copy for extra postage.

May 11, 1922.

If your subscription is already paid in advance, it will be extended from the date to which it is paid.

Student Bidders Are Cautious

(Continued from page ten.)

Bishop of Chimacum for fitting Holsteins; Charles Sumbardo of Seattle won a shield donated by E. W. Van Tassel of Wenatchee for fitting Ayrshires. Daryl Leonard was awarded the sheep fitting prize.

The mock sale was conducted by George Gochnour of Sunnyside and James McKay of Spokane. Appraisal of stock was made before the sale by a committee of visiting stockmen and the final score was determined by the least average amount of error in the bids from the values set by the committee.

The annual banquet, with Jack Dobbin, Associated Students' president, as toastmaster, followed the events of the day and prizes were awarded. Dr. E. O. Holland, president of the college, opened the program with a short talk on the relation and importance of science and agriculture today. Dean E. C. Johnson of the college of agriculture traced the growth of the college herd in quantity and quality in the last few years, and Rudie Oltman of Bellingham, president of the All-Ag club, thanked the committees and the manager of the show and mock sale, E. E. Mundy, of Ellensburg for the work done toward making the affair a success.

Others who spoke were E. E. Mundy, William B. Courtner, Walla Walla county club leader; A. E. Lawson, field secretary of the American Shorthorn Breeders' association; Herdsman Richard Hanna; Auctioneer James McKay, E. W. Van Tassel, Houston McCroskey of Garfield, president of the Western Royal Live Stock show, and Charles Maybury of Seattle.

Bull Club Organized

Another bull club was organized at San Juan county on April 22 in East Sound, according to W. W. Henry, county agricultural agent. This club purchased the Guernsey bull owned by Alfred Nelson. The animal is 9 years old and has several daughters in the county which show excellent dairy type and are promising individuals. His dam has a butterfat record of 520 pounds as a 4-year-old. He is a half brother to Samamish Topsy, the well-known Guernsey cow of Redlands, Wash. Members of the club are as follows: Harry Donohue, president; Jake Cramer, vice president; W. L. Sutherland, secretary-treasurer; Jesse M. Waldrip, Maurice Swanson, Kelly Templin, John Cramer, Jess Cramer, J. E. Moore and Jim Gibson.

SPOKANE COUNTY JERSEY BREEDERS.

A meeting of all Jersey breeders in Spokane county is called for Saturday, May 13, at the New Madison hotel building, Spokane, Wash., at 1:30 p. m. William Auld of Waikiki farms has issued the call for the meeting and states the meeting is for the purpose of forming a Spokane County Jersey Cattle club. He states that several counties in the state of Washington are being organized in this way.

We Buy and Sell
Grade and Pure Bred Dairy Cattle.
We can save you money whether you wish to buy or sell. One or a carload.
Graham Livestock Co.

Rogue's Heroine of Hawthorne No. 71328.

Cottonwood Farm Guernseys
Home of Janis of Sequoia No. 104315; Rex's Daisy of Tillamook No. 103731.

We offer for sale several pure bred Guernsey bull calves, the most promising of which is Crown Prince of Cottonwood Farm, dropped April 14th, 1922, by Rogue's Heroine of Hawthorne, who made 618.55 pounds of fat last year in Class BB, and is now milking 70 pounds per day. The sire of this calf is a son of Janis of Sequoia, who will finish on May 8th, 1922, with over 840 pounds fat in Class AA. We think this the best blooded Guernsey calf in the northwest. Write us for particulars.

First Annual Spring Sale of Registered Holsteins
Under the Management of
Lewis County Holstein-Friesian Club
at South West Washington Fair Grounds
Between Chehalis & Centralia.
Wednesday, May 24, 1922 10:00 A. M.

54 of the best registered cattle ever offered at public sale in Lewis county.

Sons and daughters of THE KING OF CHIMACUM, whose two near dams average 26,000 pounds milk and 1159 pounds butter in a year. Several cows and heifers in this sale bred to him.

OTSEGO HIGHLANDS BUTTERFLY, 812 pounds butter in a year, and her two daughters.

Three daughters and one son of HOLLYWOOD PALMYRA BURKE, a 1000-pound bull.

Four grandsons of MATADOR SEGIS WALKER, three of them from A. R. O. dams.

Several of the cattle to be sold have been prize winners at the leading fairs and exhibitions of the northwest, while many of the younger animals are very promising show ring prospects.

Health certificates and a T. B. guarantee, of course.

It contains the dispersal of Nathan Hamilton's herd of 22 head, and selections from the herds of 13 other Lewis county breeders.

Cooperative Marketing Gets Attention of Financiers—Page 2

Must Have Orderly Marketing of Farm Products

Returning from a trip extending to the Pacific coast, Eugene Meyer Jr., managing director, war finance corporation, reports to President Harding on the development of cooperative marketing. He says, in part:

COOPERATIVE ORGANIZATIONS.

While the war finance corporation during the last year has entered into agreements to lend approximately $63,000,000 to cooperative marketing associations in all parts of the country, to assist them in the orderly marketing of their products, in most cases only a small part of the credit authorized has actually been used, because the local banks have been able to take care of the needs to a greater extent than had been anticipated. This indicates that the cooperative marketing associations, when they are properly organized and soundly managed, are able, for the most part, to obtain the necessary funds from local banking sources. But it is generally agreed that a good deal of the willingness of the banks to finance the cooperatives in their sections has been based upon the ability of the cooperatives to obtain funds from the war finance corporation. This has involved, in part, the element of confidence and, in part, the funds themselves, for it is obviously easier for a local bank to furnish funds to a cooperative marketing organization when it knows that the funds can be borrowed from another source and repaid to the bank in case of need. There is, therefore, a feeling among the managers of the marketing cooperatives, and also to a great extent among their banks, that there should be a continuation of the assurance of a market for their paper outside of the local banks. It is recognized that, with improving financial and agricultural conditions, it will be easier for them to obtain funds during the coming season, but, on the other hand, their operations perhaps will be conducted on a more extended scale and, therefore, the aggregate of funds required will be correspondingly greater.

You desired me especially to report upon these organizations. While in the west I had the opportunity of meeting the directors and managers of many of them, and in some cases of visiting their working headquarters and their warehouses. California was the first state to take up cooperative marketing on a large scale in this country and there it has been carried on in its most highly developed form. In San Francisco I met the representatives of 26 of the leading cooperative marketing associations of the state and was enabled to get the benefit of their experience and views. These California associations, for the most part, are so well established that their banking credit is equal to that of the best privately owned and managed corporations, and, although they market products aggregating in value $250,000,000 annually, they have had occasion to avail themselves of the funds of the war finance corporation to the extent of only $1,500,000 during the last season. Their operations were financed almost entirely through their usual banking connections.

The more recently organized cooperative marketing associations in Oklahoma, Mississippi, Arkansas, Texas, Arizona and in the northwestern states, while not so firmly established as the California associations, appear to be organized upon sound principles and to be properly and capably managed.

Prior to the war the distribution of our agricultural products, in so far as our export trade was concerned, was financed in considerable part by European capital. But fluctuating exchange, added to the fact that European countries are no longer on a gold basis, or even on a stabilized exchange basis, has prevented the continuation of this practice. We must, therefore, adjust our own financing machinery to meet the new conditions.

Our financial system has apparently been based on the expectation that the farmer would sell his crops as soon as they matured. And the immediate sale of the season's product by the farmer contemplated its being carried by middlemen until distributed through manufacturers or retailers. As has been stated so often, the farmer's crop is harvested within a short period and consumed throughout the year. The processes of financing should adjust themselves to the natural processes of production and distribution rather than vice versa. We have reached the point where the right of the cooperative marketing organizations to carry the products of their members for orderly marketing, until the consumer is ready to take them, must be recognized and the necessary financing machinery provided.

I, therefore, recommend that the need for the orderly marketing of our agricultural products in a more gradual way and over a longer period of time be frankly recognized; that existing banking laws and regulations be adjusted with this end in view, and that a rediscount facility be established to make it possible at all times for cooperative marketing organizations to obtain adequate funds for their operations. I recommend also that the powers of the federal reserve banks be extended to include the purchase in the open markets of eligible paper secured by nonperishable agricultural commodities, properly warehoused.

John L. Smith

Honor to Whom Honor to Due

"Three times within the past 10 years herds from the Pacific northwest have come to the National Dairy show, and twice out of three times they have returned with the coveted banner of premier exhibitor. Without detracting in the slightest from the credit that is due such pioneers as P. A. (Dad) Frakes, William Bishop, David Munroe, Hollywood and Carnation farms and others, we believe the man most responsible for this, and for the attention that breeders of the Pacific northwest have given to type along with production, is John L. Smith of Spokane, Wash., owner of the Hazelwood herd."

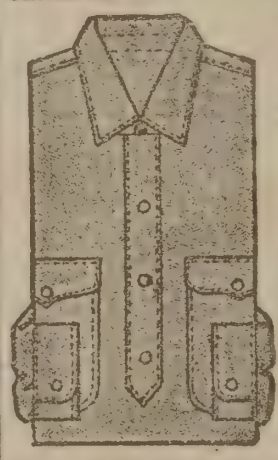
John L. Smith.

The foregoing is the opinion of Editor M. S. Prescott of the Holstein-Friesian World, formed after a visit to Spokane last fall and expressed in a recent issue of the World. The article outlines the personal history of this pioneer breeder and the winnings of the Hazelwood herd under his development and direction, at local and state fairs, at the National Dairy show and the Pacific International Live Stock exposition, at the A.-Y.-P. exposition in 1909 and at the Panama-Pacific exposition in 1915, and it is profusely illustrated with pictures of Hazelwood Ormsby Posch, Bonnie Lass Pauline and other animals which have brought fame to the herd. Among his other honors, one which has never been duplicated, is that of winning first for get of sire at both the Pacific International and the National Dairy show.

"In breeding Holsteins as well as in a good many other things," writes Prescott, "a lot depends upon getting started right. It has always seemed to me, therefore, that a great deal of the success they have achieved up in the Pacific northwest in the breeding of Holsteins along the lines of type and production satisfactorily combined was due the pioneers who established such a high standard to start with, as a model for the breeders who came later and also in the foundation stock which they so widely disseminated from their herds. If specific reference is needed, we would point to the percentage of great milk records held by the Holsteins of the Pacific northwest, particularly in proportion to the number of cattle there, and also the showing which Pacific northwest Holsteins invariably make when brought into competition with cattle from other parts of the country at national shows. With Stanley Butchart now on the job as first assistant, the Hazelwood herd should be very much in evidence at the 1922 shows," Prescott adds.

Redwood Water Tank

To the Editor of The Washington Farmer: I read in a recent issue of The Washington Farmer that Mr. Adamson of Pacific county has a redwood water tank on a bluff overlooking Shoalwater bay. I also have one, a few miles north of where Mr. Adamson lives, overlooking the same bay. Mine has been in use now for more than 18 years and is still as good as new, although I have been compelled to have a new set of hoops. F. L. SARGANT.



Nahcotta, Wash.

The Stump Becomes Its Own Furnace

Device Designed to Take the Backache Out of Land Clearing Wins Friends in West Washington

By RALPH ERSKINE

Any one who has ever wrestled with a western Washington fir stump will welcome any new method of burning that promises to save both time and expense or, in fact, either. He will naturally be skeptical, however, when he hears that he can save not only half the time formerly required for burning a stump, but he can also save approximately three-fifths of the usual cost per acre and in addition can be assured of a 75 or, in some cases, an 80 per cent burn.

This has actually been done and is being done by the use of what is known as the Zysset stump and root burner, which is a modification of the old charpit method. The device was originated and developed by S. F. Zyssett of Scio, Ore. Like many another, he detested the idea of plowing around the stumps year after year, but, unlike many others, he used his head as well as his heels and devised a sure-firing furnace that anybody can handle and that makes starting a fire for the old reliable char-pitting process as simple as starting a fire in the kitchen stove. And that's all there is to the invention.

It is the big stumps from three to six feet across that are the real problem, especially with the small farmer. The average farmer is apt to feel much as did D. D. Aitken, formerly president of the Holstein-Friesian Association of America, when he was in Washington a year ago. Mr. Aitken was born and brought up in timber, and he never ceased to marvel at the size of the stumps on Washington and Oregon logged-off lands, and at the apparent hopelessness of the task of removing them. He stood one day in silent contemplation of one of those too numerous wildernesses of charred and blackened sticks, overgrown with brush and tangled berry vines, when some one asked him what he would do if he were set down in the middle of such a 40-acre lot and told to work his way out or starve.

"I'd give it up, and die there," he replied.

Which, of course, as everybody in this section knows, many a good man—and woman, too—has done on considerably less than 40 acres.

It was with the idea of overcoming such difficulties that the extension department of the state college offered to demonstrate the new burner, by the help of the county agricultural agents in western Washington.

The first appearance of the Zysset burner in Washington was on April 19 at Tolt, where three of the units were put into operation as a means of demonstration for farmers of the north end of King county. A larger demonstration was staged at C. E. Fisher's farm, two miles from Auburn on the east highway, April 29. The burners had been in operation for nearly two weeks in order to show each step in the process and also how completely the stumps could be burnt out. Most of the stumps that were worked on were large, but a few of the smaller ones were tried out to show that they could be handled in the same manner.

Convert Doubters.

Arrangements for the demonstration were in the hands of County Agent A. B. Nystrom.

Not only farmers, but many business men left their work to see how the new method worked out. There were plenty of doubting Thomases among the crowd before the burning, who declared that no stump could be burned out with its own fuel in so short a time, but they saw the worst kind of fir stumps banked and entirely consumed with all of the roots burned to a distance of 20 feet and more.

Although the soil at Thomas, between Kent and Auburn, was rather sandy, which caused the fires to die out before the roots were entirely consumed, the demonstration in King county was a success. Most of the stumps in the pasture were cut 10 years ago and were not in the best condition for burning, but all that were tried were burned down with comparative ease. A few stumps were blasted in a neighboring field in order to show the effectiveness of powder and they, too, found that this type of soil was hard to work.

One large windfall was burned completely out in slightly over two days' time. The fact that it rested on a small knoll did not prevent the burner from getting a foothold and the whole stump was finally consumed. This method of burning seemed to be particularly adapted to windfall stumps.

It seemed to be the consensus of opinion of those who saw the demonstration that even though one had to work in sandy soil it was better to use this method, which gets rid of the entire stump, including the heavy crown, and dig the roots or pull them as a separate undertaking.

"How do you start the fire?" "Where does your blast come from?" are questions that were most frequently asked by the men who come to see how the plan worked. For this reason several stumps were started with the furnace during the demonstration in order to show that there was nothing aside from the draft made by the fire itself that forced the hole through the stump.

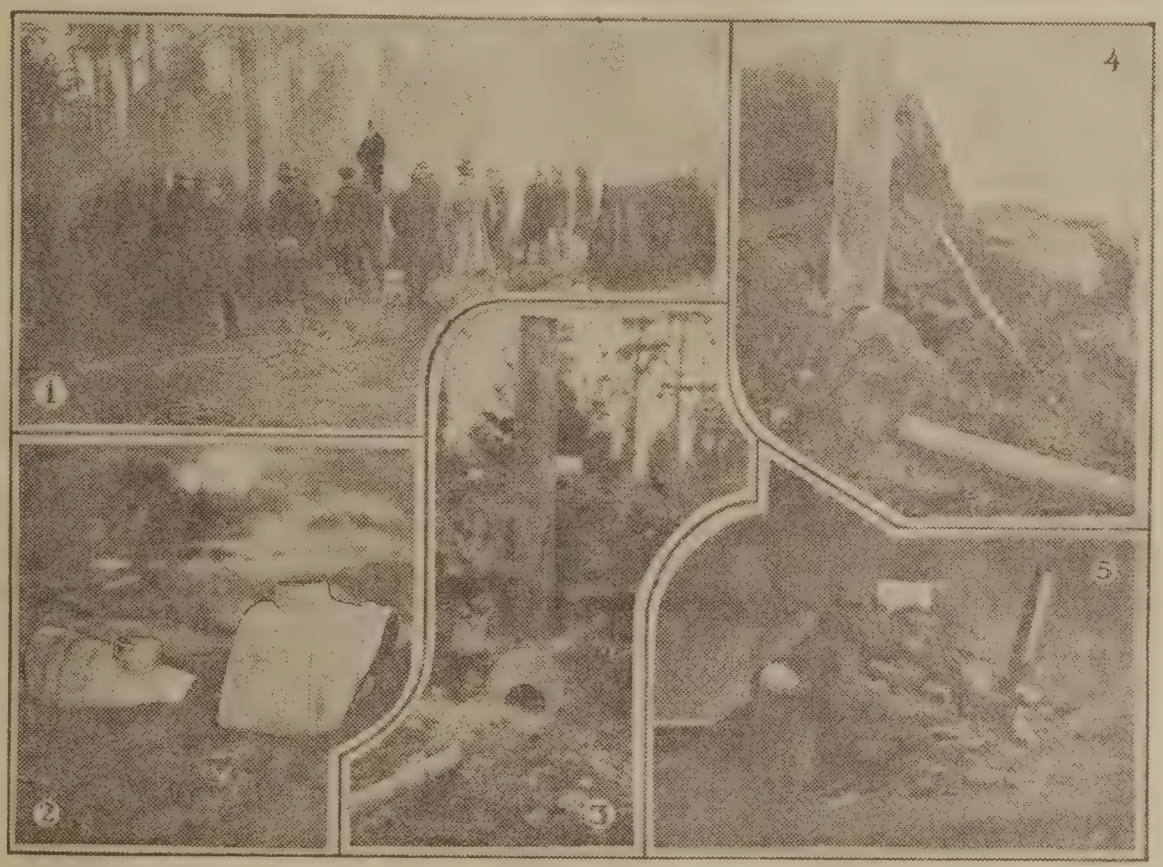
The accompanying pictures tell the story about as well as it can be told in words. All the apparatus necessary is the castiron furnace and hood shown in the second photograph. These will last indefinitely and a varying number can be used, depending upon the time devoted to burning. the furnace, the larger of the two pieces is open at the back, as shown, and has a draft hole and a stovepipe shoulder, like any of its distant relatives in the stove family. The bark is peeled from one side of the doomed stump and the open side of the furnace is placed against it preferably between two roots and in such a position that a line passing straight through it would penetrate the thickest part of the stump and would emerge just above ground on the opposite side. A 10-foot iron pipe, which may be any cheap pipe, but which should not be less than two inches in diameter, is then laid in the door of the furnace headed in the general direction of this imaginary line. A fire is kindled, usually with bark; two joints of stovepipe are put on to give it draft, and the attendant can start banking up around the stump with dirt. This completed, the project would look about as in photograph No. 3.

This banking process is the hardest work there is to be done, and the largest stump destroyed required only an hour to cover, so those with only a few "big boys" to remove can take heart. For successful firing, a three-foot stump will require stoking with bark three of four times—enough in any case to start the stump wood burning briskly. The furnace opening may then be covered as shown in the fourth photograph, and all the draft, of course, will come through the pipe, the stove end of which should be kept at a distance of an inch or two from the stump. This, of course, forces a flame of fire against the wood; as the pipe is pushed in and the fire becomes hotter the flame becomes a vertiable blow-torch, eating its way through the stump, and eventually it will burn a hole a foot in diameter through to the other side.

During this period, which usually is from 20 to 25 hours, all the attention required is an occasional kick on the pipe to keep the inner end close to the unburned wood. Now a few moments will be required to set a new fire and to start this one on its charpitting career.

Self-Destroyed.

The furnace and 10-foot pipe are dragged away to a new stump, where the hot metal makes it easy to start another fire, and a two-foot length is laid in its stead and covered with earth. On the other side, where the fire burned through, the smaller metal piece shown in the second photograph is laid with its wider opening against the stump; two lengths of stovepipe are placed on it; the whole is covered with dirt, and with the two-foot length furnishing draft you have an air-tight stove furnishing its own fuel, as in the fifth picture. About 48 hours are required to get a bed of coals sufficiently large and hot to burn without artificial draft, and when this is accomplished the hood and two-foot length of pipe are removed and the thing is a charpit, to be handled just like any other charpit. It should be allowed to burn slowly for several days or weeks, depending on the size of the stump; above-ground roots should be carefully buried, and finally the ground should be leveled with a drag.



In the trials carried on at the Oregon experimental station it was found that such stumps as pine, oak and spruce can be removed by this burner. Even cedar snags will yield to the method, but white fir is said to be a stumbling block. All other kinds found in the northwest have been found to burn successfully, provided they are larger than can be economically handled with stump puller and a little powder. Freshly cut stumps do not burn out so readly.

Strange though it may seem, the biggest stumps burn best by the process. The ones whose cost of removal with powder or puller is highest are the kind on which the burner works best.

Difficult Soil Types.

There are some types of soil on which the burner will not work well. The loose sandy soils will not hold together, but

(Continued on page twenty.)

Picture No. 1 shows a demonstrator addressing those who have gathered for the stump burning demonstration. No. 2 shows the castiron furnace and hood; No. 3, the equipment all in place ready for the fire to be started and the stump covered with earth; No. 4, the outfit in operation with the stump covered and all the draft entering through the long pipe which serves practically as a blow torch to penetrate the stump with flame; No. 5, the last step in burning away the top with the draft passing through burning stump.

An Old Pioneer of Horticulture

On the cover page of this week's issue is a picture of the "granddaddy" of one of Washington's greatest industries. It is the old pioneer apple tree at Vancouver, Wash., that early this month celebrated its 96th anniversary by bursting into full, vigorous bloom. In response to proper cultivation, pruning and spraying, this old patriarch is showing splendid vitality and appears to have every prospect of many years more of life. Unfortunately, it was badly broken by a "silver thaw" several years ago, which accounts in part for the somewhat unusual shape that it shows.

This tree was planted in 1826 by some one connected with the Hudson's Bay company, whose western headquarters were on the natural terrace sloping up from the north bank of the Columbia river where now the city of Vancouver and the Vancouver barracks are situated. A number of interesting stories have associated themselves about this old tree. One of these has it that at a dinner party in London about 1825, given in honor of some young men in the employ of the Hudson's Bay company who were about to embark for this country and the Pacific northwest, seeds from the apples eaten were slipped by some of the young ladies into the waistcoat pockets of the young men. Upon their arrival at old Fort Vancouver they gave the seeds to the gardener of the fort, who planted them. The tree the picture of which is shown on the cover page this week is believed to be the product of one of those seeds.

The Western Washington Horticultural association has undertaken to guard carefully the historic tree. A. A. Quarnberg of Vancouver, S. J. Harmeling of Vashon and R. T. Reid of Seattle comprise a permanent committee of the association which has its preservation in charge. The gavel shown as an insert in the cover page picture is made from prunings of the tree and is wielded by the president at each annual meeting of the association. It was presented to the association in 1919 by Mr. Quarnberg.

THE WASHINGTON FARMER

VOL. XLVI. NO. 20.

Trade Mark registered U. S. Patent Office.

Published Weekly, on Thursday.
By Cowles Publishing Co.

Subscription price: Five years, $1.00; three years, 50c; one year, 25c. Canadian, one year, 75c. Foreign, one year $1.25.

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter, January 13, 1915, at the postoffice at Spokane, Washington, under the act of March 3, 1879

GUARANTEE OF ADVERTISEMENTS

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible bankrupts. Complaints must be sent to us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of diseases in stock sold through these columns.

High Freights Benefit No One

Secretary Wallace, of the department of agriculture, in an address before the New York Academy of Political Sciences, stated an unanswerable truth with force and clearness when he said:

"The important point I am trying to make is this: That this nation has been built up by a system of low railroad rates designed to encourage the movement of our surplus agricultural crops long distances to manufacturing, industrial and business centers, with a corresponding return haul of manufactured products, and that a sudden reversal of this theory of rate-making results in great economic injustice and, if persisted in, will keep us in a state of confusion and agricultural and business uncertainty for a long time."

High freight rates, growing out of the war, Secretary Wallace reminds the public, are causing the fruit and truck growers of the far west and southwest to turn to water transportation, and the wheat growers of the west to use the shorter haul to water for export grains. He cited figures showing that wheat exports passing through gulf ports had increased from 24 per cent of the total in 1913 to 50 per cent in 1921.

This is a matter wherein the farmer's burden is a national loss. You can not put agriculture out of joint in this country without injuring all other interests—manufactures, transportation, labor and business. Wartime freight rates have put agriculture out of joint, and that is especially true in the agricultural regions west of the Rocky mountains.

It has now been nearly three and a half years since the war ended in the signing of the armistice. Freight rates on agricultural products are higher today than they were when the war ended. Things are kept out of joint because the railroads refuse to reduce freight rates on the contention that high wages to their employees and easy working conditions are against the desired reductions. Thus irresolution continues and the damage goes on.

Some one must take the first step, and if the railroad managers were wise they would take it. They refuse to recognize the fact that their high rates are used as an argument by their employees for the continuance of high wages.

If the railroad managers had courageously taken the plunge two years ago and had put down freight rates on agricultural products and other raw commodities, the resulting conditions would have forced a readjustment of wages and working conditions and everybody would be better off today. Prosperity would have been brought back to the farm, production would have increased, the railroads would have had increased traffic and there would be today fuller employment for railway workers.

The farmer came down to earth two years ago, but freight rates and railway wages are still skyrocketing, to the benefit of no one.

The Rural School Teacher

The National Congress of Mothers and Parent-Teacher associations was in annual convention at Tacoma last week and wisely devoted a considerable part of its time to a discussion of rural school problems. The opinion was expressed by speakers, and met with general approval, that the country schools of the nation should be in charge of the most experienced teachers, and that young educators, fresh from normal schools, should serve in city schools.

That accords with common sense. A big city school system can safely absorb a reasonable percentage of inexperienced teachers. The young teacher fresh from normal school can be put under supervision in the city systems and can make satisfactory progress there, where slow progress and unsatisfactory teaching would be the general result in country schools.

During the discussion at the Tacoma congress, Miss Mary Frazee of Seattle declared that a country school teacher should be able to take command of all community affairs if necessary and fill the requirements of a leader both for the children and the adults.

More and more the conviction is coming to educators everywhere in the United States that the big and outstanding problem of education is how to get better rural schools. It is not an easy problem. Most country districts labor under the constant limitation of insufficient funds. The problem is made still more difficult by the disinclination of too many teachers to go into country schools and a prevailing belief that life for the teacher will be more pleasant in a city school system.

There is reason to hope that that belief is losing ground. Many thoughtful teachers in the cities find that they are but a cog in a big machine. Many of them lead lonely and disappointing lives. Many of them are grieving over the lack of the wholesome, friendly associations that are so abundant in the country districts.

Society in the cities has an unfailing tendency to organize into cliques and social sets. There is not much contact or friendly association between teachers and parents. It is different out in the country, where the social life of the community often centers around the public school. The right sort of a teacher can easily become an important personage in a country district—looked up to and loved by her pupils and respected and admired by the parents of the community.

The conclusion reached by the Tacoma congress is sensible and sound. The big city school systems are the better places for apprentice work. It is the country that needs and is calling for strong, constructive teachers.

A Good Combination

C. M. Hubbard of the state college extension service, in discussing the value of a pedigree at the Northwest Live Stock conference, said that a pedigree without evidence of production on the part of the individual possessing it was of comparatively small value, but that such pedigree and such record of production made a combination hard to beat. The production, he said, might be meat, wool, milk or butterfat, depending upon the class of animal carrying the pedigree.

Reduction in Rates

The railroad committee of the Washington Woolgrowers' association, after several conferences with railroad officials, has secured a reduction in rates to and from summer grazing grounds which is approximately the rate in force last year. The reduction will save those who ship thousands of dollars. The large reduction in assessed valuations on sheep secured by the association's committee on taxation is another example of what a live organization can do for its members. This particular association asks of its members only one cent per head of sheep owned, to carry on its work.

State Farm News

More than $10,000,000 worth of highway work has been let by the state highway division during the present biennium and before the end of the summer contracts aggregating $13,133,000 will have been awarded. There is $2,293,000 worth of new work to be apportioned among contractors when bids are opened, May 16, June 1 and September 5.

Involved in the highway program of the present biennium are 147.13 miles of paving and 374.72 miles of grading, graveling and bridge construction.

Expense of the highway program is borne as follows: State, $9,142,000; federal aid, $1,866,000; forest reserve funds, $525,000; counties joining with the state or procuring federal aid, $1,575,000; railroads, $25,000; total, $13,133,000.

Some of the work that will be contracted this year can not be finished until 1923, and the next legislature will be obliged to reappropriate the funds called for by the work.

* * *

The Lewis County Cow Testing association has qualified for the 100 per cent purebred bull "honor list." This makes a total of 19 out of 42 active associations which have "fired the scrub bull," and the Lewis county association, which is one of the new ones, thereby sets an example for the older organizations.

* * *

Beekeepers of the Puyallup valley and Pierce county are completing plans for the official visit of B. A. Slocum, state bee specialist, for the week, June 9 to 14.

Mr. Slocum will inspect apiaries, explain methods of treatment for bee disease and will teach the art of transferring box hives to the modern movable frame hives now authorized by state law.

* * *

Further evidence of the world-wide popularity of northwest-made products was revealed May 2 when the Electric Heating company of Tacoma received an order for electric water heaters from the Indian Engineering company of Bombay.

* * *

There have been 983 cars of fruit shipped from Wapato, Yakima valley, from July 1, 1921, to April 1, 1922, and 628 cars of potatoes. Besides this there have been 448 cars of potatoes shipped from the five stations on the branch line west of Wapato.

* * *

Warren Lincoln, a Jersey breeder of Shelton, Mason county, Wash., has adopted the plan of trading his yearling bull calves for scrub bulls that are now in use about the county. Mr. Lincoln has been doing much constructive work for the good of the breed and has made several trades which are profitable for both parties. One of the purebred calves which is offered for trade is sired by Prosser Pogis, a full brother to Sophie's Agnes, who once held the world's record for butter production

* * *

A dairy club was organized recently in the Snoqualmie valley, with George R. Abbott local leader. The boys will buy cows that are milking or will soon freshen. They will meet once a month to test the milk, calculate the returns and figure rations. The club was organized by A. B. Nystrom, county agent of King county.

* * *

Approximately 25 berry farmers attended the organization meeting and election of the Whatcom County Berry Growers' association held recently at Bellingham.

A. Buttner, grower, from the Ferndale district, was elected president of the new association and Frank Mittelstadt of Bellingham secretary-treasurer. Alec Beverly and H. R. Clark of Sunset Avenue farms and F. J. Hill of Ferndale were elected as board of directors for the ensuing year.

Carl J. Kallgren, state organizer and representative of the state association, presided. He also addressed the berry men on the subject of state and county organization, emphasizing the value of such affiliation for the protection of berry farmers and the benefits to be derived from cooperative selling.

* * *

The Cowlitz, Chehalis & Cascade Railway company has ordered a new $15,000 gas car for delivery about August 1 to be used in the passenger and express services of the line between Chehalis and Onalaska. The new car will seat 41 persons. The car will be built by the Skagit Steel & Iron Works at Sedro-Woolley.

* * *

Scholarships of $75 and railway transportation both ways on the Union Pacific lines to the Washington College of Agriculture, school of agriculture or winter short course will be offered each of the top rank boys in 16 counties of the state by President Carl A. Gray of the Union Pacific, according to a letter received by President E. O. Holland of the state college.

* * *

There is more than one way of proving that a cow-testing association is a paying undertaking. C. A. Robinson, who has for the past year supervised the Clallam County Cow-Testing association, has entered into partnership with Ben Chambers, a dairyman, near Port Angeles. Mr. Robinson was very much pleased with dairying in Clallam county and watched for an opportunity of getting into business for himself. Shortly before the end of the year Mr. Chambers offered him a chance of working with him on a partnership basis, which Mr. Robinson accepted. The association has another tester and released Mr. Robinson the first of April to take up his new work. He is a thorough student of pedigrees and production records, and his many friends in the county feel certain that he will make a success of his new venture.

Coming Events of Interest

May 20—Farmers' market, Bremerton.
May 24—Lewis county Holstein sale, Chehalis, Centralia.
May 30—Decoration day.
June 5—Northwest Guernsey breeders' sale, Portland.
June 5-10—National Holstein meet, Kansas City.
June 7—Guernsey consignment sale, Chehalis.
June 10—Republican state convention, Chehalis.
June 14—Flag day.
June 20-22—Lincoln-Adams pioneer picnic, Keystone.
July 26-28—International apple shippers, Seattle.
July 27-28—Whatcom Guernsey gallop, Bellingham.

FARM BUSINESS AND MARKETS OUTLOOK

Most of the barometers by which the trend of business affairs is measured continue to move in the direction which will bring us back to a state of prosperity. The question is no longer whether conditions are improving, but how much betterment has taken place.

Agriculture, industry, construction, commerce, both foreign and domestic; mining, transportation, finance—in brief, all the major fields of productive endeavor show a balance of favorable conditions.

Although the season is a late one, most sections have an ample supply of moisture at the beginning of the growing period and the crop prospect is not far from the average. Costs of production will be lower than for either of the two preceding crops upon which, in most cases, heavy losses were sustained. The outlook for a price at harvest time which will yield a margin of profit to the farmer is brighter than it was last year and much better than two years ago.

The midwinter advance in farm prices has been maintained in the great majority of cases and the general level of quotations of agricultural commodities is 10 to 15 per cent higher than a year ago, when the trend was still downward.

Farm machinery sales are larger, the northwest reporting an increase of 100 per cent over last year. Shipments of stocker and feeder cattle back to the country are larger than in either of the last two years. Pessimism is less conspicuous in country districts. These are some of the signs that the farmer realizes that the road has turned and that his courage and spirit of enterprise are returning.

Industries have been hampered but little if any by the coal strike and the expansion of operations has been maintained or increased in the last month. Pig iron, steel, lumber, copper, zinc, tin and automobile manufacturing are some of the lines in which the trend toward greater activity is noted. Steel mill operations are at nearly 75 per cent of capacity, although the total capacity of the industry is 40 to 50 per cent larger than before the war.

Building operations have reached boom proportions and a long list of businesses feels the effect of the increased demand for construction materials.

Railroads are benefiting from returning prosperity in other lines which has increased freight traffic and enabled the roads to earn during March nearly 6 per cent on their tentative valuations for the first time since the war. They are placing orders for iron and steel for maintenance and equipment almost daily.

As railroad earnings are increasing, announcement that the 10 per cent cut on farm products will be made permanent and similar reductions to go into effect on coal and building materials is expected before July 1.

The strikes of coal miners and textile workers have increased the amount of artificial unemployment, but with manufacturing, mining and building operations on a broader scale and the demand for farm laborers a lot of the slack has been taken up. There is a threat of another rail strike, but there is an equally good chance that the coal strike will begin to break before long.

Money is gradually becoming easier. Spring seeding requirements were provided for without causing more than a ripple in banking affairs. Farmers apparently are going slow in borrowing. Requests for funds from the war finance corporation are 25 per cent lower than in the first quarter of the year, indicating that most of the special cases requiring loans of the character which that institution furnished have been provided for. It is probable, however, that the life of the corporation will be extended for another year from June 30 next.

Foreign affairs remain in turmoil. The economic conference at Genoa has not made much progress and the insistence upon heavy reparations payments may precipitate a crisis in Germany at the end of May. Conditions in Great Britain, however, are much better, with money easier, industries busier, foreign trade expanding and employment increasing. Sterling exchange has risen again to the highest level since 1919.

Beef Consumption Expands

In spite of a gradual increase in receipts of cattle at the seven leading markets from 136,000 head in the first week of April to about 183,000 head during the first week in May, prices have advanced again to the high point of the year. Evidently consumers are eating more beef than a month ago. Beef has been cheaper than pork or lamb recently and beef consumption holds up in hot weather better than other meats. The lower grades of steers have been helped by an increase in competition from buyers of stockers and feeders. A stronger hide market also has aided the cattle trade.

Although more light plain stockers and feeders went to the country last fall than usual, the lower grades of beef steers coming to market are scarce. The market is running true to form for this season of the year, with such steers selling at a narrow discount below choice and prime grades. But few steers suitable for carcass beef can be had on the Chicago market for less than $7.75, while the top of the market on yearlings and weighty steers hovers around $9.25. In view of the wide margin between common and choice feeder steers last fall, it is obvious that taking out the former was a more profitable venture. Since prices on common steers have advanced more than the best grades since the first of the year, the bulk of sales at the smaller markets, where choice and prime steers are seldom sent, show a more pronounced upturn than at the larger markets.

Cattle prices can not advance much further if the run enlarges, but since receipts at the seven leading markets last week were about 20 per cent above the eight-year average for this season of the year, a decrease is more probable. The principal feeding districts are winding up the marketing of their crop of winter-fed beef and as this process is completed the remaining supply will rest in stronger hands. If the demand for beef holds up, values should retain most of the recent advance and possibly reach higher ground.

A steady increase in the demand for stocker and feeder cattle has occurred in the last four weeks.

Decline in Hog Market Checked

Receipts of hogs increased sharply for two weeks until the total at the 11 leading markets began to run ahead of the 10-year average, whereas most of the time this year the supply has been less than normal. A sharp break in prices resulted, but the country shut off part of the supply again and the course of the market has been upward for the last week, reaching the highest point in two months. The demand for pork as well as beef seems to have increased as prices in eastern cities moved higher.

The behavior of the market shows that it is on a firm foundation. The regular June run is yet to be encountered, which means an increase in receipts of 10 to 20 per cent, but it is evident that the market will be well supported right along and the break in prices will not be drastic.

Reduced slaughter of hogs during most of April is reflected in the report of storage holdings of hog meats at the six leading western packing points on May 1.

Spring Lambs Becoming Numerous

Spring lambs are becoming more abundant each week. Chicago and Omaha have received several shipments from California, Kansas City reported the arrival of the first Arizonas, while the bulk of the receipts at St. Louis are spring lambs from Tennessee and Kentucky. Prices slumped sharply after working up to a new high level for the year. Heavy sheep and lambs are moving to the usual wide discount below light weights, which marks the arrival of warm weather. An erratic market is to be expected until prices are adjusted to a new crop basis, but a rather high level compared with hogs and cattle should be maintained right along. A limited demand for breeding ewes is noted. Prices upon thin fleshed shorn natives two to three years old range around $6 at Chicago.

Demand for Drafters Increases

Although the farm chunk trade has all but disappeared, leaving many medium weight horses without a satisfactory outlet, much more interest is being shown in drafters and delivery and truck horses than a month ago as the industrial revival is exerting its effect. Teaming concerns are after rugged workers and ice companies are preparing for summer trade. Choice drafters are being sought, also, for the Maine potato section.

CHICAGO—Good and choice drafters, $175@260; common and medium drafters, $140@175; farm chunks, $115@160; wagon horses, $100@175.

Wool Market Working Higher

The wool market advanced again last week, with fine wools in the west selling at a range of 35 to 42 cents and quarter and three-eighths blood at 25 to 28 cents. Dealers have been anxious to bag the new clip as sentiment is quite general that further advances will occur, so that they have been buying as fast as growers would sell. Foreign auctions show a rising tendency, as the advance is world-wide. Some grades were 15 per cent higher at the last London auction and New Zealand sales are 5 to 10 per cent higher than a month ago. In spite of the quiet market in this country during March, imports in that month were 43,071,000 pounds, the largest since April, 1921, the month which preceded enactment of the emergency tariff. Consumption of wool by American mills in March totaled 62,385,000 pounds, including 7,170,000 pounds of scoured wool and 2,608,000 pounds of grease wool. This compares with 72,721,000 pounds consumed during January, 1920, when the post-war boom in wool manufacture was at flood tide.

With a prospect of higher prices for wool and for cloth, the demand for goods has improved. Woolens have been relatively more active than worsteds for several months, but the worsted market has responded noticeably in the last few days.

The Boston market is quoted as follows: Wisconsin, Missouri and average New England, 1-2 blood, 27@39c; 3-8 blood, 36@37c; 1-4 blood, 34@35c. Scoured basis: Oregon eastern No. 1, staple, $1.15@1.20; fine and combing, $1.10@1.51; eastern clothing, 90@95c; valley No. 1, 95c@$1. Territory: Fine staple, choice, $1.15@1.25; 1-2 blood combing, $1@1.05; 3-8 blood combing, 76@78c; 1-4 blood combing, 66@68c.

Wheat Situation Analyzed

The government's report upon total supplies of wheat in all positions on March 1 showed 244,978,000 bushels. March exports were 14,371,396 bushels. Weekly clearances during April indicate exports in that month of about 11,500,000 bushels or more, making a total with March of approximately 26,000,000 bushels. Spring seed requirements will have taken about 25,000,000 bushels by the time it is completed. Domestic disappearance of flour in March and April totaled about 13,172,000 barrels, equivalent to 59,270,000 bushels of wheat.

The foregoing items account for 110,000,000 bushels, which would leave about 135,000,000 bushels for consumption and export in the next two months and carry-over in all positions at the end of the crop year. The average carry-over on farms, in the visible supply and in country mills and elevators is about 75,000,000 bushels. If it is to be as large as the average only 60,000,000 bushels are yet to be disposed of. Domestic consumption alone should take care of fully that amount. Some wheat is sold for export and not yet shipped and small additional sales are being made from time to time, so that clearances in the next two months should reach a total of 15,000,000 bushels at least. Under the circumstances it is hard to escape the conclusion that the carry-over will be below the average. There is a possibility, of course, that the March 1 reserves were under-estimated. The crop has held out much better than expected, as exports since July 1 now amount to 250,000,000 bushels. Earlier in the season the maximum amount that could be spared was estimated at 200,000,000 bushels.

Although no important change has taken place in the amount of wheat which Europe will require in the coming months, the market abroad has shown less strength in the last few days and the buying of wheat for July, August and September shipment is much less conspicuous than a short time ago.

Fight On in May Wheat

The contest over May wheat at Chicago continues to be one of the principal influences in the cash markets as well as in the future deliveries. The leading "shorts" are making a supreme effort to bring enough wheat to Chicago to satisfy their contracts and a good deal has been bought at Missouri river markets for the purpose. The "longs," who are taking in this wheat, are reshipping it to eastern lake ports. In the last few days the market has been weak, with the "shorts" in the ascendency, although total deliveries in the first third of May were less than 3,000,000 bushels. With large intermarket shipments, the weekly reports upon receipts at primary markets naturally show a material increase because of numerous duplications. Because of large amounts of corn and oats at Chicago storage room has become scarce, so that the rules have been amended to permit delivery of carlots on track on May contracts.

Crop Reports Fairly Good

The condition of the winter wheat crop as given by the government was slightly higher than the unofficial returns. Average condition was 83.5 per cent, which compared with a 10-year average of 87.1 per cent. The crop has improved greatly since December, when condition was 76 per cent. It is believed that since May 1 further improvement has taken place, although some reports have been slightly less favorable in the last few days.

The acreage abandoned was estimated at 14.4 per cent, or 6,446,000 acres, compared with an average of 10.4 per cent. The forecasted yield assuming average conditions until harvest, is 584,793,000 bushels, or about the same as was harvested last year.

Based on a condition report of 91.7 per cent on May 1, the rye crop was estimated at 79,152,000 bushels, which compares with a 10-year average of 57,060,000 bushels. Only in 1918 and 1919 were larger crops harvested.

The lateness of the spring is shown by the fact that on May 1 only 63.5 per cent of the spring plowing had been completed, compared with a 10-year average of 70 per cent, and only 53.6 per cent of spring planting was finished, compared with an average of 57.8 per cent.

Corn Market Shows Strength

Although corn is not disappearing into consumptive channels as rapidly as in midwinter, the rate of export remains far above the average and domestic disappearance is quite satisfactory.

Exporters are still selling corn rather freely, as competition from Argentina corn has not become severe.

Cash Grain Markets

The cash grain prices for May 10 were:

CHICAGO—Wheat: No. 2 red, $1.37 3-4@1.45; No. 3, $1.30@1.41; No. 2 hard, $1.35 1-2@1.44 1-2. Corn: No. 2 mixed, 61 1-4@63 3-4c; No. 3, 60 1-4@63c; No. 4, 59 3-4@62 1-2c; No. 2 yellow, 61 3-4@64 1-4c; No. 3, 60 1-2@63 34c; No. 4, 59 1-2@62 3-4c; No. 2 white, 61 1-2@64 1-2c; No. 3, 60 1-2@63 3-4c. Oats: No. 2 white, 39 3-4@45c; No. 3, 37 3-4@42c; No. 4, 36 1-2@40c. Rye: No. 3, $1.03 1-4@1.06. Barley, 64@72c.

Seed and Feed

Although buying of clover seed has continued later in the spring than usual, it is rapidly fading away and prices have sagged.

Chicago, per 100 lbs.—Clover, $12@22; timothy, $4.50@6.

Country demand for all feeds is light, but prices are holding fairly steady as stocks are not large.

Prices per ton (100-pound bags) in carlots: Chicago—Bran, $25.50; standard middlings, $25.50; flour middlings, $28.50; cottonseed meal, 36 per cent, $50; 43 per cent, $54; hominy feed, $22; gluten feed, $32.65; old process oil meal, $53; tankage, $55.

Hay Holdings Below Average

Stocks of hay on farms on May 1, according to the government's estimate, were 10,792,000 tons, compared with 18,771,000 tons last year and a five-year average of 12,417,000 tons. The average condition of haylands on May 1 was 90.1 per cent, compared with a 10-year average of 89.8 per cent. The hay market has been unusually stable, receipts being light enough to offset the very limited demand. The premium on the better grades remains wider than usual.

Prices per ton in carlots: Chicago—No. 1 timothy, $25@27; No. 2, $23@25; No. 3, $17@20; No. 1 light clover mixed, $24@25; No. 1 clover, $20@21; No. 1 clover mixed, $21@23; Alfalfa, $17@28; upland prairie, $17@19; midland prairie, $14@17; rye straw, $16@17; oat wheat straw, $14@16.

Eggs in Storage Near Record

Cold storage holdings of eggs on May 1, according to the preliminary report, were 4,627,000 cases, compared with the record May 1 total of 4,909,000 cases held a year ago.

Most Profitable Size for Farm

Is Large or Small Acreage Better Suited to Highest Standard of Farm and General Living?

By GORDON KLEMGARD

The following article by Gordon Klemgard, a young Palouse farmer, is based upon a recent address given by him at the wheat convention in Spokane in January. Mr. Klemgard's address received the closest attention as he advanced his arguments in favor of "production per man," as against "production per acre." As a general rule, he contended, the larger farm afforded a better opportunity for the capable American farmer, while he saw in the small intensified farm a dangerous approach to old-world serfdom.

Even those who do not agree with Mr. Klemgard in his conclusion, will find his article extremely readable and his facts based on his personal experience in farming illuminating.

It has been said that a few acres spell economic independence; that it will solve the unemployment problem, and result in vast good.

Please remember that there was no economic growth in these United States until machinery made it possible for one family to feed itself and at least one other. Also that our rapid development has been due to no reason so great as the one pointed out by economists that national development depends largely upon the food supply.

Our progress was hand in hand with the progress made in the invention of modern farm machinery.

When one man can produce food for 100 others, then he releases 99 men to apply themselves to other lines of industry, creating different kinds of wealth, and the economic wealth of a nation makes possible its progress, in science, in art and in literature.

So I conclude that the size of a farm that will result in the most desirable conditions for our country's prosperity will depend directly upon the efficiency of machinery in agriculture, relative to the acres it can handle under one man's direction.

When you compare the modern combine harvester cutting a thousand acres of wheat under the direction and labor of five men, as against these five workers with the old cradle, and one man plowing in one season a section of land by himself with a big tractor, as against the man and his team, I think you will get the idea I wish to convey.

I cite the above in contention of the idea that efficiency in food production per man should be the national aim or that the national aim will, if adopted, be the best thing for the producer, or the farmer.

If I can prove to you that a condition that will result in a wealthier nation will also result in a more prosperous farming people, then you will agree with me that in so far as wealth is concerned, we are now moving in the right direction. If, however, you wish to have a peasant farmer class, nonprosperous, but perhaps contented and unambitious, then let us have the inefficient small farm.

If the day comes when the size of a farm business is limited by law or tradition, so that no man could hope to expand to any considerable extent, then the farm as a profession will no longer appeal to the man of ambition and ability to do big things in a big way. Such men, though their choice be the farm business, will by necessity turn to the other industries to find an outlet for their visions. Should that time come, the farm will have no appeal to me for I regard it as I would any other industry—an opportunity to follow a chosen profession with a view to profits.

It is said that a farmer makes his home on the farm and saves the most of his living cost by his activities, while he carries on the regular business of farming. Let me say that he does not often save this cost of living, but he does it before breakfast and after supper and does his regular 10 or 12 hours' work besides. Any city man can find a side-line if he has ability, that will profit him enough to offset a large part of his living cost. I mean that the farmer earns his living, even if he earns it as a side line and that if he did not, the average farmer's books would show a red balance at the end of the year. I again refer you to the charts showing the average income of the American on the average farm is only about $500.

My aim has been thus far to show that the small farm does not create the most desirable condition on the farm; that the larger farms, more efficient in every way result in a betterment, national and agricultural, and further that it is my personal view that the farm should not be regarded as any thing other than a business.

The farmers of all times have frequently been called upon to do something really splendid in behalf of national patriotism and sometimes they have been forced to comply by legislation, resulting in financial loss to them, but they usually make no great objection. The financial burdens of the nation rest to a large extent upon agriculture. Agriculture with a small representation in politics goes peacefully on Perhaps "the fool taxpayer" and the "fool farmer" are one and the same man. But he is beginning to waken and when he feels his full power, I, for one, hope that he will retain his present sense of humor, and not abuse this power.

I want the word to go out that the farmer has a right to regard his business as an asset; that he has a right to expect it to pay the cost of production and a profit proportionate to the size of the risk and the venture and the quality of the management applied.

The farmer will go a long way in this direction by fitting himself with a system of cost accounts, specialized for this particular job—not fussy and too complicated to be useful—but clear and distinct, showing the phases of his business and keeping trace of them as they evolve. In this way the profitless ventures will come to light and be eliminated and the profitable ones will be emphasized. Also at the end of the year one will have a clear-cut view of his activities for the year. It is a useful basis for the next year's estimates of cost and the desirability for expansion.

I am asked what I consider the correct size for a farm.

The correct size for a farm is directly relative to the size of the farmer.

There are one-man farms and those requiring many hired men. Our available farm statistics show that our farms are increasing in size, and the farmers who are really making more than wages have at least a half section of land. There are very few instances were big incomes are made on small areas under specialized conditions that will usually not apply to any considerable number of farms. I should say that a wheat farmer should have all the land he can use with any standard set of farm implements that are regarded as efficient sizes.

An eight-foot grain binder with a two weeks' cutting season should have 120 to 160 acres to cut, as it can do that much work easily. A plow unit, such as a two or three bottom gang plow, operated by one man will summer fallow an equal amount of ground for next year's crop.

If a man is of larger caliber, he can double these units indefinitely, up to the point of his managing ability, and the point where inefficiency would offset the added income. This would depend upon the man and his special problem.

You may say that the big farm means hired help rather than independent small farmers.

My answer is that many men prefer to work for others and they are often failures for themselves.

Only specialized men are making money in any industry. Why not specialized farmers for efficiency in food production? Do you advocate having your shoes made by your local shoe man rather than under factory methods? Do you think the shoemaker would make a profit or annual income greater than his wage in a factory? Do you think the price of the shoes would be larger or smaller?

Factory methods are applicable to the farm, as they are similar in many respects, and certainly farming calls for specialized knowledge if it is to show a profit.

My conclusions are that the size of farms should be flexible, with a high average size, say, 300 or 400 acres; that accounting can be adapted to your particular needs that will result in a better survey of your business at all times and result in greater profits, and that sentiment should be disregarded when used as propaganda to compel farmers to produce at less than wages.

By cost accounting I have arrived at the following figures for the production of grain for the owner and tenant, respectively. These figures are based on an average crop for rent. The upkeep of building, fences and insurance should be cut to 50 cents for farms larger than one section of land. No allowance is made for soil depletion.

The accompanying pictures show the large scale method I employ in wheat farming, also the quality of the product I grow. The grain pictures show 5 1-2 to 6 foot straw. The average yield of this 250-acre field was more than 40 bushels last year. Note the stubble in harvester picture, compared to the height of the man. In harvesting this field, grain poured from the sack spouts on the machine more than one sack every 20 seconds. The tractor plows a swath 12 feet wide and 9 inches deep.

Good tilling makes crops, such as are shown in these pictures.

Tractors can be used to advantage and profit even in our hilly Palouse country, but not every man is adapted to own or run one. The matter should be gone into carefully. There is a large saving in manpower and production per man on my 1500-acre tract, which I hold under lease. My average help per year is only two men, varying from one to seven men, according to the season. The average size team driven by one man on this place is seven or eight horses.

Generally speaking, I never do a day's work that does not go into production, directly, or indirectly. Extensive undertakings toward permanent improvement are a great risk unless one has a long-time lease. It is better from a return standpoint to omit the extensive improvements, only attempting to keep up the leasehold above the point where taken. However, good farming makes a real improvement for landlord and tenant and is the type of improvement to undertake.

Here is a table giving the cost of production summary for owner and tenant in grain farming in the Palouse country.

	Owner	Tenant
Land charge, 6% val. $75, 2 years	$ 9.00	.....
Rent, 10 bu. 80c	....	$ 8.00
Taxes	3.00	.....
Plowing	2.00	2.00
Cultivation	2.00	2.00
Seeding	.75	.75
Seed	1.25	1.25
Harvesting	5.00	5.00
Grain bags, twine	1.20	1.20
Hauling	1.00	1.00
Depreciation and overhead	1.50	1.50
Upkeep, buildings, fences, insurance	1.00	1.00
	$27.70	$23.00

Grain production on the Cloverdale farm.

Sulphur in Potato Seed Treatment

By F. D. HEALD, Plant Pathologist, Washington State College.

If I cut my seed potatoes and sprinkle sulphur over them will it be of any advantage to them as a fertilizer? Will the sulphur kill the scab? Will you please explain what has to be gone through to get potatoes certified? M. G. R.
Bossburg, Wash.

Sprinkling the seed potatoes with sulphur is an unsatisfactory method of applying the sulphur. There is some danger of causing seed injury and the value of the sulphur as a fertilizer if it should have any effect would be less than by the more generally accepted method of using this chemical.

Sulphur either used for its fertilizing value or for the prevention of scab can best be applied to the soil with a drill previous to planting. It may be used at the rate of 400 to 600 pounds per acre. Two forms of sulphur are available for soil disinfection: The common uninoculated sulphur and what is known as inoculated sulphur. The latter is more effective than the uninoculated, especially under certain soil conditions, and should be used if it can be obtained on the local market. Sulphur is recommended for potato scab only when the soil is so heavily contaminated with the scab bacteria that it is impossible to produce a satisfactory crop. The scab carried by the tubers can be prevented much better by treating the seed with the standard corrosive sublimate solution, following the directions given in the typed outline which I am including herewith.

You can obtain full information concerning the recommendations and regulations for the production of certified potatoes by applying to the seed inspector, J. W. Currey, department of agriculture, Olympia, Wash.

Uniform Exhibits for County Fairs

"Much of the constructive influence of the county fairs throughout the country is lost because of the difference of ideas among the people who are selecting exhibits," said Mrs. Winnie Braden, fair exhibit specialist of the state college, who is meeting with the fair committees in many of the counties in Washington during the spring and summer months. "The judges also have differences of opinions and it would be almost impossible to find two of them who would place the prize on the same exhibit if there was any noticeable competition."

In order to remedy this condition Mrs. Braden recommends that each fair accept a uniform standard for each class and variety of exhibits. The state college has issued a score card in the form of a bulletin, which can be had upon application to the extension department. This lays especial emphasis on the commercial varieties of all fruits and vegetables and advises exhibits to be made with such varieties rather than with new ones which are not so commonly used on the markets.

"All details, such as size, uniformity, color, etc., are explained," said Mrs. Braden, "and their comparative value indicated in order that the farmers will be able to know upon what basis their products will be judged. This is important, since it gives him a better knowledge of what to plant and how to plant in order that he might stand a better chance in competing for the awards. It is just as important that the exhibitor know upon what basis the classes are being judged as for the judge himself. By making a study of the new score card it is an easy matter to know how your community fair is going to be judged, and the reasons for all placings.

Placing of Awards.

"In the live stock division the reasons are given for the placings of the awards in order that the small exhibitor may know what to expect when he exhibits his animals, as well as does the larger breeder who attends the fair regularly. Instructions are given as to the filling in of entry blanks and the classification of different aged animals. In the poultry department the coop and leg band numbers are included in order to avoid complications.

"Sample sheets are sent out as suggestions for each fair community to work on, and mimeographed copies can be made of these sheets in order that those of different fairs can be made uniform. Such blanks can be easily used in communities where there is no fair organization."

Making Sheaves.

Mrs. Braden explained the process of making sheaves with grasses and grains. For grasses the stalks should be pulled at the pollen stage and kept in the barn over night to cure. By laying out a few stalks at a time on a table and arranging it in a small fan shape a flat sheave can be made, which will lay close to the wall after being bound at three different places. The sheaves should measure four inches at the center tie. This is much better than the customary round sheaves, since all of the heads are shown from the front side. By curing such sheaves in a dark room the natural color can be held.

For vegetable displays small trays are very convenient and make a uniform container. These should measure 18x11 1-2x2 inches and should hold approximately 20 pounds when filled level full. Such trays may be used for grains if desired.

Arranging Exhibits.

"In arranging an exhibit," continued Miss Braden, "it is preferable to use one eight-foot table in the center of the room rather than two four-foot tables with an isle between. This gives a better opportunity for everything to be seen by the visitors and it has a tendency of putting all exhibits of one kind together. Exhibits shown in collective displays should not be allowed to enter the single exhibits. This ruling will avoid any complication if carried out. In any exhibit an artistic arrangement should be worked for, since this will add an education value to the general effect. Color schemes should be studied, especially in commercial exhibits, in order to give more pleasing effects, which, of course, should give the people a much better impression."

Corner in Grain

For two months or more there have been intimations of a corner or attempted corner of May wheat at Chicago. Prices have fluctuated more or less with the shift in belief as to which of the two sides in the struggle would be victorious.

Corners are made possible by the practice of selling "short" or selling for future delivery grain which the seller does not have in his possession. He must either buy the actual grain before delivery date or else "buy back his contract" in the grain pit, taking a profit or a loss on the transaction. Using a market to hedge large quantities of grain at points too distant to permit actual delivery also creates favorable conditions for a corner. With such contracts being made a speculator or group of speculators can contract to buy more grain for future delivery than it is physically possible to deliver and then decline to sell back those contracts except at a handsome profit.

Corners cause extremely wide and rapid fluctuations in price. For example, the failure of a corner in wheat caused a break on May 18, 1867, from $2.85 to $2.16. In June, 1887, a corner by Cincinnati interests caused wheat prices to advance from about 81 cents up to 95 cents, but the corner collapsed and a decline to 68 cents followed. In September, 1888, in what is known as the Hutchinson corner, wheat advanced from 89 3-4 cents to $2 and closed at that figure. In 1898 an unsuccessful corner, engineered by Joseph Leiter, occurred and prices declined to $1.25 after being as high as $1.85. In September, 1909, prices advanced 14 cents on the last day of the month.

In May, 1921, a so-called "natural corner" occurred. Wheat prices had been on down grade all winter and spring till the middle of April. The May delivery remained consistently below the price of cash wheat. Europe wanted a lot of wheat and exporters made extensive contracts to ship large quantities during the first half of June. They bought the May wheat because it was cheaper than spot grain and held the contracts for delivery in order to fill their export contracts. Wheat became scarce and but little could be delivered to the exporters. This situation caused a sharp advance in prices in the closing days of May. Apparently there was no malicious intention to corner the market.

Corners have become less numerous in recent years, partly because of a growing belief that the practice is unethical and still more because of the development of special rules by the grain exchanges which make it very difficult to carry out a successful corner. Since members of these exchanges are the most extensive "short sellers," they are apt to be among those "cornered" and naturally make rules for their own protection.

They may make deliveries on track or afloat "regular" whereas the original contracts provide for delivery in regular terminal elevators. If measures to make delivery possible fail they may establish a settlement price which permits those who default on their contracts to get off easy.

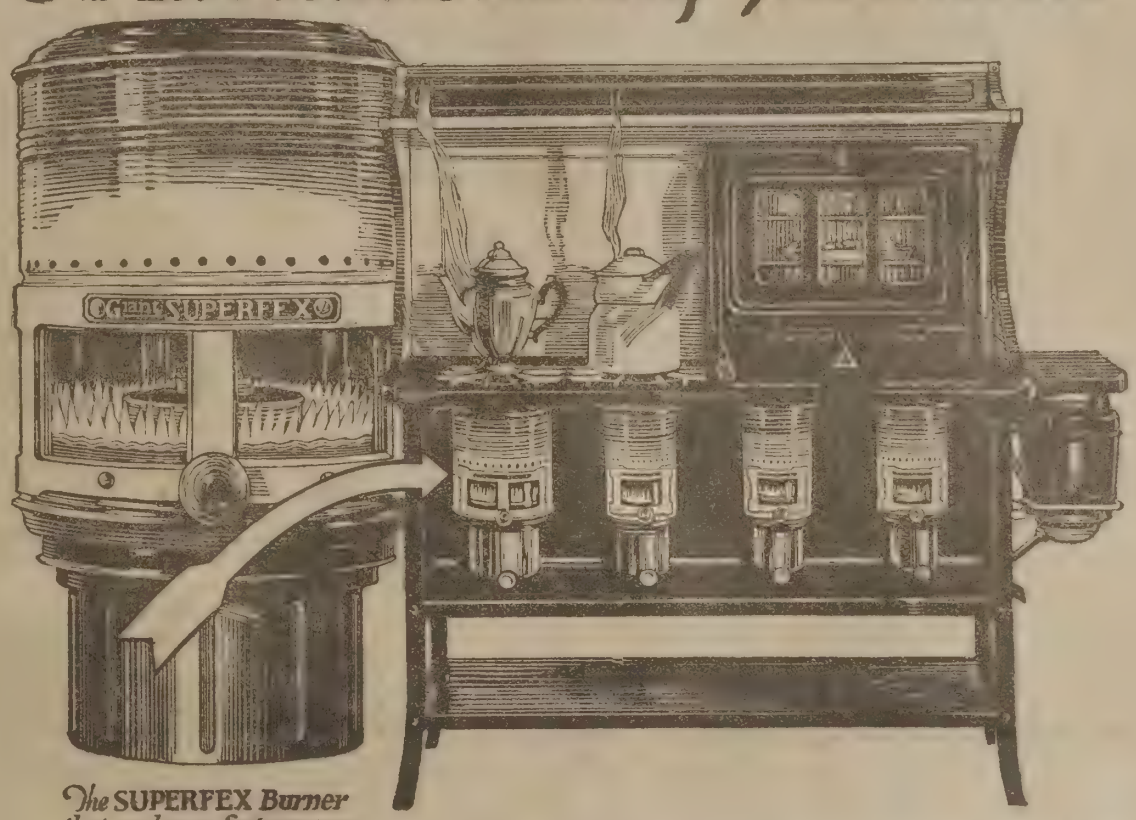
Unfortunately no corresponding rules are ever made to protect the owner of grain against the price-depressing influence of the practice of over-selling.

Although a corner is an attempt to advance prices artificially, farmers obtain but little benefit from it as a rule. Fluctuations are so rapid that country grain dealers are afraid to purchase on the basis of the advance. If the corner collapses prices may then go lower than they would otherwise have gone. As a rule, also, there has been but little grain in farmers' hands when these corners occurred.

Listening In on the World

"Listening in" on a country telephone may have its thrills, but members of boys' and girls' clubs who "listen in" on the conversation of the world with their radio receiving sets have an interest which comes not from neighborhood gossip, but from getting the morning report of the markets, the weather forecast, and crop estimates for all parts of the country.

In a number of states club members within receiving distance of broadcasting stations located at the state college of agriculture or elsewhere are receiving information that takes some of the risks out of the business of farming. They post this information in conspicuous places so that neighbors may make use of it. The work demonstrates the usefulness of the radio as a piece of farm equipment.



The department of agriculture is making special arrangements to assist boys and girls in securing small, simple receiving sets, with which to "listen in" on the nearby parts of the world.

DO NOT BE HAPHAZARD.

Be scientific in whatever you do.

It's here at Last!

A Revolutionizing Invention

The SUPERFEX *Burner that cooks as fast as gas and is absolutely reliable*

What you get in this new stove—See it NOW at your dealer's.

1. Cooking speed of the giant gas burner—in the Giant SUPERFEX Burner.
   Cooking speed of the standard gas burner—in the standard size SUPERFEX burner.
2. Abundant heat that is absolutely clean and odorless.
3. Greater economy and reliability of cooking with all grades of kerosene oil.
4. Operating convenience, cleanliness and new time saving features.
5. Handsome, sturdy, long-lived stove with higher and bigger Aladdin Quality Porcelain Enameled Cooking Top, and new base shelf for utensils.
6. One Giant and 3 Standard SUPERFEX burners.
7. A new (more beautiful) Gray Enamel finish on all chimneys.

THE world's largest makers of oil stoves and ranges have crowned their achievements with the production of an oil stove that cooks as fast as gas and is absolutely reliable.

Its speed and success are all in the New SUPERFEX Burner, a new and revolutionizing invention, which adds quickness and absolute heat control to the remarkable cleanliness and sturdy virtues of the world-famous New Perfection Oil Cook Stove—now used by more than 4,000,000 housewives.

To accommodate the SUPERFEX Burners and the Giant SUPERFEX, we have constructed a stove that for beauty, strength, smartness, convenience, completeness and all-around satisfaction, sets a new standard. Now on exhibition for the first time—America over. Visit your dealer.

This new "300 line" of New Perfection Stoves with SUPERFEX Burners, is additional to the long-established "Blue Chimney" New Perfection Stove, famous and favored the world over and still the most popular oil stove made at its price.

THE CLEVELAND METAL PRODUCTS COMPANY

Also Makers of ALADDIN Utensils and PERFECTION Oil Heaters

7775 PLATT AVENUE CLEVELAND, OHIO

Canadian inquiries regarding these new ranges should be addressed to The Perfection Stove Company, Limited, Sarnia, Ontario, *manufacturers in Canada of the famous Blue Chimney New Perfection Oil Cook Stoves.*

The Thirty-Ten School Taxation Measure

By STEPHEN B. L. PENROSE
President of Whitman College

The article herewith is one of a series being published in The Washington Farmer discussing the so-called 30-10 bill. These articles are intended to present all important phases of both sides of this vital question. The first article was by Professor Ralph Swetman of the Ellensburg normal school, and supported the bill. The following article by President Penrose opposes the measure. President Penrose has been an educator in Washington for more than a quarter of a century, having served for 27 years as president of Whitman college, Walla Walla. He is also a member of the state commission for the revision of taxation, and as such has been for several months making a study of taxation problems.

The 30-10 bill provides that there shall be levied a state tax to provide $30 for every school child and that the county shall levy a tax to raise $10 per child. The present state and county levies raise $20 and $10, respectively, per child.—Editor.

I have just been challenged by the Washington State Parent-Teachers' association to debate the 30-10 bill, technically known as the "school equalization initiative measure." I promptly and gladly accepted the challenge, replying that the bill was misnamed "equalization measure." I hope that the people who read this article will not allow themselves to be deceived by the plausible title. Ever since the adoption of the barefoot schoolboy law by the legislature of 1895 as introduced by John R. Rogers, then a member of the legislature, but later governor, the public expenditure for education has been equalized throughout the state. What "equalization" means is that the money which is raised for school purposes in the state shall be distributed equally throughout the state, so that every child receives an equal part of the total income, or, more strictly speaking, that every district receives an allotment from the state proportioned upon the number of scholars in the district. To introduce an initiative bill like the 30-10 under a deceitful title, which suggests that it is proposing a new and fair principle of educational distribution, may be smart politics, but is bad citizenship. Initiative measures should be made perfectly clear to the voters and should be disassociated from any suggestion of trickiness or deception.

As a member of the state commission for the revision of taxation, appointed by Governor Hart, it has been my duty during the last winter to attend hearings in all parts of the state at which citizens of every kind expressed their views upon the subject of taxation. The impression made upon my mind was simple and deep. Everywhere people were protesting against the heavy burden of taxation. Oftentimes they had no wise remedies to suggest, but always they exclaimed against the amount of taxes which are laid upon the people. The very fact that the legislature instructed the governor to appoint a commission to investigate the subject indicates the wide-spread feeling throughout the state, as indeed throughout the United States, that the cost of civilized life at the present time is oppressive and that the burden must be lifted or the poor man will be crushed in financial ruin. Yet at this very time, when all the people are crying against the present burden of taxation, the advocates of the so-called 30-10 plan coolly come forward and propose to add $3,750,000 a year to the present taxes. It would need to be an extraordinary emergency which could justify such an addition at the present time. If our schools were about to close and teachers were leaving the profession, starved and ragged, it might be justifiable to increase the state appropriation for public schools. Such a condition does not prevail; no emergency exists. The demand for an increase of state appropriation from $20 per child to $30 per child is not warranted by any crisis.

The advocates of the measure say that it will not increase taxes, or, rather, they ingeniously suggest that although state taxes may be increased $10 per child, district taxes will be decreased to a like extent. The experience of the state of Washington does not bear out this plausible argument. In 1895 the barefoot school law levied a state tax of $6 per school child. This was increased four years later to $8 and a second increase to $10 per school child was made in 1901. The average cost per pupil in the state, based on daily attendance, was in 1920 $79.75; in 1921, when the state had again increased its levy by $10 per child, the average cost per pupil was not $89.75, but $97.85. That is to say, the appropriation from local districts had increased almost as much as the state appropriation had increased. Instead of the district raising less money for their pupils when they received $10 more per pupil from the state, they increased their local levy to almost an equal amount. If, therefore, as the state department of education estimates, the proposed 30-10 bill will add $3,750,000 each year to the state's burden of taxation, it is not a wild guess to infer that an additional $3,000,000 at least will be levied by the local districts themselves. To add $6,750,000 to the tax burden of the state at a time when every effort ought to be directed to reducing taxation seems to me irrational and monstrous.

The so-called equalization initiative measure, popularly known as the 30-10 plan, not only adds an increased burden of $10 per school child to state taxation, but it introduces a new principle of distribution. Heretofore state taxation has been distributed equally and equitably on the basis of school attendance. Under the proposed measure the distribution will consider the number of teachers employed in the district as well as the number of scholars. I think that it might fairly be called "a measure to improve the condition of teachers" rather than to equalize the levy for students. The interest of the parent-teachers' association, made up largely of teachers, and the urging of this measure by elected and paid representatives of the state teachers' association, make the thoughtful citizen wonder whether the teachers may not have an "ax to grind," and whether their zeal for this bill is based so much upon the needs of country districts as on the hope that out of the more abundant funds which will be raised teachers' salaries may be advanced.

The advocates of the bill say that it will help the poor country districts. They say that if $10 more per child is given to the remote country district educational opportunities there will be greatly improved. It might be well to look at the facts: A school district which has 14 pupils and one teacher would get $140 a year more under the proposed measure. A school district of six children would get $60 a year more. In what respect will educational opportunities in such districts be improved? The teachers may perhaps absorb the increase in their salaries, but the school will remain the same poor country school. The teachers will not be better teachers, the schoolhouse will not be new, and educational opportunities will remain the same. What is needed in such cases is not the spending of a few more dollars on the isolated country school so much as the adoption of a wise plan of consolidation by which poorly attended and outlying schools may be brought together in some community center where better educational opportunities can be given to all the pupils. The proposed measure makes consolidation more difficult and unlikely. The increase in the state levy is based upon the number of teachers in the district as well as the number of scholars, and it will be to the interest of the teachers, and probably to some short-sighted members of the district it will seem advantageous to keep as many teachers employed as possible. The consolidation of school districts lessens the number of teachers and, therefore, under the proposed initiative measure the district would receive less state aid. But true economy in education will be found to come from the merging of small, weak districts in one strong district, and true equalization of state expenditure should be based upon the number of pupils in the newly organized joint districts rather than on the number of teachers employed. The problem of the country district can usually best be solved by consolidation, where one good building will take the place of half a dozen and three good teachers take the place of six or seven. In cases where consolidation is for geographical reasons not practicable the state superintendent or the state board of education should be allowed to make special grants to such schools on the basis of their need.

The 30-10 plan is a somewhat complicated measure, involving technical questions of tax rates and tax distribution. I am strongly opposed to submitting such measures to the people for their vote. I think that the initiative may be employed properly on questions involving great principles, moral issues and the likes, but it should never be employed for the settlement of technical questions which involve in any degree the judgment of experts. Initiative measures should be simple, definite, clear cut and readily understood by the voter. The so-called 30-10 plan, "school equalization initiative measure," meets none of these requirements in an initiative measure. It is not simple; it is not ingenuous; it is not readily intelligible.

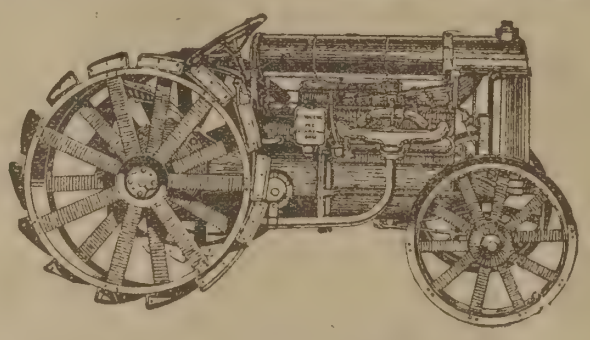
A wise course for the voter to follow in the case of measures which he is not sure of is this: When in doubt, vote no. I urge the application of this principle in respect to the 30-10 bill. Those who understand it will certainly vote no; those who are in doubt about it ought to play safe and vote no.

Jersey Men Organize

T. S. Griffith of Glen Tana farm was elected president of the newly-formed Spokane County Jersey club at its organization meeting last week. William Auld of Waikiki farm was elected secretary-treasurer, with E. F. Fraser, T. B. Campbell and W. H. Haman completing the board of directors with the president and secretary. The activities of the club will be for the upbuilding of the dairy industry in Spokane county, with special reference to the development of Jersey herds.

COWSLIP'S COQUETTE.

To the Editor of The Washington Farmer: In your recent article on our gold medal cow, Brown Lad's Cowslip, you gave us credit for owning Cowslip's Coquette, which credit should go to P. A. Dunford of Cle Elum, Wash., as he gave this cow her record and still owns her. We have just purchased Brown Lad's Roiter, a Stake Pogis bull, to use with Majesty's Cowslip's Oxford, our island bred bull. GRANT NICHOLS.



Ellensburg, Wash.

LET GEORGE DO IT.

The way not to reduce taxes is to cut out the other fellow's appropriation and stand pat against any reduction in the levies that raise money for our own roads, schools and so on.

Fordson

Tractors Reduced $230

New Price-$395, F.O.B. Detroit

Now's the time to arrange for that FREE DEMONSTRATION of the Fordson. The new price enables every farmer to own one of these power machines, so he can do more work in less time, and have more time to enjoy life.

What Fordson Does

PLOWS—HARROWS—THRESHES
GRINDS FEED—FILLS THE SILO
PULLS STUMPS
GRADES ROADS—SNAKES LOGS
DOES DRAW BAR & BELT WORK OF ALL KINDS.
RUNS PORTABLE MILLS—CUTS TIES—PUMPS WATER
And does many other things requiring POWER in abundance—and at LOW COST.

Clip, Sign and Mail This.

Washington First in "Cukes" and Melons

In yield of cucumbers and cantaloupes Washington ranked first of all states listed in 1920 statistics of the United States government weather, crops and market report.

Dr. S. B. Nelson, director of agricultural extension at Washington state college, has compiled comparative figures from the report for 1920-1921, which show some extremely interesting things as to the standing of the state as compared with the rest of the country in the matter of acreage grown, yield per acre, and tons or cars of production of sven different crops; cucumbers, tomatoes, cabbage, onions, lettuce, cantaloupes, and strawberries.

In cucumbers, for example, out of the 16 states listed as producing in quantities, Washington was 15th in 1920, and end of the list in 1921, but in yield per acre stood first in 1920 and eighth in 1921; eighth in number of tons produced in 1920, 15th next year.

Out of 38 states raising tomatoes, this state was 29th in acreage in 1920, 28th in 1921; stood third in point of yield per acre both years; was 27th in tons of production in 1920, and 23d in 1921.

Twenty-five states were listed for cabbage production, Washington being 20th in 1920, and 21st in 1921; sixth in point of yield both years; 20th in number of cars in 1920, and 17th in 1921.

Out of two dozen states raising onions, Washington was 17th in the number of acres raised both years; 12th in yield per acre the first year and fifth the second; 16th in the number of acres in 1920 and 14th in 1921.

As to lettuce, the state was eighth out of 13 in acreage in 1920, and ninth in 1921; 11th in yield the first year and fourth the second; 10th in number of cars in 1920, ninth in 1921.

The cantaloupe record shows that out of 23 states Washington was 16th in acreage the first year, 21st the second; but at the top of the list in yield the first year, dropping to sixth the second; 14th in matter of cars in 1920, 18th in 1921.

Out of 27 states listed for strawberry culture we were 15th in acreage both years and in number of cars the first year, coming up to eighth the second year. In point of yield per acre we were fifth in 1920, and rose to second place last year.

Summarizing the result, Dr. Nelson said: "Our yield is evidently all right, the question seeming to be one of acreage. Whether it is that we haven't the acreage or the farmers and market gardeners haven't awakened to the possibilities of these crops might be questioned. I am inclined to believe that it is because the farmers do not yet realize what they might do along these lines."

WASHINGTON'S RANK IN THE PRODUCTION OF SEVEN CROPS.

Club Work Grips

Kitsap county club members, 100 strong, met at the Bremerton building at the Burley fairgrounds on April 15 and demonstrated their enthusiasm for the coming year's work. Those who could not find transportation to the meeting by auto, wagons or on horseback, made the trip on foot.

The speakers were F. L. Audrain, state club leader; Leonard Hegnauer, soils specialist of the state college, and Celia Towne of Fernwood, who is referred to as the godmother of club work in Kitsap county. Miss Towne awarded the achievement pins for the work finished last year.

The young folks listened with much interest to the talks given and it was easy to see that each one determined to make a better showing for the next year's work.

The boys' and girls' clubs in this county have made rapid strides, since they have received much encouragement from the fair associations, granges, banks and commercial clubs as well as other business interests, who took it upon themselves to give the youngsters every encouragement to finish their year's work. The chamber of commerce at Bremerton entertained all the members at an all-day contest and a banquet, which it plans to repeat this year.

"So thoroughly has the spirit of club work gripped the people in many of the communities," writes G. N. Worden, the county agent, that every boy or girl of club age has enrolled. Two hundred and sixty-three boys and girls had signed up by April 17 and cover a total of 357 projects. They are as follows: Eleven garden clubs, with 146 members, three canning clubs with 118 members, five sewing clubs with 36 members, three poultry clubs with 22 members, while there are 15 members who are carrying miscellaneous work."

One Ton Silo

By PROF. L. J. SMITH, W. S. C.

Can I make silage out of lawn clippings such as blue grass and white clover? How should it be prepared? Please t ell me how to build a silo that will hold about one ton. W. J. T.

Elk, Wash.

A one-ton silo is a pretty small one to illustrate. Allowing 30 pounds per cubic foot capacity, a silo four feet in diameter would not have to be quite six feet high to hold a ton. One three and a half feet in diameter and seven feet high would hold a ton at 30 pounds per cubic foot, which I think would be a conservative figure for that depth of silage.

At the Manitoba Agricultural college we made some for experimental feeding of about this size of galvanized iron and a tight galvanized iron cover over the top. They worked very well.

The Yakima Beet Crop

Sugar beets in the Yakima valley last year averaged 8.8 tons per acre, according to J. W. Timpson. A total of 30,000 tons was produced on 3400 acres of land, and from this crop the farmers received approximately $180,000. The price received was $6 per ton.

LILLY'S

TOBACCO Soap Spray

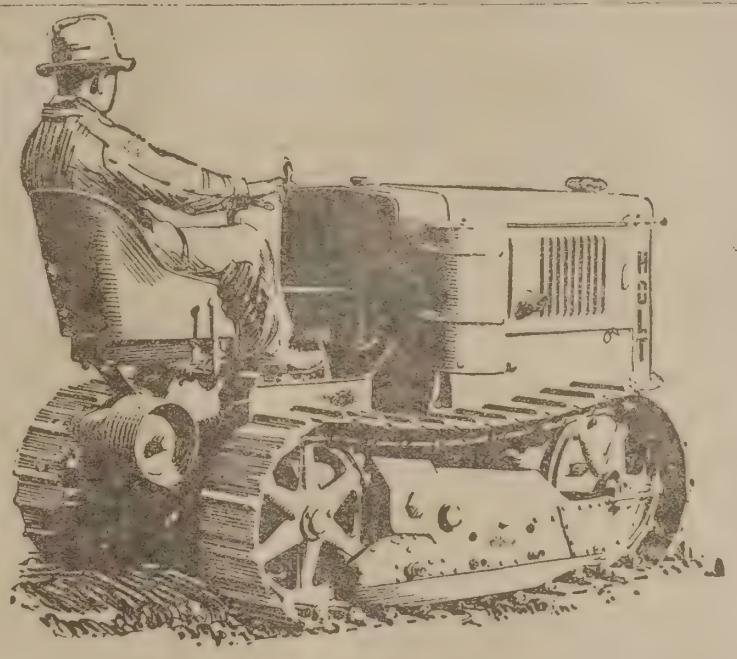
One 30c Bottle Makes 3 Gallons

Kill Plant Lice NOW

Indications point to unusual activity on the part of the aphis this season. NOW is the time to protect your garden.

It is well recognized that nicotine sulphate combined with a soap emulsion is the most successful insecticide for aphis.

In Lilly's Tobacco Soap Spray you have this combination ready prepared, powerful, convenient, ready to use. Simply add water.



Sold in small or large quantities. A 30c bottle makes 3 gallons. Get some today.

There's only one Caterpillar Holt builds it

CATERPILLAR
Reg U S Pat Off

T35 Tractor —the supreme small tractor

built for~& backed by Service

Amazing power, economy in fuel and oil consumption, versatility that makes it fitted for an exceedingly wide range of work—these qualities of the "Caterpillar" T35 Tractor are, after all, secondary in importance to the dependable service it gives. T35 is built to endure—of highest grade, heat-treated steels; anti-friction bearings used throughout; complete enclosure from dust and dirt. Its simple, rugged construction and uninterrupted performance insure minimum upkeep costs and maximum accomplishment.

"Caterpillar" T35 Tractor is built for service—and backed by service, too. A complete and well-organized Service Department co-operates to insure the success and satisfaction of every purchaser of Holt products.

Interesting literature, fully descriptive of the T35 Tractor, is yours for the asking. It will profit you to send for it, or for information regarding the larger "Caterpillar" models—the 5-Ton, Western 10-Ton or the big-power 75.

LIVESTOCK AND DAIRY

Sour Milk Starter

By FRANK W. LOGAN,
Instructor, Department of Dairy Husbandry, W. S. C.

I would like to know how to make the starter to make skimmed milk sour.
R. D. P.

The first essential is to secure a good culture of lactic acid germs. This can be obtained by the natural souring of good, clean milk or a commercial culture can be purchased from a dairy supply house.

To prepare a natural starter, proceed as follows: Select whole milk that is clean, fresh, free from off odors or flavors and fill several pint jars that have been previously scalded; cover with lids also scalded, and set away at a temperature of 95-100 F. until the milk has clabbered, probably 12 to 15 hours. Inspect the curds, discarding those that appear gassy and whey off, and select those that are firm and of good flavor and odor. Satisfactory curds are then transformed to a quantity of pasteurized milk. This milk should also be selected for its cleanliness and may be either skimmed or whole and should be pasteurized at 180 degrees for one-half hour and then cooled to 72 degrees F. At this temperature the sour milk is added and then set away over night at 72 degrees F. When the starter has "come on," or clabbered, it is cooled down to below 50 degrees to prevent it becoming overripe. It is now ready for use.

The starter should be made up in sufficient quantities to sour the desired amount of skimmed milk. The amount of starter to use depends upon the setting temperature of the milk. With the skimmed milk at 72 degrees F., 2-4 per cent of starter is sufficient on a good curd over night. It would be well to transfer starter to fresh pasteurized milk daily if possible, but twice a week will keep it in good condition if it is held at a temperature below 50 degrees F. to prevent the development of too high acidity.

A good starter has a mildly acid flavor, pleasant to the taste, free from bitterness and peculiar flavors and odors, and on agitation should become creamy in consistency and free from lumps.

The "commercial" starter consists of a preparation of lactic acid organisms and can be obtained from any dairy supply house. Directions for use accompany the culture, but the same methods and precautions as mentioned above apply to its use. If the "commercial" culture is prepared in a dry media, several propagations are necessary before a desirable flavor and acidity are developed.

Seeks Medium Hog

What we are trying to turn out is a medium hog that finishes at 7 months around 190 or 200 pounds. I don't like the big ones. You can't get the finish on them. Yes, it certainly looks good for feeders now, but it has been pretty dark."

The speaker was R. D Lewis of Yakima, who is Philo Huxtable's active partner in the development of a 230-acre hog ranch within sight of the county seat. He was surveying a group of Duroc pigs, part of 300 head on the ranch in February, and was discussing production methods and market demands as noted in his seven years' experience feeding for pork. "There isn't anything quite like milk and grain to produce growth, in my estimation, and those 230 pigs are consuming 200 gallons of it per day, besides corn from self-feeders, and hay. Milk is about the best thing there is for sows in pig, too. We use lots of it on them when litters are arriving, and we have never lost but one. Exercise is another thing they must have. Yes, we hogged off about 40 acres last fall," he nodded, indicating the scarred remains of a near-by cornfield.

Lewis has been in the Yakima country 16 years. He formerly lived on the Tieton, and became interested in feeding experiments with Roy P. Bean, then project agriculturist and now superintendent of the Prosser branch experiment station.

One expensive lesson that he learned last year may be valuable to others. He built a house 24x150 feet in size, with capacity for 46 sows and at a cost of $3500, and found out the first season that it would not do. Farrowing starts in March, and at that early date the sun could get only on one side.

This spring he had eight acres seeded and proposed to use a number of portable A-type houses, costing $5 each, with portable fencing, for the sun-loving families.

Practically every pound of pork so far raised on the place has been disposed of locally.

Purebred Females

The campaign which is being pushed by the bureau of animal industry of the United States department of agriculture for purebred sires has resulted in a striking development of an increasing tendency to acquire purebred female stock as well. This campaign for purebred sires is growing. In the period from January 1 to March 31 of this year, 970 persons filed with the department signed enrollment blanks, indorsed by county agents, saying they used purebred sires exclusively for all classes of live stock kept. This number is an increase of 254 over the previous three months, and nearly three times as many as for the same period of 1921. As the campaign progresses, a gradual rise in the proportion of purebred female animals is reported. This includes cattle, horses, swine, sheep, goats and poultry. The proportion of purebreds to the total of female animals kept now exceeds 35 per cent.

The most active counties in the purebred sire campaign during the first three months of this year were Hancock and Greene counties in Ohio; Kittitas county in Washington; Oldham county in Kentucky; Boyd county in Nebraska, and another Ohio county.

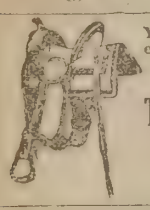
Cooperative Wool Growers

The Pacific Cooperative Wool Growers was the first in the United States to adopt the orderly marketing system on the basis of average prices for graded pools of similar grades, quality and shrinkages. This plan has now been adopted by the Ohio association, one of the oldest in the United States, and will be put into effect this year.

The Pacific organization is now the largest wool marketing organization west of Chicago. During April it received contracts from new members covering over 100,000 pounds of wool. The organization handled about 2,000,000 pounds from its old membership last year, and is preparing to handle double that amount this year.

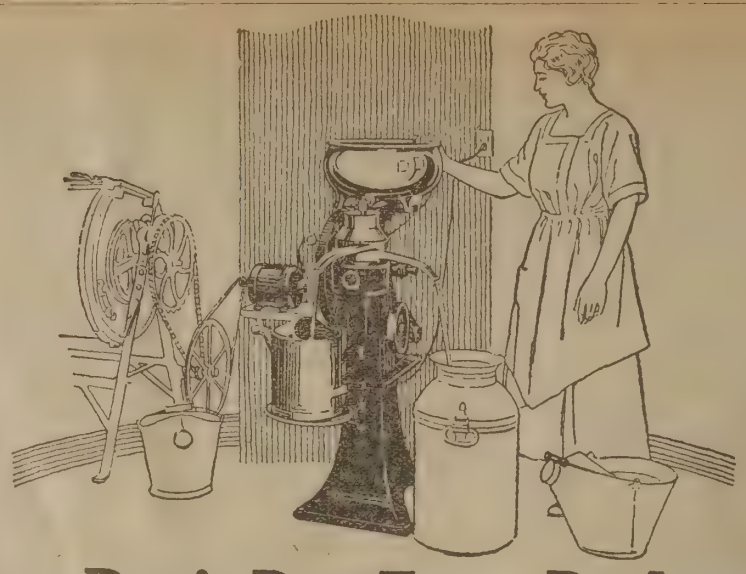
The association's membership is now close to 2000 and the results of its 1921 wool sales averaged slightly higher than the average price received outside the association by nonmembers. Its handling costs were slightly less than usual warehouse rates and the association was one of three associations having the lowest per pound handling cost of any of the cooperative wool marketing associations in the United States.

TWO BULL CLUBS ORGANIZED.



Two bull clubs have been organized on San Juan island during the month and both clubs purchased high-class purebred Guernsey bulls. W. W. Henry, county agent of San Juan county, leads the state in the number of purebred sires placed during the last three months. Seven purebred bulls were purchased in March, five of which were Guernseys and two Jerseys. In February two purebred bulls were purchased and in January six. This makes 15 purebred dairy sires in the three months. San Juan county is determined to eliminate the scrub and grade sire.

RECORD WEIGHT.



A registered Holstein cow, Mechthilde Duchess, owned by R. R. Preever of Scio, Ore., gave birth March 29 to a bull calf weighing 129 pounds. Mrs. Preever writes THE FARMER that the family believes this is almost a record weight. This certainly is "sum" calf, but the championship belt is already claimed by a Pennsylvania breeder who recently reported a Holstein calf weighing 166 pounds.

PROVIDES SUCCULENCE.

Actual nutritive value is only one feature of the usefulness of silage. Silage is a succulent feed that means much for the condition of the animal's digestive system.

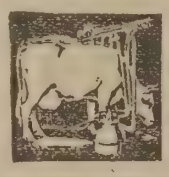
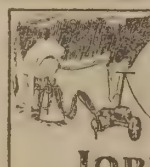
You Don't Pay For a De Laval
It Pays For Itself



A truer statement was never made. Ask any one of the millions of De Laval users and they will invariably reply, "My De Laval doesn't owe me a cent. It paid for itself in less than a year, and ever since has been making me money."



Why? Because the minute you start using a De Laval you get something to sell for cash—cream; and in addition you get skim-milk to grow into another crop of calves, pigs and chickens. Two sources of profit, and a steady cash income every day.

Even if you don't own a De Laval you are probably paying for one anyway—especially if you are using a cheap, inferior or badly worn separator, or are skimming by hand—in the cream that is being lost. No other method of separating cream from milk is so efficient, easy and economical in the long run as the De Laval.

There is a De Laval Separator just right for you, no matter if you have one or a thousand cows. Furnished with hand, power, electric or steam turbine drive. See your De Laval Agent now or write us about getting one.

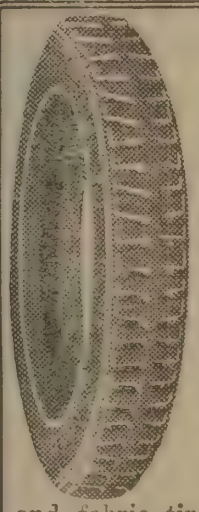
Compact, Convenient Farmyard

This drawing shows the plan described herewith, as designed by A. M. Doerner, landscape gardener at the state college.

In the model farmyard, illustrated herewith, all buildings are the same general color and have a pleasing effect from the highway. There are no gates to open, except at the main entrance, and if there are no stock in the road this may be left open. The driveway leads direct to the farmyard, from which the auto may be run into the garage or the team watered and led to the stable without opening gates. All gates are built close to some of the buildings, which is a great advantage when driving stock through. All buildings are built in line with a fence, which makes the barnyard more compact and the animals can not run around any of the buildings when being driven. To enter any field only one gate need be opened.

The machine shed is handy to the barnlot and it is almost as easy to run a machine in the shed as to let it stand in the lot where it was unhitched. The gates are all within easy reach of the barn and they open direct into the fields. There is plenty of shade around the house and other buildings. The lawn is easy to cut, since all the flower beds and shrubs are at the borders instead of in the center, which not only lessens the work, but greatly improves the appearance of the place.



The result of the plan is an increased valuation of the farm because of its greater utility and improved beauty, consequently giving more pleasure to the entire family in all seasons of the year. Such an improvement does not require the expenditure of a large sum of money in every case, but it is largely the result of a careful study of the plan and the arrangement of the buildings and fences to give the most convenience and utility.

Piping Well Water

By. PROF. L. J. SMITH, W. S. C.

Is it practical to pipe well water from my neighbor, 2000 feet away? I was planning to use one-inch pipe. He carries about 35 pounds pressure and is 15 feet higher than I. C. M. K.
Zillah, Wash.

You do not state how much water you will want to move per hour. If you are going to use the water for domestic purposes only, a one-inch pipe will be feasible, but if you wish a considerable amount of water, use one and one-quarter-inch pipe. With an inch and a quarter pipe, at the indicated pressure, you could get a little over 250 gallons per hour and the 15-foot drop would care for the friction in the pipe. Be sure the ends of the pipe are not burred.

TIRES For Less

Our large purchasing power enables us to buy standard makes of tires and sell them direct to the consumer at less than the regular wholesale cost. The HALL cord and fabric tire listed below is one of the finest tires we have ever sold. A tough FLAT TOP tread combined with a strong over-size carcass is responsible for the mileage of 18,000, 20,000 and even 25,000 miles. A record of 1460 of this tire sold last year with five fabrics and no cords returned for adjustment is a record of which we are justly proud.

VETERINARY

By DR. S. B. NELSON.

Warts.—I have a heifer that has a wart at the bottom of her hind foot. I have another cow that has a boil on her right hind flank next to the leg. She had a boil there a year ago and I opened it then and thought it had dried up for good. H. K.
Sumner, Wash.

Cut off the wart, if you can, with a pair of dull scissors, and then apply tannic acid to the stump once daily.

Cut the boil open and pack the wound with cotton soaked in tincture of iron; leave it 24 hours and remove dressing. Paint daily with tincture of iodine.

Colds.—I have two horses, age 6 and 10, that have been almost idle all winter. They have mixed hay and some oat hay with grain in it. They do not seem to be in as good flesh as they should be, especially the older one. The younger animal has a cold and cough. What can be done for the cold and is there a tonic that would be good for both of them?
Springdale, Wash. C. E. M'L.

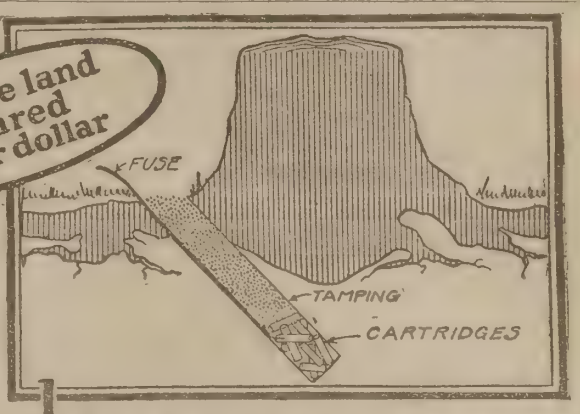
One-half dram of quinine given to the horse once daily is good for a cold, and I think the cough will disappear with the cold. As a tonic you will find iron sulphate, one dram; nux vomica, five grains; gentian, four drams, and ginger, two drams, with four drams of fenugreek seed powdered, a very good one. Give this amount once daily to the horses.

Hairless Pigs.—I have a 4-year-old sow weighing 250 pounds that has farrowed two litters of hairless pigs. They were fully matured. She is an easy keeper and I can not feed her much, as she gets too fat. I have fed slop with a little shorts in it and a little corn. Is there anything lacking in her feed? Would like to keep her, as she farrowed 13 pigs last time, but of course they all died. C. D. M.
Yakima, Wash.

The condition of young pigs being born hairless is due to a lack of iodine in the feed fed the sow during the time that she is pregnant. Professor J. W. Kalkus of the State College of Washington veterinary science department and experiment station has done a great deal of experimental work on this and advises that the administering of a grain of potassium iodide in the feed from one to three times daily is a very beneficial treatment while she is carrying the pigs.

ANOTHER WAY TO WASTE.

If you have feed for five hogs and have only two, you are wasting feed.



Buy Safely by Signature

"A manufacturer's advertised trademark name is to an article of merchandise what a signature is to a letter. It is his visible and definite assumption of responsibility for the product. It is a symbol with which he says: 'I made this article and I'm proud of it.' It is his pledge of satisfaction, put there for your guidance and protection."—Indianapolis Star.

Not only is the above statement true with regard to the advertisements in your state farm weekly, but in addition the publisher stands back of any and every advertisement printed in this paper. Note the guarantee on the editorial page. This gives you a double assurance of fair dealing in transacting business with manufacturers whose announcements appear in our columns. Thus safeguarded, we are confident you will freely investigate the articles described in the advertisements which you are likely to need on your farm or in your home. When you do write, we kindly ask that you mention The Washington Farmer.

½ more land cleared per dollar

—with PACIFIC STUMPING POWDER Save still more by using the latest, cheapest blasting methods—

Making the Hole

IN blasting stumps, the first thing to do is to make the hole to receive the charge of dynamite.

When removing large stumps such as are common in the Northwest, the charge should be placed so that there will be 16 to 24 inches between it and the bottom and the center of the stump (See cut). The "shot" then lifts the stump clear with much of its roots, instead of merely splitting it.

To make the hole, loosen ground with crowbar and clean out with long-handled tilling spade.

The subsequent steps in stump blasting will be described in future issues of this paper.

For utmost economy use Pacific Stumping Powder—the new Du Pont Farm Dynamite. A 1¼ x 8 inch stick is equal in strength to a 1¾ x 8 inch stick of any standard stumping powder—and Pacific Stumping costs 30% less per stick. You get ½ more sticks for every dollar. Buy it from your local dealer.

Write for free copy of 125-page book "Development of Logged Off Lands," giving full instructions for use of explosives for land clearing, ditching and tree planting.

POULTRY AND RABBITS

The Ultimate Goal

"Since the poultryman is planning on eggs as the ultimate goal for an income he should develop the young pullets so as to be able to obtain a maximum production in the fall and winter months when the prices are at their best. The young stock should be developed from heavy laying strains, since this is the beginning of high production. The next step, then, is to develop the birds in their early period of growth and get them in shape for an even production when they are the proper age to begin laying."

So says W. D. Buchanan, poultry specialist of the state college, who is giving talks on egg production in the main poultry sections of the state in cooperation with the county agents.

"Proper care and treatment is necessary if the minimum losses are to be had in the brooder houses as every experienced poultryman knows, and the birds should have the feed that is most needed in the production of bone and muscle. Young, growing chicks should have granulated bone in a hopper before them constantly or it can be added to the mash and fed regularly. An addition of 5 per cent in the mash will help in digestion.

"The carbohydrates, such as wheat, corn and oats, are needed for supplying heat and energy to the growing birds, but proteins are also needed to aid in the growth of muscle. This is not sufficient, however, since a bird must have plenty of exercise to make the proper growth. If they are kept satisfied they will not take enough exercise and they can not use what feed they get to the best advantage. They should never be stinted, but should have just enough so they will be ever after that last grain of wheat that they can not find. One poultryman expressed it by saying that he kept his birds 'jumping after just a little more.'

"Good range and sunshine is always essential and it is a good plan to open the brooder house for a short time, even in bad weather, as there are few days in early spring when one can not find at least a half hour of weather that is mild enough to give the chicks a run in mid-afternoon. They can often be watched and driven in again when they have been out for a half to an hour. Too much exercise in the old air will make them need more feed to replace the lost heat. By hardening them off in this manner the chicks will be more self-dependent when they they are grown up.

"There are too many chicks that are fed for rapid growths and as a result they develop into prolaps or 'blow outs' when they come to heavy production. Such trouble can be avoided by good feed and care while the birds are young and the poultryman should think of the chicks in terms of health, strength and development.

"An early matured pullet is valuable in any flock, but they should never begin to lay before they are 5 1-2 months old, since they are more apt to run down before they are past the laying age. When the chick is 1 month old it needs more protein than any other time in its life. If this feed is fed heavily later on the pullets will begin to lay peewee eggs and have a tendency to drop off their production when the higher prices are on in the early spring months.

"The chief law of health, however, is plenty of exercise in the open. Give them a chance to catch insects and eat green feeds and they make rapid but steady gains and become the best layers."

Rabbit Meat

"As a general rule the public does not know that rabbit meat is as good as, and even better than, chicken," said A. D. Norris, who has charge of the rabbitry at the western Washington experiment station at Puyallup. "This is partly because they have cultivated the taste for chicken and have never tried rabbit. The young rabbit fattened at the age of 3 or 4 months and properly dressed is a real delicacy, and there is a great possibility for rabbit breeders to work up a special trade for rabbit meat in their own community. This is actually being done with some breeders with good success.

"At the station last fall a castration experiment was carried out on about 50 young males to ascertain if a better grade of meat could be secured. Cost accounts were kept and many of the rabbits fed all they would eat of both grain and hay, up to 5 months of age, when they were killed and dressed and were found to have slightly more fat on them and the quality was improved above that of the ordinary rabbit.

"The cost, however, for fattening a rabbit in this manner reached as high as 60 cents per pound. This was considered almost prohibitive, except for occasional instances where a special demand for high-class rabbit meat could be secured.

"For economical feed the young rabbits should be butchered at an approximate age of 3 1-2 months, giving them all the grain and hay they will clean up, up to this age. It is possible, however, that further experiments would show that feeding could be done on a definite basis, giving the animals only a certain amount daily. It is possible that a cheaper grade of hay, or alfalfa alone, could be fed to animals treated in the above manner. The station may carry on an experiment with this end in view during the coming year."

W. A. Linklater, superintendent of the experiment station, authorized the above experiment in order to satisfy a number of inquiries which had come to the station upon this subject. The operation, he thought, would keep the animals from fighting and allow them to fatten more economically. It was found, however, that, although the rabbits were quieter and had good appetites, they did not make as rapid gain as was hoped for. There is very little fighting in a bin of males below the age of 3 or 4 months, and they have good appetites.

The experiment, however, is considered a success inasmuch as it has proven which method is the most economical and most practical.

Experience With Turkeys

To the Editor: Here is a little information on turkey raising I have gained by experience:

The most important thing in turkey raising is to start the little ones right. I never feed my little turkeys for 48 hours after hatching. The first feed consists of hard boiled eggs, a little milk cheese squeezed real dry with a little pepper. I give them also lime water two or three times a week. A little turkey should be fed often and not much at a time. I do not feed any grain for at least two weeks, then only a little wheat ground fine.

At first my turkeys died of black head. I do not believe there is any known cure for it if left too long, but I have cured every one I have tried with this simple remedy: Take any real fat pork on hand, cut up a little in a saucer, one hard boiled egg and one small onion. Make this black with pepper and add three or four little grains of permanganate of potash. I cured a hen this week with it. She was laying, but would not eat a thing. I caught her and made her eat it all. She was so weak she could hardly get on the roost. She is now laying again and feeling fine.

I shall watch for information from others and hope all who raise turkeys will write their experience.

WIN $1000.00 SEND NO MONEY!

Get the Big Picture Puzzle FREE

Send at once for big clear copy of the small picture puzzle shown here. Complete instructions and full details will be sent at once by first class mail. Do not try to solve puzzle from the picture, but get a good clear copy to work from.

FIND THE MOST OBJECTS BEGINNING WITH "C"

You can find quite a few "C" objects in the above picture even though it is small. Get the big free picture and full details and if you intend to go in for the big prize, send no money but just use the coupon and make your answer eligible for the big prize at once.

FOLLOW THESE RULES

First prize will be given for the largest number of words which correctly name objects shown in the picture beginning with "C". Prizes will be awarded according to the prize list shown here and in case of ties the full amount of the prize will be awarded each tying contestant. Each object can be named only once. Webster's New International Dictionary will be used as authority for all words by the Judges, and one credit will be given for each correct word and one credit deducted for each incorrect word. Do not include obsolete, hyphenated or compound words. Winning lists will be based upon all the applicable words submitted and not from any master or predetermined list. Where the singular is used the plural cannot be used and vice-versa. Where several synonyms are equally applicable to any object, any one of such synonyms will be given credit. Answers must be mailed by June 24, 1922. The winning answer will be published and a copy sent to anyone sending in a self addressed stamped envelope.

The Prizes

Winning answers will receive prizes as follows:

	If No Laymore is Ordered	If $2 Worth of Laymore is Ordered
1st	$20.00	$1000.00
2nd	15.00	300.00
3rd	10.00	150.00
4th	5.00	75.00
5th	5.00	40.00
6th	3.00	30.00
7th	3.00	20.00
8th	3.00	20.00
9th	2.00	15.00
10 to 15	2.00	10.00

Laymore

"Makes the Lazy Hen Lay"

SEND NO MONEY

Thousands of poultry raisers are making big money by using Laymore. This scientific discovery acts on the laying organs of the hen with amazing results. In order to get more people acquainted with Laymore we are putting out this big booster picture puzzle campaign. If no Laymore is purchased 1st prize will be $20.00; but if you wish to try for the big $1000.00 prize fill out the coupon and the Laymore will be sent without your advancing one penny. Pay the postman $2.00 plus the small postage fee and your answer will be eligible for the $1000.00 prize. The Laymore will be sent at once, but your answer can be mailed any time up to June 24th. Mail the coupon now.

MAYER COMPANY

620 Washington Ave. N. MINNEAPOLIS, MINN.

USE THIS COUPON

MAYER CO., 620 Washington Ave. North
MINNEAPOLIS, MINN.

Send me the big picture puzzle and full instructions FREE. Also send me 5 packages of Laymore for which I agree to pay the postman $2.00, plus postage, on arrival. This order makes the answer I will send in eligible for the big $1000.00 Prize.

"Turn Plastering Into Play"

WITH

Perfection Plaster Wallboard

With this wonderful modern building material you can do just that. You do your own plaster work and you make a perfect job of it at a very small cost and with very little work. None of the mess, uncertainty or delay that goes with the old-fashioned plastering. "Perfection" is simply plaster in a portable form—all you need to fix walls or ceiling is a hammer and a saw. With paint, tint or calcimine you can make the most beautiful and artistic interiors. Just the thing for a score of jobs around farm and home.

Get booklet and free sample from your local dealer or write to the makers.

MINERALIZED WATER ROUTS CHICKEN LICE

Tablets Dropped Into Drinking Founts Banish Vermin, Make Fowls Grow Faster and Increase Egg Yield.

Any poultry raiser can easily rid his flock of lice and mites, make chickens grow faster and increase their egg yield by simply adding minerals to the fowls' drinking water. This does away with all bother, such as dusting, greasing, dipping and spraying. The necessary minerals can now be obtained in convenient tablets, known as Paratabs. Soon after the fowls drink the mineralized water, all lice

and mites leave them. The tablets also act as a tonic conditioner. The health of the fowls quickly improves, they grow faster and the egg yield frequently is doubled. Little chicks that drink freely of the water never will be bothered by mites or lice.

The method is especially recommended for raisers of purebred stock, as there is no risk of soiling the plumage. The tablets are warranted to impart no flavor or odor to the eggs and meat. This remarkable conditioner, egg tonic and lice remedy costs only a trifle and is sold under an absolute guarantee. The tablets are scientifically prepared, perfectly safe, and dissolve readily in water.

Any reader of this paper may try them without risk. The laboratories producing Paratabs are so confident of good results that to introduce them to every poultry raiser they offer two big $1 packages for only $1. Send no money, just your name and address—a card will do—to the Paratab Laboratories, Dept. 878, 1100 Coca Cola Bldg., Kansas City, Mo., and the two $1 packages, enough for 100 gallons of water, will be mailed. Pay the postman $1 and postage on delivery, and if you are not delighted with results in 10 days—if your chickens are not healthier, laying more eggs and entirely free from lice and mites—your money will be promptly refunded. Don't hesitate to accept this trial offer as you are fully protected by this guarantee.—Adv.

ORCHARD AND GARDEN

Must Clean Up

War on Insect Pests and Weeds

The man who does not do his part toward keeping his farm, his garden and his orchard as free from disease, from insect pests and from noxious and dangerous weeds as it is possible for him to do, is a bad citizen, lacking in any pretense of decent regard for the rights of others; that is, in the instances where he neglects or refuses to do so, while others all around him are cleaning up and his own attention has been clearly directed to his duty in the premises, says E. L. French, director of the state department of agriculture. Of course, in the vast majority of instances, his neglect is sheer carelessness, recognition of the fact that others are doing the same as he is in the matter and getting by with it, and knowledge that it is little use to clean up himself while others neglect to do so.

The laws passed at the demand of farmers are designed to meet this condition and they are meeting it in part. In time they will meet it in full.

On the economic side the case for the laws is a strong one. As one minor instance: There are a million apple trees in western Washington. yet there are hardly enough commercial apples grown in that part of the state to make an appreciable figure in the market. The insect pests have taken the orchards. The man who has attempted to keep his own plate clean has been swamped with pests through the neglect of his neighbors. The loss in dollars and cents runs into millions of dollars annually. Now the department is insisting upon a clean-up of the infected orchards or that they shall be destroyed, no longer take up room that might be devoted to better crops and no longer be a center of infection to destroy the value of the fruit of those who desire to do something with their orchards.

Orchard Planting

Orchard planting is discussed at considerable length in the Chelan County Farm Bureau News by William Meikle, the county agent.

Mr. Meikle finds after making a careful survey of the planting plans that were used in the Wenatchee valley that but few orchards were laid out with any idea whatever regarding the economical working of the orchard.

Many orchards were planted 20x20 feet, with the rows running the same direction as the fences around the orchard, regardless of the slope of the land. When it comes time to remove the fillers in a 20x20 planting, if every other tree is removed from every row, the row still remains 20 feet apart one way, which is the way the rows run, and 28 feet apart diagonally across the track, which is usually not in the direction that the orchard is piped for running the water. If the wider spaces are used to drive through with the spray rig a constant crossing of and destroying of ditches results. Furthermore, this 20x20 plan when thinned usually leaves rows of trees not of the same variety, but alternating with various other varieties in the row. This mixed-up condition makes it difficult to spray, irrigate or harvest without great inconvenience on account of the mixing of varieties.

Planting plans with permanent trees 25x25 feet to 30x30 feet apart, with a filler in the center, makes an orchard that is almost impossible to manager economically when the trees are large enough to bear, says Mr. Meikle. Moreover, there are only a few orchards in the valley planted with the tree rows running on the contour of the land, or, in other words, with the tree rows running the way the water should be run.

As to the right of way of planting, first determine the direction that the water should flow to get the best results from irrigating. North and south is preferable to east and west, as the direction to run the irrigating water and the tree rows of the contour of the land will permit. The tree rows should then be spaced at least 30 feet apart and if fillers are to be used put the fillers in the tree rows and not in the center. At noon, when the sun is high, it will shine into the tree rows, although fillers may be in the rows.

There should not be over three varieties and in planting these three varieties they should never be mixed in the rows. The variety in the row straight through should be the same for both filler and on permanent trees. If fillers are used in the tree rows they will do more damage than good, if they are of a variety that must be sprayed and harvested earlier than the permanent trees.

A 30x30 is really too close for any filler, is the final judgment of Mr. Meikle, who adds that fillers have been used to a very good advantage by having the permanent trees about 32 feet apart or more, and the fillers in the rows, which makes the trees 16 feet or more apart in the rows. When the fillers begin to interfere with the permanent trees they can be cut back on the side next to the permanent trees and permitted to spread into the row. By doing this they may be left until about the 12th year, when the fillers should be removed, leaving the permanent trees well spaced for all future orchard operation.

The argument against the use of fillers is not against the proper use of fillers, but it is against the filler abuse, as in nearly all cases where fillers are used, the damage resulting from letting them remain too long is greater than the benefits derived from the use of the fillers. This condition has resulted in the following statement: "The time to remove fillers is the same year that they are planted."

Apple Shipments Increase

A total of 43,521 cars of apples were shipped from the four Pacific northwestern states in the period from July 1, 1921, to March 1, 1922. These figures show an increase of 18,246 cars over the previous year, when 25,275 cars were shipped.

The Wenatchee valley shows the largest shipment, with a total of 13,988 cars, an increase of more than 5000 cars over the previous year.

The Yakima valley is second with a total of 11,862, an increase of more than 4000 cars over the year previous.

The Idaho district shipped a total of 5830 cars, a gain of 3000 over last year.

The Hood River-White Salmon district is next with a total of 4046, a gain of nearly 2000 cars over the preceding year.

The Spokane district, which includes territory as far west as the Big Bend, north to the Canadian boundary and east to the Idaho line shipped 2887 cars, an increase of 659 over last year.

The district of eastern Oregon shipped 1653 cars, an increase of more than 1100.

Walla Walla district shipped 1443 cars, as against 319 the year previous.

The Rogue river district of Oregon shipped 985 cars, as compared with 368 last year.

Montana district shipped 672, as against 437, and the district of western Oregon shipped 524 cars, as compared with 322 the previous year.

STRAWBERRY PRODUCTION PROSPECTS

Strawberry production in early producing states is estimated at 3074 cars, as compared with 2240 cars harvested last year, according to the U. S. department of agriculture. The average condition of the crop April 1 is placed at 90 per cent of normal, as compared with a seven-year April 1 average of 87 per cent. The average condition of the cabbage crop April 1 is placed at 78 per cent of normal, as compared with a seven-year April 1 average of 72 per cent. The condition of truck crops generally range from 68 per cent on cantaloupes to 94 per cent on asparagus.

Here's Good Advice: Relieve Your Fatigue With Sleep. Avoid Stimulants

THERE is nothing in the world so reconstructive as sound, refreshing sleep. During sleep the system rids itself of the fatigue poisons that have accumulated during the day. The finished elements in the food are taken up by the various tissues that require rebuilding nutriment.

It is important that you get plenty of health-bringing sleep. Anything that interferes with your sleep hampers and hinders you—mentally and physically.

A common cause of physical weakness and mental depression is the reaction following over-stimulation caused by the drug, caffeine, and other elements found in both coffee and tea.

If you have an idea that coffee or tea drinking may be injurious to your health, why not stop it for a week or so, and drink delicious, fragrant Postum instead.

Postum is a rich, golden-brown, pure cereal beverage. It contains no harmful elements of any kind. You can drink Postum as many times a day as you or the children desire a grateful, refreshing beverage.

Your grocer sells both forms of Postum: Instant Postum (in tins) made instantly in the cup by the addition of boiling water. Postum Cereal (in packages of larger bulk, for those who prefer to make the drink while the meal is being prepared) made by boiling for fully twenty minutes.

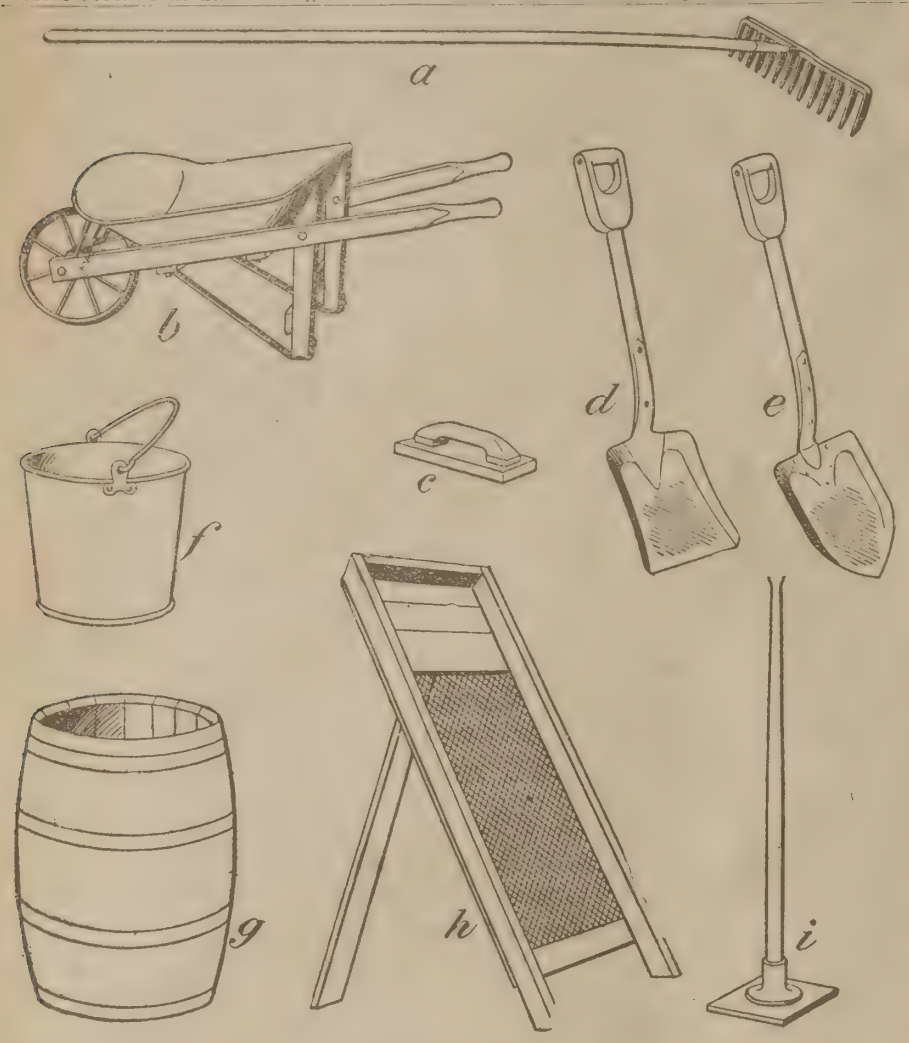
Different Concrete Mixtures



In general, a 1:2:4 concrete mixture is used on fine work and in reenforced concrete. In other constructions the mixtures run sometimes as weak as 1:3:7 on founda-tions, or 1:4:9 on tilling and subpave-ment. A farmers' bulletin of the United States department of agriculture says that a fairly rich mixture makes the best concrete floors. Mix bank-run gravel one to five, that is, one part of Portland cement to five parts of gravel by actual measure-ments. With screened gravel or crushed rock the materials should be mixed one to two and one-half to five—that is, one part Portland cement to two and one-half parts screened sand to five parts screened gravel or crushed rock.

In measuring the quantities, splitting of bags of cement may be avoided by bearing in mind the fact that a sack of cement (emptied loosely) practically fills a box holding one cubic foot. Therefore, make all measurements of sand, gravel and crushed rock in even cubic feet. Guage the wheelbarrows by using a bottomless box holding one cubic foot, or construct a shallow bottomless frame which, when set on the mixing board and filled, will con-tain thefull amountof sand or one-half the quantity of gravel or crushed rock re-quired for one batch of concrete.

Sand for concrete should be clean and should have grains grading in size from fine to coarse. Such material as drift sand, with all fine, light grains, makes very weak concrete. Sand which will con-siderably discolor the hands when a por-tion is rubbed between the palms should not be used unless well washed. With dirty sand no amount of cement will make strong concrete.

Bank-run gravel, just as dug from the pit or taken from the stream bed, seldom runs even and rarely has the right pro-portion of sand and pebbles for making the best concrete. The mixture most suit-able has one part sand to two parts gravel, measured by volume, in which all sizes passing through a quarter-inch screen are considered sand. As there is generally too much sand for the gravel, it is advisable to separate the sand from the gravel and later to remix them in the proper pro-portion. For concrete feeding floors no pebbles larger than one inch should be used. The larger stone will do for the foundation. Gravel should have no rotten stone and should be clean, that the cement may adhere to it tightly.

The best stone for crushed rock is one which is clean, hard, breaks with sharp angles, and to which mortar easily sticks. Trap, granite and hard limestone are among the best. The use of shale, slate and very soft limestones and sandstones should be avoided. The crushed rock should be screened only enough to remove the very fine dust. The small particles should be left in the stone and allowance made for them in proportioning the amount of sand.

Tools used in making concrete on the farm: A, rake; b, wheelbarrow; c, wooden float; d, square-nosed shovel; e, round-nosed shovel; f, bucket; g, water barrel;

Poison Engine Gas

By PROF. L. J. SMITH, W. S. C.

Carbon dioxide is the gas which results from the combustion of fuels. Ordinarily this gas is so widely mixed with the air that it is not dangerous, but when combus-tion occurs in a limited space, for example in a closed garage or a room where a coal stove leaks badly, the results may easily be fatal.

This gas is colorless and odorless in its pure form, though usually it is accom-panied by smoke. It is heavier than air. Once the lungs get full of the gas, the per-son affected loses consciousness without warning and will die as quickly as a case of drowning. Get the patient into fresh air, and start artificial respiration at once, in the same manner as if the victim had been under water.

Never run the engine of your car in a closed garage and at the same time try to make repairs on the car. If you must run the car in the garage, open the doors wide.

Never close the dampers of a coal stove too tightly.

Never go down into a well or any deep pit without first lowering a lighted can-dle or lantern, to learn if their is gas in it.

A GOOD IDEA!

"The first thing I did was to buy 480 rods of woven wire and fence for hogs."

Alfalfa Silage

As a silage crop alfalfa is not altogether a success, says the U. S. department of agriculture. Where other silage crops can be grown profitably it is seldom advisable to use alfalfa for this purpose.

Alfalfa is somewhat difficult to handle with ordinary silage machinery and is hard to pack properly in the silo. It often becomes moldy and slimy, as do various other legumes when put up in this way. The high percentage of protein in alfalfa causes it to putrefy instead of fer-ment when too much air is present in the silo.

There are times, however, when alfalfa may be made into silage; for instance, when weather conditions are unfavor-able the curing of hay. This silage may be made from partially wilted alfalfa if it is cut fine enough and well packed.

Experience has shown that a "washy" silage may result if freshly cut alfalfa is put up while wet with rain. Under rea-sonably favorable conditions alfalfa can be made into hay at less expense than into silage.

Alfalfa and corn mixed make good silage. The addition of crude molasses to alfalfa also increases the chances of producing a good quality of silage. Good silage can be made by mixing straw of any of the small grains with alfalfa if the mixing is done as the material passes through the cutter and water is added to make it pack well.

Taxes on Reclaimed Land

A decision of importance to settlers on reclamation projects who acquired lands by homestead entry is one just handed down by Chief Justice Taft. It reverses the United States district court of Ari-zona, which held that such lands are tax-able by state and local authorities from the date of completion of requirements of the old homestead act.

The Taft opinion declares that the local taxing power does not apply until the con-ditions of the reclamation act have also been met, including the residence and cul-tivation requirements of the act.

FARMERS' WANT ADS

This is the farmers' "want," "sale" and "exchange" department for small adver-tisements of farmers, including live stock and poultry.

Advertising rates for ads running 1 to 3 times, 10c per word per insertion, with a special rate to Farmer subscribers, as fol-lows: Ads running 4 to 12 times, 9c per word per insertion; ads running 13 times or more, 8c per word per insertion.

All commercial and land advertising 10 cents per word each insertion. Open also to nonsubscribers.

In using these columns advertisers must observe: (1) No advertisements will be in-serted for less than $1.00. (2) Every word, number and initial, including name and address, must be paid for. (3) New adver-tisements, changes of copy or cancellations must reach general office, Spokane, Wash., 10 days in advance of publication date. (4) Cash must accompany order.

Above rates include insertion in The Washington Farmer, The Idaho Farmer and The Oregon Farmer, which constitute the Pacific Northwest Farm Trio, 46 Review Building, Spokane, Wash.

SYNOPSIS.

Shad Trowbridge, a New England lad of about 20 years, sails on a mail boat to Labrador, where he plans to spend a few weeks of summer hunting and fishing in the wilderness. Upon his arrival he meets two experienced fishermen and trappers, Dick Blake and Ed Matheson, who recommend to him a young lad of 17 known as Ungava Bob, as a guide for his hunting and fishing trip inland. Desiring to lose the least time possible in securing Ungava Bob's services and starting inland for his vacation, Shad starts across the bay in his canoe in the face of a threatening storm. In the darkness his canoe is capsized and he is plunged into the icy water. As he rises to the surface a rope is thrown to him and he hears a voice shouting to make it fast. He is soon drawn aboard a little sailboat which, unknown to him, had approached at the moment of his great need.

To his surprise, Shad discovers that his new friend, the lad with the sailboat, is none other than Ungava Bob. Shad decides to remain a month and visit a part of Bob's winter trapping trail.

They leave for the wild trapping grounds and Shad is so delighted with the wilderness that he decides to remain with Bob on the trails all winter. The other members of the party start back home, leaving the two boys alone to start their long winter of adventure. But they are not alone! Hardly has the boat carried their friends around the bend of the river before Bob and Shad see two Indians watching them from the shadows of the forest trees.

The Indians proved to be old friends of Bob, but it was not many days until enemies appeared. A group of Mingen Indians, catching Bob and Shad out in their canoe on the river above the Great Falls of Labrador, fired upon them, compelling them to remain in the current and be dragged down to the rapids and seeming certain destruction.

In the midst of their peril Bob remembers that in the rapids above the falls there is a small, rocky island, and he skillfully guides the canoe to a safe landing on it. In the meantime their friends, Ed. Matheson and Dick Blake, reach their tilts to find Bob and Shad gone. The Indian maiden, Manikawan, tells them of the supposed loss of Bob and Shad over the falls. She plans to leave at once to wreak vengeance on the enemy Indians who sent them to destruction. Cunningly she entices them onto the river above the rapids and sends them to their deaths at the foot of the falls. Bob and Shad, on their island prison, witnessed the tragic plunge. Suddenly Manikawan appears on the shore, discovers the boys on the island and tells them that she will be back when the sun is noon-high next day with help to get them off, which she does successfully.

As winter comes upon them a strange thing happens. Wild animals of all kinds disappear. There is no game for fresh meat, and a large party of friendly Indians decided to go far north to other hunting grounds. Shad goes with them, Bob returning to his trapping trails and tilts

CHAPTER XVII.

Christmas at the River Tilt.

Christmas fell on Thursday that year, and it had been arranged that the trappers, by turning back on their trails the preceeding Saturday instead of waiting as was their custom until Monday, and by slighting some of the less important sections of the trails on their return trip, should gather at the river tilt on Wednesday evening, in order to celebrate the holiday with a feast.

It was late on Christmas eve when Ungava Bob, returning from the Indian camp, drew his toboggan into the clearing in the center of which stood the river tilt. Its roof was scarcely visible in the moonlight above the high drifted snow. He had hoped that some of the others might have arrived before him, but no smoke issued from the pipe, and fresh drifted, untrodden snow around the door told him that he was the first.

It was fearfully cold. Rime filled the air. The deerskin coat which Manikawan had given him, and which he wore, was thick-coated with frost.

He paused before the door and stood for a moment to painfully pick away the ice that had accumulated upon his eyelashes, partially closing his eyelids, and discovered that his nose and cheeks were frost-bitten. He drew his right hand from its mitten, and holding his nose in the bare palm, covered the exposed hand with the mittened palm of the other, quickly rubbing the frosted parts with the warm palm to restore circulation.

Presently, satisfied that the frost had been removed from nose and cheeks, he kicked off his snowshoes, shoveled the accumulated snow from the doorway with one of them, set the snowshoes on end in the snow at one side, and entering the tilt lighted a candle and kindled a fire in the stove.

Taking the kettle from the stove and an ax from a corner he passed out of the tilt and down to the river, chopped open the water hole, filled the kettle, and returning set it over to heat.

Unpacking his toboggan and stowing the things away, he leaned it end up against the tilt, brought a bucket of water from the river for culinary use, removed his deerskin coat, and settled down in the now comfortable tilt to prepare supper and await his friends.

Presently he heard a movement outside, and a moment later Dick Blake poked his head in at the door.

"Evenin', Bob," he greeted. "Glad t' see you. Th' tilt smells fine an' warm! Where's Shad?" he asked, entering and rubbing his hands over the stove.

"Stoppin' wi' th' Injuns. I were tryin' t' get he t' come back, but he thinks he wants t' go huntin' deer with un, an' stays," explained Bob. "Any fur?"

"Only one marten an' one otter, but they's good uns. No signs o' foxes. But foxes won't stay when th' rabbits goes," and Dick went out to unpack.

Presently Bill Campbell arrived, and a little later Ed Matheson drew his long form through the low doorway, his red beard laden with ice.

"Where's Shad?" he asked, after greetings were exchanged.

Bob explained Shad's absence.

"Well, now!" he exclaimed. "Shad must ha' been gettin' light-headed t' do that. Well, he's welcome t' 'bide 'long with Injunes if he wants to, but I'm thinkin' by about now he's wishin' he was where he ain't. An' by t'morrer he'll have boiled goose an' fried pa'tridges on his mind, an' wishin' harder'n ever he were back here in th' river tilt."

"He were wantin' th' hunt, an' now he may not find un so bad," said Bob.

"He won't be havin' no feather-bed time cruisin' about with Injuns," insisted Ed. "Shad's gettin' wonderful peevish an' sot in his way lately. He's thinkin' o' th' fine grub an' good times he's been havin' t' that college place he talks about, instead o' thinkin' o' how he likes rabbit meat three times a day an' betwixt meals when you an' him was 'bidin' a time on th' island over here because you wasn't havin' wings t' fly off, an' they wa'n't no other way t' get off till th' Injun lass takes you off."

"Shad weren't getting peeved," objected Bob, ready to defend his absent friend. "He were just disappointed at findin' no huntin', an' he 'bides with th' Injuns t' get some deer."

"Maybe so, but Shad'll be glad enough t' get back t' th' river tilt, an' when he is gettin' back he'll be findin' it fine. He'll be thinkin' o' th' tough crusin' with th' Injuns instead o' th' grub at his college place, an' that'll make he think 'tis fine in th' tilts. That's the way it mostly is with folks. They always wants somethin' they ain't got, an' when they gets un they wants somethin' else. An' like's not then they wants what they was havin' first, because they can't have un now."

Ed paused to pour a cup of tea and help himself to pork.

"Shad's a good mate, though," he continued magnanimously. "He ain't gettin' used t' th' bush yet. That's all's th' matter with he. He'll get used t' un after a bit, an' then he won't be gettin' peeved like he is now."

"I'm wishin' he weren't stayin' back with th' Injuns now. I'm fearin' he'll be havin' a hard time of un—an' I'm fearin' he may be gettin' in trouble not knowin' how t' take un," Bob remarked solicitously.

"I'm wonderful sorry, now, he stays wi' th' Injuns. 'Twould be fine t' have he here for Christmas," agreed Ed, as he drew a plug of black tobacco from his pocket and began to shave some of it into the hollow of his hand, preparatory to filling his pipe.

"Any fur this trip?" asked Bob.

"Two martens—both fine uns. Not so bad. How'd you make un, Dick?"

"I gets one marten an' shoots an otter," answered Dick.

"You gettin' any, Bill?" asked Ed, turning to Bill, who was reclining in one of the bunks and smoking in luxurious contentment.

"Aye, one marten, an' I shoots a wolf last evenin'—a wonderful poor wolf, an' his skin ain't much account. Three of un were after me on th' trail all day, but I only gets one."

"Three wolves, now—an' poor uns," commented Dick. "Wolves ain't follerin' a man all day unless they's hungry, an' they ain't like t' be hungry where they's deer."

"No," agreed Ed, who had lighted his pipe, one moccasined heel drawn up on the edge of the bunk upon which he lounged, the other long leg stretched out. "Wolves follers th' deer, but when they ain't no deer t' foller they don't foller un. Which means they ain't no deer in this part o' th' country, an' so they just naturally follers Bill as th' next best meat."

"An' bein' poor means they's hungry, an' bein' hungry means they's lickin' their chops for Bill," continued Dick.

"Were it night, now?" asked Ed.

"No, 'twere broad day," answered Bill, undisturbed.

"Now if 'twere night, I'd say they was follerin' you because you red hair lights th' trail up for un."

"'Tain't no redder'n your'n," retorted Bill.

"Never mind un, Bill," said Bob sympathetically. "Ed's jealous because your hair's curly an' his'n ain't."

"Now, how about gettin' grub?" suggested Ed, when the laugh had subsided. They ain't nothin' t' kill an' we got t' haul grub in from th' bay. I'm thinkin' t' start down Friday, an' if one o' you wants t' go along, we'll both haul up a load on our flatsleds. How'd you like t' go, Bill? They's a moon, an' by travelin' some at night we'll make th' bay for th' New Year, goin' light, an' be back by th' first o' February, whatever, with our loads."

"I'd like wonderful well t' go!" answered Bill, elated at the prospect of a visit to the bay, brief as it would be.

"What you think of un?" asked Ed, addressing Dick and Bob jointly.

"We got t' have grub if we stays on th' trails," agreed Dick, "an they's no sign o' killin' any meat."

"Aye, we'll all have t' leave th' trails by the first o' March, whatever, unless some of us goes for grub," said Bob.

"Bill an' me bein' away'll stretch th' grub we has, for Bill be a wonderful eater——" Bill interjected a protest, but Ed, ignoring it, continued: "An' what we hauls back on th' flatsleds'll carry us over th' spring trappin'. We'll be startin' early on Friday. We'll go down your trail an' spring your traps up on th' way out, Bill."

A late breakfast of fried ptarmigans, and a late afternoon dinner of boiled goose, with an evenin' "snack" of ptarmigan before retiring—the last of the game reserve from the fall shooting—together with camp bread and tea, comprised the Christmas menu.

Directly after breakfast Ed and Bill made ready for packing on their toboggans the light outfit which they were to use on their outward trip, and this done, the four held a service of song in which all joined heartily, and spent the remainder of the day luxuriously lounging in the tilt and telling stories.

Shad was sincerely missed. He had looked forward keenly to the Christmas

His nose and cheeks were frost-bitten.

feast, and many hearty good wishes were expressed for him—that even among the Indians he might pass a pleasant day—that he would not find the hardships so great as his friends had feared—and that he would soon return to them in safety and none the worse for his experiences.

Then the thoughts turned to home, and speculations as to what the far-off loved ones were doing at the moment.

"I'm thinkin' a wonderful lot of home now," said Bob. "Tell mother and father, Ed, I'm safe an' thinkin' of un every day, an' of Emily, away off somewhere in St. Johns t' school. It's makin' me rare lonesome t' think o' home without Emily there. An'—an'—tell mother, Ed—I never forgets my prayers."

"That I will, lad!" promised Ed heartily. "An' what you wantin' me t' say t' Bessie, now? Tell she about th' Injun lass an' th' fine deerskin coat she's givin' you?"

"Tell Bessie I always carries th' ca'tridge bag she gives me—an' I'm thinkin' how 'tis she that makes un—an' I'll be glad t'—get home t' th' bay," directed Bob hesitatingly.

"Oh, aye. Glad t' get back t' see th' bay, I'm thinkin'," laughed Ed.

As Bob and Dick returned to the tilt an hour before daybreak, after watching Ed and Bill disappear down the trail in the still, bitter cold of the starlit morning, Bob remarked:

"I'm feelin' wonderful strange—I'm not knowin' how. 'Tis a lonesomeness—but different—like as if somethin' were goin' t' happen."

"An' I has th' same sort o' feelin'," confessed Dick. "'Tis like th' stillness before a big storm breaks at sea—'tis like as if some one was dyin' clost by."

CHAPTER XVIII.

The Spirit of Death Grows Bold.

When Ungava Bob was gone Shad Trowbridge returned to the deerskin lodge to think. Now that he was alone with the Indians, he was not at all sure that he did not regret his decision to remain with them and share their uncertain fortunes.

For a moment the thought occurred to him that he might even yet follow Bob's trail and overtake him in his night camp. But he thrust the impulse aside at once as unworthy consideration. He had come to his decision, and he was determined to remain and play the game to a finish.

He craved action and excitement, and the glamour of romance that surrounded the Indians and their nomadic life had attracted him. It was this, together with the human instinct to play at games of chance, and the primordial instinct slumbering in every strong man's breast to throw off restraint and, untrammeled, match his brains and strength against the forces of untamed nature, that had led Shad to adopt the red man's life for a period which he believed would not exceed three or four weeks at most.

In preparation for departure the following day, the Indians erected upon an elevated flat rock, which winds had swept bare of snow, a log shelter some five feet square and five feet high. After lining the bottom and sides of this shelter with spruce boughs, a quantity of jerked venison and dried fish was deposited in it, the top covered with boughs, and the roof, consisting of logs laid closely side by side and weighted with stones, was placed in position. This precaution was taken to protect the cache from marauding animals.

In the dim light of the cold December morning the deerskin covering of the wigwam was stripped from the poles, folded and packed upon the toboggans, together with the simple housekeeping equipment of the Indians, and a sufficient quantity of fresh bear's meat and jerked venison to sustain them for a fortnight.

Immediately the march was begun toward the Lake of Willows, Sishetakushin and Mookoomahn in turn taking the lead and breaking the trail, the others following, single file.

Day after day they pushed on and still on through scattered forests, across wide barrens and over frozen lakes, always on the alert for caribou, but always disappointed.

Once a small flock of ptarmigans was seen along the willow brush that lined a stream. Shad drew his shotgun from his toboggan, but the Indians would not permit him to use it, and in disgust he returned it to its place while he watched Sishetakushin and Mookoonmahn kill the birds with bows and arrows. He marveled at their skill. Indeed, he did not observe a single arrow go astray of its mark.

Eleven birds were secured in this way—the first game they had seen, and the last they were to see for several days.

A dead, awful cold settled upon the earth. The very atmosphere was frozen. Rime in shimmering, glittering particles hung suspended in space, and covered bushes, trees, and rocks—scintillating in the sunlight and seeming to intensify the cold.

The brief hours of sunshine were disregarded. The sun rose only to tantalize. For three or four hours each day it hung close to the horizon, then dropped again below the southwestern hills, and its rays gave out no warmth.

No sign of game was seen near the Lake of the Willows, and no halt was made. The life of the Indians depended upon the killing of caribou. The little cache of jerked venison and fish left near the Great lake would scarcely have sustained them a month. The few ptarmigans killed now and again were of small assistance. The food they hauled was nearly exhausted.

Then came a period of storm. For a week snow fell and gales blew with such terrific fury that no living thing could have existed in the open, and during this period a halt was unavoidable.

Once a day a small ration was doled out—pitifully small—enough to tantalize appetite, but not to still hunger. Shad was consumed with a craving for food. He could think of nothing but food. His days on the trails and in the tilts with the trappers were remembered as days of luxury and feasting. He wondered if Bob and the others had thought of him when they ate their Christmas dinner of geese and ptarmigans. "Oh, for one delicious meal of pork and camp bread. Oh, for one night of the luxurious warmth of the river tilt!"

When the storm abated sufficiently to permit them to continue their journey he moved his legs mechanically, even forgetting at last that the effort was painful. An insidious weakness what taking possession of him. It was an effort to draw his lightly-laden toboggan. It made him dizzy to swing an ax when he assisted Manikawan to cut wood for the fire. His knees gave way under him when he sat down.

Manikawan's plump cheeks were sunken. Her eyes were growing big and staring. Her mother had lost half her bulk, and Sishetakushin and Mookoomahn were also noticeably affected. They no longer laughed and seldom spoke.

As one performing a duty that must not under any circumstances or condition be neglected, Manikawan conscientiously looked after Shad's welfare, but still she treated him with the same degree of dignity and reserve, if not aloofness, that she had always maintained toward him. He realized that what she did for him she

FAMILY CIRCLE

ALICE BARLAND
EDITORIAL CONTRIBUTOR

Experience Letters

From Our Family Circle Women

Dear Mrs. Barland: It is now the time of year when many of us try our luck at raising lambs, so will tell how I manage with mine.

I make a trough on legs the right height for the lambs and bore as many holes in the bottom as I have lambs. I take spools from common sewing thread and cut away the bulge from one end and drive them into the holes and fit the nipples over the other end and I have an excellent feeder. This does away with the bother of bottles.

MRS. D. H. JONES.

Dear Mrs. Barland: I have been a reader of the Family Circle for three years and am asking the sisters for some good breakfast dishes, especially different kinds of toasts, as we do not care for muffins or griddle cakes. We live on a farm and I have one dear little girl.

Idaho. A YOUNG WIFE.

My Dear Young Sister: Allow me to suggest a few good breakfast dishes. I am aware that on the farm where a good deal of work is done before breakfast the first meal should be nourishing.

Poached eggs on toast: Make the toast by putting a little fat, or butter if you can afford it, in a frying pan, get it hot, but don't burn it, put in your slices of bread, keep the pan hot and turn quickly and lift your eggs from the water and put one on each slice with a dash of salt over it. Make corn meal mush the day before and make it thicker than you would for mush and milk. Pack it into a dish the right shape so the mush will cut into nice slices and fry crisp and brown for breakfast. Nearly all the cereal foods are good fried, too.

Baked apples are fine for breakfast and with fried potatoes, scrambled eggs, and with bread, butter, coffee and doughnuts, any family should be well fortified till the noon hour. A. W. B.

Dear Mrs. Barland: I wonder if many mothers are like myself in regard to child training. I don't believe any one can formulate a set of rules whereby a mother can train her children. Every mother must solve her own problems and the more children, the more problems.

I have four children and find that what works with one doesn't with another. For example, a slight slap on the mouth, as suggested by one mother in a recent letter, would result in one child saying, "Aw, that didn't hurt," and another would pout for hours over any corporal punishment. I do not believe mine are worse or better than the average. Please do not think I am criticizing that suggestion, for it works all right with my one girlie. I only say there can not be any set rule for all children.

I think it is a good plan, when children "fuss" among themselves, to set each one to doing something apart from the others or even have them sit still with a book or without it for a while.

I think each child should be taught to help with the work about the house and I insist upon the work being done properly. We know the result when a child is allowed to grow up with the idea that a task may be performed "any old way." But we shouldn't get the fault-finding habit.

I greatly enjoy the home department and nearly always get some help from it.

MRS. "X. Y. Z."

Bedbugs are a disagreeable kind of thing and a Washington sister has sent in a new remedy, which she claims will do the work. Here it is: "Get 10 or 20 cents' worth of hard lump alum and measure one-half cup and dissolve it in a quart of hot water and when the lumps are all gone put the liquid in a machine oil can and use freely in all places where the bugs are supposed to be. This will kill the nits, too. I have used this many times and it never failed. MRS. M. M'C."

Here is another one which would be especially good to use where there were cracks in the wall and places hard to apply the alum water:

Dear Mrs. Barland: I am an interested reader of the Circle page and think my cure for bedbugs may be of benefit to some one. It is a certain cure and less trouble and less offensive than coal oil or turpentine.

Remove from the rooms all good clothing, silver articles or gilt picture frames. (And don't forget to remove any pets, cats, dogs or canary birds.) Close tightly all windows and stuff the cracks. On the floor of the rooms place a pan filled with earth and on that place another old pan containing about two pounds of common sulphur; light each sulphur pot and keep burning for two hours. Open all the doors and windows and let out the fumes and you will find all the bugs are killed. If bedsteads are taken apart and bedding spread over chairs the fumes can better penetrate. This method will also kill all disease germs in a house. MRS. A. F. G.

As spring approaches ants will appear. Below are several ways to be rid of them:

Take one-half teaspoon each of tartar emetic and same of sugar with a few drops of water and place in dishes in places infested by ants. In 24 hours all ants will be gone. For the small red ant mix a little fresh butter with the above mixture.

Mrs. C. M. P. of Bellingham, Wash., says draw a chalk mark wherever the ants run and you will be rid of them. It seems too simple to be true, but she says she had perfect success getting rid of them this way, much to her surprise.

Dear Mrs. Barland: I have been a reader of THE FARMER for a long time and get many helps from the Circle letters.

I am a girl of 17 and last summer and fall I did all the housework as mother was sick and had to stay in bed. I had to care for her and I did the washing, ironing and the cooking and enjoyed it very much. I think housekeeping a pleasure.

I canned 320 quarts of fruit and 3 quarts of jelly. A FARMERETTE.

(This young housekeeper sends a recipe for what she calls rabbit ears which sounds very good. It will appear in order in the recipe column where all the recipes will be found in the future, so you can find them easier and can clip them out with less confusion.—A. W. B.)

Your Health

By Royal S. Copeland, M. D., F. A. C. S.

FIRST AID FOR ULCERATED TOOTH.

Did you ever have an ulcerated tooth? If you did, you know the agony it caused. But do you know how it "happened" and what to do if another abscess forms?

Dr. Copeland.

After the neglect of proper cleansing of the teeth the acid-forming germs of the mouth attack the sugar and starches clinging to the teeth. The acid thus generated cuts the enamel. When this is once perforated, the softer interior structures of the tooth are speedily destroyed. Pretty soon the pulpy center of the tooth becomes a decaying mass. Next, the infection passes through the root-canal into the jaw bone. Now we have an abscess, commonly called an "ulceration."

This is the history of an ulcerated tooth. Mastoid disease does not come suddenly and primarily to plague the victim. It can be traced back to a simple cold in the nose. The condition caused by the cold rapidly grew worse, and gradually spread up the canal to the middle ear. Pus formed here, and after a while the pus germs resulted in an abscess.

In just the same way the remote bony tissues around the root of a tooth are reached by the tireless and relentless pus germs. An ulcerated tooth is not a primary trouble, remember. Like the mastoid attack, it goes away back to a simple and apparently harmless first cause.

Sometimes these root abscesses remain as blind pockets of pus. Beyond the discomfort suffered by the patient they cause no symptoms. Except by the aid of the X-ray they give no visible evidence of their existence.

In other cases there appears a swelling at the root of the affected tooth, and an enormous swelling of the cheek and face. The eye may be closed, and, all in all, the patient may "look" a sight."

As in every other abscess, the object of the treatment is to drain off the pus. To have this done you must, of course, consult your dentist.

Somehow or other, toothache and ulceration seem never to appear when the dental office is open. Something must be done till the dentist can be reached.

Hot fomentations should never be applied to the outside of the face. The danger is that the tissues may be softened and the pus "drawn" to the skin surface. This is unfortunate, because it results in an unsightly, depressed scar. Hot water may be held in the mouth, or rolls of gauze may be dipped in hot water and placed against the tooth, inside the cheek.

"Counter irritation" sometimes helps. That is, a mildly irritating drug directly applied may draw the blood to the surface, and thus relieve the pressure. Here is a mixture—which you can have your druggist prepare—commonly used for the purpose:

Tincture of iodine and of capsicum, of each three drachms. Tincture of aconite, two drachms.

Let it be remembered that this mixture is poisonous in large quantities, and must be used sparingly.

Now to apply it. Roll cotton about a match or a toothpick and dip it in the liquid. Then rub the medicine into the tissues at the root of the trouble, both directly on the gum about the tooth, and on the outside of your cheek, close to the roots of the troublesome tooth.

Should you be successful in relieving the pain and reducing the swelling, do not flatter yourself the trouble is at an end.

The cause is still there. You must have the care of the dentist. Otherwise you will never be free from the dangers of pus absorption with all its evil effects upon your general health.

Home Recipes

Molasses cookies: One cup of sugar, lard, molasses and water, three eggs, one tablespoon of soda dissolved in a little of the water, mix as soft as you can roll out with flour. This makes about four dozen cookies. MRS. C. F. L.

Washington.

Popcorn balls: Popcorn with butter or not as desired. The best way is to put butter or lard into a kettle and pop the corn. To make balls, put a cup of sugar on the stove after wetting thoroughly with one-fourth cup of water, boil till it ropes, then pour over the corn, which should be separated from the hard kernels which didn't pop. Butter your hands and quickly press the corn into balls. Take care not to burn your hands with the hot sirup. Before pressing the corn into balls shake the pan and the corn will begin to stick together while it is cooling.

ALICE W. BARLAND.

To harden a soft wood floor: Clean and dry thoroughly, then oil with boiled linseed oil applied hot, as it penetrates better hot. Put on with a brush as much as the wood will absorb and wipe up with a cloth what doesn't absorb. It is well to keep the oil on hand and apply to spots where there is the most wear.

This is a good substitute for paint, is easily cleaned and dries very quickly. In time and on several applications it will turn the floor darker and will make it last much longer. MRS. M. N.

La Center, Wash.

Applesauce cake: One and one-half cups of applesauce, one cup of sugar, two cups of flour, one cup of seeded raisins, one-half cup of shortening, one tablespoon of hot water, two level teaspoons of soda, one teaspoon each of cinnamon and cloves. Cream the shortening and sugar, add applesauce, dissolve soda in the hot water and add the flour, into which put the spices and sift. Add raisins, rolled in one-half cup of flour, the last thing.

Idaho. MRS. E. B. WENDELL.

(There is no mention of either eggs or baking powder in this cake, but perhaps it is all right.—A. W. B.)

Sour cream cake: One cup of brown sugar, one cup of sour cream, two beaten eggs, one and one-half cups, scant, of sifted flour, one level teaspoon of soda, one level teaspoon of baking powder, sifted with the flour, one level teapsoon of cinnamon, one-half teaspoon of salt, one and one-half squares of unsweetened chocolate. Icing for above: One cup of powdered sugar, two tablespoons of hot coffee, butter size of a walnut, one teaspoon of vanilla, one and one-half teaspoons of cinnamon, two tablespoons of cocoa. This makes two nice layers or if baked in a long dripping pan will cut into very nice squares. MRS. G. F. T.

Meat pie: One large cup of cold cooked beef chopped, one-fourth cup of fat meat chopped, two cups of chopped apples, one-half cup of raisins, one-half cup of currants, one teaspoon of salt, one cup of sugar, one-half teaspoon each of cloves and cinnamon, one cup of water and cider vinegar mixed. MRS. G. H.

(I think this must be meant to be used as mince meat.—A. W. B.)

Sour cream cookies: Two cups of sugar, one cup of lard, one cup of sour cream, two eggs, one teaspoon of soda, stirred into the cream, one teaspoon of salt and one teaspoon of vanilla and flour enough to make a soft dough, roll thin. Bake in a quick oven. MRS. C. C. CAPPS.

Bellingham, Wash.

DISCOVERS NEW WAY TO KEEP KITCHENS COOL ALL SUMMER.

An amazing discovery is claimed to have been made by Mrs. B. B. Oliver of St. Louis. This discovery is a new kind of heat that dispenses entirely with coal and wood. It burns 95 per cent air and 5 per cent kerosene. The device is installed in one minute in any cook stove, heater or range. This new invention is already sweeping over the country like wild fire. It eliminates hours of work, perspiration and drudgery for the housewife in sweltering summer kitchens. Just turn a valve and you have plenty of heat for cooking or baking. Another turn and the heat is off.

It fits any stove without change of parts—simply sets in the firebox. It is absolutely safe and generates its own gas from kerosene. Mr. Oliver will send an attractive booklet to any one interested who writes for it. Just address him at 2121-E Pine St., St. Louis. He is making a special low introductory offer including a thirty-day free trial plan. He is looking for good live local distributors. He will tell you how you can earn $500 a month easily. Request his sales plan.—Adv.

Bits of Fun for Everyone

Feebly Rooted.

"Which weeds are the easiest to kill?" asked young Flickers of Farmer Sassafrass, as he watched that good man at his work.

"Widow's weeds," replied the farmer. "You have only to say 'Wilt thou?' and they wilt."—Weekly Telegraph (London).

Running Wild.

"What has become of the tin locomotive and train of cars I gave you on your birthday?"

"All smashed up," replied the small boy. "We've been playing government ownership."—Washington Star.

The Fair Chauffeur.

"How are you coming on with your driving, Lucile?"

"Oh, splendidly," replied the fair owner with a blush. "I can blow the horn and fill the radiator. Harry says I'm a wonder for two lessons."—Country Gentleman.

Of Course.

"Who's dead?" asked the stranger, viewing the elaborate funeral procession.

"It's the mayor," was the reply.

"So the mayor's dead, is he?" mused the stranger.

"Well, I guess," said the small boy, witheringly, "D'you think he's having a rehearsal?"—Union Pacific Magazine.

The Natural Position.

Photographer (taking a picture of a man and his son): "Young man, it would look better if you would put your hand on your father's shoulder."

Father: "I beg your pardon, sir; it would be more natural if he put his hand in my pocket."—Successful Farming.

And Then He Heaved a Sigh.

"I found a letter in a woman's handwriting in your pocket this morning," she began angrily.

"But what—where—why—I didn't know—did you open it?" he asked in confusion.

"I did not. It was the one I gave you to mail yesterday."—Exchange.

Took Too Much for Granted.

The minister was delivering his farewell sermon. He had been having tough luck in collecting his salary and concluded to quit. Here is what he said: "Now, brethren, I have been appointed chaplain of the penitentiary of the state, and this will be my last Sunday among you. I will preach from the text, 'I go to prepare a place for you,' after which the choir will sing, 'Meet Me There.'"—Kiowa (Kan.) Review.

These Decadent Days.

"It used to be," grumbled old Riley Rezdidew of Petunia, "that when I got hit and knocked down on a crossing it was by somebody's span of spankin' bays; a team to be proud to drive. But now, gashblitter it, every little while I get spanked over into the mud by a confounded, pusillanimous, second-hand hootin' Nanny car that I wouldn't let 'em ketch me dead drivin' !"—Country Gentleman.

The Argonauting Ache.

One night I went to bed in Maine.
In half an hour I felt a pain
In Massachusetts, so it seemed
And 'twasn't merely that I dreamed.
I tried to soothe the sore spot, but
It soon was in Connecticut.
And though it stabbed me like a fork
The pain was next down in New York.
When morning dawned at last I lay
And ached in Pennsylvania.
I said I went to bed in Maine
'Twas in a Pullman on the train.
—Country Gentleman.

The Gaunt Gray Wolf

(Continued from page sixteen.)

did because he was the friend of her beloved White Brother of the Snow, and not for his own sake—as a dog will guard the thing which its master directs it to guard, faithfully and untiringly, for the master's sake, but with no other attachment for the thing itself.

He wondered why they did not return to their cache on the Great lake after the long storm, and then it occurred to him that probably their destination was the trading post at Ungava, of which Bob had told him.

On the afternoon of the second day after the storm they came upon a single wigwam. Sishetakushin and Mookoomahn looked into it and passed on. Shad raised the flap, and peering in saw the emaciated figure of an old Indian. He was quite stark and dead, his wide-open eyes staring vacantly into space. He has been abandoned to die.

That evening Shad stumbled over an object in the snow. He stooped to examine it in the starlight, and was horrified to discover the dead body of a woman

The following morning, as they plodded wearily forward under the faint light of the stars, they suddenly upon a group of wigwams. Men, women and children came out to meet them—an emaciated, starved, unkempt horde that had more the appearance of ghouls and skeletons than human beings. Some of them tottered as they walked, some fell in the snow and with difficulty regained their feet.

"Atuk! Atuk! Have you found the atuk?" was the cry from all—a hopeless cry of desperation, as they crowded around the travelers.

"We have not found the atuk," answered Sishetakushin.

Some heard him stoically, others staggered hopelessly away to their wigwams, others wailed:

"The Great Spirit of the Sky is angry. He has sent all the spirits to destroy us. The Spirit of Hunger—the Gaunt Gray Wolf—is at our back. The raven, the Black Spirit of Death, is ready to attack us. The Spirit of the Tempest torments us. The Spirits of the Forest and of the Barrens mock us. The Great Spirit of the Sky has driven away the atuk, and our people are starving. Many of our people are dead. Four of our hunters now lie dead in their lodges."

Shad Trowbridge could not understand what was said, but he could not fail to understand the situation.

For some inexplicable reason the caribou, upon which the Indians depended for food, had disappeared from the land. All living things save these starving wretches had vanished.

For 24 hours not a mouthful of food had passed Shad's own lips, and a sickening dread engulfed his soul.

(To be continued.)

Latest High Class Patterns for the Home

Please order the patterns you desire at least two or three weeks before you wish to use them. Desiring to obtain the latest high-class patterns for its readers, THE FARMER has made arrangements to have them sent direct from the east, and under present mailing conditions it takes about that time for them to reach you.

3784. Misses' dress. Cut in three sizes: 16, 18 and 20 years. An 18-year size requires 5 7-8 yards of 40-inch material. The width of the skirt at the foot is about two yards. Price 10 cents.

4000. Girl's dress. Cut in four sizes: 8, 10, 12 and 14 years. A 12-year size requires 3 1-2 yards of 36-inch material. Price 10 cents.

3840-3823. Ladies' costume. The blouse 3840, cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It will require 3 3-8 yards of 40-inch material for a medium size. The skirt 3823, is cut in seven sizes: 26, 28, 30, 32, 34, 36 and 38 inches waist measure. It will require 2 3-4 yards of 44-inch material for a medium size. Two separate patterns, 10 cents for each pattern.

3978-3993-3986. Ladies' costume. Blouse 3978, cut in six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 2 3-8 yards of 36-inch material. The cape 3993, cut in four sizes: 14 and 16 years for misses', and medium (38-40), large (42-44) bust for ladies. Skirt 3986, cut in six sizes: 25, 27, 29, 31, 33 and 35 inches waist measure. Cape and skirt will require six yards of 40-inch material for a medium size. The width of skirt at the foot with plaits extended is about two yards. Three separate patterns, 10 cents for each pattern.

3990. Ladies' negligee. Cut in four sizes: Small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. The width at the foot is 2 1-2 yards. A medium size requires 5 1-8 yards of 36-inch material. If flounce is made of embroidery 2 1-2 yards 18 inches wide will be required. Price 10 cents.

3456. Ladies' work dress or apron. Cut in four sizes: Small, 32-34; medium, 36-38; large, 40-42, and extra large, 44-46 inches bust measure. A 38-inch size will require 4 1-4 yards of 36-inch material. Price 10 cents.

3738. Ladies' apron. Cut in four sizes: small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size will require 2 7-8 yards of 36-inch material. Price 10 cents.

3628. Girl's dress. Cut in four sizes: 6, 8, 10 and 12 years. A 10-year size requires 4 3-4 yards of 27-inch material with bolero; without bolero 3 1-2 yards will be required. Price 10 cents.

3704. Girl's under garment. Cut in six sizes: 4, 6, 8, 10, 12 and 14 years. A 10-year size requires 2 1-2 yards of 36-inch material. Price 10 cents.

3531. A practical child's set. Cut in four sizes: 6 months, 1, 2 and 3 years. A 2-year size will require two yards of 36-inch material for the dress, 7-8 yard for the sack and 1-2 yard for the bonnet, for which 1-4 yard of lining is also required. Price 10 cents.

3982. Boy's "overalls." Cut in four sizes: 2, 3, 4 and 5 years. A 4-year size requires 2 1-8 yards of 27-inch material. Price 10 cents.

2450. Sun bonnets for ladies and girls. Pattern including both styles is cut in one size: Medium for ladies, and girls. It requires for No. 1, 1 1-2 yards; for No. 2, 1 3-4 yards of 32-inch material. Price 10 cents.

Catalogue Notice.

Send 12 cents in silver or stamps for our up-to-date spring and summer, 1922, catalogue, showing color plates and containing 500 designs of ladies', misses' and children's patterns, a concise and comprehensive article on dressmaking, also some points for the needle (illustrating 30 of the various, simple stitches), all valuable hints to the home dressmaker.

Just Folks

There is a difference between doing little things in a perfect way and doing little things in a big way.

Doing little things in a big way leads to big things.

Doing little things in a perfect way leads to fine workmanship which is directed and controlled by another and to another's ultimate profit.

I was talking with an employee in a responsible position with a big business concern a day or two ago. He has been in this position for more than a score of years. "I am in love with my work," he said. "My employer is an incident to me. I may or I may not agree with him always. I may or I may not judge him rightly. But that is neither here nor there. My work is my life. To do it daily, accurately, faithfully and with a high sense of pride, is the height of satisfaction."

In these days of talk about so-called labor and capital, employers and employees, bosses and men, it seemed to me I was in another world as I listened to this man's earnest, sincere and enthusiastic devotion to his work—a devotion that led him to regard his employer as an incident in his life.

There are certain recognized units in life. There is the unit of the individual and there is the unit of the family. There is the unit of the clan and of the nation. There is the unit of the race.

In the terms of centuries and ages some of these units may coalesce. In the terms of the individual and of the family, they do not coalesce.

Families may cooperate and by mutual consideration may approach satisfactory life, but they can never be truly united. There is no agitator that can make miscible two or more family units. Even in its form as an institution the harem is oriental, not occidental. Amid all his devious ways, the American has found it advisable to separate his alleged wives in different houses and different towns. Even the outlaw family unit refuses to have its unity outraged.

Even in lawful ways and under open conditions family units have found it difficult, though by no means impossible, to live under the same roof.

The family is a unit and must remain a unit to fulfill its purpose. Broken units of other families may enter and become a part of the household, but as units they can not be joined in peace.

Verna Rowell writes that she has many pets. Here they are: A guinea pig, nine rabbits, some banties, two cats and two calves. May 24, 1921, Verna was 11 years old. (When you are 12 you will be a graduate, Verna. We like to have graduates write about club work, school work, interesting journeys or short stories.) Verna expected to visit her grandma the day she wrote to us. Her grandma broke her arm and Verna's mamma was staying with her. Verna lives near the Columbia river, in northeastern Washington.

Archie Hausen is going to have a Grandmother Magpie scrapbook. He already has the cover. Now he is going to save the Magpie page from every Junior Farmer. (Yes, Archie, the best pioneer stories get prizes. The stories must be true ones and the characters must be northwestern pioneers.) Archie is a western Washington boy. He lives in King county. October 29 is his birthday.

Here are some of the books that Hazel Heiman says she has read: "Tale of the Sand Hills," "In the Child's World," "Edith's Burglar" and "Daddy Longlegs." Hazel likes short stories, too. She was 9 December 7, 1921. Her home is in southern Lewis county, Washington. She has good times at school.

Edith Aylward's school is out already. On the last day they packed their lunches in a basket and were going outside for a good time, but it snowed. Then they ate in the schoolhouse. This is what they had: Sandwiches, pie, cake, salad, pickled eggs and tea. After lunch they played games and had a good time. Then they went home. Edith lives west of the Grand coulee in Douglas county, Washington. She will be 10 May 4, 1922.

Helen Flork, 10 years old August 18, 1921, has a little black puppy and two cats for pets. She also has three little pigs and some bantam chickens. She says, "I have brown hair, brown eyes and freckles." Helen is a western Washington girl and lives in Pierce county. She doesn't think her lessons at school are hard.

"I ride my pony to school during nice weather," writes our cousin, Lucille Jackson. Lucille lives in eastern Lincoln county, Washington, on an 800-acre farm. She says they have 25 horses and two cows. Lucille's birthday is December 30. She is 9 years old.

Hulda Schmauder, whose home is east of Moses lake, in eastern Washington, writes about the high water last winter when the coulees overflowed. The water came to within 12 feet of their barn. Hulda says, "We had a tin trough which we used for a boat. My brother, Willie, and I put it in the water and both got in. We had fun." April 25 Hulda's school closes.

Here is what Muriel Daugherty, our 6-year-old cousin in southern Washington, writes: "I have a new little cousin. Sister and I are going to color some Easter eggs." Muriel's birthday is January 1.

Clara Breitmein, 8 years old, has never written to us before. She is in the second grade at school and Miss Hafterson is her teacher. Aunt Nellie is glad to hear from Clara, who is a central Washington girl.

Lawrence Chenoweth is an eastern Washington boy and lives near Eloika lake, in Spokane county. This summer he expects to have a fine garden. He has selected carrots, onions and tomato seeds from a good seed catalogue for his garden. He says all winter he enjoyed the coasting, but now he is anxious for spring to come. October 14, 1921, he was 11 years old. Robert, Frank and Philip are his brothers.

Viola Spangenberg, who lives near the Columbia river in northeastern Washington, goes three miles to school. Part of the time she rides her pony, but when it is real cold she walks. Viola writes about her pets. She has a cat, a kitten and a dog named Rover. Her cat's name is Rainbow and she calls the kitten Mike. January 27, 1922, Viola was 9. She says she likes country life better than living in the city.

Bertha B. Brown thanks Aunt Nellie for The Junior Farmer. Bertha's home is in Okanogan county, Wash. She says her pony is brown and white.

At school where Edna Yochum goes there are nine pupils. Edna has another sister who will go to school as soon as the weather gets nice. Edna wonders how many of the cousins crochet. She was making herself a yoke. She had it nearly finished when she wrote. Here is a riddle: As I was going through whealie whirlie whick-a-whack I met Bum Backum. I told Tom Tackum to run Bum Backum out of whealie whirlie whick-a-whack. What is it? Whealie whirlie whick-a-whack was a wheat field; Bum Backum was a pig and Tom Tackum was the dog. (I told the dog to run the pig out of the wheat field.)

Maude Stoney writes about the good time she had skating last winter. She has taken part of her final examinations and passed. In spelling she got 99 per cent; history, 96, and in physiology, 87. She is a western Washington cousin. Her home is in Skagit county.

"I am 11 years old; my birthday is April 14," says Evelyn Glenn, whose home is in the Palouse country, in southeastern Washington. "I have dark hair and dark eyes." Evelyn is a sixth grade pupil. She has two sisters and two brothers.

A dog named Rover and a cat named Buster are Agnes Hassel's pets. She also has a chicken she calls Fluff. She is going to have a puppy, too, as soon as it gets big enough to take away from its mother. Agnes is taking cooking lessons at school. She lives near Puget sound, in Pierce county, Washington. Here are some jokes she has contributed: If a man is a pa, is a pan-a-ma? "I haven't been able to sleep for days." "What do you do for that?" "I sleep nights." How can you get rid of hay fever in the summer? Die in the winter. What is the best thing out? An aching tooth.

Fern Daugherty's mother has made Fern a new dress. It is blue and white checked, with white ruffles. Fern's home is in Yakima valley, Washington. When she wrote to us she was having a vacation.

"I am a little girl 7 years old; my birthday is November 9," writes our little cousin, Bella Harvey. Bella lives near the Canadian border line in Okanogan county, Washington. She says her sister, Pearl, milks nine cows. Sister has a cow of her own. Bella has a kitten named Tiger Lily.

Birthday Greetings

THURSDAY, May 18—Nedra Bacon, 9 years old; Margaret Olive Ewing, 11; Ruby Streeter, 11.

FRIDAY, May 19—Emily Elizabeth Dowell, 11 years old; Naomi Fleager, 10; Gladys Nessly, 11; Clohe Hancock, 10.

SATURDAY, May 20—Culvert P. Baker, 11 years old; Esther Boos, 9; Grace Forbes, 10; Mary Krasselt, 11; Frances Lathen, 11; Thelma Martin, 9; Elizabeth Porter, 8; Mabel Habberstadt, 11.

SUNDAY, May 21—Elizabeth Nyberg, 11 years old; Ada Shockley, 11.

TUESDAY, May 23—Mellie Campbell, 11 years old; Jack Litt, 8.

WEDNESDAY, May 24—Virginia Carviere, 10 years old; Freda Draper, 11; Winifred Mast, 10; Evelyn Norbeck, 11; Helena Wilma Peters, 11; Kathleen Stuhr, 10; Victoria Penhallick, 11.

BEDTIME STORIES

By THORNTON W. BURGESS.

Copyright, 1919, T. W. B.

LONGLEGS AND WHITETAIL QUARREL.

You see, Longlegs the Blue Heron had patiently stood on one foot all the long morning waiting for Grandfather Frog to go to sleep on his big green lily pad. He had meant to have Grandfather for his breakfast and lunch, for he had had no breakfast, and it was now lunch time. He was so hungry that it seemed to him that the sides of his stomach certainly would

"You robber! You thief!" he screamed harshly at old Whitetail.

fall in because there was nothing to hold them up. But Longlegs has patience, a very great deal of patience, and so he had stood, and stood, and stood, and stood, all the time on one foot.

Then without any warning at all old Whitetail the Marsh Hawk had glided out across the Smiling Pool with his great claws stretched out to clutch Grandfather Frog. With a slap of his tail on the water Jerry Muskrat had warned Grandfather Frog, who had dived into the Smiling Pool with a great splash just in the very nick of time.

Now, is there anything in the world so hard on the temper as to lose a good meal when you are very, very hungry? Of course, Longlegs didn't really have that good meal, but he had thought that he was surely going to have it. So when Grandfather Frog splashed into the Smiling Pool of course Longlegs lost his temper altogether. His yellow eyes seemed to grow even more yellow.

"You robber! You thief!" he screamed harshly at old Whitetail.

Now, old Whitetail was just as hungry as Longlegs, and he had come even nearer to catching Grandfather Frog. He is even quicker tempered than Longlegs. He had whirled like a flash on Jerry Muskrat, but Jerry had laughed in the most provoking manner and ducked under water. This had made old Whitetail angrier than ever, and then to be called bad names—robber and thief! It was more than any self-respecting Hawk could stand. Yes, sir, it certainly was! He fairly shook with rage as he turned in the air once more and made straight for Longlegs the Blue Heron.

"I'm no more robber and thief than you are!" he shrieked.

"You frightened away my frog!" screamed Longlegs.

"I didn't."

"You did."

"I didn't! It wasn't your frog, it was mine!"

"Chugarum!" said Grandfather Frog to Jerry Muskrat as they peeped out from under some lily pads. "I didn't know I belonged to anybody. I really didn't. Did you?"

"No," replied Jerry, his eyes sparkling with excitement as he watched Longlegs and Whitetail, "it's news to me."

"You're too lazy to hunt like honest people!" taunted old Whitetail, as he wheeled around Longlegs, watching for a chance to strike with his great, cruel claws.

"I'm too honest to take the food out of other people's mouths!" retorted Longlegs, dancing around so as always to face Whitetail, one of his great, broad wings held in front of him like a shield, and his long, strong yellow bill ready to strike.

Every feather on Whitetail's head was standing erect with rage, and he looked very fierce and terrible. At last he saw a chance, or thought he did, and shot down. But all he got was a feather from that great wing which Longlegs kept in front of him, and before he could get away that long, yellow bill had struck him twice so that he screamed with pain. So they fought and fought till the ground was covered with feathers, and they were too tired to fight any longer. Then slowly and painfully old Whitetail flew away over the Green Meadows, and with torn and ragged wings Longlegs flew heavily down the Laughing Brook toward the Big River, and both were sore and stiff, and still hungry.

"Dear me! Dear me! What a terrible thing and how useless anger is," said Grandfather Frog, as he climbed back on his big green lily pad in the warm sunshine.

LETTERS WELCOMED BY AUNT NELLIE.

Among recent letters received by Aunt Nellie are those from cousins whose names follow. A few of these will be published each week in the regular edition of THE FARMER, and others will appear from time to time in The Junior Farmer:

Josephine Suchanek, Clara Baskette, Kenneth Sieveke, Ethel Stiltner, Hilda Stark, Doris Groff, Audrey L. Miller, Sylvia Goosic, William Carl Sieveke, Doris Meyers, Elsie Stark, Helen Hoard, Pearl Long, Esther Simila, John A. Malone, Helen Wyene, John Norman Roe, Hilda Hageman, Myrtle Harper, Edith Mideke, Anna Blunck, Herbert Scheuerman, Frances Letford.

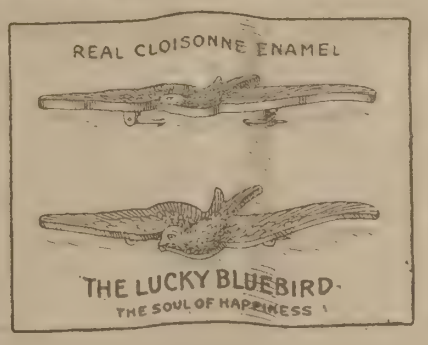
Marie Thornton, George Lanhart, Mary Aharn, Nellie Templer, Zella Johnson, Annie Thomson, Delia Anderson, Kathleen O'Meara, Winifred Alice, May Reynolds, Emma Miller, Harold Puffert, Ruth Nance, Goldie Peterson, Cecil E. Millhorn, Frances Greely, Clairinda Fagan, David LeRoy, Margaret Gustafson, Marjorie Dean, Fern Parvin, Joyce Louise Wise, Nettie Knox, Harold Marvin, Verna Alice and Verlle Grace Robbins, Phillis Patterson, Minnie Olds, La Vera Grout, Hannah Wells, Impie Wilson, Robert Osborn, Jewel Field, Dorothy Timm, Clara Bernice Smith, Ivan Schafer, Marie Tamley, Fern Stallcop.

THE AUTO-OILED AERMOTOR

A Real Self-Oiling Windmill

A year's supply of oil is sent with every Aermotor

Oil an Aermotor once a year and it is always oiled. Every moving part is completely and fully oiled. A constant stream of oil flows on every bearing. The shafts run in oil. The double gears run in oil in a tightly enclosed gear case. Friction and wear are practically eliminated.



Any windmill which does not have the gears running in oil is only half oiled. A modern windmill, like a modern automobile, must have its gears enclosed and run in oil. Dry gears, exposed to dust, wear rapidly. Dry bearings and dry gears cause friction and loss of power. The Aermotor pumps in the lightest breeze because it is correctly designed and well oiled. To get everlasting windmill satisfaction, buy the Aermotor.

Aermotor Towers are Towers of Strength

High Points in News of the Week

After a short rest following the resignation of Senator Kenyon as chairman the farm bloc in the United States senate has again become active. Senator Capper of Kansas is acting as chairman at the present time.

The latest undertaking of the farm bloc is to harmonize all pending legislation having to do with farm credits. There are now several measures before congress providing for various features in improved farm credits under governmental supervision and assistance. The farm bloc hopes to be able to combine the good features of all of these measures into one bill on which congress could unite solidly for better credit to the farmers.

The tendency is to use the existing farm land bank system and extend its powers. These 12 regional banks now make loans on land only, but the proposed legislation would permit loans on the basis of grain, cotton and live stock and other farm products. The government would start the ball rolling with an advance of $100,000,000, though some estimates run as high as $500,000,000, and then the government would float farm bonds as a basis of credit and thus obtain from small investors throughout the country the money to finance the crops of the nation.

Under the present system, the farmer borrows on a 90-day basis from the banks and must dispose of his crops quickly to get money to pay his notes. He dumps his wares on the market and this depreciates the prices.

Meanwhile the speculators and elevator owners who take the farmers' product hold the same for higher prices, thus making the price to the consumer higher. The farmer wants that margin for himself and believes he should be given credit on parity with the speculator or elevator owner who gets it from the city banks.

As Senator Capper expressed it, the present banking system was devised to furnish credit for the manufacturer and merchant who has a quick turnover. For that purpose 90-day credits are sufficient, but for the farmer and cattle raiser a longer period is necessary, for he doesn't turn over his crops as quickly.

* * *

The feature of last week's bond operations was the sensational manner in which $117,000,000 of federal farm loan bonds was absorbed. These bonds pay interest at the rate of 4½ per cent per annum and run 20 years, although they are redeemable after 10 years. The first announcement of the week pertained to $75,000,000 of these bonds and they were readily taken up. Land bank bonds are exempt from all taxation. D. G. O'Shea, president, estimates that the Spokane bank by the end of the year will have $70,000,000 in bonds outstanding, including its share of the bonds now being sold as above. The Spokane bank serves all four northwestern states.

* * *

At this writing it appears likely that the conference at Genoa will adjourn early and meet again within a few weeks, probably on June 15 at The Hague.

* * *

Governor Cooper of South Carolina has been appointed by President Harding and confirmed by the senate as a member of the federal farm loan board to take the place left vacant by the resignation of Asbury F. Lever.

* * *

A press dispatch from Minneapolis last week announced that the national nonpartisan league executive committee had accepted the resignation of A. C. Townley, president of the league. The dispatch said that Mr. Townley had offered his resignation at the recent state convention of the league in North Dakota and Minnesota.

* * *

More than 150 labor leaders have been arrested in Chicago charged with having had part in a series of bombings in that city, one of which resulted in the death of a member of the police force.

Farm Business and Markets Outlook

(Continued from page five.)

The five-year average on May 1 is 3,077,000 cases. The season of heavy production this year started about two weeks later than last spring and therefore may continue later in to the summer than it did a year ago. If it does, a new record in cold storage holdings when the season's high point is reached will not be surprising. Present prices largely discount such a possibility, however, and no decline of any consequence is probable. The eggs produced at this season are counted as the best of the year for storage and demand for this purpose is so active that a slight advance has occurred.

SPRING FLUSH BREAKS BUTTER

The butter market slumped early last week, due in part to convincing evidence that the spring flush period is at hand. Production is increasing rather steadily, receipts at the leading markets are becoming larger almost every week and the amount which must be withdrawn from cold storage in order to supply the trade is diminishing. In another week it is probable that the tide in storage operations will move in the other direction and the accumulating period will begin. Further readjustment in prices downward is not improbable in the next fortnight, but the decline should not be more than 2 or 3 cents.

Cold storage holdings on May 1 were only 3,634,000 pounds, the smallest on that date since 1917. The five-year average is 7,613,000 pounds.

Prices on 92-score fresh butter on May 10 were:

Chicago, 35c; New York, 38c; Boston, 37 1-2c; Philadelphia, 39 1-2c; San Francisco exchange quotation, 37c.

SLIGHT RECOVERY IN CHEESE

The decline in cheese prices was running slightly ahead of the seasonal increase in production and a small upward reaction occurred last week.

FRUITS AND VEGETABLES.

Potato prices advanced sharply for several days last week, but reacted toward the close. Shipments from producing sections each week continue to run considerably ahead of any recent year, although they are not so large as a few weeks ago. About 1000 cars of new potatoes are coming forward each week, compared with an average of about 400 cars at the corresponding time during the three preceding years. Northern sacked round whites in the Chicago carlot market are quoted at $1.50 to $1.70 and Rurals are bringing $1.70

LATEST QUOTATIONS.

The Live Stock Market.

PORTLAND, May 13.—Cattle—Choice steers, $8.50@8.75; good to medium steers, $7.50@8.25; fair to medium steers, 6.75@7.75; common to fair steers, $6.25@6.75; choice feeders $5@6; fair to good feeders, $4.50@5; choice cows and heifers, $6.50@7; medium to good cows and heifers, $5.50@6.50; fair to medium cows and heifers, $4.75@5.50; common cows, $3.75@4.75; canners, $2.25@3.75; bulls, $3.50@5; choice dairy calves, $9@10; prime light calves, $8@9; medium light calves, $7@8; heavy calves, $4.50@7.

Fresh ranch eggs—$6.50 case; no storage; pullet eggs, $6.

Butterfat—34c a pound.

Stump Becomes Own Furnace

(Continued from page three.)

will run into the fire and put it out. Gravelly soil is very hard to bank and it is also hard to shovel. When any soil is dry or frozen deeply it can not be banked as successfully as when it works well and the burning should not be done during the driest parts of summer or in very cold weather, for the above reasons. Almost any kind of loam or clay soil has been found to work successfully during ordinary weather. The presence of sod will help in the banking process.

The new stump burner has much in its favor, since it has several points which are not found in the old charpit method. In the first place, it was difficult for any one not accustomed to the method to get the fire started and to keep it burning until sufficient heat was generated to consume the stump. The new method enables a man to do his work at odd times and to clear his land at a minimum cost. It also adds interest to the work and gets away from the usual backbreaking drudgery that is usually thought of in connection with stump land.

Wheat Goes Up; Then Goes Down

Wheat last Thursday took a sharp upward turn in Chicago to as high as 7 1-2 cents a bushel over the previous day on the basis of May delivery. The closing quotation for May delivery was $1.45 1-4. There was a decline Friday and Saturday, the closing offer for May wheat on Saturday being $1.43 to $1.43 1-2 per bushel.

Chimacum Holsteins

Sixty-two Animals Bring $13,620

In order to supply a demand for purebred foundation stock and to cut down the number in their herds, the Holstein breeders of Chimacum valley held a consignment sale of 62 animals at the Grays Harbor county fairgrounds at Elma May 6. A number of visitors came from the adjoining counties, but a greater part of the purchases were made by the local dairymen.

The sale brought a total of $13,620 for the 62 animals, an average of $219.67. This was considered a good figure, since 16 head out of the total were calves under 1 year. The top animal, C. K. K. S. V. Lady May, a 4-year-old, was bid off by C. H. Kampendonk of Chimacum for $510. She was an exceptional animal, who is in her seventh month of the 305-day test and is expected to make over 700 pounds of butter. She was consigned by William Bishop.

The consignment was made up of animals from most of the breeders of the Chimacum valley. The individuals were selected from each herd by the consignor, while a delegation of breeders of Grays Harbor county visited the herds and looked the animals over before the shipment was made.

A few days prior to the sale a representative from each bank in the county met and organized the Grays Harbor Purebred Cattle Loan association for the purpose of helping such breeders as were in need of finance. It was agreed that a five-year loan be allowed for two-thirds the value of the cattle purchased. The application for loans provide for an agreement by the purchaser that he join his breed association, test his animals regularly for tuberculosis as well as for butterfat and sell only such offspring as are passed on by a committee of breeders and the county agricultural agent as advisory member. A number of the dairymen took advantage of this opportunity to secure additional foundation stock for their herds.

Nine of the animals were purchased by Governor Hart for the Western Washington hospital at Steilacoom. It is the governor's intention to build up a strong foundation herd at this institution which can be drawn upon by the other state institutions as they need more animals.

A few head were taken back to the Chimacum valley by purchasers who desired to introduce new animals in their herd and secure new blood. The greater part of the sales, however, were made to breeders in Grays Harbor county.

A detailed report of the sale will appear next week.

Launch Guernsey Club

About 20 Guernsey heifers were distributed to the boys and girls of the Yakima Valley Guernsey club at the annual picnic of the Guernsey Breeders' association at the state fairgrounds at Yakima May 12. The heifers were selected by lot. The prices paid by the boys and girls ranged from $185 to $350, which sums covered the initial costs of the heifers, as recently purchased by representatives of the association in Wisconsin, and all expenses up to date.

The following is a list of club members with the name and age of the heifer which each secured in the drawing: William Heers, Naches Heights, Luna of Elk Meadow, born January 3, 1920; Chester Schlein, Mabton, Fern of Elk Meadow, born December 20, 1919; Charles B. Bell, Yakima, Celestine of Elk Meadow, born May 20, 1920; Delos Clemens, Granger, Starlight Lily of Pleasant Hill, born September 2, 1920; Francis Bohlke, Grandview, Noble Lady of Pleasant Hill, born September 22, 1920; McClellan Brown, Grandview, Hayes Maid of Pleasant Hill, born August 14, 1920; Jessie Harris, Naches Heights, Rue Irmie, born October 29, 1920; William Saar, Mabton, Arvilla of Tristram Farm, born August 6, 1920; Charles Bohlke, Grandview, King's Dairymaid, born April 30, 1919; Fred Keith, Alfalfa, Pretor's Polly Anna, born June 28, 1920; Herbert Short, Granger, Lavina Goldine, born January 14, 1921; Carlyn Winger, Grandview, Katrina Amis Lily, born June 28, 1920; Mark Meyers, Outlook, Ella Velma, born May 16, 1920; Roscoe Angel, Mabton, Rhoda Rebekah, born April 24, 1920; Walter Scott, Naches, Imo's Pride of Roberts, born April 22, 1921; Esther Bohlke, Grandview, Park's Etta of Bonnie Brae, born May 2, 1920; Kenneth Cochrane, Toppenish, Polly of Seymour, born April 25, 1921; C. L. Lightburn, Grandview, Glenwood Dairymaid.

An Enthusiastic Meeting.

The Guernsey breeders of the valley enjoyed an enthusiastic picnic during the day. Among the speakers were E. C. Scott, county club leader; H. E. Angel, president of the association; E. V. Ellington, new head of the dairy department of the state college; H. P. Vermilye, secretary of the state fair; R. W. McKenna, manager of the Yakima Dairymen's association; A. E. Lovett, county agent; W. W. Underwood, assistant county agent leader, and a number of others.

Professor Ellington announced that it was the intention of the state college to begin very early the upbuilding of a Guernsey herd at the college experiment farm. He said that it was the intention to have on the college farm a herd of 15 head of each of the leading dairy breeds.

Doddies Come West

The live stock breeders of the state will be interested to learn that the entire Congdon and Battles herd of Aberdeen-Angus cattle will make their headquarters at the Yakima farm. Two carloads arrived recently from Maquoketa, Iowa, where Mr. Battles has been located for years and built up a reputation for the herd. Special emphasis has been laid on the Yakima herd during the last few years and the combination of the two herds will help in the establishment of the Doddies in the northwest.

The shipment consisted of 35 females and 10 bulls, including Prizemere 9th, proclaimed by expert judges to be one of the greatest Aberdeen-Angus bulls in America today. He won first in the 2-year-old class at the last Chicago International. He was defeated for the grand championship only because he lacked in flesh, it is claimed, due to his having been dangerously sick some three weeks before the opening of that show.

The cattle brought to the northwest are the remainder of the well-known Rosemere herd. They were the cream of 15 years of constructive breeding, and, while Mr. Battles was loath to take them from their native state and farm, around which are associated many boyhood memories and which later on was the scene of his breeding operations and incidental struggle for Aberdeen-Angus supremacy, he felt that he must have all the cattle under his personal supervision on one farm.

In the comparatively short history of the herd it has produced three grand champion bulls at the Chicago International, two grand champion cows and scores of first prize winners.

"We feel that with this addition to our western herd we will be better able to take care of the growing demand for Angus cattle in the Pacific northwest," said Mr. Battles. "There has been a brisk and increasing demand for Angus bulls this spring."

BULL CLUB ORGANIZED.

The Dayton Community Bull club has been organized in Mason county, with 10 members, each one equal shareholder in a registered Guernsey bull, which will replace the scrub bulls in the community. A 15-month-old bull was secured from A. L. Gile and will be the property of the club.

DUROC JERSEY BREEDERS.

All the Duroc Jersey breeders of the lower Yakima valley are supporting the state fair futurity and are making a special effort to put the maximum amount of growth on their young stock, is the report of C. M. Hubbard, state college extension live stock specialist. Boys' and girls' club work will receive the earnest support of the breeders. The breeders will also work for a strong exhibit at the state fair, a breed tour about August 15, a bred sow sale in February and a demonstration herd.

KITTITAS BERKSHIRE BREEDERS.

The Kittitas County Berkshire Swine Breeders' association, which was recently organized with Alva Bull as president, will take up the following program of work for the year:

A breed tour during the summer.
A bred sow sale next February.
Strong support of the boys' and girls' Berkshire club work.
A big exhibit at the county and state fair.

One of the best herds in the county will be used as a demonstration herd following the suggestion of C. M. Hubbard, the state college live stock specialist.

WASHINGTON'S CROP VALUES.

The valuation of farm crops produced in the state of Washington during 1919, not including live stock or live stock products, is given by the census bureau as about $227,212,000.

Helpful Exchange of Ideas and Experiences offered by Your State Farm Weekly

The Washington Farmer is welcomed just as much by the wives and daughters on the farm as it is by those who hold the plow handles or who drive the big reaper. It devotes articles, pages and departments in every issue to the special field of women. It aims to lighten the work of those who must perform the endless tasks in the farm home, and to carry a word of inspiration and cheer to those who keep the wheels in the farm household turning smoothly.

The "Family Circle," with its constant interchange of experiences, ideas, opinions and methods, becomes more and more popular as the weeks pass.

The friendly interest of our women readers makes them warm adherents of our cooperative plan for securing and renewing subscriptions. Here is the idea. Many publications charge a high subscription price because it costs so much to gather the subscription orders. We eliminate the expensive system of having a force of agents go from town to town and from farm to farm to secure and renew subscriptions. Instead, we ask our friends to send in their own orders at least sixty days in advance of the expiration date stamped on the wrapper of your paper, and to include the orders of friends and neighbors with your own.

You get the benefit of the money saved by this economical plan. You receive this big, enterprising farm and family magazine for five years for only $1.

Continued cooperation is necessary. We hope to make 1922 even more successful for cooperation than the past years have been. Please do your part.

Subscription Rates to The Washington Farmer:

$1.00 for Five Years 25 Cents for 1 Year. 50 Cents for 3 Years.

In Canada add 1 cent a copy for extra postage.

May 18, 1922.

World's Record Jerseys

Our herd of 16 cows averaged over 56 lbs. butterfat per month for the year ended April 30, 1922. This is a world's record for the Jersey breed by a herd of 15 or more.

These cows have Register of Merit records averaging over 650 lbs. butterfat at an average age of 3 years 9 months—another world's record for a herd of 15 or more. All but two of these cows were bred by us. The above figures represent all cows in our herd with one or more official records.

Our herd is noted for good udders and teats, large size, correct conformation and ability to produce and reproduce. We are on the Accredited Herd List of the United States Government.

Why not buy your next bull from this herd that is making Jersey history? We have several choice bull offerings—one out of a dam with a record of 903 lbs. butterfat.

McARTHUR & STAUFF, Rickreall, Oregon.

MEADOW VIEW JERSEY FARM

Home of

TIDDLEDYWINK--NOBLE, FAMILY

Our Slogan—PURE JERSEY TYPE WITH ECONOMICAL PRODUCTION.
Our late herd sire, TIDDLEDYWINK'S NOBLE, became a Silver Medal Bull Feb. 25, 1922.
His three silver medal daughters are—
Allena's Noble Lassie—673.75 lbs. fat in 305 days (world's record). Winner of two gold medals and 1 silver (2 tests).
Tiddledywink's Noble's Pride—532.15 lbs. fat in 305 days (junior 3-yr.-old). Winner of two silver medals and 1 gold (2 tests).
Tiddledywink's Golden Fern—548 lbs. fat (senior 2-yr.-old). Winner of 1 silver medal, now on 2d test.
These three young cows were shown at the state fair and the Pacific International, winning many prizes in the open classes as well as
1st in get of sire.
1st dairy herd in both shows, in spite of the fact they were not yet acclimated and in poor flesh.
Their great beauty and symmetry of form has not injured their ability to produce.
Our Motto—LIVE AND LET LIVE.

MR. AND MRS. B. J. NEAL. Turner, Ore.

OREGON GOLDEN GLOW'S CHIEF JERSEYS

Have Two of Oregon's World Record Cows.
Have the Only Cow in the World With Two Records Over 1000 pounds Fat.

Their great Progenitor, Golden Glow's Chief, has more world record daughters than any other bull in the world. His four highest daughters average 910 lbs. fat, and his three highest, 947 pounds.

OREGLOW GOLDEN GLOW JERSEYS

We invite all attending the Fourth Annual Oregon Jersey Jubilee, May 25, 26, 27, to visit Oreglow Herd.

Our three herd sires are:

POGIS ONEIDA'S CHIEF 141024—Sire, Golden Glow's Chief; dam, Pogis Oneida. His first five two-year-old daughters to calve have made an average record of 533 lbs. fat.

VIVE GOLDEN GLOW'S CHIEF 154816—Sire, Golden Glow's Chief; dam, Vive La France. His first two two-year-old daughters to calve have just completed an average record of 520 lbs. fat.

Our junior sire is DARLING VIVE GLOW CHIEF 187368, a grandson of both Vive La France and Old Man's Darling 2d. Five times descendant of Golden Glow's Chief through that sire's three greatest daughters, who have an average record of 947 lbs. fat. He is seven times descendant of Chief Engineer, sire of Golden Glow's Chief; twice descendant of Pride Olga's 3d's King, sire of Lady Silken Glow, with record 1038.7 lbs. fat.

OREGLOW'S HERD AVERAGE is over 60 lbs. fat and half the records made by 2-year-olds; only two mature records; lowest record 429 lbs. fat.

GOLDEN GLOW'S CHIEF 61460 was bred by W. S. Ladd Estate. He is sire of four and grandsire of two of the 40 highest records of the breed (more than any Oregon sire and second for the breed).

His two greatest daughters and greatest double granddaughter have all been grand champion in the show ring of the great shows in the west and have an average record of 913 lbs. fat and have held four world records between them. No sire any breed has a record anything like this.

He is sire of Vive La France, who has made 555 lbs. fat more in her first five lactations than any other cow, any breed; on her 6th test is now making between 75 and 90 lbs. fat a month; only cow to twice make over 1000 lbs. fat; these records average 1035 lbs. and made two years successively; only cow to break two world records two years in succession (made 3 world records); present senior 4-year-old world record.

He is sire also of present junior 4-year-old world record.

He has 40 daughters TESTED BY TEN DIFFERENT OWNERS with an average record of 526.6 lbs. fat, or 95 lbs. per cow more than the average for the breed. 57 records made by his daughters have an average test of 5.64 per cent or .3 per cent higher than the breed average—high test means economical production.

He is both grandsire and great grandsire of Lady Silken Glow, record 1038.7 lbs. fat. This cow with his daughter, Vive La France, hold three of the seven 1000-lb. fat records of the breed. Their three records average 1036.8 lbs. fat—the four held by other cows average 1023.5 lbs. fat.

He is the only sire with four daughters that average over 900 lbs. fat (910 lbs.)—all cows still alive, producing big and bringing calves.

Oregon's greatest records are made by Oregon bred cows. The following great cows, and coming great cows of Oregon, whose names you have heard over and over have the following relationships to Golden Glow's Chief and Vive La France:

Old Man's Darling 2d—75 per cent or inbred daughter of Golden Glow's Chief.
Vive La France, Old Man's Darling, Sunlight's Glow, Morrow's Select—All daughters of Golden Glow's Chief.
Chief Engineer's Viola—Double granddaughter of Golden Glow's Chief.
Lady Silken Glow—Her dam an inbred daughter of Golden Glow's Chief.
Lulu Alphea of Ashburn—Four times descendant of Golden Glow's Chief.
Clara Lettie of Ashburn—Three times descendant of Golden Glow's Chief.
Star of Ashburn—Two leads to Golden Glow's Chief.
Lulu May of Ashburn—Two leads to Golden Glow's Chief.
Countess Stella of Ashburn—Two leads to Golden Glow's Chief.
Darling's Jolly Lassie—Her dam an inbred daughter of Golden Glow's Chief and her sire a descendant of Chief Engineer, who is sire of Golden Glow's Chief. (Lassie is dam of Oreglow's Junior Herd Sire.)
Lad's Iota—Granddaughter of Ruth Val, daughter of Golden Glow's Chief.
Diamond of Fair Acres—Descendant of Chief Engineer.
Silver Chimes Rua—Descendant of Chief Engineer.
Birdie Karnak of M. L. P.—Granddaughter of Birdie La France.
Birdie's Owl of M. L. P.—Descendant of Birdie La France and of blood in common with Golden Glow's Chief.
Helma of Ashwood—Descendant of Golden Glow.

These above cows have made six of Oregon's last twelve world records. Come to Oregon for Jerseys and to Oreglow for Golden Glow's.

OREGLOW HERD, Iron Mine Farm, Oswego, Ore. W. M. LADD, Owner.
D. BROOKS HOGAN, Mgr.

PICKARD FARM JERSEYS.
GOLDEN GLOW HERD.

We bred and own Vive La France, world's greatest dairy cow. Her production for first five years is greater by 555 lbs. fat than that of any other cow in the world, any breed. She is the only cow, any breed, to make two records each over 1000 lbs. fat. We bred and own Old Man's Darling 2d, world champion Jersey 4-year-old, record 983 lbs. fat. Three cows in our herd average 1020 lbs. fat. No other herd in the world has 3 cows that average so high. We have bred 14 cows that average over 700 lbs. fat. Only 4 of these were mature cows, the most of the others being 2 and 3 year olds. We have bred many others with splendid records. We now own or have bred 10 cows that average over 800 lbs. fat.

Our herd sire is Darling's Gallant Boy, son of Old Man's Darling 2d. His dam and granddam average 900 lbs. fat. His first daughters, as 2-year-olds, are making splendid records. We expect him to be a silver medal bull this year. His full sister, Darling's Gallant Lassie, as a senior 3-year-old, is producing close to 100 lbs. fat per month.

These are all Golden Glows. They are large, beautiful cows, with splendid udders and good teats. If you want to start right, start with Golden Glows, the kind that are proving right in both production and type. Make it a point to see these cows on your trip to Oregon Jubilee, May 25, 26 and 27.

PICKARD BROS. Marion, Oregon.

GOLDEN GLOW'S CHIEFTAIN

is our herd sire. He is a 75 per cent son of the great gold medal bull, **Golden Glow's Chief**, sire of Vive La France, Old Man's Darling 2d and other great cows. Our bull is a full brother of Old Man's Darling 2d, 983.68 lbs. fat as senior four-year-old, a world record which still stands, and his dam is a gold medal cow with a record of 817 lbs. fat. His sons and daughters are of excellent type and his four daughters in milk in our herd, at an average age of 1 year, 357 days, produced an average of over 460 lbs. fat in a year, ordinary herd care, twice a day milking. We have some choice young bulls combining this blood with that of the gold medal bull, Valentine's Ashburn Baronet.

Green Meadows Farm

Henry Stewart, Propr., **Albany, Ore.**

SILVER CLIFF JERSEYS

Foxhall's Chief Engineer, senior herd sire, combines the blood of Foxhall's Jubilee, sire of 28 Register of Merit daughters and 3 Register of Merit sons, with that of Chief Engineer's Viola, 726 lbs. fat, a gold medal cow, that was grand champion Oregon State Fair, 1917. Foxhall's Chief Engineer was grand champion Oregon State fair, 1917. His first daughter on milk won the milking contest Oregon State fair, 1921. She finished a year's test as senior yearling with 605 lbs. fat and qualified for silver medal.

Golden Glow's Chief of S.C. is a direct son of Old Man's Darling 2d, whose world record of 981 lbs. fat, as junior 4-year-old, still stands. She was grand champion Oregon State fair, 1916. Our herd combines type and production.

FOX BROS. Silverton, Ore.

CONAN'S GOLDEN CHIEF 136935

heads our herd. He is a son of Golden Glow's Chief. He was grand champion at the Lincoln county fair, 1921; a great individual, with the capacity and quality which have made this family great. He has back of him the great cows and bulls of the Golden Glow's Chief strain.

L. A. HULBURT, Toledo, Ore.

Fair Meadows Farm Jerseys

Our herd bull is out of a high producing sister of Vive La France, "the wonder cow." Young stock for sale.

V. S. ABRAHAM, Gaston, Oregon.

Blondy's Glow Lad 179934

is our herd sire. He is 40 per cent Golden Glow's Chief blood and 52½ per cent same blood as Vive La France. His sire, a 56½ per cent son of Golden Glow's Chief, and out of a 75 per cent daughter of Pride's Olga 3d's King. His dam is sired by a grandson of Stock Pogis of Prospect. She is a sister to Chief Engineer's Viola and Sultan Telivo, out of Sugar Sweet Violet, a full sister to Vive La France. Lad is 3 years old and weighs over 1600 lbs.; the biggest and best Golden Glow bull in central Oregon. Our females have type and similar breeding.

REELS BROS. Redmond, Ore.

Sire, Rosaire's Olga Lad, a gold medal bull. Dam, Boise Queen, a gold medal cow. Full sister, St. Mawes Boise Rosaire, 891 lbs. fat; sold for $5100.

Boise's Olga Lad Is Being Mated With

nine daughters of Rinda Lad of S. B., sire of Lad's Iota, 1048.07 lbs. fat, the new sensational world record Jersey for all ages.

Five daughters of St. Mawes Lad, sire of St. Mawes Lad's Lady, 829.09 lbs. fat, the world record senior yearling.

We are offering typy young bulls sired by Boise's Olga Lad, out of daughters of Rinda Lad, that are making gold and silver medals as two and three year olds.

Frank Loughary & Sons. **Monmouth, Oregon**

Type and Production Combined
Our Senior Herd Sire, Daisy's Golden Poppy Is a Silver Medal Bull

He has three silver and two gold medal daughters. Four are now on test; two seem sure of gold medals, the other two of silver medals. His six two-year-olds—all his daughters tested at that age—average for one best day, 39.6 lbs. milk; his five three-year-olds, 50.6 lbs. milk; one four-year-old, 60.7 lbs., and one aged cow, 50.3 lbs.

With four daughters at the Pacific International, 1920, and ten in 1921, he has to his credit, one junior champion, four firsts, five seconds, four thirds, three fourths, two fifths, three sixths, one seventh and two eighths.

DAISY'S GOLDEN POPPY is the first silver medal son of St. Mawes Golden Poppy, sire of Poppy's Dortha, 994 lbs. fat, world record junior three-year-old.

Mated with our herd of cows of fine show type, he reproduces the type and production of the St. Mawes strain. Bull calves for sale.

CHESTER L. MULKEY, **McMinnville, Oregon.**

ST. MAWES LAD

HEADS OUR HERD.

He has more gold and silver medals and more production close up than any other Jersey bull in the west.

Our herd, except Betty's Lady Fern, 660 lbs. fat, is composed entirely of daughters and granddaughters of the great gold medal bull, Rinda Lad of S. B. They include the new world record cow for all ages, Lad's Iota, 1047.94 lbs. fat; Lad's Little Pauline, 941 lbs. fat, world record junior 4-year-old, in class AA, and Rhinda Lad's Trilby, 760 lbs. fat as junior 2-year-old, a class AA record.

The blending of the blood of St. Mawes Lad and Rinda Lad of S. B. produced the world record senior yearling, St. Mawes Lad's Lady, 819.09 lbs. fat, and St. Mawes Lad's Lucy, 708 lbs. fat as a junior 2-year-old, who will freshen for class AA. Four more two-year-olds are on test and all will surpass the records of their dams by a large margin.

We have placed our young bulls of this blood in some of the leading herds of the northwest.

S. J. McKEE, **Independence, Oregon.**

Blending of Two Great Strains

COIN'S DOUBLE GELATINE, son of Capt. Tristrom and Gelatine's Coin, and 56¼ per cent common blood of St. Mawes, is considered worthy for use in his great sire's stead, and is engaged by the owner of St. Mawes Boise Rosaire to be the sire of her next calf. For the sake of constitution and extreme production we are outcrossing him with the blood of Myra's Missionary, 75 per cent common blood of Rosaire's Olga Lad, including Poet's Mabel Mowat, by a 75 per cent son of Myra's Missionary, who will finish soon with about 870 lbs. fat, at 3 years, 3 months. A few calves for sale.

K. Hanneman **Corbett, Oregon**

Sunny Lea Jersey Farm

HERD HEADED BY THE MAORI.

Grandson of St. Mawes Lad through Capt. Tristrom. Dam, Waita of St. Mawes, by same sire as St. Mawes. Has produced 600 lbs. fat, beginning at 16 years, six months of age.

We are mating him to daughters of St. Mawes Lad, including St. Mawes Lad's Lady, our world record senior yearling, 829.09 lbs. fat. Young bulls for sale.

HARRY D. ILIFF, **Independence, Oregon.**

DUFRANO'S POPPY

Our senior herd sire is a son of St. Mawes Golden Poppy, sire of the world record junior 3-year-old, Poppy's Dortha, 994 lbs. fat. His daughters have good type and are producing big with first calf.

ST. MAWES BABE, our junior herd sire, is a son of Capt. Tristrom, who has more common blood of St. Mawes than any other bull. Babe is a double grandson of St. Mawes Lad, sire of the world record senior yearling, St. Mawes Lad's Lady, 829 lbs. fat. He is being bred on the daughters of Dufrano's Poppy. The mating is producing a beautiful lot of calves, with exceptionally good udders. When considering the St. Mawes strain, look our herd over.

GEO. W. LAWSON, **McMinnville, Oregon.**

ST. MAWES OXFORD BEAU.

Our junior herd sire, is a son of St. Mawes Lad, sire of the world record senior yearling, St. Mawe's Lad's Lady. His dam is the imported show and gold medal cow, Edith Oxford Belle.

We have bred him to the daughters of our imported Majesty bull and his calves have all the greatness of the Majestys, and we believe that the production of the Majestys, combined with that of the St. Mawes, will breed on with what is now and ever will be in demand—Production, with Real Type.

STANLEY RICHES. **—REGISTER OF MERIT JERSEYS—** **WALLACE RICHES.**
Turner, Oregon.

SUSIE'S ST. MAWES POPPY.

Our senior herd sire is a son of St. Mawes Golden Poppy, sire of the world record junior 3-year-old, Poppy's Dortha, 994 lbs. fat. His dam is the great show cow, Nashville Susie, grand champion P. P. I. E. stock show. His six daughters on test with first calf, and two with second, average over 50 lbs. fat for April.

Boise Queen's Olga Lad, our junior herd sire, is a full brother to St. Mawes Boise Rosaire, 891 lbs. fat as senior 3-year-old. He is being used on daughters of Susie's St. Mawes Poppy and St. Mawes Golden Poppy. Come and see our young stock.

7 head on test, 2 daughters of St. Mawes Golden Poppy and 5 of Susie's St. Mawes Poppy, have averaged over 51 pounds fat for the last two months. One mature cow in the seven.

JOHN KOPPLIN, **Gaston, Oregon.**

HOWARD'S JERSEY DAIRY

STRAIGHT ROSAIRE'S OLGA LAD-ST. MAWES JERSEYS.

Herd headed by TRISTROM'S ST. MAWES, 56¼ common blood of St. Mawes. He is a son of Capt. Tristrom, the great show bull who carried the richest inheritance of St. Mawes blood, and the magnificent cow, Gelatine's Coin. She is out of Gelatine of St. Mawes, full sister to old St. Mawes and dam of Capt. Tristrom.

Now situated ¾ mile east of Beaverton, and 8 miles west of Portland.

D. C. HOWARD, **Beaverton, Oregon**

Three Grandly Bred Bulls

ANOKA'S POPPY'S ST. MAWES was bred on our foundation cows. He is by St. Mawes Golden Poppy, sire of the world record junior 3-year-old, Poppy's Dortha, 994 lbs. fat. He was followed by **Violet's Olga Lad**, son of the great gold medal sire, Rosaire's Olga Lad, and out of St. Mawes Keffee Violet, 777 lbs. fat. We are now using **Baronet's St. Mawes of Anoka**, a son of the gold medal sire, Valentine's Ashburn Baronet, and out of a daughter of the silver medal bull, St. Mawes of Ashburn, that will be a gold medal cow with near 800 lbs. fat, finishing her test May 31.

R. B. SEELY, **Sherwood, Oregon.**

THE FOUNTAIN HEAD.

ST. MAWES was originally used in our herd. Bred on a small herd of cows rich in the blood of Coomassie, his 20 tested daughters average higher than all the daughters of any other Jersey bull having 20 or more tested daughters. Four of his daughters, full sisters, average 728.2 lbs. fat, the highest average of any four full sisters in the world. One of them has five daughters in the Register of Merit, of which three have won gold medals. Their average is 655.03 lbs. fat, and the four highest average 712.71 lbs. fat. St. Mawes was the first gold medal bull in the west and has more proven grandsons and Register of Merit granddaughters than any other western bull.

ROSAIRE'S OLGA LAD, bred on the daughters of St. Mawes, has 46 daughters in the Register of Merit, and more still coming. He is a gold medal bull and his ten highest daughters average 757.06 lbs. fat. He has 14 proven sons, of whom three have sired world record cows and two of the records still stand. One of these, St. Mawes of Ashburn, is a silver medal bull, sire of the ex-world record senior yearling, Lulu Alphea of Ashburn, 800 lbs. fat. Another is a gold medal bull and sire of St. Mawes Lad, who sired the world record senior yearling, St. Mawes Lad's Lady, 829 lbs. fat. The other sons are St. Mawes Golden Poppy, sire of the world record junior three-year-old, Poppy's Dortha, and Poppy's Golden St. Mawes, sire of the senior two-year-old, St. Mawes Pretty Lady.

POPPY'S ST. MAWES, son of Rosaire's Olga Lad, and out of the best daughter of St. Mawes, was bred and used by us. He was the first gold medal son of a gold medal sire, besides having a dam and dam's sire both gold medal Jerseys. He is the gold medal sire of St. Mawes Lad, who is a world record sire, as mentioned above.

POGIS 75TH OF HOOD FARM, a gold medal bull with four gold medal daughters and breeding going back to common blood with our original herd, is now being bred on the great producers sired by above bulls, though Rosaire's Olga Lad is still being used. Pogis is the fourth gold medal bull used in our herd. We are still breeding potential gold medal bulls and heifers and probably world record Jerseys.

ED CARY, **OAK SPRINGS FARM.** **Carlton, Oregon.**

ST. MAWES GOLDEN POPPY
Heads Our Herd

He is a son of the great sire, Rosaire's Olga Lad, and out of St. Mawes Poppy, the greatest daughter of St. Mawes, both by her own record of 952 lbs. fat, and the world record cows sired by her sons and grandson.

ST. MAWES GOLDEN POPPY sired the wonderful world record junior 3-year-old, Poppy's Dortha, 994 lbs. fat. Three of his two-year-old daughters average 524 lbs. fat, and two of his three-year-olds, 809 lbs. He has a number of daughters on test that will qualify for silver and gold medals. He has a silver medal son, who will soon qualify for a gold medal. One son now for sale out of a silver medal dam.

LYNN & NEDROW, **OAK LODGE FARM.** **Perrydale, Oregon.**

GREAT LINE BRED ST. MAWES HERD.

TOSCA'S ST. MAWES, our first St. Mawes bull, was by the gold medal sire, Poppy's St. Mawes, and out of Tosca's Fair Daughter, an inbred St. Mawes with a record of 539.78 lbs. fat. He was used on cows of Golden Maid's Prince and Noble of Oaklands blood and splendid Jersey type, with records up to 850 lbs. fat. His daughters are big producers.

ST. MAWES POPPY'S ROSAIRE LAD, our second St. Mawes bull, has every prospect of being a silver medal bull with first 3 heifers on test with first calf, 2 of them senior yearlings.

POPPY'S ST. MAWES is now being used. He is by Rosaire's Olga Lad and out of St. Mawes' greatest daughter, and is the first gold medal son of a gold medal sire. He is sire of St. Mawes Lad, who sired the world record senior yearling, St. Mawes Lad's Lady, 829 lbs. fat. His calves have fine udders and good type.

We now have a son of St. Mawes Lad out of LaBelle's Girl, 901 lbs. fat, to breed on these great daughters. How can both heifers and bulls help but breed on?

GEO. BIERSDORF. **Cornelius, Oregon.**

Type and Production

ST. MAWES NOBLE, our senior herd bull, has 14 Register of Merit daughters, with records up to 613 lbs. fat at 3 years old. These records are being greatly raised this year. He combinese the breeding of the great producing St. Mawes strain with the wonderful show type of the Nobles.

ST. MAWES SUSIE OLGA LAD is being mated with these cows. His 3 nearest dams average 841 lbs. fat. He combines the blood of the two greatest daughters of St. Mawes with that of Rosaire's Olga Lad. His get show great uniformity and promise of high production.

Our nine cows on test averaged 64.5 lbs. fat in March. We are offering a choice young bull at an attractive price. Can spare a few heifer calves.

J. C. BROWN & SONS. **Shedd, Oregon.**

RICHEST ST. MAWES BREEDING

GREAT COWS MEAN GREAT OFFSPRING.

with a record of 891 lbs. fat, and her daughter, a straight 75 per cent Rosaire's Olga Lad heifer; also Gelatine's Coin, 607 lbs. fat, under adverse conditions, and Niece of St. Mawes, both out of a full sister of St Mawes. Entire herd straight St. Mawes-Rosaire's Olga Lad breeding. All are or will be officially tested. Capt. Tristrom and Susie's Poppy's St. Mawes will soon have offspring for sale from this mating.

RICHARD C. WILLIAMS, **Sherwood, Oregon.**

BELLEVUE FARM JERSEYS

Rich in the blood of St. Mawes, Rosaire's Olga Lad and Rinda Lad of S. B. Our herd is headed by St. Mawes Chief, son of Poppy's St. Mawes and out of Gem of Boise, a daughter of St. Mawes. Included in the herd are two direct daughters of Rinda Lad of S. B., the gold medal cow, Flossie May St. Mawes, 777 lbs. fat, and others of similar rich breeding.

GEO. LAWRENCE & SON, **Estacada, Oregon.**

HOME OF THE WORLD RECORD SENIOR TWO-YEAR-OLD
ST. MAWES PRETTY LADY

whose 824.35 lbs. fat brought the senior two-year-old record to Oregon for the first time. Her sire, Poppy's Golden St. Mawes, is a full brother to St. Mawes Golden Poppy, sire of the senior three-year-old, Poppy's Dortha, 994.25 lbs. fat, and to the gold medal bull, Poppy's St. Mawes. She has two crosses of the St. Mawes-Rosaire's Olga Lad strain, and is only a sample of the Jerseys we breed.

We have for sale full brother in blood to Lady, 8 months old; also a bull calf out of her dam, Olga Lad's Dewbell, 633 lbs. fat, and by our senior herd sire, Belle's St. Mawes Lad.

L. C. DANIELS. **Tillamook, Oregon.**

JERSEY JEWEL DAIRY FARM.
IOTA'S ST. MAWES

heads our herd. He is a son of the new world record cow, of all ages, Lad's Iota, 1048.09 lbs. fat, and by St. Mawes Lad, sire of the world record senior yearling, St. Mawes Lad's Lady, 829.29 lbs. fat. Our herd gives him some of the best blood of St. Mawes, Rosaire's Olga Lad and Hood Farm stock to breed on. See his daughters and notice their dairy type and temperament.

E. E. WATTS, **Hillsboro, Oregon.**

Washington St. Mawes Jerseys Also

GWENDOLA ROSAIRE

has three gold medal records in succession—830 lbs. fat, 919.8 lbs., and 749.25 lbs. She is the highest record daughter of Rosarie's Olga Lad, and is dam of Silver Chimes Gwendola, ex-world record senior yearling, and still world record in class AA. She is also dam of Gwendola's Rosaire Gertie, that is now making Washington state record as senior yearling, and of other great cows. We have for sale her son, just a year old, by Gertie's Poppy's St. Mawes, whose junior two-year-old daughters have made over 500 lbs. fat with first calf. He is a full brother to Gwendola's Rosaire Gertie and is a good individual. Also other richly bred St. Mawes bulls for sale.

N. C. SORENSEN, **Chehalis, Wash.**

MIDFIELDS DAIRY FARM
WINNERS IN SHOW RING AND PAIL.

ST. MAWES OF GRASSMERE, our herd sire, straight St. Mawes-Rosaire's Olga Lad bred, won two grand championships and was second at Pacific International, 1920. In two years' showing his get won 47 firsts, 44 seconds, 4 junior championships on females and one senior and grand championship on bulls.

We began testing last fall. With nine on test, five have made over 50 lbs. fat in a month, one over 73 lbs., and one over 60 lbs. Four are two-year-olds; three, 3-year-olds; one 4-year old, and only one mature cow.

We are breeding both show type and production. Both sexes for sale.

SUREGROW

"A Sperry Product"

Feeding SUREGROW to a growing chick is like giving a knee-high youngster a "boost" over the fence. It gives them the "lift" they need. It helps them over the top of their critical period.

From the time they are five weeks old until they are twelve weeks old these sprightly little fellows need, above all, two things: *bone and muscle.* Without a good, strong framework you can't expect chicks to mature into good layers or good breeders. And—don't lose sight of this:

The feed you give your pullets in this quick-growing stage must not be too violent or forcing. Normal, natural growth springs from normal, rational feed. And that's exactly what SUREGROW gives them. It contains the essential food values growing chicks must have for healthy, vigorous growth.

Remember that sturdy chicks mean sturdy profits—and SUREGROW insures *both.* Such common chick troubles as indigestion, moping, slow growth, are reduced to a minimum once you get your growing chicks going on this balanced ration. This explains, too, why many successful poultrymen make it a practice to feed SUREGROW dry in hoppers—so the hungry, active birds can have free access to it all day long.

How to lay a good foundation for every bird in your flock is more fully explained in the new edition of our booklet, "Makes Hens Happy." We'll gladly send a copy on request. Don't even bother to write a letter—simply clip the coupon and mail today.

Holstein Sale

Of Whatcom County Association

By RALPH ERSKINE.

The breeders of the Whatcom County Holstein-Friesian association are to be congratulated upon the energy and initiative with which they staged their first auction sale of registered Holsteins in that territory. Sixty-four head of breeding stock were consigned at the county fair grounds at Lynden, May 11th.

The seven breeders consigned 50 females and 14 bulls, most of the latter being young animals. Practically all the animals were bred by the members of the association, which made the sale truly a breeders' sale. It was largely due to a turn of good weather and the sale coming at a time when most of the farmers were busy in their fields, that the prices were not as high as was hoped for the quality of the stock offered.

The top animal, Canary Aaggie Piebe, a well bred, straight, typy animal, and a daughter of Paul Aaggie Oakhurst, was consigned by P. P. Lee and purchased by William Bishop of Chimacum, for $300.

The majority of the animals were kept in the county. Thirteen head were purchased by the Milky Way farm of Sumas, while others were picked up by breeders as far distant as Kent and Eatonville.

The 50 females brought an average price of $127.50, while the bulls brought a lower figure and the total average was $112. Much credit is due to the consignors for their effort to put on a quality-guarantee sale that would be satisfactory to the consignor and the buyer.

The consignors were: P. P. Lee, Bellingham; H. J. Evans, Ferndale· Andrew Benson, Lynden; N. P. Sorenson, Bellingham; A. Blankers, Lynden; Piet Bergsma, Lynden, and Claud Graham, Ferndale.

Officers of the Whatcom County Holstein-Friesian association, one of the strong associations of the state, are:

Archie Wright, Everson, president; H. J. Evans, Ferndale, vice president; A. W. Dahlquist, secretary-treasurer. The sales committee consisted of A. W. Dahlquist, Mrs. E. J. Tyrrell, W. B. Vandergriend, D. H. Smith, P. Bergsma, and H. J. Evans.

George A. Gue of Yakima was auctioneer.

BUYS BULL CALF.

J. R. Martin, a well-known Jersey breeder of Satsop, Grays Harbor county, has purchased a new bull calf, Theater Cup, from the A. L. Bright herd at Newark, N. J. The calf is sired by Theater Cup Prince, a prize winning son of Fauvic's Prince, whose daughters have a butterfat production which is said to average higher than any bull of any breed. The calf's dam is Fairy Boy's Oxford Fern, a show

Theater Cup, a new bull calf purchased by J. R. Martin of Satsop, Wash., from the Prospect farm of Newark, N. J.

cow who holds four seconds and one third prize in the big eastern shows where she competed against as high as 20 in her class.

The calf is slightly over 6 months, but shows some excellent quality, and he will soon be placed at the head of the Martin herd of 25 purebred animals. The entire herd is kept on official test and three of the animals are expected to make silver medals before fall. The entire output from the herd is sold to the Elma milk trade and to the cheese factory.

ASSOCIATION BUYS BULL.

The Walla Walla Valley Cooperative Bull association, of which Frank Wilson of Walla Walla, Wash., is secretary, has recently purchased from J. J. VanKleek & Sons of Hillsboro, Ore., a richly bred young Jersey bull. The calf is by the silver medal bull, St. Mawes of Ashburn, and out of Lettie's Blossom, by Sultan's Telivo, a heifer that has just won a silver medal with first calf. M. C. Abrahamson of Amboy, Wash., also purchased a VanKleek bull about the same time. This one is out of Darkey's Lass, another silver medal daughter of Sultan's Telivo, with first calf, and the sire is St. Mawes of Ashburn.

MOVES HERD TO MONTESANO.

Jacob Kooy has recently moved his herd from Elma to Montesano, where he will build up a herd of registered Holsteins. He has seven purebred cows milking at present and two grade animals which will be disposed of later. There are a total of nine purebred females on the place.

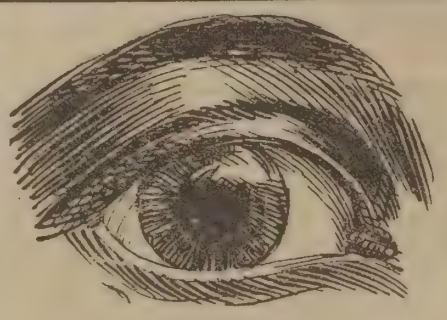
He is not forcing any of the cows, but is milking them three times daily, which he considers better for all-around conditions than a four-time plan. It is less work, and the cows do well unless they are giving over 100 pounds a day. He feeds only five pounds of grain for each pound of milk.

Two of the herd are on semi-official test. Ononis DeKol Johanna, a heifer, has produced 4465 pounds of milk and 140 pounds of butterfat in 72 days. She is now on her third month of the test, is fourth in the state for her class. She is by a son of Marjorie Newman, and is out of Ononis Cornicopia DeKol, one of the females owned by T. R. Yarr of Chimacum.

AMONG LEADING RECORDS.

Among the leading yearly records recently reported by the Holstein-Friesian Association of America are four from the northwest, two of them made by Max Arp of Eugene, Ore., one by Ralph H. Tuttle of Walla Walla, Wash., and one by R. L. Rutter Jr. of Ellensburg. Those of Mercedes Alcartra Mead, the new senior 4-year-old state leader, and of Lucy Freela Pontiac, at full age, have already been reported in THE FARMER. The one made by Tuttle was on Von Heim Winnifred Colantha at 5 years. The animal produced 22,546.9 pounds of milk and 805.50 pounds of fat, the equivalent of 1006.87 pounds of butter, in one year, and thus by production as well as by breeding becomes one of the important members of the Tuttle herd. Daisy Blossom Fayne, a junior 4-year-old product of Todd breeding, brings Rutter's Lockwillow herd to the fore with a record of 19,909.3 pounds of milk and 762.38 of fat. The latter is the equivalent of 952.57 pounds of butter.

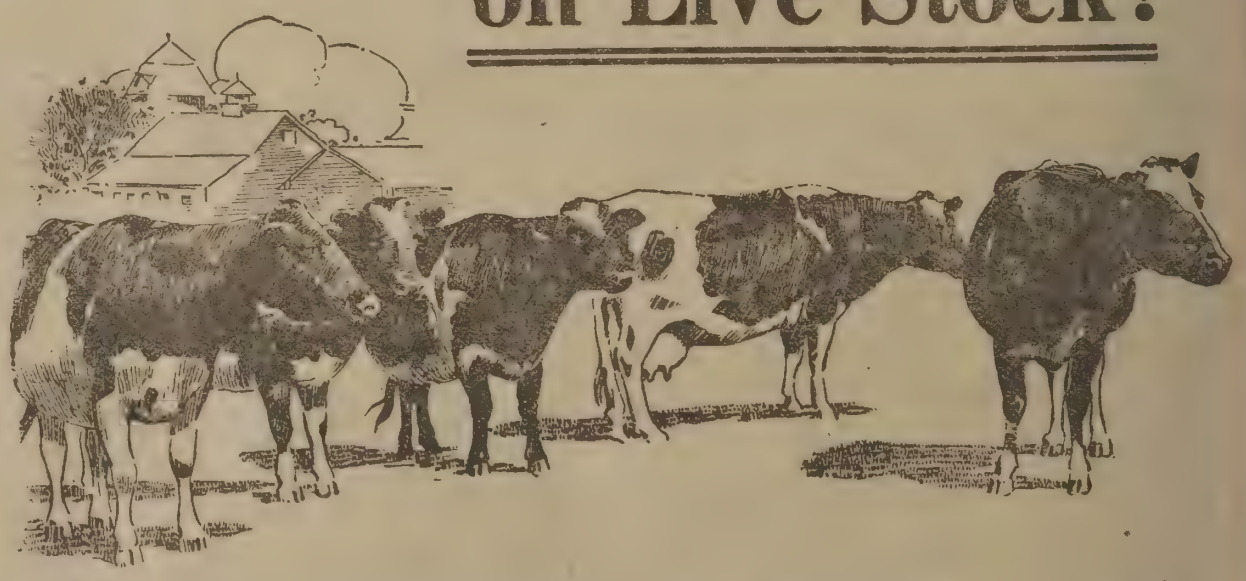
RECORD FOR FAT PRODUCTION.



Parker Askew's herd of Jerseys of Montesano still holds the record for fat production in the aged class for Jerseys with Alpha's Lady May. She has a record of 713.40 pounds of fat and 12,751 pounds of milk in a year. She is in class AA.

There are 20 head of purebred females in the Askew herd, all of which are making good records. The herd sire is Oxford Lad, from the Taylor herd and is out of Golden Massie Polo 3d.

HOLDS HIGHEST HERD AVERAGE.



The Valley Gem farm, owned by J. E. Wrage, Guernsey breeder of Arlington, holds the highest herd average in the cow testing association in Washington for the last three months. In March the entire 27 cows averaged 1001 pounds of milk and 46 pounds of butterfat each.

In making this record for the three months' period the herd competed against 2680 cows in western Washigton. Mr. Wrage is a member of the Stillaquamish Valley Cow Testing association, which operates largely in Snohomish county.

Fix Your Eye

on Live Stock!

Live stock is at the root of the agricultural success of this state. It is already a tremendous business and an asset to be watched and guarded. To this task your state farm weekly bends its efforts and lends its resources. Experienced veterinarians and authorities are in charge of its live stock department, and readers are given a great deal of practical and reliable information on the proper care of stock, treatment of sick animals, news of sales, market quotations, and reports of every important development in the live stock world.

Such information and service are often worth many dollars to our subscribers, yet are available at low cost on account of our cooperative subscription plan.

We say to our friends: "Send your subscription order direct. Get your neighbor to do the same. We will give you and your neighbor the benefit of every penny which would ordinarily go to the agent handling the subscription."

If you believe in cooperation, help us make our plan a success. Send in your order if you haven't already done so, and let as many neighbors as possible know about our money-saving plan.

State Grange Ready for Convention

Prospects Good for Thirty-Fourth Annual Gathering June 6-9 at Yakima

The 34th annual convention of the Washington state grange will be held this year at the state fairgrounds at Yakima June 6, 7, 8 and 9.

The Horticultural building will be used for all meetings and the delegates and visitors will have a chance to camp in the maple grove on the grounds. The grange warehouse will operate a service for the delivery of all supplies needed on the grounds during the week and a large number are expected to make the trip by auto and camp out.

The voting delegates will include the masters of the Pomona and subordinate granges and their wives, but any granger may attend the convention. There will in all probability be more visitors than delegates present during the entire week.

On Monday, June 5, the state executive committee will hold a preliminary meeting before the convention is formally opened. The directors of the Grange Fire Insurance company will meet and the financial details of the secretary and treasurer will be gone over and put in readiness for the convention. There will also be a meeting on Monday for those that are especially interested in cooperation.

On Tuesday, the opening day, E. L. French, director of agriculture, will deliver the address of welcome. The address of the master will then be given and a sightseeing trip will occupy the afternoon. Congressman John C. Ketchum, past master of the Michigan state grange and past lecturer of the national grange, is expected to address the convention in the evening. A team from the Lower Naches grange will give the first and second degrees.

On the morning of the second day, Wednesday, the third and fourth degrees will be given by a team from the Broadway grange. The election of officers will also take place on the second day in order to fill the office of master, which is now vacant, Fred Nelson having taken the office last year as acting master from his office of overseer following the removal of William Bouck by National Master Lowell. Other officers, such as state lecturer and one member of the executive committee, will be elected. The general election, however, takes place every two years.

Thursday will be held for the receiving of delegates from other fraternal organizations, the farm bureau and the farmers' union having been invited. The installation of officers will also be taken up and the fifth degree will be put on by the Benton county grange and the sixth degree by the state grange officers.

The last day of the convention will bring the reports of all communities and such other details as are to be brought up before the general meeting. The program is expected to be completed before the close of the day and the delegates will have the following day to return to their homes.

Speaking of the possibilities of the meeting, A. W. Swigert of Yakima, treasurer of the state grange, said that he believed this year's session will be one of the most enjoyable conventions ever held and can also be made great in accomplishment.

"GRANGE" BELONGS TO GRANGE.

That the name of "grange" belongs exclusively to the order founded by Father Kelly over 50 years ago and to its state and subordinate orders is the ruling of the superior court of King county in the case brought by the Washington state grange against William Bouck to prevent his using the word as a part of an organization that he is attempting to build up throughout the state. Several months ago the regularly constituted state grange won a preliminary decision in the King county courts and the one handed down last week apparently decides the case definitely and finally in favor of the original order.

Former Master Bouck, after being suspended as master by National Master Lowell, which suspension was unanimously approved by the national convention in Portland last winter, and after having failed in an attempt to have the Washington state grange secede from the national order, undertook the formation of a new and radical order, which he named the Western Progressive grange.

It is apparent that if he desires to continue in the movement for a new organization a name not including the word "grange" will have to be selected.

For the benefit of all persons interested in this important case, The Washington Farmer will, in an early issue, publish in full the findings of Judge Ronald of the King county superior court, upon which he rendered his decision restraining Mr. Bouck and his associates from using the word "grange" in their organization.

The "Bang" Herd at Steilacoom

To the Editor: I want to thank you for your splendid story of our "Bang" herd at the Western State hospital by Mr. Erskine, but I think in fairness to all, one or two slight errors, wholly excusable from a newspaper man's standpoint, but misleading to the general reader, ought to be corrected.

At two different places in the article Mr. Erskine speaks of the "purchase" of tubercular cattle.

Since I have been governor we do not pay anything for "reactors" and do not even accept them as a gift unless they are of exceedingly high class breeding. We have declined to accept "reactors" from some of the largest and highest priced herds in the state simply because the individuals were not better than the ordinary bred cow.

I find that most breeders who are unfortunate enough to have one of their very best cows or heifers react are glad to have us take them and given them the proper care and attention, the breeder getting his pay out of the records that we may be able to make from his breeding. This statement applies to all of the tuberculars we have accepted since I have been governor with the lone exception of our senior herd sire.

I wish you would kindly make note of this in some early issue of THE FARMER.

Very truly yours,
LOUIS F. HART,
Governor.

Olympia, Wash.

Newhouse Takes New Position

Succeeding C. I. Lewis, who recently went to Chicago to become managing editor of a national fruit publication there, M. J. Newhouse of Vancouver, Wash., has accepted a position as assistant manager of the Oregon Growers' Cooperative association and will move at once to Salem, Ore. Newhouse is a graduate of Washington State college, who during his service as agricultural agent in Clarke county showed a talent for organization and became manager of the Washington Growers' Packing corporation. This cooperative concern, which controls a large acreage of prunes in Clarke county, has worked in close harmony with the Oregon growers.

To Loan Money

Wool Growers Form Corporation

Formed primarily to loan money for long periods at low rates of interest to live stock men, the Wool Growers' Service corporation, articles of which were filed at Olympia early in May, will also seek to stabilize the live stock industry through cooperative marketing and the development of winter feeding. A. D. Dunn of Wapato is president, T. J. Drumheller of Walla Walla vice president and J. F. Sears of Prosser secretary-treasurer, and the other incorporators are C. H. Anderson of Ellensburg and T. H. Smith and Archie Prior of Yakima. The capital stock is $100,000, which will enable the corporation to loan a maximum of $1,000,000 through the war finance corporation. Loans will run for three years and will bear about 8 per cent interest. It is expected that money will be available by July 1.

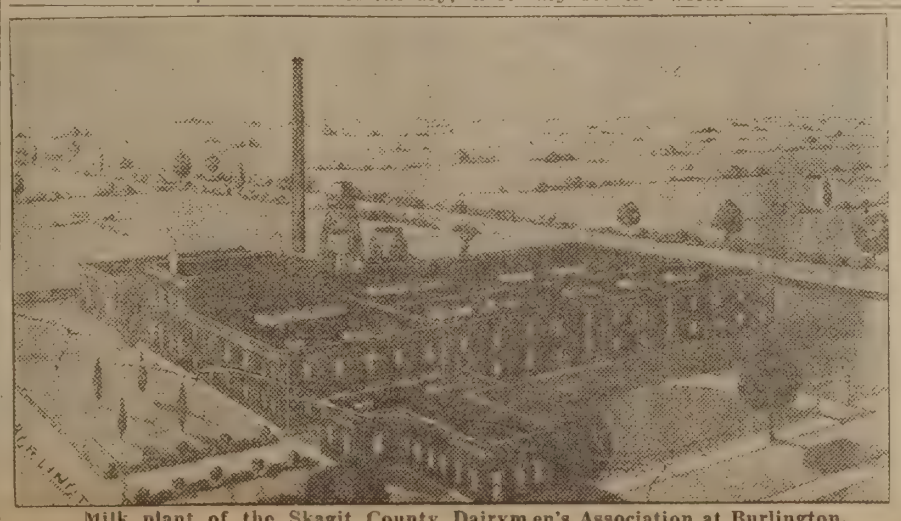
Not merely sheepmen, but cattlemen as well, will benefit by this means, for it is proposed to bring both feeder lambs and feeder steers into the state for market fitting. Local farmers will thus be given a home market for their grain and alfalfa and most of the money that goes out of the state each year in gigantic feeding operations in the east, will be retained. Similarly, officers of the corporation point out, thousands of dollars could have been saved this year if sheepmen had been in a position to control their own wool clip.

"The figures are staggering," says Secretary Sears. "On a business that has a capital of upward of $10,000,000, our loss on wool alone during the last two years, due solely to the lack of organization, was $750,000, or 7 1-2 per cent of the capital. Any fair-minded sheepman will concede that if we had possessed proper facilities for holding and handling our wool in 1921 we could have saved 10 cents per pound. This year, with the same facilities, we could have saved 5 cents per pound. On a 5,000,000-pound clip, this means a $750,000 loss."

Profit From Surplus Skimmed Milk

Surplus skimmed milk is now being manufactured into powdered milk at the Burlington plant of the Skagit County Dairymen's association. Hitherto, the plant has made butter and cheese only while the skimmed milk has been turned out to the dairymen for hog and calf feed, which has not proved as profitable to the dairymen as the manufactured products. The plant is now producing an average of 5000 pounds of powdered milk daily.

"There is a constantly growing demand for powdered milk on the eastern and California markets," according to J. M. Humpheries, manager of the factory. "The powdered milk is used in bakeries, kitchens, for ice cream making, confections, as well as for home use. In California, especially, the housewives are using more and more of this product for general cooking purposes. The powdered product is preferred especially during warm weather when it is difficult to keep milk. There is some demand for the powder on the foreign market, but we have not made any extensive shipments of this kind."



In the process of manufacture the skimmed milk from the separator is condensed to a 4 to 1 consistency which leaves only about 40 per cent solids. The mixture is then pumped into a hot chamber through spray nozzles and the vapor thrown off. The powder is then separated from the vapor as it strikes the dry, warm air. Powdered milk collects in the bottom of the chamber while all of the moisture is drawn out with the vacuum at the top.

This milk plant handles a total of approximately 165,000 pounds of milk daily, a small part of which is kept in the Federal condensery at Mt. Vernon. The butter and cheese produced at the factory are sold largely on the local market. Approximately 2500 pounds of cheese are manufactured daily.

Of the three big plants now in operation by the United Dairy association of Washington, the Skagit county milk plant is the last to be completed. It has, however, almost doubled the capacity of any of the others. There is room for yet another condensing plant and necessary machinery.

The cheese rooms contain six large vats as well as a number of modern glass-lined storage and weigh tanks. The cheese curing room has a capacity of six cars and is cooled by ammonia pipes from the 10-ton capacity refrigerator plant. The battery of five separators is equipped, each having a capacity of 24,000 pounds per hour.

There are about 1000 patrons who supply milk to the plant, all of whom are members of the Skagit County Dairymen's association. The milk routes are handled by contract plans, 20 large trucks being necessary for the work.

Milk plant of the Skagit County Dairymen's Association at Burlington.

Potato Industry

What Certified Seed Means

"An increase of from 10 to 25 per cent would be realized from the entire potato acreage of the United States if every one were to use first-class potato seed. This is what really could be done from the use of certified potato seed," according to E. L. French, director of the state department of agriculture, who quotes the above from the United States department of agriculture. This would mean an increase of money value for the potato crop of the year of between $32,704,000 and $81,984,000.

"The condition of the potato seed used for planting is usually such as to cause a heavy annual loss to the potato grower," said Mr. French. "There are many diseases and pests which affect the potato crop in this state, many of which are increasing at a rapid rate. This increase can be checked by planting seed which is free from disease.

"An increase of at least 25 per cent of the amount of potatoes produced in potato producing areas in Washington could easily be obtained by the use of good seed. Seed potatoes entered for certification in 1919, the first year that the law was in effect, amounted to 451 acres, of which only 90 acres passed the final tests and were certified. This increased in 1920 to 190 acres certified and in 1921, 600 acres were entered for certification, of which 405 acres passed the usual tests and were certified. The most that can be said of this is that a fair start has been made to restore the potato industry of the state through the production of seed free from disease.

"With good seed, produced in strict accordance with law and in sufficient quantities to meet the requirements of the commercial potato growers, there is no reason why potato production in this state should no regain a higher position than even in the past.

"But there are two things to be taken into consideration. One is that these results will not be accomplished if there is any relaxation of the regulations for the production of certified seed. The other is that no good, but possibly a good deal of harm may result if farmers without previous experience in the industry are lead into the attempt to produce great quantities of seed potatoes, which they hope to get certified and to sell at very high prices.

Smith-McNary Bill Delayed

At this writing indications are that the Smith-McNary reclamation bill in congress may not be acted upon at this session of congress. The latest development is the attitude taken by Representative Mondell of Wyoming, republican leader of the lower house, who has taken a position supposedly not exactly against the measure but not in favor of it. He is reported to have refused to assist the house steering sommittee in getting the measure before that body, which apparently promises greatly to delay action on the bill.

It appears that part of the east is doubtful of the measure or actually opposed to it, partially because of misunderstanding the possibilities that it contains for national development, and partially through misguided jealousy of the growing industry of the west.

The measure would advance $350,000,000 as a revolving fund which would be used for the reclamation of land throughout the entire United States. It is estimated that within 20 years the fund would produce $2,000,000,000, or sufficient to develop practically all the productive waste lands

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter, January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible bankrupts. Complaints must be sent to us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of diseasee in stock sold through these columns.

How Not to Reduce Taxes

It is perhaps more to the point to discuss how to lower taxes than how not to lower them, but it is easier to discuss the latter. Furthermore, if we can find out how not to reduce them, possibly we can reverse the system and slip out from under a part of the staggering burden that threatens to break the back of the American public.

Here is one way that is guaranteed to prevent lowering of taxes: Vote for every bond issue that comes up and see to it that lots of them come up. Bonds have to be redeemed sometime and it takes money to redeem them. It takes taxes usually to raise money for a public purpose like that. Then again, bonds bear interest. That is one reason why investors buy them—to get the money that the people of a bonded district raise by tax levies to meet constantly accruing interest. Hence the desirability of voting plenty of bonds for whatever improvement is wanted, and wanting lots of improvements. Incidentally, we are living in an improvement-loving age. We must keep up with our neighboring county or district at all costs. We want everything and we are determined to have everything that we want.

Then again, if we are threatened with a reduction of taxes, we want to raise a goodly rumpus if our representative in the legislature fails or is about to fail to get an appropriation for the particular bridge or piece of new road or something that we want. Get him to swap his vote with the representatives from other counties that want bridges or those from the cities that want armories and trunk highways. To be sure, the people in the cities that want hard-surface highways across the state have a much better opportunity to help keep taxes up than the farmer who would be satisfied to have his dirt roads graded and drained so he could get to town, but the farmer can do his part by having his representative vote for the city man's project in turn for the city man's voting for his.

To be sure, as suggested at the outset, if it is tax reduction we want, we can get it by reversing these recommendations. We can vote down a few bond issues like we did the $42,000,000 Carlyon highway bill two years ago, and be content to pay for our highways as we go. We can do without a few things that we would like to have and that would really be good to have. We can stand solidly behind our representatives in the legislature when they want to vote down appropriations, and demand that they vote them down whether they want to or not.

If we want something we must pay the contractor to get it for us. If we are willing to do without it we can save our money. When all is said and done, the unprecedented tendency on the part of the American people to have what they want at any cost, and the almost limitless number of their desires, are responsible for the burden of taxation under which county, state and nation are staggering today.

Chinese Eggs a Menace

George Breed of Lynden has had much experience with the Chinese egg problem, having spent some time in China himself with one of the large egg companies. He gives the following brief points about the production of eggs in China:

The Chinese have no chicken houses, but every family has a small flock and the birds live in the house with the family and are given no feed except what few scraps are thrown away. Each flock consists of from 5 to 12 birds. They are mostly red and look like our game flocks. They lay practically no eggs during the winter, but what eggs are laid are saved and sold to Chinese coolies, who gather them in two large baskets for as small prices as possible. They are then taken to the large egg dealers, carrying them a distance of from 5 to 25 miles.

Such labor is worth only 16 cents in gold a day and an average Chinaman can raise a family on this amount. Chinese people never eat eggs except on Chinese New Year, it being their habit to eat nothing that can be sold for actual cash.

At the large egg plants the eggs are either packed for shipping, broken, mixed and frozen for "egg meat" or dried as egg powder. Products of this kind are sent to the American market, where they compete with our eggs that are produced at a greater cost.

There is food for thought in that little picture of an overseas industry that is competing with the farmers of this and other states of America. There may be artificial standards of living in some quarters of this country that make for an unnecessarily high cost of production, but not so on the farm. There is still room for a higher standard on the American farm, room for shorter hours of toil and more freedom and recreation that would result from better prices for farm products. The admission of Chinese eggs into this country, produced on the plane described by Mr. Breed, is a direct slap at the standard of living in our own rural districts.

Yakima Fruit Prospects

Every variety of fruit except plums and prunes, which furnish but a small proportion of the total, will contribute an increase over last season to the total of 18,264 carloads now estimated by H. A. Glen of the Northern Pacific as the output of the Yakima valley for the coming season.

The estimate is based on appearance at blossom time, and is subject to revision after the hard frosts of early May. Frequently, however, these frosts prove more beneficial than otherwise, because of the thinning expense they save.

The total is an increase of 3000 carloads over the actual shipments of 1919, and if the estimate is borne out it will show practically full recovery from the freeze of 1919.

Mr. Glen estimates apple shipments at 13,155 carloads; pears, 2540; peaches, 1534; cherries, 154; strawberries, 35; plums and prunes, 125; mixed cars, 334. Peaches are the only fruit not fully recovered from effects of the freeze. In 1919 2200 carloads of peaches were shipped. The figure fell to almost nothing in 1920, but came back to 1332 last year.

Standard Weights and Measures

The weights and measures division of the state department of agriculture, which was recently transferred from the office of the secretary of state, is making an attempt to standardize all weights and measures that are used for the convenience of the public.

W. B. Newcomb, superintendent of the division, reports that he finds many different kinds of weights which have been plugged or "rebuilt" to replace ones that have been lost. These, while they might balance the scales, are always sure to cause doubt in the minds of those who have to buy goods which are weighed by such weights.

In many cases the home-made weight does not balance on all loads and the inspectors are in the field to correct any default that may be found. It is not always the fault of the owner, but often there are parts of scales that are lost in moving from one place to another. This is especially true with the platform scales, and it is for this reason that the weights are placed on each corner when testing them out.

State Farm News

"The standardization of potato varieties in Thurston county will eventually be realized and will result in a potato grading station that will be managed by a county organization," said County Agent E. B. Stookey, upon being asked how this work was progressing in his locality.

"A difference of $10 a ton is going to make enough difference with the farmers so they will adopt the standard long, white potato instead of raising some of the inferior grades that are classed as "local spuds" and bought at a cheaper price. As soon as we are able to eliminate the '57 varieties' and raise potatoes that the people want, the sooner we will be able to demand around $30 a ton for our crop instead of having to take something like $20 for them and have trouble to dispose of them at that."

* * *

H. P. Huske of Satsop, Grays Harbor county, reports some excellent results from his small patch of Blue Belle field peas. They yielded 53 bushels to the acre and sold well on the local market for seed. The entire patch was certified by the state seed inspector.

* * *

The active demand for wool this spring was reflected in the fact that early in May, before the last of the shearing had been completed, 95 per cent of the 1922 clip had been sold at prices ranging from 20 to 30 cents, the average being about 26 cents. Most of the crop went to Portland or Seattle for sea shipment to Boston, though some of it went by rail. The last big clip to be sold, that of 7000 fleeces sheared by the Yakima Sheep company, brought the highest price of the season for Yakima and Benton counties, though some wool moved at 30 and 32 cents in Kittitas county, it was reported.

* * *

Community fairs have gained much favor in southwestern Washington.

* * *

The Oakville Canning club of Grays Harbor county has 10 members who have made out their budget to include only the canning of fruit that is needed in the home. They will give a mothers' day, when the mothers will be entertained by the members, and a mothers' holiday, when the girls will take entire charge of the home and let their mothers go for a day's vacation. A trip to Hood canal has also been planned by the club, when the girls will take a few days' outing after their summer's work has been completed.

* * *

Riverview residents, in the vicinity of Pasco, formed a Farmers' Welfare association, with D. M. Hurley as president and S. J. Comre secretary-treasurer.

* * *

The Lewis-Pacific Dairy association's condensed milk and powder plant at Chehalis has recently installed a cooperage plant for the manufacture of powdered milk barrels, according to J. A. Scollard, president of the United Dairy association.

Heretofore all barrels have been made at Portland and shipped in cars, which, of course, necessitated a large amount of car space. With the new arrangement the association can ship from 6 to 10 cars of barrels in one car of sets, which includes staves, hoops and heads. The quality of the barrel is also improved by the new arrangement.

* * *

Fully 1000 acres of grapes are being planted in the Yakima calley alone this spring, according to H. M. Church of Kennewick, the pioncer grape juice producer of the Pacific northwest.

* * *

Twenty-five gallons of water per person per day and 20 gallons per head of cattle or horses per day is the amount usually figured on as necessary for the farm supply, and if a windmill is used for pumping the tank should hold a five-day supply. If a gas engine is used a tank that will hold two days' supply is sufficient. If fire protection is planned the mains must be large to afford pressure.

* * *

The county commissioners and members of the commercial club have decided to dedicate Wahkiakum county's new courthouse at Cathlamet June 8.

* * *

Inspector P. S. Darlington has returned to Wenatchee from a trip through the orchard districts of Okanogan county.

"The present indications point to a crop of about 4000 cars in Okanogan county, which is an increase of 1000 cars over last year," he says. "In spite of the slight frost damage which was sustained in some places, prospects are that the county will have by far the largest crop ever produced.

"About 2000 acres of orchard is being set out between Tonasket and Oroville, running strong to Delicious apples."

* * *

Kennewick asparagus is competing with the California product in middle western markets. A carload was shipped to Minneapolis a few days ago.

* * *

Josh Barnes, living near Supplee, dug out a den of coyotes recently and found eight lively pups. The bounty on the eight would be that many dollars, but the boys have made such a demand for them that all the coyotes still live.

* * *

Potato and grain production in the Yakima valley both doubled in two years since 1919, and both crops will set new high records this season. Railroad figures show that potato shipments increased from 2000 carloads in 1919 to 3000 in 1920 and 5000 in 1921, and the figure set for this year is 3000 carloads. The valley's grain crop was less than 750 cars in 1919, but increased to 1200 in 1920 and to 1500 in 1921. Still more will be produced this season. Fruit crop totals increased from 15,000 carloads in 1919 to 17,500 in 1921 and promise to reach 18,000 this year, although frost damage is still to be considered. Alfalfa alone, of all the major crops, may show a falling off. It furnished 10,000 cars in 1919, 15,000 in 1920 and 12,000 in 1921, but many farmers are turning over alfalfa sod to put in cultivated crops.

Coming Events of Interest

May 30—Decoration day.
June 5—Northwest Guernsey breeders' sale, Portland.
June 5-10—National Holstein meet, Kansas City.
June 7—Guernsey consignment sale, Chehalis.
June 10—Republican state convention, Chehalis.
June 14—Flag day.
June 20-22—Lincoln-Adams pioneer picnic, Keystone.
July 26-28—International apple shippers, Seattle.
July 27-28—Whatcom Guernsey gallop, Bellingham.

FARM BUSINESS AND MARKETS OUTLOOK

Enter Period of Expansion

Plunging tactics never are safe, but there are times when it is entirely wise to expand, to proceed with confidence and initiative, while at others contraction of operations and cautious procedure are necessary to avoid trouble.

The evidence steadily accumulates that we will soon be ready to enter a period of expansion if we have not already entered it, in which enterprisers, whether agricultural or otherwise, can go ahead fortified in the belief that they are moving with the current of business affairs. The latest records of industrial output continue to show a big demand for goods of nearly all kinds. April steel production was nearly 3 per cent greater than in March, pig iron made a healthy gain and the unfilled orders of the steel corporation increased substantially. Auto and truck production thus far in 1922 was never exceeded but once in the same period of the year. All previous records for amount of construction started were broken in April.

Bank clearings, which measure business turnover, were 15 per cent larger in April than in the same month a year ago and more than double the highest figure ever reached in April before 1915. Nor can the increase be accounted for on the score of higher prices for goods and securities. Commodity prices are gradually moving upward. Bradstreet's index advanced nine times out of the last 11 months and was 10.2 per cent higher on May 1 than on June 1 last year, when it reached low point. Security prices have been getting a little ahead of the general procession and are passing through a moderate setback.

Credit conditions do not indicate that business expansion has yet begun, however, as interest rates are still easing. But since the United States now has about one-third of the world's gold supply, thus providing a foundation for a large volume of credit, it is not unlikely that considerable expansion could be financed without affecting money rates.

In the field of agriculture itself the outlook has attractive features. This country is short on sheep and its product, wool; there is, apparently, a slight shortage of beef cattle and thus far the profitableness of hog production has not brought about any undue expansion in production. Our dairy cows and poultry are turning out a lot of butter and eggs, but the consumptive demand for both is at a gratifyingly high level. The world-wide situation promises a good year for the American wheat grower, the corn surplus has been largely absorbed by an increased rate of consumption and even oats are gradually coming back in market value.

Thus we can go through the entire list of leading agricultural commodities and find sound reason for belief that supply and demand conditions and market prices will favor the farmer as he has not been favored for two years.

Smaller Cattle Run Expected

A small decrease in receipts around the market circle last week offset a decrease in the demand for beef as a result of hot weather and net changes in prices on the hoof were not marked. The belief that market supply will shrink at least a little further before long is prevalent as the run for the last four weeks has been above the seasonal average, whereas the available supply in the country is thought to be below the average. Quotations are practically the highest of the year. Heavy steers are not being discriminated against as they usually are at this season and, on the other hand, plain light steers are extremely scarce.

A small fraction of the supply of butcher stock and a few steers already show signs of having been on grass. Within a few weeks this factor will widen the price spread in both divisions materially.

The veal calf market is recovering its stride and advanced 75 cents to $1 at Chicago most of the last week, but lost part of the gain at the close. Further improvement in this division should be seen during June.

Steady Demand for Stock Cattle

With but two exceptions the shipments of stocker and feeder cattle from 12 leading markets since the middle of January have not gotten far on the upper or lower side of 50,000 head weekly. Prices have been gaining rather steadily and reached the highest level of the year last week. May usually is the high month, so that the market is running true to form.

The spread between stocker and feeder prices on the one hand and fat steers on the other is abnormally narrow, favoring the breeder rather than the feeder. After the spring demand has been satisfied values in this division are likely to sag.

The movement of cattle from the southwest to northern pastures is now at its maximum, but it will not be completed for 30 days. Total shipments in that direction still promise to fall below those of last year. Unfavorable weather and the failure of the railroads to grant reduced rates were partly responsible.

Hog Market on Profitable Basis

Although receipts of hogs at the 11 leading markets are running ahead of the 10-year average, the fresh pork market has weakened slightly and export sales of hog products are not voluminous, hog prices are holding up exceptionally well. It is quite probable that values will pass through a trough before the middle of June, but a break below the $10 level at Chicago should be of brief duration if it occurs at all. After the June run has been garnered receipts will drop to the lowest level of the year, so that prices should remain on a highly remunerative basis as compared with corn at least until the new crop of hogs begins to come upon the market next fall in large numbers. If hog production has not been increased more than prevalent reports upon loss of spring pigs would indicate, the price level should be a satisfactory one most of the coming year.

The lard situation may make a little trouble later on, as it is not moving into consumption as rapidly as hog meats, in spite of the fact that wholesale prices for lard are but little above the price of hogs on the hoof. Stocks on May 1 were below the average, but the increase during April was above the average and reports show a decided increase at some packing points in the first half of May. A heavy run of fat sows is expected a little later on, as well as a generous supply of heavy fat barrows, so that the lard kettle may be kept well filled all summer. Even so, lard is not likely to become much cheaper than it is now and the usual fall export trade in lard should take care of whatever accumulation occurs.

Live Mutton Selling Lower

The live mutton market has started the seasonal decline in prices which marks the onset of the new crop of lambs and the effect of hot weather on mutton consumption. Receipts at the seven leading markets for three weeks have been practically equal to the eight-year average for this season of the year, but the total supply has been augmented by the arrival of two cargoes of approximately 34,000 carcasses of New Zealand frozen lamb and mutton at an eastern port, with additional shipments said to be on the way. A clean-up of the supply in feedlots will soon be completed and the course of the market will depend largely on the rate at which the movement of spring lambs expands. Further declines are probable as the season works along, but the top of the market promises to hold above $13 at Chicago most of the summer as the supply in all sections is below normal. Some of the range states report rather heavy losses as a result of losses during the lambing season.

Draft Horse Market Strengthens

The draft horse market has been gaining strength for several weeks, as industrial concerns are in the market in a more active way than they have been for months. Horses weighing 1600 to 1800 pounds, if sound and around 6 years of age, are bringing $210 to $250 at Chicago. Chunks are not doing so well, however, as the farm trade is over and prices in this division declined about $10 per head early last week, those weighing 1200 to 1500 pounds clearing mostly at $110 to $150 on the Chicago market.

Rise in Wool Values Continues

Wool prices continued upward last week, Boston quoting an advance of about 5 cents per clean pound. Seaboard markets were feverishly active, although the supply of wool at these points is small. The range country is excited, with wool changing hands as fast as the growers are willing to sell. About 85 per cent of the Oregon clip and the best Utah and Nevada packages have been sold. As high as 42 cents was paid for some fine Utah clips, with medium and coarse wools seldom selling below 25 cents. These quotations show an advance of around 100 per cent as compared with last spring. The rise has been world-wide, as British and Australian auctions have been uniformly reported firm or higher during the last three weeks. The American Woolen company has had a big increase in orders for cloth and the country's looms are still running at a high percentage of capacity.

The Boston market is quoted as follows:

Wisconsin, Missouri and average New England—1-2 blood, 38@40c; 3-8 blood, 37@39c; 1-4 blood, 35@37c.

Scoured basis:

Oregon—Eastern, No. 1 staple, $1.20@1.25; fine and fine medium combing, $1.15@1.20; eastern clothing, $1@1.10; valley No. 1, $1.05@1.08.

Territory—Fine staple, choice, $1.20@1.28; 1-2 blood combing, $1.05@1.10; 3-8 blood combing, 80@83c; 1-4 blood combing, 68@70c.

May Wheat Unsettles Market

Owing to the alignment of large grain interests on each side of the market for May wheat at Chicago, conditions in that delivery are exercising an exaggerated influence upon the trend of prices. The outcome remains in doubt. Over 5,000,000 bushels have been delivered thus far and the rule permitting deliveries on track has been invoked because of a shortage of storage room, but the wheat has gone into the hands of exporters and other strong interests who appear to want it and it is claimed that a good deal of it has been sold abroad. It is possible that foreigners themselves may be interested in the market on the "long" side. Those who are taking in the wheat delivered are not offering to sell at prevailing prices, apparently looking for a better market in June for any grain which they have not yet placed.

The "shorts" are combing all markets for wheat good enough to meet contract requirements and are rushing it to Chicago with a prospect that several million bushels more will be delivered before the end of May. A shipment of nearly 100,000 bushels has been brought back from Buffalo.

Wheat Disappearance Runs Large

Comparing the foreign visible supply of wheat and stocks afloat on July 1 last year with the stocks in those positions in the middle of May this year and counting world's exports between those two dates, about 573,000,000 bushels of wheat have disappeared in international trade in the last 10 1-2 months, according to Russell, the New York statistician. In the same period in the preceding year disappearance was 529,000,000 bushels. If the rate thus far is maintained importing countries will need 80,000,000 to 85,000,000 bushels more July 1 and 140,000,000 bushels more before August 1 unless stocks afloat which are now about 50,000,000 bushels are allowed to become very small. They have decreased nearly one-third as a matter of fact in the last few weeks, as wheat has been disappearing at the average rate of nearly 14,000,000 bushels per week since last July, while new quantities placed afloat recently have been running from 7,000,000 to 10,000,000 bushels per week.

Australia and Argentina combined are believed to have about 80,000,000 bushels yet for export, which means that North America must furnish a small quota right along and that old crop surpluses will be well cleaned up in all exporting countries before the beginning of the European new crop year on August 1.

Flour Mills Expected to Buy More

Flour mills appear to be grinding wheat at the rate of about 8,000,000 bushels weekly, but the rate is hardly up to the average for this season of the year and is the weakest point in the market situation at present. Some mills which bought wheat at a much lower level of prices are offering to resell. Whether flour stocks and supplies of wheat still held by mills will permit them to remain out of the market until cheaper wheat from the new crop is ready is unknown, but it is generally believed that they will be obliged to buy considerable wheat before harvest and this demand may appear at any moment.

The new wheat crop should be warmly welcomed at prices only 10 to 25 cents below the present cash price. When receipts begin to mount, following harvest, the sales for export for July, August and September shipment will need to be filled. If these export sales continue until new wheat begins to move they should be of sufficient volume to prevent any sharp sag in the market.

The prospect will depend to some extent upon conditions in the new crop. Reports are favorable for the most part, but after the prolonged wet period it is not unnatural to expect some dry weather, which the crop in some sections is not in condition to withstand.

Corn Market Drags

The corn market has been dragging as the movement to primaries has been above the average for this season of the year and the increase which generally appears around the first of June is showing up in the form of larger country offerings. The loss in values has not been marked, however.

Industries are buying more corn. Large starch sales have been made to Japan and one plant in Illinois which has been closed down for a month has reopened.

Clearances for export, which averaged close to 5,000,000 bushels weekly from the middle of January to the first week in April, have dropped off over 50 per cent in the last month. New sales are being made right along, but they do not point to an early renewal of the enormous winter movement overseas. Shipments from the Argentine are increasing, although the new crop is not in very satisfactory condition for shipment across the equator.

Oats Disappearance Quickens

Both domestic and export demand for oats is better than a few weeks ago and this grain is disappearing into distributive channels with more celerity. All reports point to a decreased acreage with a high percentage of late planted grain which generally yields none too well.

The range of cash grain prices for the week ended May 17 was:

CHICAGO—Wheat, No. 2 red, $1.36@1.46 1-4; No. 2 hard, $1.38 1-2@1.46 1-4; No. 3, $1.37 3-4@1.41. Corn, No. 2 mixed, 61 3-4@62 1-2c; No. 3, 60 3-4@62 1-4c; No. 4, 60 1-4@61c; No. 2 yellow, 62 1-4@63 3-4c; No. 3, 60 3-4@62 1-2c; No. 2 white, 62 1-4@63 1-2c; No. 3, 61 3-4@62 1-2c. Oats, No. 2 white, 39 3-4@44c; No. 3, 38 1-4@43c; No. 4, 36 1-2@40c. Rye, $1.05 1-2@1.11. Barley, 62@72c.

Small Clover Seed Carryover

Stocks of clover seed, which were below the average at the beginning of the year, are now said to be exceedingly small. There is but little life to the cash demand. Timothy is more active than clover, with rather large shipments going into the eastern states.

Chicago, per 100 lbs.—Clover, $12@22; timothy, $4.50@6.

Toledo, per bushel—Prime red clover, $13.75; prime alsike, $11.50; prime timothy, $3.10.

Limited buying has weakened the feed market, although prices have not reacted downward very far. Flour mills are not pressing sales of wheat feeds as their production is light. Much the same is true of corn feeds. Demand for cottonseed meal and linseed meal is small.

Prices per ton (100-pound bags) in carlots—Chicago: Bran, $23; standard middlings, $23.25; flour middlings, $27.50; cottonseed meal, 36 per cent, $49; 43 per cent, $53; hominy feed, $22.50; gluten feed, $32.85; old process oil meal, $52.50; tankage, $55.

Light Receipts Support Hay

Light receipts remain the chief support of the hay market at most points as buying is limited. At Chicago, for example, receipts in April were only 11,277 tons, compared with a four-year average of 21,917 tons. Shipments amounted to 1316 tons, compared with an average of 5349 cars during the four preceding years.

Prices per ton in carlots—Chicago: No. 1 timothy, $25@27; No. 2, $23@25; No. 3, $17@20; No. 1 light clover mixed, $24@25; No. 1 clover, $20@21; No. 1 clover mixed, $21@23.50; alfalfa, $17@28; upland prairie, $17@19; midland prairie, $14@17; rye straw, $16@17; oat and wheat straw, $14@16.

Absorption of Eggs for Storage

The movement of eggs into cold storage continues unabated with 50 to 60 per cent of the receipts at the four leading cities going for that purpose. The available supply is large, with receipts running ahead of the corresponding season last year, but it is probable that the peak of the movement has been passed.

(Continued on page sixteen.)

A Good Law But Misused

Trade Commission's Act a Blow to Livestock Men

What seems to be a perversion of the intent of a good law is found in the order issued recently by the federal trade commission at Washington commanding Armour & Co. to dispose of their packing plant at Spokane. Armour & Co. bought that plant five years ago from the E. H. Stanton company. The purchase was open and above-board and has long been regarded by live stock interests in the Inland Empire as beneficial to their industry. Before Armour & Co. bought the Spokane plant the packing industry in Spokane was largely a scalping process. The local packers often took advantage of a grower's necessity and bought his live stock at the lowest possible prices. We think it is practically the unanimous verdict of live stock growers in the Inland Empire that they have had better and more considerate treatment than was accorded them before Armour & Co. came into that field.

Notwithstanding these conditions, the federal trade commission holds that the purchase of the plant was an act of restraint of trade and a violation of section 7 of the Clayton act. Armour & Co. in a statement made at Chicago emphatically deny that their purchase was a violation of law and announce their determination to carry the question to the United States courts. We are confident that a great majority of the live stock growers of the Inland Empire would be sorely disappointed if the courts required the dismantling of the Spokane plant or its forced sale to others who might not be as willing to build up, or as capable of building up, the live stock industry in the Pacific northwest.

Many live stock growers and business men believe that the federal trade commission has been unjustly hounding some of the packers now for several years. The Chamber of Commerce of the United States, a responsible organization that is generally careful about its assertions, openly accused the federal trade commission of prejudice and hostility. In a letter to President Wilson in 1918 it charged that the commission was scheming to bring about government ownership and operation of the packing industry and that when it conducted its hearings it was grossly unfair to the defendant packers, "refusing to permit concerns that were mentioned in the documents to offer any testimony or produce any documents," and further that "it examined witnesses of its own choosing and prevented cross-examination by the concern at which, it was made clear, the proceedings were directed. At each city the special counsel or other members of the staff let it be known that the government contemplated taking over and operating the industry. The result of the commission's course was not to give information to the public, but to place the commission in the position of seeking to create prejudice which would support an apparently preconceived purpose to inaugurate government ownership of the business."

The commission failed in that purpose and seems to have been in a nagging mood against the packers ever since.

THE FARMER is not and never has been a special advocate of the packers. It has been outspoken against some of their practices that it considered unfair. It has always advocated the turning of the searchlight on these great packing concerns. But it does stand for the square deal, and it does not want to see a serious blow delivered at the live stock growers of this region over the shoulders of the Chicago packers.

It was a good thing for the Pacific northwest when Armour & Co. came to Spokane and Swift & Co. to Portland. We should like to see all of the other big packing concerns establish plants in the Pacific northwest. But if the federal trade commission has its way it would seem that the big packers now here are to be driven out and the live stock industry of this region turned back to the old scalping methods that were so costly to our growers.

IN DOUBLE LETTER CLASS.

The record of the Guernsey cow, La France of Bralee, owned by Dr. A. Macrae Smith of Bellingham, has been officially accepted in the double letter class. She made her record of 594.58 pounds of fat from 10,537.0 pounds of milk as a senior 3-year-old and carried a calf 274 days. She leads her class in Washington and ranks seventh of the breed in that class.

Stable Dollar

Little Journeys to the Markets

Most of us assume that the saying "a dollar is a dollar" is axiomatic. It is true that at any given time one dollar in our currency is as good as any other. But it is equally true that our dollar varies in value at different times. During the war the dollar depreciated more than 50 per cent; that is, the quantity of goods which it would buy declined. In the last two years the value of the dollar has been rising.

Usually these changes are thought of from the other angle, that prices have risen or fallen. When prices are high, however, it is just as correct to say that the value of the dollar has shrunk. When prices fall the dollar rises in value.

We think our dollar is constant in value because a dollar in silver or currency is always redeemable in gold and the gold dollar always contains 23.22 grains of pure gold.

Gold is a commodity like any other and is more abundant at times than at others. The discovery of new gold fields, as in California, the Yukon or South Africa, leads to coinage of a larger number of gold dollars or to a larger gold reserve in the banks against which paper money can be issued. With the quantity of goods remaining constant and money more plentiful, prices tend to rise. A decrease in the amount of gold due to exports of the yellow metal or other causes will have the opposite effect.

Since money is a medium of exchange, a perfect dollar should have a constant purchasing power rather than a constant weight. Professor Irving Fisher has suggested the substitution of a dollar which would vary in weight from time to time so that its purchasing power would be comparatively constant. When gold becomes plentiful, increase the amount of gold behind the dollar enough to prevent prices from rising and decrease it whenever money becomes scarce and causes prices to fall.

No gold dollars would be coined, but the amount of pure gold which could be obtained in exchange for gold certificates would not remain constantly at 23.22 grains, but would be raised or lowered periodically according to whether prices as shown by carefully prepared index numbers were tending to advance or decline. The plan as worked out would limit the amount of change in any one month to 1 per cent.

Many people do not believe the plan would work. They argue that fluctuations in prices are due only in part to variations in the supply of gold. The quantity of goods varies also and it would be impossible to stabilize prices unless both production and consumption were stabilized. Under our banking system bank credit functions as money. It is based upon gold reserves, but varying the value of this reserve by 1 per cent each month could hardly affect conditions enough to offset all the other factors which cause price levels to vary.

The plan would not suffice to prevent the rise in prices such as occurred during the war or the declines which occur in times of crisis. It might stabilize prices in normal times, but would fall down when most needed. Furthermore, it would be dangerous for one country to put the plan into effect alone, as foreign countries, foreseeing a crisis, could withdraw gold when most needed and send it back after it had reached a higher value.

Furthermore, the plan is objected to because it would tend to fix the price level prevailing at the time it went into effect. It is difficult to do this without doing injustice to some class or classes of society, the prices of whose labor or commodities happen to be above or below the normal level at the time.

Eventually some such scheme for stabilizing prices may be put into effect, but at present it seems rather remote.

First to establish the $10.90 price—"Usco"

THE makers of U.S. Tires made this announcement last November—

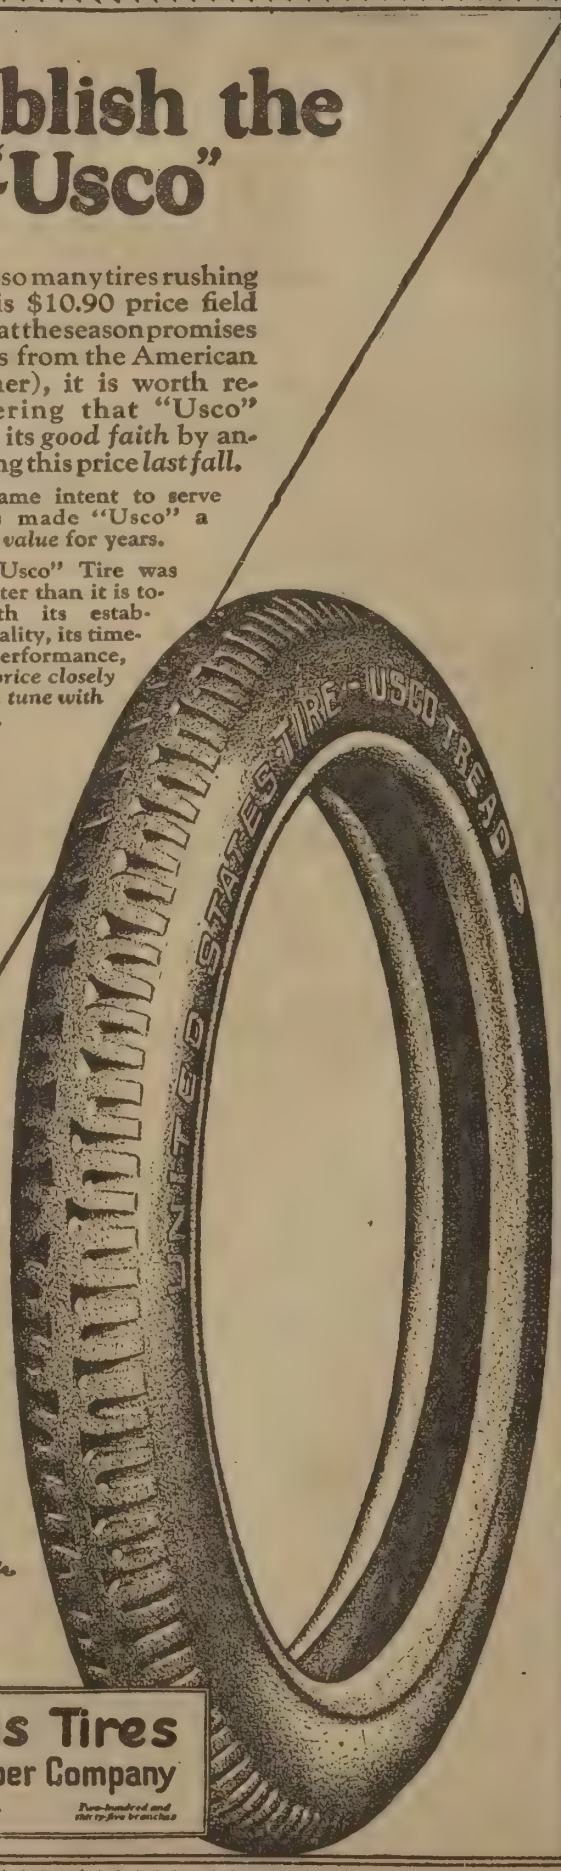
"Hereafter the price of the 30 x 3½ 'Usco' is $10.90."

The lowest price ever quoted on a tire of *quality reputation* and *standard performance.*

* * *

And now, with the opening of Spring, there seem to be quite a number of "New and Special tires" coming into the market in the $10.90 price range.

Perhaps you are wondering just what there *can* be either "new" or "special" about these tires.



It can't be the $10.90 price—"Usco" established *that* five months ago.

Nor *quality* reputation and *standard* performance—for it takes more than one full season for any new tire to *demonstrate* where it stands in quality and value.

With so many tires rushing into this $10.90 price field (now that the season promises business from the American car-owner), it is worth remembering that "Usco" showed its *good faith* by announcing this price *last fall.*

The same intent to serve that has made "Usco" a *standard value* for years.

The "Usco" Tire was never better than it is today—with its established quality, its time-tested performance, *and its price closely figured in tune with the times.*

New Superior Model

The World's Lowest Priced High-Grade All-Year Sedan

The Ideal Family Car

The Comfort and Weather Protection of a Limousine For Less Than the Cost of Most Open Cars

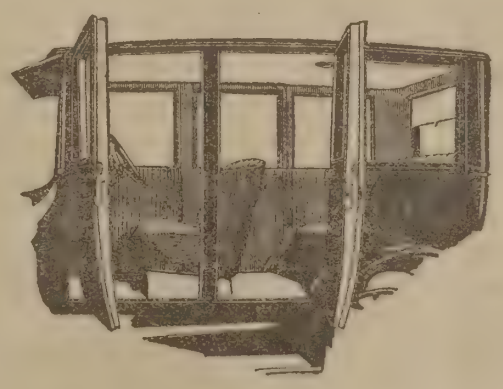
$875

F. O. B. FLINT, MICH.

Never before has a Fisher Body Sedan of this quality been offered at a price so low. The beautiful lines, superb finish, luxurious upholstery and refined appointments that have made Fisher Bodies the standard of excellence in closed cars, are all here in full measure. Its four doors fit perfectly and cannot rattle.

The heavy plate glass windows can be instantly lowered to any desired point, or as quickly raised, and the plate glass windshields are both movable, permitting instant conversion of the Sedan into either a closed or an open car.

Mounted on the New Superior Model Chassis, this car is fully equipped mechanically, and combines ample power and speed with steadiness and ease of handling.



No matter what car you now use, or think of buying, investigate this Sedan. Its power, speed, appearance and appointments please discriminating motorists accustomed to paying higher prices for closed cars.

Its low price and low maintenance appeal to all who find it desirable to economize. In no other car on the market can you find this unusual combination of Style, Quality, Economy, and Year-'Round Service.

LIVESTOCK AND DAIRY

Carrots for Hogs

By JERRY SOTOLA, Instructor in Animal Husbandry, W. S. C.

What is the food value of carrots in comparison with barley for hogs? J. H. Deer Park, Wash.

Barley with a moisture content of 10 per cent contains seven and one-half times as much dry matter per 100 pounds as carrots with a moisture content of 88 per cent. Carrots are not as palatable nor as good keepers as mangels and sugar beets. They tend toward growth rather than fattening and fit well in rations of bacon hogs. In finishing pigs the allowance should be restricted or the desired finish will not be obtained. Pigs are not suited for handling excessively bulky feeds. They become filled up on carrots before they have consumed the quantity digestible matter necessary for putting on the proper finish if roots are fed in large amounts.

Pigs weighing 90 pounds and full fed on grains have made daily gains per head of 1.2 pounds, requiring 499 pounds of feed per hundredweight gain. When the grain ration was reduced by 30 per cent, and roots fed liberally after the grain feed, the daily gains were 1.0 pounds per day, but it required only 358 pounds of grain and 631 pounds of roots per hundredweight gain. During periods of high priced grains roots used in limited quantities induce economy in fattening operations. In this instance 550 pounds carrots replaced 100 pounds of grain.

Because of their slightly laxative effect and their bulkiness, carrots have a special place in the rations of brood sows in winter, a place that can not be filled by barley.

LIFE PRESERVERS FOR LIVE STOCK

By DR. E. E. WEGNER, W. S. C.

INFECTIOUS DISEASES, ARTICLE IX.

Tuberculosis.

There is no disease of man or animals that has such a wide distribution nor which affects such a large number of species of animals as tuberlosis. This disease is no respector of animals or birds, hough not all species of them are equally susceptible.

The greatest loss among lomestic animals is in cattle, hogs and fowls and probably in the order named. Horses seldom suffer and dogs and cats are rarely affected, sheep and goats practically never get this disease, though it has been reported in a few instances. Wild animals do not suffer very much, as they live under conditions that are not favorable to its spread, but when these animals are placed in captivity the disease may cause great distress and severe losses.

A question as to wether tuberculosis can be transmitted from one species to another is still in dispute, but the evidence seems to be that this is possible and that it is actually spread in this way. The difference in the appearance of the organism from different species is not very great, though there are some minor diffeences. Tuberculosis is by far more widely spread among animals and man than is commonly supposed and it is not too much to say that a very high percentage of men and animals have had this disease sometime during their lifetime, though they may not have been aware of that fact. The common opinion that tuberculosis is invariably fatal is not correct and as a matter of fact the contrary is more true. We see unmistakable evidence of this every day in the great packing houses of the country where thousands of animals are killed for food every day. In these places we find that apparently healthy animals have been sufferers from this disease sometime during their lives, though most of them have quite completely recovered.

The fact that all cases are not fatal should not be construed as a reason for relaxing our efforts to eradicate this disease because the fatalities are numerous enough and the economic losses among animals are sufficient to justify us in using every means at our disposal to suppress this dicease. My only thought in mentioninng the large number of recoverie is to impress upon every one the fact that having tuberculosis is not the same as being marked for an early funeral, but every one is justified in going a long way to get around it.

May Affect Any Part.

It was once supposed that tuberculosis was a disease of the lungs and that form was commonly called consumption. We now know that tuberculosis may affect any organ of the body. We are frequently asked to describe the symptoms of tuberculosis, and to such we must reply that the symptoms vary according to the location of the disease or the organs affected. The symptoms would not be the same if the bones of the limb were diseased, as they would be if the bowels were the seat of the trouble, or the lungs or some other organ. The manifestations differ with the location.

Some have the opinion that the disease soon becomes generalized after it enters the system. We find actually, however, that this spread is a very slow one in most cases and that instead of spreading rapidly the tendency is for it to become distinctly localized and in most cases it never spreads beyond the primary seat of infection. Those are the conditions in the many cases that never knew that they were diseased. In the cases that are more serious the disease is likely to be more extensively spread, but even then there is a decided tendency for the disease to be considerably limited. We may see evidence in animals that they have had the disease for considerable time without an extensive distribution throughout the body.

When first entering the lesion appears as a small spot that changes to hard, firm nodule in the substance of the diseased organ. These nodules become more numerous or get larger as the disease advances, though if the patient is sufficiently strong to recover the nodule does not develop as above, but remains permanently small and softens in the center. This soft center is gradually hardened passing through a cheesy state and finally getting gritty and hard throughout. This is the condition found in cases that we say have permanently recovered.

(To be continued.)

Cross-Bred Bulls

By R. T. SMITH, W. S. C.

What kind of calves will a bull produce, if he is one-half Hereford and one-half Durham, thoroughbred on both sides? Would he be a good herd bull?? S. G. Nespelem, Wash.

Cross-bred bulls are unsatisfactory for two reasons. First, their offsprings lack uniformity, and second such a cross never makes for improvement of the herd in any definite direction.

A cross-bred bull may be a better individual than either parent, but as a sire he will be unsatisfactory. Some of the offsprings may be good, but an equal number will be poor individuals and all lack in uniformity. The offsprings will also be scrubs as there is no definite improvement in any direction. I would strongly advise against the using of a cross-bred sire. It is far better from a financial standpoint to put a few more dollars into a good full bred bull.

AVOID THE RUNTY RENEGADE.

One good, thrifty shoat is worth more than two starved, runty renegades and will not cost half as much in feed and vexation.

AN INDIVIDUAL PROBLEM.

When Hungry Little Muscles Say, "Please Help Me"

DID you ever stop to think who it really is that's talking, when childish voices raise a clamor, "Mother, I'm hungry?"

It's really muscles and bones and nerves and cells worn in the stress and strain of play—that are calling for rebuilding material.

What kind of an answer? The *right* thing, or *just anything?* It makes a big difference.

Grape-Nuts, so deliciously crisp and appetizing to taste, and so quick and convenient to serve, is a splendid food for rebuilding young bodies. All the wonderful nutriment put in wheat and barley by Nature, including the vital mineral elements, is there—and Grape-Nuts digests easily, quickly and completely. Served with cream or milk, Grape-Nuts is exceptionally nourishing.

"That's splendid!" says appetite. "That's just the need!" say the hungry muscles, nerves and bones.

Ready to serve right from the package—always crisp and fresh. A favorite dish with all the family. Sold by grocers.

Grape-Nuts—the Body Builder

"There's a Reason"

WESTERN CANADA
Land of Prosperity

offers to home seekers opportunities that cannot be secured elsewhere. The thousands of farmers from the United States who have accepted Canada's generous offer to settle on FREE homesteads or buy farm land in her provinces have been well repaid by bountiful crops. There is still available on easy terms

Fertile Land at $15 to $30 an Acre

—land similar to that which through many years has yielded from 20 to 45 bushels of wheat to the acre—oats, barley and flax also in great abundance, while raising horses, cattle, sheep and hogs is equally profitable. Hundreds of farmers in western Canada have raised crops in a single season worth more than the whole cost of their land. With such success comes prosperity, independence, good homes and all the comforts and conveniences which make life worth living.

Farm Gardens, Poultry, Dairying

are sources of income second only to grain growing and stock raising. Attractive climate, good neighbors, churches, schools, good markets, railroad facitities, rural telephone, etc.

For illustrated literature, maps, description of farm opportunities in Manitoba, Saskatchewan, Alberta and British Columbia, reduced railway rates, etc., write

VETERINARY

By DR. S. B. NELSON.

Cholera.—I would like to know when and how to vaccinate pigs for cholera and where to obtain the serum for same?
Ritzville, Wash. E. M.

You can vaccinate pigs for cholera, single treatment, at any time. You can obtain the serum through any reputable druggist, or your veterinarian will get it for you. Do not use the double treatment unless all pigs have cholera.

Sore Ears.—I bought some 6-week-old rabbits and shortly after I got them I noticed scabs down inside the ears which spread until it covered the entire ear. It seemed to be a dry scab that kept sloughing off. I used vaseline in their ears and the scabs went away, but I see it is coming back on one. Is there a cure? A. A. L.
Cosmopolis, Wash.

Try painting the ears with 1-2 per cent solution of picric acid in water once daily.

Mange.—I have a fox terrior pup that has a skin disease that causes the hair to fall. First a red spot appears and then the hair comes out. Is this disease contagious? R. L.
Hoquiam, Wash.

Your dog is probably affected with mange, due to skin parasites, which may be transmitted to other animals and even human beings. Try applying a sulphur ointment made with sulphur and petroleum, so that it is not quite solid and more toward a semi-liquid. Put a muzzle on the dog so he can not lick himself as the treatment is applied. You had better try covering one-fourth of the body the first time, then one-half the body and then the other fourth and repeat in about six days. The reason I suggest partial treatment at a time is that once in a while a dog may become affected from the petroleum. You should give the animal from three to four treatments about six days apart.

Treatment for Gargot.—What is the matter with my cow's udder. The front of the udder swells and the milk gets lumpy. It will stay this way a few days and then gets all right again for two or three weeks and then swells up again. She has been fresh six weeks. A. B.
Valleyford, Wash.

I would suggest that you first give your cow one and one-half pounds of epsom salts in three quarts of water. Two or three days later inject into the udder a 2 per cent solution of boracic acid with water. The water should be boiled and the boracic acid stirred into it. You will have to sterilize the instruments with which you inject the liquid into the udder. The best way to sterilize it is by boiling it. The end of the teat, before the injection is made, should be dipped into tincture of iodine. After the udder is filled hold the teat closed and gently massage the liquid all through the udder and then milk it out. You can repeat the treatment in a week or four or five days if necessary.

Teat Clogged—I have a cow 6 years old that was fresh a month ago. One of her teats is clogged. I open it up twice a day, but it does no good. She seems healthy, eats well and gives eight to 10 quarts of milk at a milking. The teat is not sore or swollen. H. M.
Elk, Wash.

Dip the teat in tincture of iodine before and after each milking. You can also apply a little carbolized vaseline up into the end of the teat. I would not go inside of it with anything.

Sore Ears—I have a valuable cattle dog that has had a running sore in her ear for about six weeks. Sometimes the matter is brown and sometimes white. G. S. M.
Montesano, Wash.

I think that your dog is suffering from a rather severe attack of otitis. I am going to suggest the following treatment to you: Pour into the ears a little peroxide of hydrogen until the ears are fairly clean. You can then dry them carefully with some soft absorbent cotton, being careful not to injure the ear. After this pour some methyl alcohol into the ears. Be careful in using this because this is wood alcohol. After this fill the ears comfortably with boracic acid. Tie the ears down with a long V-shaped cloth with slits in it so that the ends may be brought up and through and then tied. In an hour or two take it off and let the dog shake out the extra amount of boracic acid. Give him that treatment daily for two or three days and then try it every other day and then every week or 10 days as long as necessary.

Elma Holstein Sale

The following is a detailed report of the recent Holstein sale held at Elma, Grays Harbor county, by a number of breeders from the Chimacum valley in Jefferson county:

Consigned by William Bishop:
Chimacum Wayne Phoebe, John McBride, Aberdeen $220
Queen Nana Segis, Western Washington hospital, Fort Steilacoom 220
Phoebe Sadie Vale, William Polson, Montesano 210
Sir Chimacum Andy Wayne, L. E. Smith, Satsop 200
Chimacum Sadie Vale Segis, F. S. Aolz, Chimacum 150
Sir Chimacum Wayne Segis, John Grossman, Acosta 150
Chimacum Bos Lutske, A. O. Hamilton, Chehalis 280
Chimacum Lutke Abberkerk, W. J. Berns, Montesano 300
Twin heifers out of Chimacum Lutske Abberkerk, W. G. Hopkins, Elma 210
Chimacum Violet Cornucopia 2d, A. O. Hamilton, Chehalis 250
Chimacum Ormsby Lilly, W. G. Hopkins, Elma 165
Riverview Lilith Bracelet, A. D. Kain, Chehalis 200
C. K. K. S. V. Lady May, C. H. Kampendonk Chiacum 510
Chimacum Rag Apple, A. O. Hamilton, Chehalis 250
Chimacum Lilith Bracelet, William Polson, Montesano 140
Sir Galaxy Pontiac Ormsby, J. K. Mohney, Elma 115
Consigned by Thomas Yarr:
Clothhilde Wayne Boon, John Grossman, Acosta 220
Mannett Cornucopia Wayne Boon, Western Washington hospital 260
Selah Newaman Sadie Vale, Ellis Mouncer, Elma 200
Jewel Mechtilde Newman, W. G. Hopkins, Elma 140
Astrea Wayne Boon, Western Washington hospital 400
Selah Johanna Wayne Boon, Le e Kegley Lacey 260
Jenny Mechtilde Newman, Edward Valentine, Montesano 335
Consigned by Hugh Nisbet:
Ononis Sena North Star, A. D. Kain, Chehalis 310
Sena Newman Johanna, William Polson, Montesano 180
Aggie Cornucopia Blossom, Ed. Valentine, Montesano 300
Blossom Wayne De Kol Boon, W. J. Berns, Montesano 460
Spofford America De Kol, Edward Valentine, Montesano 340

Clara Netherland Mercedes 2d, F. C. Baker, Olympia 250
Billy Baker Mercedes, John Halman, Elma 125

VEEDOL in your tractor means money in your pocket

Veedol will make money for you this year by cutting costs in the operation of your tractor, truck and car.

Take your plowing for example: The Veedol oil designated for your tractor engine on the Veedol chart forms a piston seal that holds tight even under the terrific heat of extreme operating conditions. This means complete compression with full power at every power stroke, even on a still day under a broiling sun.

Full power means fuel saved, but more important it means better and quicker plowing. Quicker plowing means more acres covered in less time. Time saved means real money to you in the sweat of a busy season. And, perhaps most important, Veedol keeps your tractor engine *on the job* and out of the repair shop.

After you have read the panel at the right get a trial 5 gallon can of Veedol. Test it in your tractor, truck or car. Compare it "under fire" with the oil you have been using.

There are Veedol oils and greases for every type of power farming equipment. Consult the Veedol Charts and select the particular Veedol lubricants designated for your automotive equipment. Use these and no others.

TIDE WATER OIL SALES CORPORATION
11 Broadway, New York

Veedol motor oils and greases are sold throughout the world

YES or NO!

Does your oil meet these rigid requirements?

1. Full power—Your engine delivers full power only when the oil maintains a piston seal. Veedol maintains a piston seal, and gives full power even under extreme operating conditions.

2. Fuel savings—Poor compression allows unburned fuel to seep into the crankcase to further weaken and dilute the oil. Veedol holds compression. Therefore, Veedol saves fuel.

3. Minimum repairs—Over 80% of engine repairs are traced to faulty lubrication. Veedol saves you from seized pistons, burned bearings and scored cylinder walls.

4. Continuous operation—A motor laid up loses more money in a few days than the price of a year's supply of oil. Veedol keeps your machinery on the job.

5. Time and money savings—Full power, fuel savings, minimum repairs and continuous operation mean more acres worked in less time at lower cost. Veedol saves time and money.

Veedol is a Pennsylvania base oil, refined *more* than other oils. The exclusive Faulkner process gives Veedol *extra* resistance to deadly heat and friction.

POULTRY AND RABBITS

Builds Up-to-Date Laying House

Although one of the oldest poultry farms in the vicinity of Longbranch, Pierce county, the Brookdale Poultry farm will be one of the most modernly esuipped when all plans are completed. August Anderson, the owner, has been in the business for nearly 10 years and has made a careful study of new methods and practices.

His new laying house is built after the Shoup plan with a few modifications. It is 18 feet wide and 112 feet long and has a large two-story feed room at one end. Two feed carriers are built so as to handle all the heavy work. One of them passes in front of the dropping boards and is first used to carry the early morning feed to the scratch floors and then on the return trip is filled with manure from the dropping boards. The carrier is then cleaned well and is ready for the next feeding. The mash is fed in troughs below the wire screen at the front of the house and the second carrier operates the entire length of the house on the outside. In this way the feeding can be done very quickly and with the minimum of labor.

"I built the roof low in front, but arranged the gables so they would admit an abundance of light," said Mr. Anderson. "The windows in the gables can be opened or closed from the feed room at the end by means of a lever. In this way an abundance of air can be had in the main scratch room and still enough light. The floor is of concrete which was built with a moisture-proof mixture, thus insuring against dampness.

"To economize on room, I put the nest boxes under the dropping boards. The droppings should always be cleaned out anyway and there is no need for any trouble from this source. The roosts are built in sections and separated by partitions to prevent a draught. I find it a good plan to suspend the roost frames by wires which keep the mites from getting on the hens. It is necessary to use oil and spray the whole house from time to time to keep any such insects from getting a foothold."

Mr. Anderson keeps some of his best hens in a separate compartment of the large house for the production of hatching eggs.

A home-made oat sprouter is being used to good advantage and three small bins made from 12-inch planks, four feet in length, have been built side by side. An old churn sits on top of the oldest bin of oats and when the oats have soaked for 24 hours they are dumped where the sprouted oats have just been removed. The churn is refilled with oats and water and set over the bin which is to be fed next. The main thing to watch is to keep the grain turned each day and keep it from getting sour or becoming matted. An oil heating lamp can be placed underneath in cold weather.

By building the feed room with two stories, Mr. Anderson finds that he has more room for storing such articles as

The new laying house and feed shed on the Anderson farm.

brooder stoves and incubator supplies that are used only in the early spring. These can be taken down in the winter and repaired without having to be moved from one building to another during bad weather.

"I am making the brooder house to serve two purposes," said Mr. Anderson. "The top story will be fitted for raising the young chicks that I want for my own use, while the basement, which runs the full length of the building, will house the incubators. In all I have 10 machines, which have a total capacity of 4000 eggs.

"The building was erected directly over an old creek bed so that we could make use of the water power for running a small dynamo for lighting the farm buildings. I am planning on using this power for different purposes in a small machine shop in an adjoining room from the incubators.

"The creek will run a good flow during six month of the year and that is the time when we will need the lights most. The dam in the creek will make a fine swimming pool for the children for hot weather."

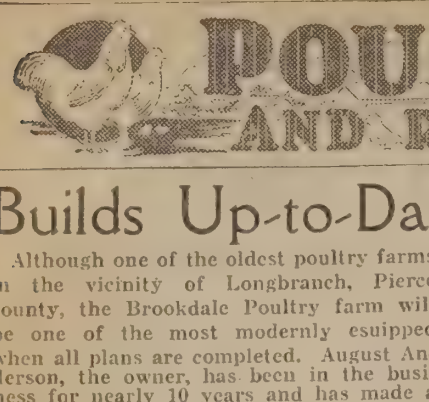
Raising Rabbits

By AGNES E. RENNER.

Is there any money in raising rabbits? Instead of asking an established breeder that question, ask yourself: Have I got the elements of success in me? Will I be successful raising rabbits?

The rabbit business is like any other business; it takes brains, work and lots of courage.

After observing the average rabbit breeder, we find many lack the elements of success. They lack, most of all, the nerve that it takes to stay with what they have started. I have seen many start and quit in a short time, but success is not won that way. It requires planning, thinking, studying and hard work.



I believe the opportunities today in rabbit raising are brighter than ever before. The present demand indicates that.

The man or woman on the farm is the best suited for commercial rabbit raising. Plan a comfortable and convenient house for your rabbits, and then buy several head of stock of the best foundation stock money can buy. Join a good association. They will help you sell your stock. You can build up a fine business if it is in you. If it isn't, nobody can help you.

I believe the rabbit business pays better for the small amount invested than any other kind of business.

Furnish Cheap Meat

"The cheapest meat I can raise," is the verdict of C. J. Staats, whose farm is about nine miles from Oregon City, Ore., regarding his rabbits. Mr. Staats breeds Guernsey cattle and milk goats, but he has a place for the rabbits also, though he says they take less room and make less trouble than any other kind of live stock. Mr. Staats has New Zealand Reds and Flemish Giants, but is breeding only for the meat and not for predigreed breeding purposes.

Wipe Out Every Rat and Gopher

Amazing New Discovery Quickly Kills Them All—Not a Poison.

Rats, Mice, Gophers—in fact all Rodents can now be wiped out easily and quickly. Imperial Virus will do it. This new discovery is a fluid, true Virus. Entirely harmless to humans, poultry, stock, pets, etc.

Infects Rodents only. Greedily eaten on bait. Sets up burning fever. The pests communicate it to others, and all die outside, hunting air and water. Imperial Virus is put up in sealed bottles, thus insuring full strength and potency. Only safe, sanitary method to overcome these pests. Protect your Poultry, especially Baby Chicks and Egg Hatches.

YOU CAN GET YOURS FREE

Here's how! Send $1.00 today (currency, M. O., Checks, etc.) and we will give you by return mail, postpaid, two regular, full sized (double strength) $1.00 bottles of Imperial Virus. Use one to rid your place of these pests, and sell the other to a neighbor, thus getting yours free. Special inducements to represent us.

If more convenient, send no money, just your name and address to Imperial Laboratories, Dept. 497, 2110 Grand Ave., Kansas City, Mo. Pay postman $1.00 and few cents postage when two bottles arrive. Guaranteed to do the work to your entire satisfaction within 30 days or your $1.00 will be cheerfully refunded.—Adv.

QUALITY IS AT THE PEAK PRICES ARE AT BEDROCK

Year after year the quality of Goodyear Tires has been going up and up.

Veteran users say Goodyear Tires today give more than twice the mileage they did ten years ago.

In the meantime, there has been no slackening in our effort to push Goodyear prices down.

Today these prices are at bedrock—*the lowest they have ever been.*

Look at the figures listed below.

They represent an average decrease in Goodyear prices since 1910 of more than 60 per cent.

Remember—Goodyear quality is at its peak.

These prices, divided by your speedometer reading, tell the story.

Now is the time to buy.

30 x 3½ Cross-Rib Fabric	$10.95		
30 x 3½ All-Weather Tread Fabric	$14.75	33 x 4 All-Weather Tread Cord	$33.40
30 x 3½ All-Weather Tread Cord	$18.00	33 x 4½ All-Weather Tread Cord	$42.85
32 x 3½ All-Weather Tread Cord	$25.50	34 x 4½ All-Weather Tread Cord	$43.90
32 x 4 All-Weather Tread Cord	$32.40	35 x 5 All-Weather Tread Cord	$54.75

DR. HESS Instant Louse Killer Kills Lice on Poultry *and* Stock

Use it on your lousy hens and chicks—your lousy colts, horses and cattle. You'll get better chicks—bigger, better fowls—more eggs—better contented stock.

Chicks are apt to be lousy now. Give them a chance. Sprinkle Louse Killer into the feathers, about the coops, on roosts, in nests of laying and setting hens. Always keep Louse Killer in the dust bath. For lousy horses and cattle, colts and calves, stroke the hair the wrong way and sift in Louse Killer.

We authorize dealers to return your money if it does not do as claimed.

1 lb. 30c, 2½ lbs. 60c (*except in Canada*)

ORCHARD AND GARDEN

Berry Harvest

Enjoy the Fruits of First Picking

By NELL CROSBY.

From the first of July until frost the beautiful Puyallup valley lying between Seattle and Tacoma, Wash., is the scene of interesting activity, as men and women, both old and young, gather from far and near, to reap the wonderful harvest of luscious raspberries and blackberries for which this fertile valley is noted.

Whole families come to take part in this industry, each family occupying the quarters assigned to them in the low, rambling houses built for their accommodation, which are a necessary part of the berry grower's equipment.

Two visiting girls at a Sumner berry farm, enjoying the fruits of their first picking.

The women and girls in overalls or in khaki breeches and shirts are familiar figures in the fields and even on the highways, indeed they become so accustomed to this style of dress that at the street dances, which were given in the little town of Sumner, Wash., last summer for the amusement of the berry pickers, many of the young girls attended and danced in their khaki costumes.

Bee Calendar

Professor B. A. Slocum, extension bee specialist of the Washington State college, has prepared a monthly calendar giving advice to beekeepers. His calendar for the remaining months of the year follows:

June.

Keep colonies supplied with vigorous, prolific queens. If white clover or alfalfa regions, divide to prevent swarming at this time. Best time to Italianize. Give plenty of room to ripen honey.

July.

Remove comb honey sections as rapidly as capped over. If left are liable to become travel stained. Surplus from fireweed begins, while that from clover ends latter part of month or forepart of August. Increase may be made before end of clover flow.

August.

Replace important queens. June and July suggestions apply for fireweed sections. Give plenty of room for queen and workers as fall storing commences.

September.

Remove all surplus sections and extracting honey supers as storing ceases. See that all colonies have enough stores for wintering, if not feed. Great caution should be taken against robbing. Unite weak colonies. Remove fall honey and give honey saved from beginning of flow. Place super of honey beneath brood chamber, will then pack it around brood nest.

October.

Bees should be packed for winter latter part of month or forepart of November. Suggestions for September apply here. See that all colonies are strong and have 40 or 50 pounds of honey for winter stores.

November.

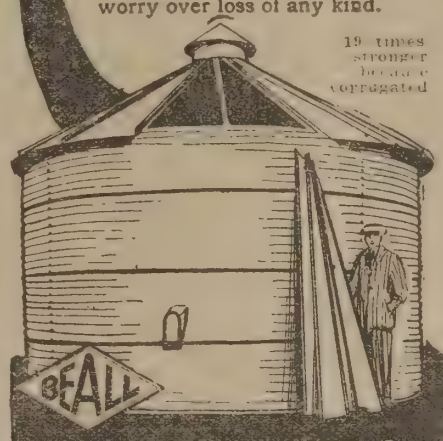
Finish work left over from October. As a rule all bees should be packed by the middle of month.

December.

Shop work and read. Eat honey, nature's own sweet.

HONEY-PRODUCING SECTIONS.

The intermountain region, extending from the Cascades in Washington east and south through the Rocky mountains to the southern border of Arizona and New Mexico, is the largest area of commercial honey production in the country. The states of New York and California come to the minds of many readers as the large centers of honey production, and they are very important honey areas. Commercially, however, the intermountain area ships several times as many carloads of honey as California and many more than New York, says the department of agriculture.



Apple Seedlings

The nurseries of the United States are growing more and more of their own apple seedlings for grafting, according to C. L. Robinson, supervisor of horticulture of the Washington state department of agriculture.

Prior to the World war the nurseries were accustomed to get their seedling stock from France, but the supply was cut off when the war started and the seeds were planted at home for the time being. From this time on the results have been improving and it is possible that this country will grow a large part of the seedlings for use in the nurseries.

BEALL METAL GRAIN BINS

Cut out the sacks —use Beall portable or stationary bins for your grain. Saves time and money —eliminates all worry over loss of any kind.

5 Reasons Why Beall METAL BINS Are Best For You:

1 **Insurance Protection.** Eliminates need for fire insurance—stubble can burn all around and not damage grain or tank.

2 **Rat and Squirrel Proof.** Keeps out the pesky rodents.

3 **Rain Proof.** Crops will be safe and dry during the long winter rains.

4 **Rot Proof.** No loss from mould or decay.

5 **Economy in Handling.** Portable —1000 bushel size readily moved from place to place.

Write for catalog and full details regarding sizes, prices, etc.

Power!

There's only one Caterpillar Holt builds it

Judge the "Caterpillar" T35 Tractor by its performance—don't let its small size mislead you

Read what the users say regarding power of T35

"With a 10-foot disc weighted down and cutting from 4 to 6 inches deep, the tractor walked right along and even on the turns it did not slow up. It handles a 7-foot scraper and a 15-inch springtooth cultivator without trouble."

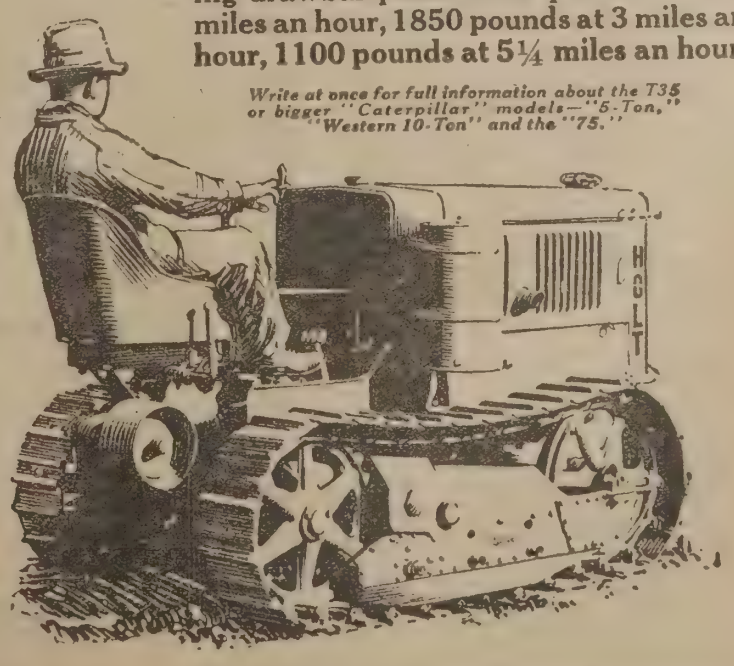
"I used the T35 to subsoil and went down 20 inches deep the second time. I pulled my 3-gang plow 9 and 10 inches deep and you could hardly tell the "Caterpillar" was working."

"I have subsoiled 16 inches deep. Have also pulled a 7-foot double disc—the T35 simply played with this load.

The Holt MANUFACTURING COMPANY

Spokane, Wash.

Factories Stockton, Calif., & Peoria, Ill.



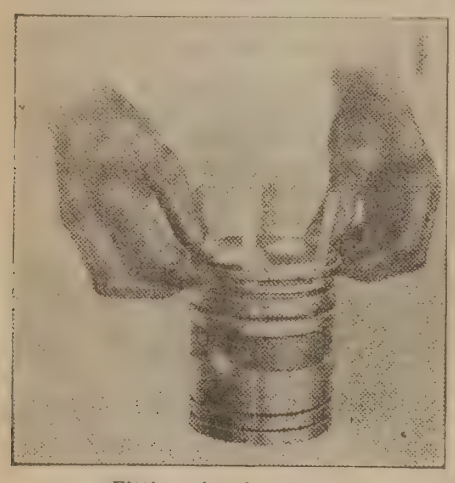
Oregon Representative

J. W. HILL, Henry Bldg., Portland

Don't confuse "Caterpillar" T35 Tractor with the ordinary small tractor, either in dependability, endurance or power. T35 is small, but small in size only. In power it surpasses many tractors of much greater size. In quality of design and workmanship, and in dependable, enduring performance, it is not even approached by any other tractor.

In addition to a liberal warranty covering materials and workmanship, the T35 is guaranteed to deliver 15 drawbar horsepower, with the following drawbar pulls: 2600 pounds at 2⅛ miles an hour, 1850 pounds at 3 miles an hour, 1100 pounds at 5¼ miles an hour.

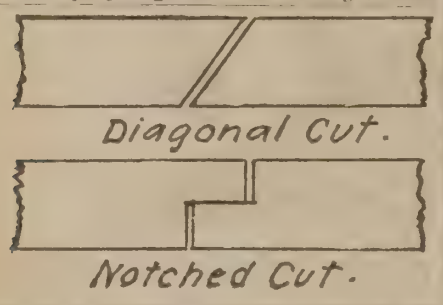
Write at once for full information about the T35 or bigger "Caterpillar" models—"5-Ton," "Western 10-Ton" and the "75."



The Piston Ring

By PROF. L. J. SMITH, W. S. C.

If the valves of a motor seat properly, the efficiency of the motor is large dependent upon the tightness with which the piston rings fit the cylinder walls. The rings are made of a high-grade cast-iron, and are of a larger diameter than the bore of the cylinder, which gives them the spring necessary to tightly fit the cylinder walls.



It is customary to replace the upper two rings each season, as they get more wear and are subjected to a higher heat which tends to make them lose their spring.

To remove the ring, spring the ring outward with a thin screwdriver and insert four narrow thin strips of tin under the

Fitting ring in groove.

ring as shown in the cut; then gently slide the ring over the end of the piston head. Then scrape the groves, to remove accumulated carbon, and clean with gasoline and old tooth brush, and wipe dry. If the rings are used again, each should be placed in its proper groove. Do not get them

mixed. Each new ring must be fitted to its respective groove. This is done by rolling the ring in the groove as shown in the illustration. The ring must fit the groove without end-play, yet not tightly.

There is one more important point in putting new rings in a piston. The ring is usually a little too large for the cylin-

Replacing and removing rings.

der and must be filed where the ends meet, else it will bind in the cylinder. The ends usually overlap by means of a diagonal cut or a notched cut as shown. These ends should have a clearance of about one-hundredth of an inch when the ring is in the lower end of the cylinder. When testing for clearance, be sure the ring does not rest at an angle against the cylinder wall. Tight fitting rings insure the maximum power in your motor.

Septic Tank

A septic tank is not as expensive or as difficult to construct as is sometimes imagined. W. A. Hunter of Shelton, Mason county, recently completed a tank under the direction of A. B. Crane, the drainage specialist of the state college. The total cost of the tank was $35, which included all labor and material. The material alone amounted to only $15.

Such a tank can easily be built with the aid of blue prints from the state college, Pullman, Wash., or by closely observing the details of one already constructed. The expenses of the materials and labor of Mr. Hunter's tank are as follows:

Cement	$10.80
Iron pipe	5.00
Two yards gravel	4.00
One yard sand	2.00
Four days' labor	14.00
Total	$35.80

FARMERS' WANT ADS

This is the farmers' "want," "sale" and "exchange" department for small advertisements of farmers, including live stock and poultry.

Advertising rates for ads running 1 to 3 times, 10c per word per insertion, with a special rate to Farmer subscribers, as follows: Ads running 4 to 12 times, 9c per word per insertion; ads running 13 times or more, 8c per word per insertion.

All commercial and land advertising 10 cents per word each insertion. Open also to nonsubscribers.

In using these columns advertisers must observe: (1) No advertisements will be inserted for less than $1.00. (2) Every word, number and initial, including name and address, must be paid for. (3) New advertisements, changes of copy or cancellations must reach general office, Spokane, Wash., 10 days in advance of publication date. (4) Cash must accompany order.

Above rates include insertion in The Washington Farmer, The Idaho Farmer and The Oregon Farmer, which constitute the Pacific Northwest Farm Trio. 46 Review Building, Spokane, Wash.

Speed and Dependability in the Hay Harvest

McCormick - Deering - International

HAY machines that bear the above names may always be relied on to put your hay where you want it, the way you want it, in the quickest, most economical manner. *McCormick* and *Deering mowers* can be depended on to cut hay every minute. *International tedders* hasten, and insure, better curing. *McCormick* and *Deering self-dump rakes* are known the whole world over for their quick, clean work and light draft. The *International combined side-delivery rake* and *tedder* is a saver of time and labor.

Look at the farmer in this picture, pulling two wagons and two International loaders with the Titan tractor. He is sure to get his hay out of the way for grain harvest.

International sweep rakes and *stackers* provide a quick method of getting your hay to the stack.

International power hay presses put the hay in neat tight bales that keep better, are easier to handle, store and feed, and that bring the top price on the market.

CHAPTER XIX.

The Cache on the Lake.

Shad Trowbridge stood dazed, as one in a dream—a horrid, awful dream. He looked through a haze, and what he saw was distorted, unreal, terrible. The suffering creatures about him were spectral phantoms of the nether world, the shimmering rime a symbol of death, the endless snow the white robe of the grave quickly to cover them all.

A sudden stillness fell upon the camp, to be presently broken by the agonized scream of a woman, shrill and startling, followed by wailings and melancholy moans. The Spirit of Death had snatched away her favorite son.

A sickening nausea overtook Shad, and he sank upon his toboggan, faint and dizzy with an overpowering weakness. His imagination was getting the better of him.

It is always dangerous and sometimes fatal for one to permit the imagination to assert itself in seasons of peril. Will power to put away thoughts of tomorrow, to think only of today, to do today the thing which necessity requires, coupled with a determination never to abandon hope, is a paramount essential for the successful explorer to possess.

In this moment of hopeless surrender Shad felt Manikawan's hand rest lightly upon his shoulder for an instant, and looking up he saw her standing before him, tall, straight, commanding, and as she looked that day on the river bank when she bade him and Bob wait for her return to free them from their island prison.

"The Friend of White Brother of the Snow is not a coward. He is not afraid of the Spirit of Hunger. He is not afraid of the Spirit of Death. He is brave. He once outwitted the Matchi Manitu of the river. He will outwit the Spirit of Hunger. He will outwit the Spirit of Death. The friend of White Brother of the Snow is brave. He is not afraid to die."

The words were unintelligible to him, but their import was unmistakable. She a young Indian maiden, was offering him encouragement, and recalling him to his manhood.

He arose to his feet, ashamed that she had read his mind, ashamed that she had found it necessary to recall him from a lapse into his foolish weakness which must have seemed to her like cowardice.

But he remembered now that he was a man—a white man—and because he was a white man the physical equal and mental superior of any savage there. Looking into Manikawan's eyes, he made an unspoken vow that she should never again have cause to chide him.

Dawn was breaking, and in the growing light a half dozen lodges were to be seen. At one side and alone stood a deerskin tent of peculiar form. It was a high tent of exceedingly small circumference, and where the smoke opening was provided and the poles protruded at the top of the ordinary wigwam, this was tightly closed. It was the medicine lodge of the shaman.

Sishetakushin and Mookoomahn had entered one of the lodges immediately after the tumult caused by their arrival had subsided, and Manikawan now followed her mother into another lodge. There were no Indians visible. The moans of the grief-striken mother, rising above the voices of men in the lodge which Sishetakushin and Mookoomahn had entered, were the only sounds.

The air was bitterly cold, but the tragedy enacting around him had for a time rendered Shad quite insensible to it. When he did finally realize that, standing inactive, he was numbed and chilled, he still lingered a little before joining Sishetakushin and Mookoomahn, dreading to enter the famine-stricken lodges.

At last, however, necessity drove him to do so, and within the lodge he discovered that a council was in progress. In the center a fire burned, and around it the men, solemn and dignified, sat in a circle. One after another of the Indians spoke in earnest debate. They were considering what action they should take to preserve their lives, and Shad, as deeply interested as any, felt aggrieved that he could not immediately learn the final result of the conference, which came to an end as the sun cast its first feeble rays over the barren ranges that marked the southeastern horizon.

When the council closed the Indians filed out of the lodge, and one, a tall old man, fantastically attired in skins, entered the medicine lodge alone, carefully closing the entrance after him to exclude any ray of light.

Immediately drum beats were heard within the tent, accompanied by a low groaning and moaning, which gradually increased in volume and pitch until presently it became a high, penetrating, bloodcurdling screech. This continued for perhaps half an hour, the drum beats never ceasing their monotonous rat-tat-tat.

The shaman, or medicine man, thus working himself into a frenzy, at length believed he saw within the lodge the ghostly form of the particular Matchi Manitu, or evil spirit, responsible for the disappearance of the caribou and the resulting famine.

This spirit's wrath it was believed had for some reason unknown to the Indians been aroused against them. Only the shaman could get into communication with the spirit, and learn from it what course the Indians would be required to pursue to placate its wrath and remove its curse.

When the appearance of the spirit was announced, the shaman began to supplicate and implore the Matchi Manitu to withdraw from the people the pursuit of famine; to return the caribou to the land, and to preserve the lives of the dying.

Presently in tones of joy the shaman announced that he had succeeded in enlisting the services of the Matchi Manitu, and with the announcement the din within the lodge ceased, and for several minutes mysterious whisperings were heard.

Suddenly the shaman threw open the lodge, and in a state of exhaustion tottered forward. Still under the influence of the paroxysms into which he had worked himself, he delivered in a wandering, disconnected jumble of meaningless sentences the demands of the Matchi Manitu. These consisted of many unreasonable and impossible feats that the people were required to accomplish before the Spirit of Starvation—the Gaunt Gray Wolf—would cease to follow upon their trail.

The Indians began at once to break camp. Sishetakushin had reported no caribou to the southward. Their only remaining hope was to reach the haven of Ungava post to the northward, and they were to begin the life-and-death struggle northward at once—a struggle in which many were to fall.

A sense of vast relief was experienced by Shad when Sishetakushin resumed the march. Famished and weak as he was, this was inexpressibly preferable to a continuance with the starving crowd, and he turned his back upon the camp, little caring whence their trail led.

For a while they continued northward upon the frozen bed of a stream, which they had been following for several days, then a sharp turn was made to the eastward, and as the sun was setting they came upon the ice of a wide lake.

At the end of a half hour of slow plodding across an arm of the lake they entered the edge of sparsely wooded forest and halted. Sishetakushin and Mookoomahn began at once to remove the snow from the top of what appeared to be a high drift, and a little below the surface uncovered the roof of a cache similar to the one they had made on the shores of the Great Lake of the Indians, where Shad and Ungava Bob had found them.

Shad's heart gave a bound when the object of the journey was revealed to him. Here was food and promise of life! And Bob's words, so often repeated when they were stranded on the island, flashed into his mind:

"It's th' Lard's way. He's watchin' you when you thinks he's losin' track o' you. He's takin' care o' you an' you does your best t' take care o' yourself."

Manikawan and her mother stretched the deerskin cover upon wigwam poles used the previous summer and still standing near the lake, and Shad cleared the snow from the interior of the wigwam, while the women broke boughs and laid the bed.

In the meantime, Sishetakushin and Mookoomahn opened the cache and transferred its precious contents to the wigwam. A fire was kindled, and in the cozy warmth of their shelter they broke their fast, which had now extended over a period of 36 hours.

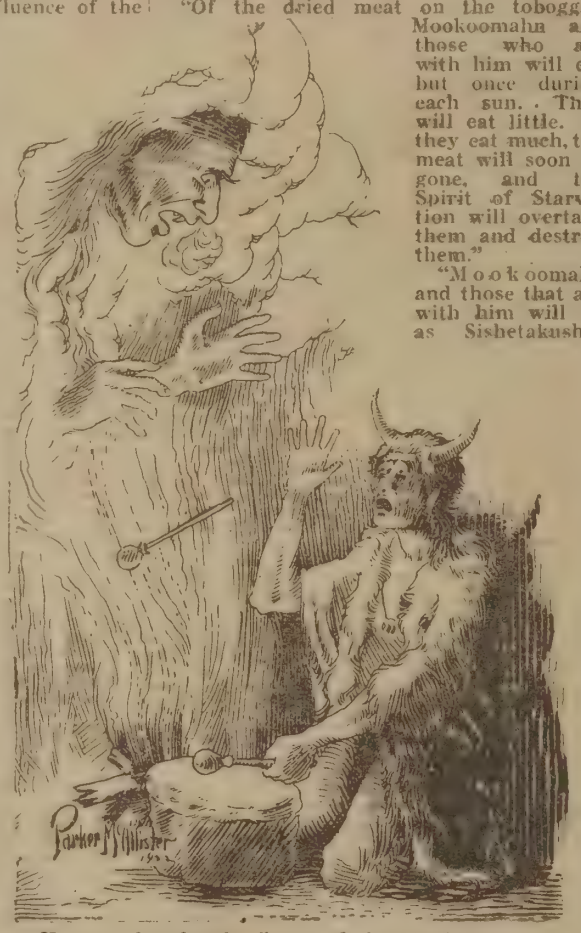
The small portion of dried caribou meat doled out to each was far from satisfying. Some of the tea which Ungava Bob had given the Indians still remained. A kettle of this was brewed, and it served to stimulate and warm them. Then they lighted their pipes and for a time smoked in silence.

At length Sishetakushin, turning to Mookoomahn, began:

"On the Lake of the Beaver to the northward we have a small store of atuk weas (deer's meat). We also have there the cover of a lodge. Three suns will pass before we can reach this store of food. On the Great lake we have another store.

"Sishetakushin and the woman will travel to the Lake of the Beaver. With the store of provisions and the lodge which we find on the Lake of the Beaver we will travel northward to the lodge of the white man, where the water of the river joins the big sea water, and where we shall find food.

"Mookoomahn and the maiden, with the friend of White Brother of the Snow, will travel southward to the Great lake. Mookoomahn will show the white man the way to the lodge of White Brother of the Snow. Then he will return to the Great lake and trap the marten and the mink.



"When the sun grows strong, and drives away the Spirit of the Frost, Mookoomahn will travel northward to the Lake of the Beaver. There he will find Sishetakushin and the woman to welcome him. He will take his food from the waters as he travels.

"The maiden will remain in the lodge of White Brother of the Snow. Sishetakushin gives her to White Brother of the Snow. She is his. White Brother of the Snow is of our people. He will be glad, and the maiden will be glad. White Brother of the Snow has white man's food in great store. Mookoomahn will not be hungry."

"Mookoomahn will do as Sishetakushin directs," answered Mookoomahn.

For a time all smoked in silence, then Sishetakushin resumed:

"Of the dried meat on the toboggan Mookoomahn and those who are with him will eat but once during each sun. They will eat little. If they eat much, the meat will soon be gone, and the Spirit of Starvation will overtake them and destroy them."

He saw the ghostly figure of the Mitchi Manitu.

"Mookoomahn and those that are with him will do as Sishetakushin directs," said Mookoomahn.

A series of signs and pantomime conveyed to Shad the substance of Sishetakushin's remarks. He understood that on the morrow the party was to separate. That he with Mookoomahn and Manikawan were to return to the Great lake, and that they had been cautioned to husband their provisions.

He surveyed the small bundle of jerked venison with misgivings. Even with one light meal a day he calculated that it would not last them above three weeks. Their journey from the cache on the Great lake to their present position had consumed a month, including a period of one week when they were stormbound.

Should they be fortunate and encounter no storms, the food, sparingly doled out, might serve to sustain them. If storms delayed them, it certainly would not.

In any case their lives must hang in the balance until the cache was reached, unless game were encountered in the meantime, which seemed highly improbable.

A meager meal was served at an early hour the following morning. As usual, camp was broken long before day, and then came the farewells.

The parting between Sishetakushin and Mookoomahn was affecting, that between the women more stoical. Shad regretfully shook the hands of the old Indian and his wife. They had been friends to him, and he had no expectation that he should ever see them again.

Then Shad and his companions turned southward into the wide wastes of frozen desolation that lay between him and his friends. It was to be a journey of tragic experiences—a journey that was to try his metal as it had never yet been tried.

CHAPTER XX.

The Folk at Wolf Bight.

The Grays were very lonely and the little cabin at Wolf Bight seemed desolate and deserted indeed during the first days following the departure of the trappers for the interior. Mrs. Gray and Emily cried a little, and often Emily would say:

"I wonders where Bob is now, mother, an' what he's doin'?"

"He's workin' up th' river, lass, an' th' dirty weather's makin' th' trackin' an' portagin' wonderful hard for un," she would answer, when it stormed; or, when the sun shone, "They's havin' a fine day for travellin' now."

But presently the preparations for Emily's departure for school occupied their attention to the exclusion of all else, and they forgot for a time their loneliness.

Her going was to be an event of vast importance. It was an innovation, not only in their household, but in the community, for never before had any of the young people of the bay attended school, and never before, save on the occasion when Emily had been taken to the St. Johns hospital the previous year to undergo an operation, had any of the girls—or women, either, for that matter—been farther from home than Fort Pelican.

When Bob came into his little fortune through the salvage of the trading schooner, "Maid of the North," Mrs Gray had urged that Richard rest from the trail for one season, and at the same time give the animals an opportunity to increase. This he had done, and during the previous winter, when Bob also was at home, he and Bob had occupied their time in the woods with an ax and pit saw, cutting a quantity of timber and planking.

There was no immediate need of this timber, and when Bob was gone Richard determined to utilize it in the construction of a small schooner, in anticipation of the trading operations to begin the following year. Such a vessel would be a necessity in transporting supplies from Fort Pelican to the store at Wolf Bight.

Therefore, he began at once the work of laying the keel. There were nearly three months at his disposal before he would go out upon his trapping trail, and in this time, hoping to accomplish much, he remained at his task from early morning until dusk drove him from it. Thus occupied, Mrs. Gray and Emily seldom saw him save at meal hours, and this made them doubly lonesome.

One day late in August Douglas Campbell sailed his boat over to Wolf Bight to spend the day with his friends and to announce that a week later he would come for Emily to take her to Fort Pelican, where they were to connect with the mail boat for St. Johns.

This recalled the near approach of Emily's departure, and the days that followed passed with amazing rapidity. Emily's new woolen frock—the first woolen frock she had ever possessed—needed still some finishing touches. It was to be her Sunday dress—to be worn at church, where there would be many fine people to see her—and as pretty as the mother's skill and care could make it.

Then there were the print frocks for everyday wear, to be freshly laundered and packed with other clothing into a new wooden chest which her father had made for her, and the innumerable last things to be done, which kept Emily and her mother in a continuous state of flurry and excitement.

Quite too soon Emily's last day at home dawned, and, true to his appointment, Douglas Campbell arrived during the afternoon. He looked very grand and dignified and altogether unlike himself in his suit of gray tweed. He wore this suit only on those rare occasions—usually at intervals of three or four years—when business called him to St. Johns, and Emily had but once before seen him so strangely attired.

He looked so strange and unnatural—so unlike the good old Douglas that she loved, in moleskin trousers and pea-jacket or adicky—that she felt he was somehow different, and that the world was going all topsy-turvy.

And then for the first time there came to her a full realization of the great change that was to take place in her life—that she was going far from home and into a strange land—that for many, many months she was to see neither her father nor her mother—that she was to live among strangers who cared nothing for her—that she would be separated from those who loved her and all that she held dear in the world. A great ache came into her heart—the first heart-hunger of the homesick—and she slipped away behind the curtain to throw herself upon her little white bed and seek relief in stifled sobs.

Presently as she lay there, weeping quietly to herself, loud exclamations of hearty welcome from her father and mother as some one entered the door caused her to sit up and listen. Then she recognized Tom Black's voice and heard Bessie asking:

"Where's Emily?"

FAMILY CIRCLE

ALICE BARLAND
EDITORIAL CONTRIBUTOR

Experience Letters

From Our Family Circle Women

Dear Mrs. Barland: I will give a little of my experience in raising turkeys. I set my hens on the ground whenever possible, but if not I put ashes under the straw in the nest.

When my turkeys hatch I give them bread soaked in water and no milk at all, not even milk made into biscuits, only the raised light bread, which is made of water. After they are 4 or 5 days old I let them out for an hour first and each day leave them out a little longer. I have no trouble about losing them at all and the same diet will work with little chicks. I never have any bowel trouble in my flocks.

Dear Mrs. Barland: About turkeys, I keep them close in yards, but keep them contented, so they will not know they are confined. I gather the eggs every day and set from 18 to 20 to a setting. The first 24 hours after the little ones are hatched I feed them nothing but give plenty of fresh water and grit. The first feed is cottage cheese with one-half teaspoon of black pepper to a quart of cheese every two hours. I never put salt in anything they eat. After a week I give chick feed with the cottage cheese and after that I mix wheat with the chick feed. After July 4 they are fed wheat only at night, as this brings them home to roost. They like best an alfalfa field to run in.

MRS. L.

Will some one write and tell us how to do hemstitching on a common sewing machine? MRS. O. C. D.
Washington.

A sister who reads the Circle in Nebraska would like to correspond with some of the western sisters. Address Mrs. Henry Marx, Dalton, Neb.

Concerning wormwood: It is very useful in winter for colds. Gather in the fall, cut off the tops and put away to dry. Steep as desired and add sugar and milk. It is given to children as a cure for worms.

MRS. A. D. W.

For perspiring and tired feet: Get a small package of white oak bark, put into one and one-half pints of boiling water in a granite dish and let it steep and set back and let stand till cold. Put in glass jar to use as follows: Bathe the feet daily in warm water to which has been added a little salt or soda; dry thoroughly, then pour into the basin a little of the oak bark solution and soak the feet in this for two or three minutes and let it dry on the feet. It is best to change the stockings every day for a week anyway, or until you get results. MRS. J. H.
Washington.

Dear Mrs. Barland: I read the Family Circle and find many good recipes, but I see very little about bread making. Bread being the most important article on the table every housewife should know how to make it. When my husband says: "Wife, this is fine bread you have today," it more than repays me for the extra work in making it. Bread making is easy if the right method is used. I have baked bread a good many years and used different kinds of yeast with different methods, but the last years have used starter yeast and find it the most reliable. I find I can make altogether the best bread with it that I have ever made.

The starter yeast never runs out, never requires renewing with a yeast cake or other yeasts, but keeps itself going by potato and the water potatoes are cooked in and a little sugar and salt.

It can only be made by getting a start of it from some one using it. Any one wishing to know more about this starter yeast may write to me.

MRS. S. WELTON.
Vancouver, Wash., Route 6, Box 281.
(I am wondering how the first person got started.—A. W. B.)

Dear Mrs. Barland: We have lived here in Kansas for a good many years, but I read THE FARMER every week and am interested in the far west. I spent eight weeks in the Boise valley at one time and it looked to me that life would be well worth living there. We would like to move there, but are told that one must have a good deal of money to get a home there. I would like to live where one could have plenty of fruit and would be very thankful if some of the readers of THE FARMER would write to me about their part of the country and the chnaces of getting a home there.

A KANSAS SISTER.

Dear Mrs. Barland: I am a young reader of the Family Circle and enjoy it very much even at the age of 16. I am a farmer's daughter and have lived on a farm for 13 years. I milk four cows night and morning. I have several saddle ponies and like to ride horseback very much.

Will some one tell what to do for dry hair.

I wish more young girls would write to THE FARMER. "COLUMBINE."

Please, dear Columbine, and every one else, give name and address.—A. W. B.

Dear Mrs. Barland: I have used several of the recipes in the Family Circle and have never yet had a failure. I have been married two years and owe my success in cooking to the Family Circle.

Oregon. MRS. J. F. M'D.

Dear Mrs. Barland: I noticed in a recent number of THE FARMER that a lady asked about papering her house. I would suggest mats which can be bought at a printer's office very cheap. They are called matrix and are put on the walls sidewise with tacks and one can paint or kalsomine over them. If painted one can wash them.

I saw a house fixed with them where the living room was painted cream colored, kitchen white, one bedroom pink and another blue. The floors were oiled and the furniture stained cherry color. It is all inexpensive. Sincerely, MRS. F. M. C.
Washington.

Rhubarb Recipes

By H. A. LYNAN.

Rhubarb pudding: Chop rhubarb pretty fine, put in a pudding dish and sprinkle sugar over it. Make a batter of one cupful of sour milk, two eggs, a piece of butter the size of an egg, one-half teaspoonful of soda and flour enough to make a batter about as thick as for cake. Spread it over the rhubarb and bake until done. Turn out on a plate upside down so rhubarb will be on top. Serve with sugar and cream.

Rhubarb tapioca: Soak two-thirds cupful of pearl tapioca over night, drain and cook in a double boiler with one and one-fourth cups of boiling water and one-third teaspoonful of salt; when tapioca has absorbed water add three cupfuls of rhubarb, cut in three-fourth inch pieces, one and one-third cupfuls of sugar. Cook until tapioca is transparent and rhubarb is soft. Serve hot or cold with sugar and cream.

Rhubarb pie: Line plate with rich pie crust. Skin the rhubarb and cut it in half-inch pieces, using one pound to a pie, and put into dish, and pour boiling water over it, and let stand five minutes. Mix two tablespoonfuls of flour with one cupful of sugar, add one beaten egg, and remove rhubarb from water and mix all, put into crust, cover and bake. Rub milk over top of pie.

Rhubarb ice cream: Heat one quart of milk, add one beaten egg, one pinch of salt, one cupful of sugar; when cold add one pint of whipped cream and, lastly, one pint of stewed rhubarb slightly sweetened, freed of all juice. Freeze several hours.

Just Folks

In the middle ages feudal castles were dotted over European lands. The lord of the castle was the pride of his retainers.

Twenty-five years ago the glory of feudal castles and the pride of feudal lordship was outdone in the vision of men who began irrigation enterprises in a personal way.

I remember visiting a sandbar on the Snake river, watered by pumping from the river, the grapes from its vines taking the first prize at the world's fair in Chicago. It was the beginning of the feudal estate right there on that sandbar.

I remember visiting the far more pretentious feudal estate on which the owner had spent all the money he could obtain from a lucrative professional practice and whose enthusiasm was not excelled by any of the lords of the manor of olden times.

I spent a night in the shack of another dreamer of a feudal estate on the Columbia, whose broad acres of land, dotted with young trees, was wiped out by an untimely flood.

During a night ride on a day coach to Portland, in the small hours of the morning, there entered a man and a woman, a father and daughter. The father was full of enthusiasm over another feudal estate to be erected on an island in the Columbia, containing a section or more of land. All the details were plain in his mind. Alfalfa and peaches and hogs would be the foundation of his estate.

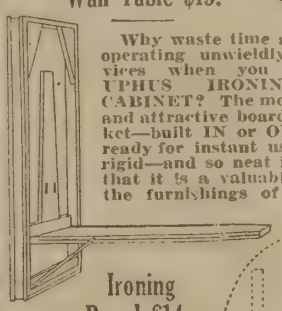
Those were glorious days of personal adventure and will never quite return again. The Columbia basin project, with its undreamed-of possibilities, can not surpass the personal aircastles of these enthusiastic forerunners of feudal estates built upon the sandbars of the rivers.

UPHUS ARTKRAFT WALL CABINET

Breakfast Table
Ironing Board
Sleeve Board
China Cabinet

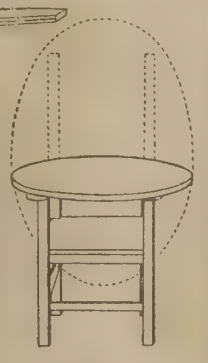
ALL-IN-ONE

The very last word in household efficiency—a table, ironing board, sleeve board and china closet ALL-IN-ONE-FOLDING CABINET fastened on your wall or built IN your wall. Means economy in space, in movement, in cost! Each part may be used separately. Substantially built to give years of service. The most modern improvement for an old or new house.



Four-in-One $27.

Looks like a decorative panel on the wall. One turn of the wrist and down comes a table seating five people! Eliminates crowded rooms and bulky furniture. One-piece table top, figured grain, special design. Will make that little alcove into the coziest breakfast nook you ever saw.



Wall Table $13.

Why waste time and energy in operating unwieldly ironing devices when you can enjoy a UPHUS IRONING BOARD CABINET? The most convenient and attractive board on the market—built IN or ON your wall—ready for instant use—absolutely rigid—and so neat in appearance that it is a valuable addition to the furnishings of your home.

Ironing Board $14.

Tilt the top of the table and you have a chair—all in one! A comfortable chair and a solid table of beautiful grain and finish—built together for your convenience. The very thing you need for small space and all-around utility, indoors or out.

Chair Table $17.

High Points in News of the Week

Notwithstanding the apparent refusal of Secretary of State Hughes to accept the invitation of European nations that the United States be represented at the international conference on Russian affairs at The Hague next month, there yet appears a possibility that this government will participate. It is explained by the state department that the reason for the flat refusal to accept the invitation lay in certain conditions placed upon the conference by the allied delegates at Genoa. It is reported from Washington, D. C., that President Harding would be willing to see these conditions so amended that this country could feel free to join in the conference with a view to assisting in the solution of Russia's problems.

The conference at Genoa has adjourned, with apparently little definite accomplishment other than the calling of the second conference at The Hague for June 15, at which time the specific question of how best to assist Russia will be taken up.

* * *

One of the notable steps in the hope of bringing about an early reduction of freight rates on staple commodities was taken at Washington last week when President Harding called into conference the presidents of the principal railroads of the country to discuss the problem. The president urged that the railroad officials cooperate with the interstate commerce commission by making voluntary reductions in freight rates as early as possible with a view to bringing about a return of normal industrial conditions. The railroad representatives voted to have a committee named from their membership to take up the suggestions made by the president and recommend such action as seemed to them practical.

The interstate commerce commission has before it at the present time a number of applications on the part of shippers for rate reductions. Under the law, the commission is required to fix rates that will give to the railroads a reasonable profit. It is apparent, however, that President Harding is seeking to have the railroads make a temporary sacrifice in certain instances where reduced rates would deny them such reasonable profit by voluntarily making such reductions with a view to stimulating industry, out of which would later grow a profitable railroad business on the basis of these rate reductions, increased traffic and lower operation costs.

* * *

Following the adjournment of the allied conference at Genoa last week, Premier Lloyd George of England declared the most dramatic spectacle he had ever witnessed was at Genoa when the representatives of more than 30 nations arose and pledged themselves to a future policy of nonaggression. "We must remember," he said, "that only a few weeks ago armies were massing on frontiers extending thousands of miles with the evident intention of marching against each other. By the Genoa conference their march has been arrested."

Premier Lloyd George says he is convinced that the Russians are sincere in their desire for peace and are ready to be readmitted into the society of the leading nations of the world.

While admitting that the Genoa conference was not the success that had been hoped for, he expressed the belief that the second gathering, to open at The Hague June 15, would build upon the foundation laid at Genoa.

* * *

At a meeting last week in Washington, D. C., between President Harding, three members of his cabinet and about 40 representatives of the iron and steel industry the president took up with the steel representatives the desirability and practicability of completely abolishing the 12-hour working day in the steel and iron industry. Definite action on the proposal awaits further developments.

* * *

Steps have been taken to carry out the agreement reached at the arms conference at Washington between China and Japan whereby the Shantung peninsula is to be handed back to China. Japanese troops are being withdrawn from Shantung and are being replaced by Chinese. This province was taken from China by Germany 24 years ago and was taken from Germay by Japan early in the recent war.

* * *

The last British troops in Ireland were withdrawn last week. There is reported to be increasing evidence of the probable success of the contending factions in Ireland in their efforts to bring about permanent conditions of peace.

* * *

Gifford Pinchot was last week nominated in the Pennsylvania primaries as the republican candidate for governor of that state.

* * *

On the charge that they were being used by their owners as the source of wine for violation of the prohibition act, government officials last week seized and took control of vineyards valued at $2,000,000 in the vicinities of Oakland and San Francisco.

* * *

Both the senate and house of representatives have passed the bill appropriation $500,000 for the use of the department of justice in prosecuting persons and concerns charged with defrauding the government in war-time contracts. The department of justice is organizing to push these prosecutions vigorously.

Farm Business and Markets Outlook

(Continued from page five.)

Receipts of dressed poultry at the four leading cities since the first of the year total 68,639,621 pounds, compared with 62,600,393 pounds in the same period in 1921. Consumptive demand is large and storage holdings may have been cut down to 32,309,362 pounds on May 16, compared with 30,788,303 pounds on the same date a year ago.

BUTTER STORAGE BEGINS.

Storage holdings of butter began to increase starting with the third week in May. Stocks were down to about 550,000 pounds at the four leading cities, which is only about 10 per cent of the amount still on hand when stocks were at the minimum last spring. Since receipts have been consistently larger than those of last year, the evidence that consumptive demand has been unusually broad is convincing. Reports upon creamery butter production show a rather steady increase. The market has sagged slightly in the last few days, but further declines are not expected to be severe.

Prices on 92-score fresh butter on May 17 were:

Chicago, 35c; New York, 36 1-2c; Boston, 37c; Philadelphia, 37c; San Francisco exchange quotation, 38 1-2c.

Slight advances in cheese prices occurred at Wisconsin country markets last week and distributing markets responded slightly. Only a few large sales were reported, as most buyers are purchasing for immediate needs only. Nevertheless, about 10 or 15 per cent of the receipts at the four leading markets is going into storage. The total amount in storage at present is not large. The grass cheese season will arrive soon and the movement into storage should expand materially in the next three weeks. Well cured cheese is exceedingly scarce and is quoted at a premium of 6 to 10 cents per pound.

Prices on No. 1 American cheese on May 17 were:

CHICAGO—Twins, 17@17 1-2c; S. Daisies, 17@17 1-2c; D. Daisies, 17@17 1-2c; Y. Americas, 17@17 1-2c; Longhorns, 17@17 1-2c; square prints, 18@18 1-2c.

POTATO SHIPMENTS REMAIN HEAVY.

After making marked gains the potato market has slumped once more under the burden of an unusually heavy supply. Shipments of old and new stock combined in the last 10 days were nearly twice as large as a year ago. Northern whites are quoted at $1.30 to $1.50 per 100 pounds sacked and Russets at $1.75 in the Chicago carlot market. Maine is the chief source of old stock. The new crop in Florida has nearly all been shipped, but South Carolina and Louisiana are becoming active. New potatoes comprise about 25 per cent of the supply at present.

LATEST QUOTATIONS.

TIRES For Less

Our large purchasing power enables us to buy standard makes of tires and sell them direct to the consumer at less than the regular wholesale cost. The HALL cord and fabric tire listed below is one of the finest tires we have ever sold. A tough FLAT TOP tread combined with a strong over-size carcass is responsible for the mileage of 18,000, 20,000 and even 25,000 miles. A record of 1460 of this tire sold last year with five fabrics and no cords returned for adjustment is a record of which we are justly proud.

Bits of Fun for Everyone

Tee Hee, It's Wasted.

Billy was riding with his father in the automobile. Father sounded the klaxon before rounding a dangerous corner. When they turned the corner and met no one, Billy cried gleefully, "Tee-hee, dad, you wasted a honk, didn't you!"—Capper's Farmer.

Definition by Example.

Joe—Ere, Curly! You know everything—what's a cosmopolitan?

Curly—Well, it's like this: Suppose you was a Russian Jew livin' in England, married to a black woman, an' you'd just finished a bit of Irish stew, an' was smoking an Egyptian cigarette, while a German band outside was playin' the "Blue Bells o' Scotland"—you'd be a cosmopolitan.—Bystander.

An Ignorant Jury.

Here is another sample of muckraking directed toward juries. A lawyer had a somewhat difficult witness, and finally asked if he was acquainted with any of the men on the jury.

"Yes, sir," replied the witness, "more than half of them."

"Are you willing to swear that you know more than half of them?" demanded the lawyer.

"Well, if it comes to that, I'm willing to swear than I know more than all of them put together."—Los Angeles Times.

Bashful Weather.

"The sun has hard work to shine this week," said a woman to a maid, who was dusting her room one gloomy day. "It comes out for a few minutes, and then the clouds hide it for hours again."

"Yis, mum," said Mary. "It's what ye'd call bashful weather, mum, now, isn't it?"

Can't Avoid Them.

With the idea of naming his boys so that there could be no nicknames, which the father had always detested, the first child was called Edmund, the second Edward, the third Edgar, the fourth Edwin, the fifth Edson, and the sixth Egbert.

"That surely has served your purpose, hasn't it?" a stranger once asked.

"Not at all," said the father. "Beginning with the eldest, they are known as Eddie, Chuck, Bim, Snorkey, Muggins, and Pete, and every mother's son of them answers proudly to his nickname."—Capper's Farmer.

Latest High Class Patterns for the Home

Please order the patterns you desire at least two or three weeks before you wish to use them. Desiring to obtain the latest high-class patterns for its readers, THE FARMER has made arrangements to have them sent direct from the east, and under present mailing conditions it takes about that time for them to reach you.

3699-3698: Ladies' costume—Waist 3699 cut in 6 sizes: 34, 36, 38, 40, 42, and 44 inches bust measure. Skirt 3698 cut in 6 sizes: 24, 26, 28, 30, 32, and 34 inches waist measure. To make the dress for a medium size will require 8 3-8 yards of 32-inch material. The width of the skirt at the foot is 2 1-2 yards. Two separate patterns 10 cents for each pattern.

3976-3906: Ladies' costume—Waist 3976 cut in 6 sizes. 34, 36, 38, 40, 42, and 44 inches bust measure. Skirt 3906 cut in 6 sizes: 25, 27, 29, 31, 33, and 35 inches waist measure. The width of the skirt at the foot is about 2 1-4 yards. Two separate patterns 10c for each pattern.

3988: Ladies' dress—Cut in 6 sizes: 34, 36, 38, 40, 42, and 44 inches bust measure. A 38-inch size requires 4 1-2 yards of 36-inch material. The width at the foot is about 2 yards. Price 10c.

3880: A new bathing suit—Cut in 4 sizes: Small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size requires 2 5-8 yards of material 40 inches wide for the undergarment, and 2 5-8 yards for the smock. Price 10 cents.

3992: Ladies' home dress—Cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38-inch size requires 5 7-8 yards of 32-inch material. The width at the foot is 2 yards. Price 10 cents.

3400: An "easy to make" apron—Cut in 4 sizes: Small, medium, large and extra large. A medium size will require 2 3-4 yards of 27-inch material. Price 10 cents.

3981: Child's dress—Cut in 4 sizes: 2, 4, 6 and 8 years. A 4-year size requires 1 7-8 yards of 27-inch material. Price 10 cents.

3995: Girls' apron—Cut in 4 sizes: 4, 6, 8 and 10 years. A 6-year size requires 1 1-8 yard of 27-inch material. Price 10 cents.

3451: Ladies' blouse—Cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size will require 3 yards of 38-inch material. Price 10 cents.

3556: Boys' suit—Cut in 4 sizes: 2, 4, 6 and 8 years. A 6-year size will require 2 1-2 yards of 36-inch material. Price 10 cents.

3563: Girls' dress—Cut in 4 sizes: 8, 10, 12 and 14 years. A 12-year size will require 3 yards of 27-inch material. Price 10 cents.

3994: Juniors' dress—Cut in 3 sizes: 12, 14 and 16 years. A 14-year size requires 3 1-2 yards of 32-inch material. Price 10 cents.

Your Health

By Royal S. Copeland, M. D., F. A. C. S.

LOOKING FORWARD.

Nobody wants to grow old. It is a common thing to hear somebody say: "I wish I were 10 years younger!"

Dr. Copeland.

Three score years and ten is the frequently repeated reminder of the expected span of human life. I object to this limitation, but that is another story.

Think over the list of persons you know who have reached the age of 70. Isn't it remarkable how they differ in physical appearance, in mental alertness and in sweetness of spirit? Some are old and broken down. On the contrary, some are as young and cheerful and as active as they were at 50. Why the difference?

This is not an easy question to answer, and it must be admitted at once that there are many factors involved. But there is one very definite reason. The mental attitude has much to do with one's state of health at 70 and at all other ages, too.

In a sense, the brain is like a searchlight and the intelligence directing the light. Its operations depend on the direction of the path of light. The mind dwells on the things and events illuminated by the lamp of memory.

But memory of the past isn't the only function of the mind. There are also imagination, vision, calculation, interest in human affairs, devotion to country—all these indicate forward looking.

You may die from physical disability, but you will never grow old so long as the searchlight of your mind is turned ahead. Forward looking is the secret of youthfulness.

If you wish to keep young, you will keep your searchlight directed ahead. Turn it around now and then for the sake of knowing just where you are, and how much you have progressed. But let its main use be for illuminating the future. Keep your light flashing forward and make the century mark your goal!

Oats and Beardless Barley

Still Available

It is a well-known fact that beardless barley and oats suitable for seed purposes have been very difficult to secure this year.

We were fortunate enough, however, to secure three cars of oats and two of barley, and still have a small quantity left.

We also have spring and winter rye, sunflowers and green field peas.

Send in your order at once before our supply is gone.

BEDTIME STORIES

By THORNTON W. BURGESS.

Copyright, 1919, T. W. B.

GRANDFATHER FROG IS GREEDY.

Grandfather Frog has a great, big mouth. You know that. Everybody does. His friends of the Smiling Pool, the Laughing Brook and the Green Meadows have teased Grandfather Frog a great deal about the size of his mouth, but he hasn't minded in the least, not the very least. You see, he learned a long time ago that a big mouth is very handy for catching foolish green flies, especially when two happen to come along together. So he is rather proud of his big mouth, just as he is of his great goggly eyes.

But once in a while his big mouth gets him into trouble. It's a way big mouths have. It holds so much that it makes him greedy sometimes. He stuffs it full after his stomach already has had all that it can hold, and then, of course, he can't swallow. Then Grandfather Frog looks very foolish and silly and undignified, and everybody calls him a greedy old fellow who is old enough to know better, and ought to be ashamed of himself. Perhaps he is, but he never says so, and he is almost sure to do the same thing over again the first chance he has.

Now, it happened one morning that Grandfather Frog had had a very good breakfast of foolish green flies, and really didn't need another single thing to eat, when who should come along but Little Joe Otter, who had been down to the Big River fishing. He had eaten all he could hold, and he was taking the rest of his catch to his secret hiding place up the Laughing Brook.

Now, Grandfather Frog is very fond of fish for a change, and when he saw those that little Joe Otter had his eyes glistening, and, in spite of his full stomach, his mouth watered.

"Good morning, Grandfather Frog! Have you had your breakfast yet?" called Little Joe.

Grandfather Frog wanted to say no, but he always tells the truth. "Y-e-s," he replied, hesitatingly. "I've had my breakfast, such as it was. Why do you ask?"

"Oh, for no reason in particular. I just thought that if you hadn't you might like a fish. But as long as you have breakfasted, of course, you don't want one," said Little Joe, his bright eyes beginning to twinkle. He held the fish out so that Grandfather Frog could see just how plump and nice they were.

"Chugarum!" exclaimed Grandfather Frog. "Those certainly are very nice fish, very nice fish indeed. It is very good of you to think of a poor old fellow like me and I—er—well, I might find room for just a little teeny, weeny one, if you can spare it."

Little Joe Otter knows all about Grandfather Frog's greediness. He looked at Grandfather Frog's white and yellow waistcoast and saw how it was already stuffed full to bursting. The twinkle in his eyes grew more mischievous than ever as he said: "Of course I can spare it. But I wouldn't think of giving such an old friend a teeny, weeny one."

With that Little Joe picked out the biggest fish he had and tossed it over to Grandfather Frog. It landed close by his nose with a great splash and it was almost half as big as Grandfather Frog himself. It was plump and looked so tempting that Grandfather Frog forgot all about his full stomach. He even forgot to be polite and thank Little Joe Otter. He just opened his great mouth and seized the fish. Yes, sir, that is just what he did. Almost before you could wink an eye the fish had started down Grandfather Frog's throat head first.

Now, you know, Grandfather Frog has no teeth and so he can not bite things in two.

"Those certainly are very nice fish," exclaimed Grandfather Frog.

He has to swallow them whole. That is just what he started to do with the fish. It went all right until the head reached his stomach. But you can't put anything more into a thing already full, and Grandfather Frog's stomach was packed as full as it could be of foolish green flies. There the fish stuck, and gulp and swallow as hard as he could, Grandfather Frog couldn't make that fish go a bit farther. Then he tried to get it out again, but it had gone so far down his throat that he couldn't get it back. Grandfather Frog began to choke.

The Gaunt Gray Wolf

(Continued from page fourteen.)

This was splendid! Bessie had come to spend the night! And, quickly drying her tears and forgetting her heartache, Emily rushed out to greet her friend and to find that the whole Black family were there—Tom, the motherly Mrs. Black and Bessie.

"Oh, Emily, I just had t' come t' see you off!" exclaimed Bessie, as the two girls rushed together and hugged each other in delight. "I coaxes, an' coaxes, an' coaxes father t' bring me over, an' he just teases me an' says he's busy, an' Mr. McDonald can't spare he, till this mornin' he says we're comin'. An' all th' time he an' mother's plannin' t' come!"

"'Twon't do t' tell a maid everything you plans t' do," Tom chuckled.

Bessie pursed up her red lips, and tossing her head at him laughed gaily, showing her dimples.

"Oh, but you just had t' come anyway, for I'd never give you a bit o' peace if you hadn't."

Her cheeks flushed with excitement and her eyes sparkling with pleasure, Tom looked at her proudly, and could not refrain from the remark:

"She ain't a very humbly lass, now be she, Richard?"

"Now, father, stop teasin' Bessie," cautioned Mrs. Black. "He's always teasin' th' lass."

"I'm just dyin' t' see your things, Emily!" exclaimed Bessie, as Emily took her friend's bonnet and wraps. "An' I couldn't let you go without seein' you. An' I'm goin' t' stay awhile, too, with your mother. She'll be so lonesome without somebody t' talk to when you goes."

"Oh, Bessie! How wonderful glad I am o' that! I were just thinkin' how lonesome mother were goin' t' be with me an' Bob both gone—an'—an' 'twere makin' me feel bad;" and Emily brushed away a tear.

"We'll not be lettin' your mother, nor father, either, get lonesome," said Douglas, patting her shoulder gently and looking down in his kindly way into her face. "Bessie'll be 'bidin' here till I comes back in October, an' then she'll be comin' again after th' New Year for a long stop. An' I'll be comin' once every week, whatever."

"Oh, I'm hoping so!" Mrs. Gray exclaimed. "I'm not darin' t' think about how 'twill be when Emily's gone.

"Now I knows, an' Tom knows, an' we was talkin' t' Douglas about un when he were over t' th' post, an' we were sayin', 'Now Bessie'll have t' go over an' 'bide awhile with Mary when Emily's gone,'" said Mrs. Black.

"An' you never tells me, an' just lets me tease t' come!" pouted Bessie.

"We were wantin' t' surprise you, lass. An'," Mrs. Black continued, addressing Mrs. Gray, "I knows what 'tis t' be alone, now, an' th' men folks is all in th' bush. I used t' be alone before Tom takes th' place t' th' post, but now we has plenty o' company."

"'Tis wonderful good an' thoughtful of you!" Mrs. Gray exclaimed heartily. "Now set in an' have a cup o' tea an' a bite. You must need un after th' cruise over."

The evening was spent in chatting and visiting and looking over Emily's new clothes, with excitement—slept much, however, that night, for they had a world to talk about as they lay in bed—but most of all the great and wonderful experiences Emily was to have.

Emily and her mother clung to each other, and Bessie to both of them, and cried and cried, when the time for parting came the following morning, until finally Douglas and Richard were compelled to draw Emily gently into the boat. Then motherly Mrs. Black, surreptitiously brushing tears from her own eyes, put her arm around Mrs. Gray and soothingly urged:

"Don't be cryin', Mary. Th' maid's goin' t' be all right, an' they's nothin' to cry for. 'Twon't be so long till you has she back."

Richard had the hull of the little schooner well under way when the mid-October cold forced him to abandon the work until the following summer, and he was preparing to set out upon his trail when Douglas appeared one evening, fresh from St. Johns, to report Emily comfortably settled in the home of a hospitable family near the school she was attending, and that she was immensely interested in her studies and fairly well contented, though a little lonesome at times for home.

Douglas evidently had something on his mind that troubled him. Once Mrs. Gray asked if he were ailing, but he denied anything but the best of health. Finally, however, as a disagreeable duty that he must perform, the kind-hearted old trapper said:

"I'm not knowin' just how t' tell you—'twill be a wonderful hard blow t' th' lad—th' bank where Bob were puttin' his money has broke, an' I'm fearin' th' money's all lost."

"Lost! Lost!" exclaimed Richard and Mrs. Gray together.

"Aye," said Douglas, "lost."

Then he explained fully the failure of the bank, in which he also had a small amount on deposit, and the improbability of any of the depositors recovering more than a nominal percentage of their deposits, and even that doubtful.

"Well," said Mrs. Gray, "'twill be wonderful hard on th' lad, an' he countin' so on th' tradin' business."

"Aye," repeated Richard, "wonderful hard on he. Wonderful hard an' disappointin', after all his plannin' an' hopin' an' thinkin' about un."

"An' Emily's schoolin' charge! How now be we goin' t' pay un?" asked Mrs. Gray.

"Don't worry about that, now," said Douglas. "I were wantin' she t' go, an' I were th' first t' say for she t' go, an' I'll see, now, about un this year, whatever. Don't worry about th' schoolin', now."

"But we can't be havin' you pay un," remonstrated Richard.

"Well, now, don't worry about un," insisted Douglas. "We'll see. We'll see."

They lapsed into silence for a little, when Bessie remarked:

"'Tisn't so bad, now. 'Tis bad t' lose th' money, an' 'twill be hard an' disappointin' t' Bob, but he's a wonderful able lad—they's no other lad in th' bay so able as Bob. He's a fine lot o' traps on his new trails, an' he'll not be doin' so bad, now."

"Yes," agreed Douglas, "he be, now, a wonderful able lad."

"And," Richard spoke up, beginnning to see the brighter side of the situation, "Bob owns un, an' he's havin' no debt, an' he's payin' up all our debts. They's no other folk o' th' bay as well off as we be."

"I weren't thinkin' of un that way. I were just thinkin' of how hard 'twill be for Bob—givin' up th' tradin'," Mrs. Gray explained. "But we has a lot t' be thankful for, an', as Besie says, Bob's young an' wonderful able."

But nevertheless it was a hard blow—a disheartening blow—to all of them. Bob had planned so much for the future, he was still planning and dreaming of his career as a trader, and building air castles—away up there in the desolate white wilderness.

This meant, instead of the realization of those dreams, a tedious, interminable tramping, year after year, of the fur trails, an always uncertain, a never-ending struggle for the bare necessities of life. A single bad year would throw them again into debt; two bad years in succession would plunge them so hopelessly into debt that the most earnest effort for the remainder of his life would not relieve Bob of its burden.

Jersey Herd for Sale
Holger and Golden Glow's Chief Breeding
14 Head, Only $1800, With Terms
Nine cows in milk, 2 bred heifers, 3 heifer calves, 8 of them sired by Judge Benedict, son of the great Holger, a silver medal bull and will be gold medal bull in June, with six gold medal daughters this year. Judge Benedict's daughters are bred to a strongly bred Golden Glow's Chief bull, and the others are in calf to Judge Benedict.
Circumstances requiring me to sell cause me to offer the entire herd for $1800, to turn them quick. They are good individuals, with good udders and are heavy producers. Part terms will be given, if desired. Inspection of the cows and milk checks is invited.
F. E. YERGEN
HUBBARD, OREGON.

Fifty Registered Holsteins

AT AUCTION

Scappoose, Oregon, Wednesday, June 14, 1922

This offering is one of the best to ever go under the auctioneer's hammer. The most of them are young cows; a few heifers, heifer calves and young bulls. They are nicely marked, in good condition, of conformation that would command attention in any show ring and they are heavy producers.

PRODUCTION

A senior yearling producing over 62 lbs. milk per day.

A mature cow producing 90 lbs. per day. Others producing from 50 to 90 lbs. Straight top lines, free from disease, square udders and right in every way.

Not a cow in the herd but what will produce 50 lbs. per day under ordinary herd care. The average per cent test is high. Every one a profitable producer.

BLOOD LINES.

A number of the offering were sired by Pietertje Beauty Segis, he a full brother to Segis Pietertje Prospect, 1448.68 lbs. butter; 37381.40 lbs. milk, world's record milk producer.

Others, close descendants of such bulls as King Segis, King of the Pontiacs, Lord Netherland De Kol, King Segis Pontiac, Beauty Pietertje Prince, Aaggie Cornucopia Johanna Lad, Colantha Johanna Lad, and other noted sires.

Seldom if ever has as grand a lot of cattle gone over the auction block as will at this sale.

Sale to be held on the Wist Farm, one mile north of Scappoose, Oregon, just off the paved highway, easily accessible by train, stage or auto.

Catalog will be published, giving full information. Mailed upon request to Sale Manager.

One year's time will be given to responsible parties (see catalog for details).

Do not overlook this opportunity to secure these ultra valuable Holsteins at a price set by the buyers.

THE WASHINGTON FARMER
ESTABLISHED 1894
SPOKANE. SEATTLE.

THE picture above was taken at the Western Washington fair at Puyallup last fall, and shows an exhibit by the live stock extension service of the state college designed to show the value of a purebred sire over a scrub. Three daughters of grade cows and a purebred sire averaged 230 pounds of butterfat per year more than did their poorly bred mothers, and equally convincing cases are on record by the score. In a herd of 10 cows this would have meant 2300 pounds of butterfat, which, supposing fat to be worth 35 cents, would mean over $800 per year more than from a similar herd of scrub cows.

A Study of Our Market Page Each Week Will Make You Money—Page 5.

Fox Farming Takes Its Place in Northwest

Fox farms will never become as common as wheat farms or dairy farms, nor as essential, but they are no longer the rarity they were only a few years ago. Farmers who want to specialize in a specialty that is special, indeed, find fox farming a subject of unusual interest.

There are today, according to the United States biological survey, at least 500 ranches where silver foxes are being raised. On these ranches there are between 12,000 and 15,000 of these semi-domesticated animals. The biological survey estimates that there is now invested in the fox farming industry of the United States about $8,000,000.

The problems met by the breeder of foxes or other fur-bearing animals require an expert knowledge of species, temperament, sanitation, diseases, parasites and so on, perhaps of an even higher order than that required in the case of the successful live stock producer.

Silver fox breeding has taken its place among the farming specialties of the Pacific northwest. Perhaps the most prominent farm is that of the United States Silver Fox Farms corporation of Spokane, where about 60 pairs of breeding animals are in captivity. Another farm, with approximately 50 pairs, is located near Missoula, Mont. Another, with 10 or 12 pairs, is located near Pendleton, Ore., on the farm of Dr. McNab, while another of considerable proportions is operated by William Rambo at Elk, Wash. Several others with from six to 10 pairs of foxes are scattered throughout the northwestern territory.

Until professional breeders began the development of the silver fox industry this animal was considered something of a freak of nature. Like the black sheep, which occasionally appears in a flock of otherwise uniform animals, there would occasionally, in the fox-inhabited wilds, appear a black animal among his red brothers and sisters. This black fur-bearer was the original silver fox, so much desired in a season's catch by the fur trapper, and a few of which have been captured and used as the foundation stock for building up this infant breeding industry. The true silver fox is a lustrous raven black and its fur is among the most prized obtainable.

Owing to different qualities, just as different qualities appear in cattle or other classes of live stock, prices of breeding animals at the present time vary widely, ranging from a few hundred dollars to a few thousand dollars per pair.

Milk Campaign in Pierce

A countywide milk campaign was recently put on in Pierce county by the three extension workers and the county school superintendent. The work was carried on through the schools and by advertising while a demonstration booth was arranged in one of the larger stores in Tacoma. Here a life-size doll would continually pour milk from a bottle and drink it, much to the delight of the children who came to see the demonstration.

A survey is being put on in the schools to determine the increased use of milk since the campaign of last year. A milk poster contest is being put on for the school children for six different grades, while the prizes are $3 for first and $1.50 for second place.

OVER 1000 POUNDS BUTTERFAT.

Cascade Jessie, a mature cow owned by William Todd & Sons of Yakima, is the third Washington Holstein cow to produce over 1000 pounds of butterfat in 365 days. She made 24,866.9 pounds of milk and 1021.42 pounds of fat.

Chips and Splinters

The following pointers from the Extension Service News of the State College of Washington are worthy of a place in the family scrapbook:

Fresh air helps ill temper.

* * *

Rest and exercise sends clean blood to the brain.

* * *

Chew thoroughly, digestion begins in the month.

* * *

Green vegetables and eggs contain iron; milk contains much lime.

* * *

Influence of dress acts upon the person who sees as well as the person who wears.

* * *

Spring housecleaning that includes the electric light globes will increase their efficiency as much as 16 per cent.

* * *

"A woman in business is a housekeeper, and a housekeeper is a woman in business."

* * *

How about that graduation dress this year? Is it going to be a fashion plate or stand forth with simplicity and good sense?

* * *

Did you ever stop to think that whatever income a husband may bring into the family, already has been earned in part by the wife?

* * *

A tablespoonful of ammonia in a quart of tepid water is good to sponge wool skirts that have become shiny. Press over a cloth with a hot iron and brush up the nap with a stiff brush.

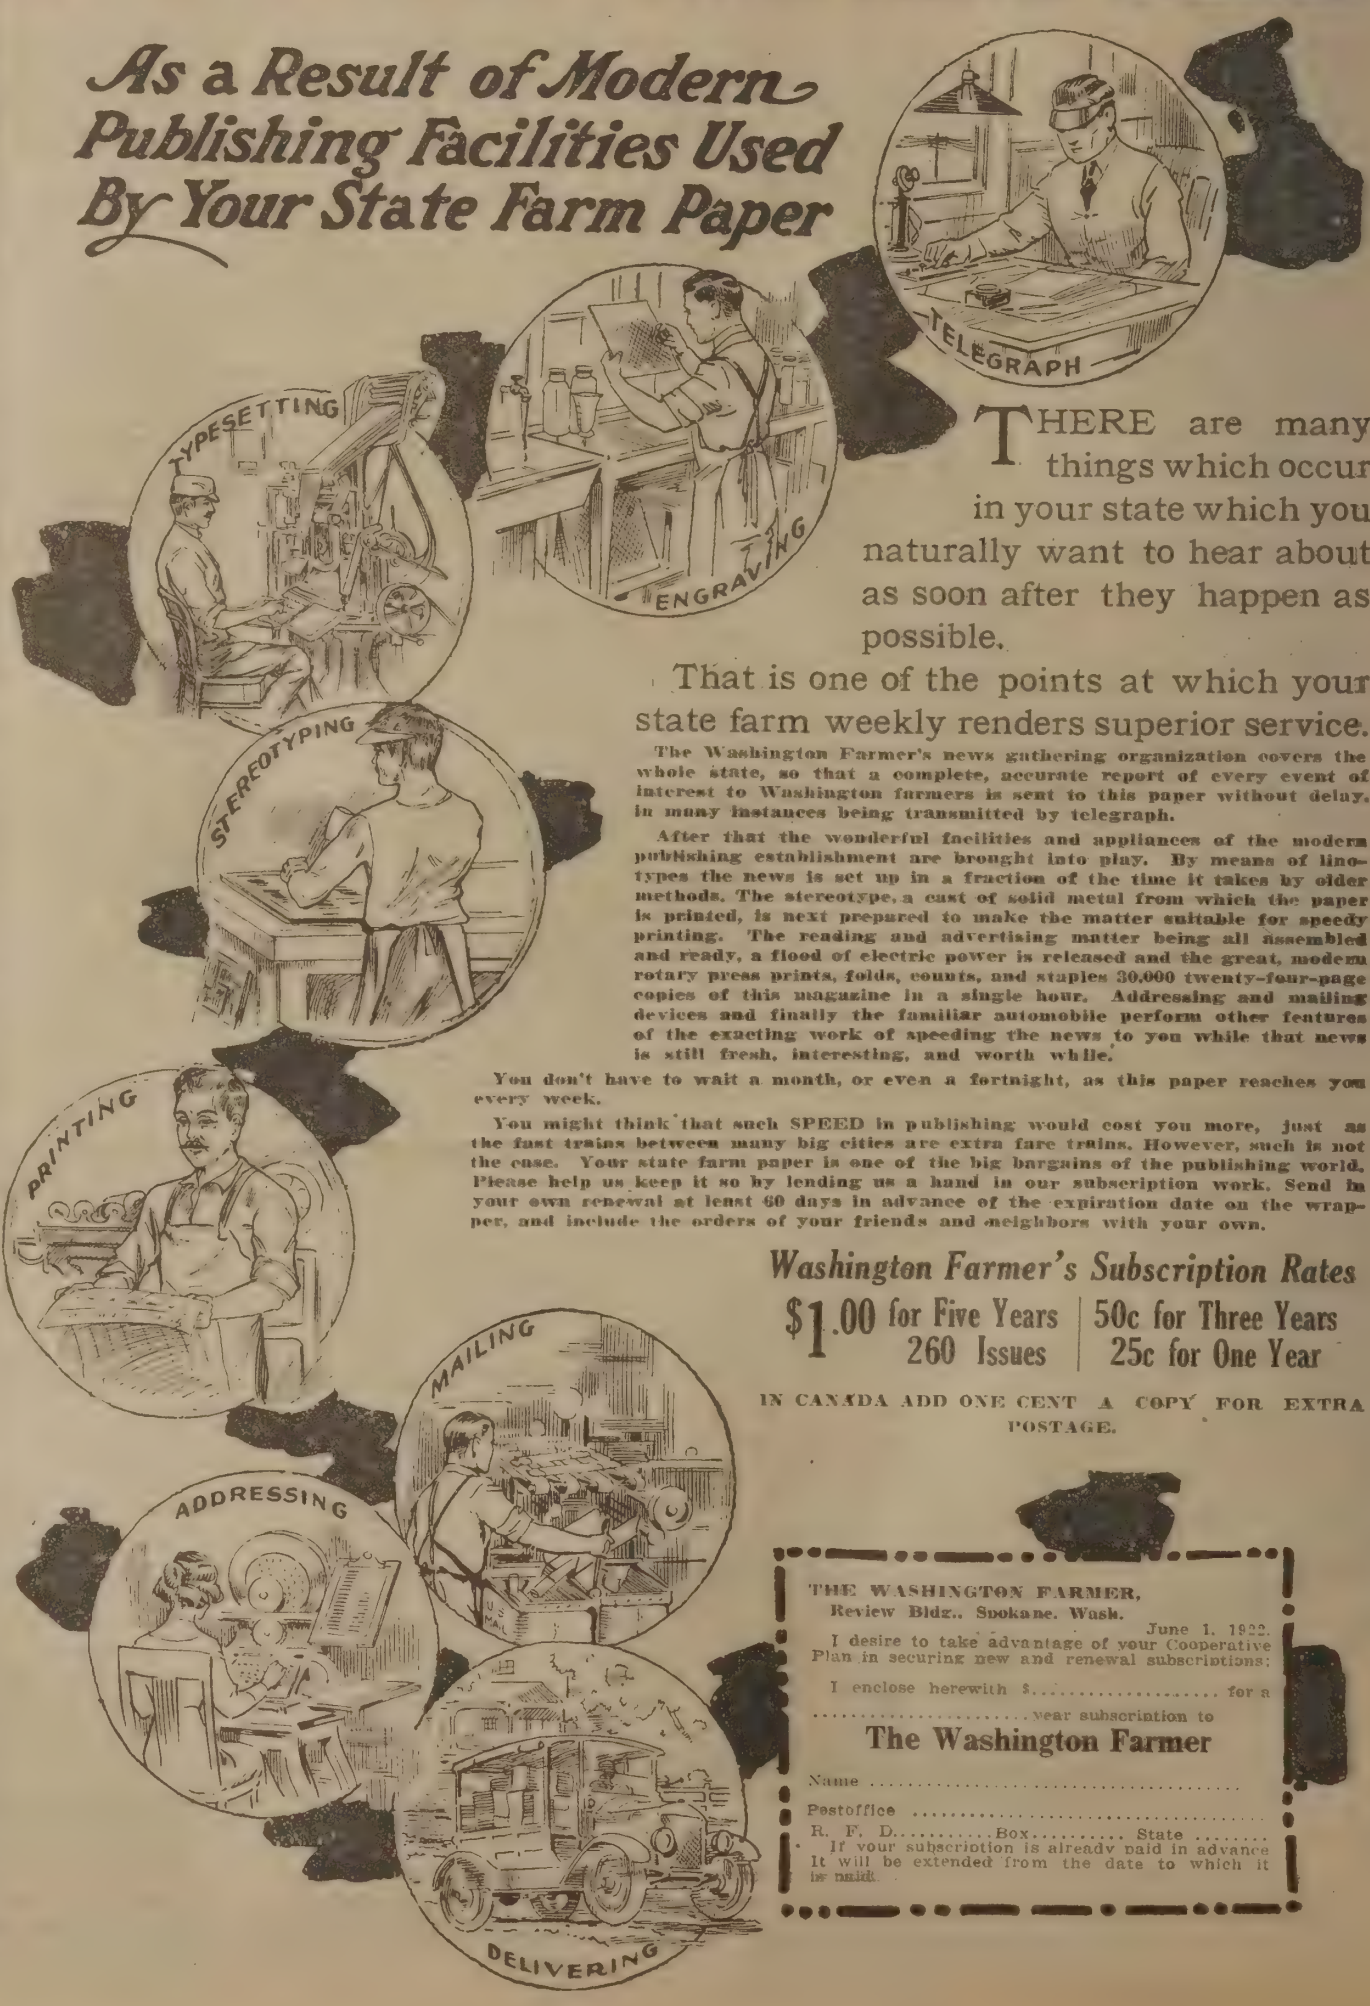
QUINCY UNDER BIG PROJECT.

Dan A. Scott, director of the state department of conservation and development, has announced that the QQuincy flat lands, a tract of 100,000 acres lying on the east east side of the Columbia river, will be reclaimed under the Columbia basin project, and not under the Greater Wenatchee project, as proposed. State reclamation engineers have reported that the lands can be watered for $146 an acre under the Columbia basin, while the cost of watering them under the Greater Wenatchee plan will be $196 an acre.

How Advertising Lowers Prices

The makers of a famous camera, when they began advertising over 30 years ago, made one camera which took a 2½-inch picture and which sold at $25. In 1917 (at the time of the violent rise in cost of materials) they made a far better camera which sold for $10.

When the manufacturer of a well-known breakfast food began advertising, his goods sold at 15 cents a package. In 1917 his package was 50 per cent larger and sold for 10 cents.



The selling cost of a spark plug was decreased 70 per cent in four years. In 1908 a magneto sold for $50. Ten years later a much better magneto used for the same purpose was selling at $18.

These cases are not exceptional, says Art Metal—just illustrative of some of the things which advertising can do and has done.

To get the full benefit of advertising, we suggest that you read regularly the advertisements in this paper. Also, write the advertisers for additional information, catalogues and price lists. When you do so, please mention the Washington Farmer.

You Get Your State News Quick

As a Result of Modern Publishing Facilities Used By Your State Farm Paper

THERE are many things which occur in your state which you naturally want to hear about as soon after they happen as possible.

That is one of the points at which your state farm weekly renders superior service.

The Washington Farmer's news gathering organization covers the whole state, so that a complete, accurate report of every event of interest to Washington farmers is sent to this paper without delay, in many instances being transmitted by telegraph.

After that the wonderful facilities and appliances of the modern publishing establishment are brought into play. By means of linotypes the news is set up in a fraction of the time it takes by older methods. The stereotype, a cast of solid metal from which the paper is printed, is next prepared to make the matter suitable for speedy printing. The reading and advertising matter being all assembled and ready, a flood of electric power is released and the great, modern rotary press prints, folds, counts, and staples 30,000 twenty-four-page copies of this magazine in a single hour. Addressing and mailing devices and finally the familiar automobile perform other features of the exacting work of speeding the news to you while that news is still fresh, interesting, and worth while.

You don't have to wait a month, or even a fortnight, as this paper reaches you every week.

You might think that such SPEED in publishing would cost you more, just as the fast trains between many big cities are extra fare trains. However, such is not the case. Your state farm paper is one of the big bargains of the publishing world. Please help us keep it so by lending us a hand in our subscription work. Send in your own renewal at least 60 days in advance of the expiration date on the wrapper, and include the orders of your friends and neighbors with your own.

Washington Farmer's Subscription Rates
